Mr. DIRKSEN. Mr. President, I cannot imagine someone looking at a battle map in the Pentagon and then indicating whether there should be an assault upon Hill 927, which has been dubbed Hamburger Hill. That determination had to be made there.

It has been related that it had no strategic value. The fact is that as soon as they took Hamburger Hill, they then proceeded methodically to flush out the enemy wherever they found them.

In that respect, it was an undertaking that the military people thought should be undertaken, and they equated it with whatever the cost should be. It was a military judgment in the field and not here.

Mr. MANSFIELD. If I may reply to the distinguished minority leader, he is referring to one particular incident which I did not mention by name. What I am referring to is the general policy which has been in effect since the bombardment of the north stopped on November 1, 1968, and what seems to be a continuation of that policy up to this time—a policy which is an inheritance from the previous administration.

APPOINTMENTS BY THE VICE PRESIDENT

The VICE PRESIDENT. The Chair appoints the Senator from Texas (Mr. YARBOROUGH), and the Senator from Vermont (Mr. PROUTY), to the 22d assembly of the World Health Organization to be held at Boston, Mass., beginning July 8, 1969.

WASHINGTON STAR MAKES USEFUL CORRECTION OF PROXMIRE FIGURES ON THE DISTRICT OF COLUMBIA INCOME

Mr. PROXMIRE. Mr. President, a few weeks ago, I told the Senate that the District of Columbia is the richest city of those cities with a population of between 500,000 and 1 million in the country; that it had a larger percentage of families with incomes over $10,000 than any of the others; that it had the highest average family income; and that it had the smallest proportion of families with incomes below $3,000 per year.

I suggested that these figures suggested that the District could solve most of its poverty problem itself, if it were unleased and given home rule.

In an excellent article in yesterday's Washington Star, James Welsh concedes my basic argument on the relative wealth of the District and its capacity to meet its problem, but vigorously disputes validity of the figure of $14,222 that I offered as the average household income in the District for this year 1969.

Mr. President, I think Mr. Welsh is right. I had taken the figure from a study which the Library of Congress secured from Sales Management Magazine's Survey of Buying Power and the Editor and Publisher Market Guide.

Mr. Welsh does a highly plausible job of showing, from the most recent Department of Commerce figures of District of Columbia personal income and the District's own figures of the number of households, that this $14,222 is probably much too high for the average income—even if average is defined as the arithmetic mean instead of the median. The Welsh analysis suggests that the figure I used is probably $4,000 or more too high.

Mr. President, to supplement the Welsh analysis, I would call attention to the figures I published at the time of my statement showing the proportion of families with incomes above $10,000 in 1967. Washington had the highest proportion of such families, but it was still only a little more than 30 percent. Obviously the median average was less than $10,000 in 1967, and probably less than $9,000. It was very likely well below $10,000 in 1969.

Mr. President, I think the Welsh article places this numbers game in a far more realistic and appropriate context than did the stark figure of $14,222 which I used in my original speech. I ask unanimous consent that the article by Mr. Welsh, entitled "High Income Report for District of Columbia Questioned" be placed in the RECORD at this point. And I congratulate Mr. Welsh on handling a complicated statistical mare's nest with an unusual sense of proportion and fairness.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AVERAGE $14,222? HIGH INCOME REPORT FOR DISTRICT OF COLUMBIA QUESTIONED

(By James Welsh)

Residents of the District may be considerably less affluent than they recently were pictured.

"A whopping $14,222" is the annual average household income within the city, Sen. William Proxmire told the Senate a couple of weeks ago.

That's the kind of statement that sends economists and statisticians scurrying. Any number of them, staffers of the District government, the Census Bureau and other agencies, have been busy since then, checking a welter of figures.

As a result, they are prepared to say that $14,222 figure is much too high, especially if the figure is interpreted as what the typical family makes in a year.

The Mayor's Economic Development Committee, for instance, has conducted a study based on a sampling of Social Security payments, that will show the typical income figure below $10,000. The District statistical information office worked up a quick study last week, also picking apart that $14,000-plus figure.

These studies have not been made public yet. One problem is that no one involved wants to cross Sen. Proxmire. He is chairman of the Senate Appropriations subcommittee on the District. And a chief purpose of his speech was to show that the city deserves home rule and has "the financial muscle" to solve many of its problems. Who in the District government wants to fight that?

On the other hand is the apprehension of city officials that Congress, if it gets the idea the city is swimming in affluence, will do less than it might about poverty and other social problems.

Another problem is that the whole issue is a statistical minefield. Until next year's census, there is not enough information to support a precise calculation of income. As one economist put it:

"We have just enough information to get in a good fight and confuse everyone."

Proxmire's information came by request from the Legislative Reference Service of the Library of Congress. That unit did no original research but rather performed a library function, preparing readily available data in table form.

Its sources for income from 1967 to 1969 were two publications—Sales Management Magazine's "Survey of Buying Power" and the Editor and Publisher Market Guide. The figures were compiled for Washington and 15 other cities of 500,000 to 1 million population.

No one among the study's critics seriously disputes one conclusion, that Washington is tops in income among the 16 cities, with a disproportionate share of people making more than $10,000 and relatively few people in the poverty class. But the dollar amounts themselves are another matter.

Economists with the city government and the Census Bureau privately question the methods of Sales Management and Editor and Publisher in assembling income data, some going so far as to say the data is worthless. This comes despite the fact that business firms throughout the country, starved for accurate marketing information, rely heavily on these figures, especially those put out annually by Sales Management.

HOW MUCH IS AVERAGE?

Then comes the problem of definition. That $14,222 figure is listed as "average household income."

One statistical bramblebush involves the word "average." Another involves "household."

With income distribution, the average always is higher than the median, or typical, income. Median income is a half-way figure, with half the incomes above, and half below it. In any city, some people have extremely high incomes, pulling the average above the median.

Most economists believe the median a better figure to use. But in the absence of a census count, it is a very difficult figure to determine.

A household consists of all the persons who occupy a housing unit. It might be four secretaries in an apartment, pooling four separate incomes. It might be two or more families in the same house, as with a young married couple living with parents.

Census officials don't like the household-income measurement, they much prefer family income or individual income. In any calculation, the average or median household income is always higher than the average or median income of families and single persons added together.

POSSIBLE PROCEDURE

A rough calculation of income in the District might be made this way:

The Department of Commerce's "Survey of Current Business" published a preliminary figure for 1968, showing total personal income in the District as $3.65 billion. This included all wages, salaries, income from business, and government payments such as pensions and welfare stipends.

Last year, according to city figures, there were about 279,000 households in the District. No one has a precise total of families and single persons here, but if this total is in the same proportion to households as it was when the 1960 census was taken, it can be said that last year 353,000 families and individuals were living in the District.

With that total divided into the Department of Commerce's income figure, the average income comes out to $10,300.

SOME MODIFICATIONS

No one is prepared to say how far the median, or typical income falls below the average, although one District economist guessed it could be as much as 20 percent.

If the median is 10 percent below the average, the typical income in the District last year would have been $9,300. In view of government estimates that incomes are rising about 5 percent annually, that figure goes up to $9,800.

Confronted with all this, Dr. Herman Miller, a top official of the Census Bureau, had no real quarrel with it, but commented: "It will probably confuse people about as much as all the other calculations."

But a $9,800 income estimate might make the poor feel a little less poor than that $14,222 average. It might make the family that's actually in the $14,000 bracket feel a little better, too.

ORDER OF BUSINESS

Mr. PROXMIRE. Mr. President, I ask unanimous consent to proceed for 3 minutes.

The PRESIDING OFFICER (Mr. SCHWEIKER in the chair). Without objection, it is so ordered.

A NEW MANNED BOMBER

Mr. PROXMIRE. Mr. President, I have released a nonsecret and unclassified reply to my April 7, 1969, letter to Secretary of Defense Laird.

The original reply marked "secret" was returned by me to the Pentagon in line with my practice of refusing secret and classified material.

My April 7 letter questioned whether the Air Force should build a new manned bomber—AMSA—which would not be delivered for almost a decade. AMSA stands for advanced manned strategic aircraft.

The reply was signed by John S. Foster, Jr., director of Defense Research and Engineering.

I am delighted to get this unclassified letter. It shows that by insisting on full information one can get a reply which is responsive and yet nonsecret. This is in the public interest and necessary to public understanding. I intend to follow the same practice in the future and to insist on responsive, nonsecret replies to questions concerning the huge defense budget.

Concerning the substance of the letter:

First. I am gratified that Mr. Foster has said in unqualified terms that production of this plane will not take place now. I am pleased that the decision to initiate development of the plane, according to Mr. Foster's letter "in no way implies a decision now to produce or deploy the system" and that "production decisions can be delayed until the uncertainties are resolved."

Congress should also have advance notice of any decision to move into production. Congress should have the chance to approve or disapprove that decision. I will seek additional guarantees from the Pentagon that the Air Force will not move into production until Congress has specifically agreed to that action.

Second. Once again the Pentagon appears to be grossly underestimating the ultimate costs of a weapons system. The figure of $25 to $30 million each is hard to believe. This is a highly sophisticated plane which, if produced, will not be delivered in quantity until 10 years from now.

This looks like the biggest underestimate of a long list of underestimated costs by the Pentagon on major weapons systems. The figure strikes me as unrealistic, unreliable, and unattainable.

This plane will have a weapons system and avionics system many times more complicated that the C–5A cargo plane, whose costs now are over $40 million each. The Pentagon is kidding the public and itself when they estimate a cost of $25 to $30 million per plane for the AMSA.

Third. While I favor a policy of greater emphasis on research, development, testing, and engineering, and the development of working prototypes before production on mammoth weapons systems begins, the figure of $1.8 billion for R.D.T. & E. for this plane is very, very high. It represents 20 percent of the total funds that the Director estimates a fleet of 200 planes will cost. This job should be done more efficiently and for far less money.

Fourth. The AMSA program should be kept flexible. No final decisions should be made now. I question whether a plane should ever be built.

This plane will be obsolete before it flies. As long ago as 1962 the President and Secretary of Defense decided against such a plane on grounds that it would be obsolete before it could be delivered in large numbers.

The Russians do not have such a plane nor plans to build one. They do not consider it necessary or desirable.

Mr. President, why do we need a new manned bomber in an age of sophisticated missiles? What can a bomber possibly do that a missile cannot do better and cheaper?

If it is said these planes are to be used in conventional warfare, what can they do that a B–52 cannot do which justifies $1.8 billion for development and $10 to $20 billion as a minimum for production? I ask unanimous consent that the full text of the Pentagon's nonsecret reply to my letter be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 27, 1969.

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PROXMIRE: Secretary Laird, who is away from Washington, asked me to send you an unclassified reply to your letter of April 7, 1969 in place of the classified letter he sent to you last week. Before answering the specific questions on AMSA, I would first like to address our general objectives for the AMSA program and our intended approach to its development.

Basically, we view AMSA as an economical replacement for the B–52 bomber. We also visualize AMSA as having better survivability and penetration characteristics than does the B–52, and believe it appropriate to incorporate improved capability made possible by the increases in technology during the 20 years since the B–52 was in the design phase.

We do not know precisely how long the G&H models of the B–52 can be kept in the force before they wear out. We can estimate that the B–52 C–F models will require extensive and expensive modifications to extend their life past 1977–78. Because of such uncertainties and because of the long lead times involved in development of a new manned bomber system, I believe it prudent to initiate development of such a system at this time. (I would hasten to point out that our proposal to start development on AMSA in no way implies a decision now to produce or deploy the system.) Production lead time is not nearly as long as development lead time and we believe that production decisions can be delayed until the uncertainties mentioned above and those connected with the threat are better resolved.

We would like to start development now in order to reduce the time between a production go-ahead and IOC to a time interval more compatible with intelligence lead time. Thus, our basic objective is to formulate a development program where significant progress can be made but which contains adequate flexibility allowing a configuration freeze to be made far enough downstream so that the system, when delivered, will be what we want and need at that time.

During the last nine or ten months, the Air Force has investigated various development approaches tailored to achieve the above mentioned objective. We have tentatively selected one of these approaches and are now in the process of further refining it to better meet our objectives. Although all details of the program are not yet defined, our general approach will be to initiate development after selecting an airframe and engine contractor toward the end of this calendar year. We do not propose to then initiate the development of the entire avionics system with selected contractors. Our objective here is to extend competition on some elements of the avionics systems until adequate requirements analysis and subsystem tests have been accomplished.

The program we propose to initiate at this time would extend through the design, fabrication and flight test of several experimental airplanes and their subsystems. A production commitment might be made prior to completion of this development program provided the need was clear and technical performance milestones were satisfactorily achieved.

Now let me attempt to answer the questions in your letter.

First, we do not intend to pursue "contract definition" as outlined in DOD exhibit 3200.9. The past three and one-half years of advanced development effort on AMSA has provided the technical data which is normally part of the output of a formal contract definition phase. Instead, we propose to proceed on into engineering development which would normally follow contract definition phase, but without a production commitment at this time. However, by contract award, we will have defined a contract on which this development will be based.

Second, the additional FY 70 funding does not, as mentioned above, commit us to build any production airplanes. The initiation of the development program at this time will provide us with test results on an engineered AMSA configuration and appropriate subsystems upon which future production decisions can confidently be made.

Third, we have made no commitment nor do we now have any plans to buy a specific force size of AMSA airplanes. Therefore, it is not possible to allocate development cost on a per unit basis. However, the RDT&E program is estimated to cost about $1.8B. We cannot at this time give any firm costs on production units since this is dependent on the system configuration and negotiations with the contractors that will participate in the program. However, based on the past three and one-half years of preliminary design effort, we estimate the production airplans will cost about $25M to $30M when bought in quantities in excess of 200 airplanes.

Fourth, we have not decided on a force size at this time. I believe that the number of planes that you mentioned should be considered as the upper limit of the procurement and represent the number of AMSA airplanes necessary to duplicate the task performed today by the B–52 fleet. The fleet size will be determined based on our forecasted strategic needs at the time a production decision is made. If the number of planes you suggested were ultimately procured, I would estimate the program cost to be about $9B not including operating costs.

Fifth, we believe it important to maintain a deterrent posture with a mixture of all three elements of our strategic force—bombers, land based missiles and sea based missiles. The mixture is a hedge against any one of the elements failing to deter a potential enemy. The mixture also compounds his problems and fragments his resources in trying to negate our deterrent. For example, defense against the bomber attack requires a basically different system than that required against the ballistic missiles. In similar fashion, he might attack the land based missiles with ICBMs but these would not be effective against the sea based missiles. In general, we are not trading off bombers versus missiles to arrive at a single system for our strategic deterrent. To do so is a high risk approach allowing an enemy to focus his resources against that system. In view of the consequences involved, a high risk approach to strategic deterrence is not an approach consistent with national security objectives.

Sixth, since we view AMSA as an economic replacement for the B–52 force, it is difficult to see how the replacement of over 600 B–52s with far fewer AMSA airplanes could be interpreted as a provocative action or an escalation of the arms race.

Additionally, I would like to note that we do not consider AMSA as a replacement for the FB–111. When the decision was made to develop the FB–111, it was considered to be an interim measure and not as a strategic system with the 20-plus years lifetime of the B–52 force. Again, we consider AMSA to be the B–52 replacement and intend to tailor its characteristics so that it will endure as the strategic bomber with a lifetime similar to that realized by the B–52 force.

The additional FY 70 funding has been proposed because the program we now visualize has a shorter competitive period for some of its elements resulting in an earlier start on some elements of detailed engineering as compared to the previous program.

I trust that the above information answers your questions on the objectives of and approach to the development of AMSA. I will be pleased to answer any additional questions that you have on this matter.

Sincerely,

JOHN S. FOSTER, Jr.

EXECUTIVE REPORT OF A COMMITTEE

As in executive session,

The following favorable report of a nomination was submitted:

By Mr. SPARKMAN:

Hamer H. Budge, of Idaho, to be a member of the Securities and Exchange Commission.

EXECUTIVE SESSION

Mr. SPARKMAN. Mr. President, the Committee on Banking and Currency unanimously voted in favor of recommending to the Senate the confirmation of the nomination of Hamer H. Budge to be a member of the Securities and Exchange Commission. The nomination has just been reported.

I ask unanimous consent—and I may say this is agreed to by both sides of the aisle—that the Senate proceed in executive session so that we may take up that nomination at this time.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate proceeded to consider executive business.

SECURITIES AND EXCHANGE COMMISSION

The PRESIDING OFFICER. The nomination will be stated by the clerk.

The legislative clerk read the nomination of Hamer H. Budge, of Idaho, to be a member of the Securites and Exchange Commission.

The PRESIDING OFFICER. The question is, Will the Senate advise and consent to the nomination?

Without objection, the nomination is confirmed.

Mr. SPARKMAN. Mr. President, I ask that the President be notified immediately of the confirmation of the nomination.

The PRESIDING OFFICER. Without objection, the President will be so notified.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

There being no objection, the Senate resumed the consideration of legislative business.

ORDER FOR ADJOURNMENT UNTIL THURSDAY, JUNE 5, 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 12 o'clock noon on Thursday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEAVE OF ABSENCE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I be officially excused from attendance upon Senate business from Wednesday, June 4, until Friday, June 13, 1969, for the purpose of attending a meeting of the United States-Canadian Parliamentary Group in Ottawa, Canada, and to spend a little time in Montana at this particular time of the year.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONGRESS AND THE TOBACCO INDUSTRY

Mr. LONG. Mr. President, in today's Washington Post an editorial appeared entitled "Bowing to the Tobacco Lobby."

The problem raised by the discovery of the connection between cigarette smoking and cancer, heart disease, and other diseases requires that either Congress or certain regulatory agencies take action in the public interest.

I, for one, do not care to see the tobacco people badly injured, or driven out of business. It seems to me that in this situation it might be very appropriate for Congress to dedicate some of the money raised from the cigarette tax to pay the tobacco industry for any loss it might suffer if it were compelled to quit advertising cigarettes on television, radio, and the other media controlled by Federal regulatory agencies.

The problem is one that we cannot ignore, and the fact that we have failed thus far to serve the public interest has done nothing to reduce the rate at which people smoke tobacco, or in fact the rate at which new young people are recruited as smokers. People are led to believe that there is something in smoking that involves good taste, or makes one more desirable as a man or as a woman, as the case may be. Evidence would tend to indicate that since the disclosures have come forth, we have more or less played the part of a patsy for the tobacco industry, letting them go ahead and expand their sales while failing to take any significant action to inform the public of the health hazards, or do anything to limit the advertising of the product.

I have for some time considered drawing up a bill to help the tobacco industry divert its efforts into other lines, by means of grants, insured loans, subsidies, or whatever it would take to concentrate the efforts of the industry into something more constructive and more in the public interest. The fact that Congress has thus far done so little about the disclosures achieved by public and private agencies is clear evidence, on the face of it, that we should be thinking in terms of some sort of effective action in this general area. I expect to draft and introduce legislation along that line sometime soon.

I ask unanimous consent to have printed in the RECORD the editorial entitled "Bowing to the Tobacco Lobby," published in today's Washington Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BOWING TO THE TOBACCO LOBBY

The House Commerce Committee has put itself in a very awkward position. By a vote of 22 to 5 it has reported out a bill which has as its chief purpose the suppression of information about the health menance of cigarettes. In the face of growing concren over deaths resulting from cigarettes, the Committee has yielded to the tobacco lobby in shameful fashion.

The main thrust of the bill is not altered by the fact that it would also require a somewhat stronger warning on cigarette packages. Its basic purpose is to stay the hand of regulatory agencies in dealing with this hazard to health until 1975. If passed, the bill would prevent the Federal Communications Commission from putting into effect the ban on television and radio advertising of cigarettes, which it already tentatively approved. It would also thwart a proposed Federal Trade Commission requirement that cigarette ads include a warning that smoking may cause death from cancer and other diseases.

Nearly six years ago the Surgeon General's Advisory Committee on Smoking and Health concluded that "cigarette smoking is causally related to lung cancer" and that the death rate from coronary artery disease, the foremost killer in America, is 70 per cent higher for cigarette smokers. Much independent research since that time has confirmed these findings of lethal consequences from smoking. Yet a substantial majority of a congressional committee supposed to represent the people in their respective districts has voted to prevent any effective remedial action from being taken.

This comes uncomfortably close to being a public-be-damned attitude. To put it bluntly, a freeze on any type of regulatory action against the promotion of cigarettes for six years would be bound to contribute, at least indirectly, to many thousands of unnecessary deaths. The country cannot afford such slavish obeisance before the tobacco industry. In dealing with any such widespread habit as smoking the Government must of course feel its way. It can take only one step at a time. But with conscientious regulatory bodies prepared to take such cautious steps, it would be an outrage for Congress to say that this one cause of death must be given free rein to help the tobacco industry. If Congressmen will permit themselves to think realistically about this issue and about the probability of a backfire against the callous demands of the tobacco lobby, they will consign this reckless Commerce Committee bill to the grave that it deserves.

UNITED STATES BUYS "GREAT SOCIETY" FOR JOHNSON

Mr. WILLIAMS of Delaware. Mr. President, in the May 11, 1969, issue of the Philadelphia Inquirer there appeared an article by Saul Kohler entitled "United States Buys 'Great Society' for Johnson."

This article calls attention to the elaborate expenditure of Government funds to build a replica of the President's office for ex-President Johnson.

The Federal Government has always recognized the need for providing facilities for ex-Presidents, and as a Member of Congress I have supported such steps. There can be no justification, however, for this Texas extravaganza. The expenditure of this large sum is not necessary to perpetuate the memory of the Great Society—the unpaid bills that were charged to the future generations will remain as a sufficient reminder.

I ask unanimous consent that this article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES BUYS GREAT SOCIETY FOR JOHNSON

(By Saul Kohler)

WASHINGTON, May 10.—The Great Society of Lyndon B. Johnson, while it may be down, certainly is not out.

It isn't likely to be, so long as the government underwrites the expenses involved in immortalizing the former President—right down to a Texas replica of the White House oval office, $454,981 in annual salaries for employes and consultants, a brand new $440,000 post office and federal building for Johnson City, Tex. (pop. 385), and machines ranging from a $10,155 typewriter with a brain to a security-minded waste basket for $445.50.

Those are some of the expenditures in the name of transition disclosed in a survey by The Inquirer.

Originally, the Presidential Transition Act of 1963 provided that the changeover take six months. Several congressmen now suggest that it be extended to a year, but a recent opinion by Comptroller General Elmer B. Staats suggests 18 months.

Meanwhile, that Johnson inventory in Texas includes:

The $12 million Johnson library building being constructed by the University of Texas, for which informal planning began in 1966, and construction in 1967. It is here that the oval office replica will be built, right under the helicopter landing pad on the roof.

$208,400.62 worth of office equipment, $148,550.31 of it for Mr. Johnson's office in Austin. The ex-President also maintains offices in Dallas and Johnson City. The Austin offices are provided and maintained by the operators of the Commodore Perry and Driskill Hotels. The government is leasing basement office space in the Johnson City Bank until the new post office building is completed.

Salaries of $28,000 a year for an executive assistant and two special assistants to Mr. Johnson. The former is Wyatt T. (Tom) Johnson Jr., who served as deputy White House press secretary under Mr. Johnson.

Consultant fees of $100 a day for Walt Whitman Rostow (who works 12 days in each of the government's 24 pay periods) and for Yoichi R. Okamoto (who works 10 days). Rostow, former Presidential adviser, thus would receive $28,800 annually, and Okamoto, the photographer who was assigned to the White House in the Johnson years, $24,000.

The bulk of the staff is assigned to the Lyndon Baines Johnson Library from various departments of the government, and the 29 employes may return to their normal duties later. The transition staff consists of 14 persons.

The library, actually a complex which will include a 100-seat auditorium, a 205-seat lecture hall, archives and audio-visual research facilities, will be completed next April.

Office facilities for former Presidents heretofore have been limited to:

A suite in the Waldorf-Astoria Hotel, New York, for Herbert Hoover.

Office space in the library building at Independence, Mo., for Harry S. Truman.

The residence formerly occupied by the president of Gettysburg College for Dwight D. Eisenhower.

The Johnson City post office would have two stories and a penthouse, with elevators, air-conditioning, a fallout shelter and exterior parking.

Johnson City, the seat of Blanco County, is about 40 miles west of the state capital at Austin. Its principal industry is agriculture.

"The principal requirement for the building is to meet the growing needs of the postal service in the postal area served by the Johnson City post office now located in inadequate leased facilities," a high government official wrote last September.

"In addition, the boyhood home of President Lyndon B. Johnson, located in this community, has been included in the National Register of Historic Places. . . . The community thus attracts numerous visitors.

"It is appropriate, therefore, that federal activities serving the community and its environs be housed in a federal building which reflects the full dignity of its location."

At present, the government pays $1860-a-year rent for the space occupied by the Post Office and Department of Agriculture.

While waiting for the luxurious new facility, the government has spent $10,418 to refurbish the basement of the Johnson City Bank for the President's use—the bank collects $1 a year as rent—and $59,850 for administrative equipment.

The office machines and furnishings include an IBM "selectric" typewriter for $10,155; two similar but smaller models at $7210 each; $5890 worth of dictating and transcribing equipment, and a "destroyit" waste basket which shreds scrap paper for security reasons, at $445.50.

There also is a stapling machine worth $159.44 and an envelope opener which cost $245.

The justification for the high-priced library staff is contained in a confidential memorandum, which says in part:

"The staff of the Lyndon Baines Johnson Library performs a wide range of services for former President Johnson and his immediate staff. The library director (Chester A. Newland, at $26,264 a year) and his assistants respond directly to the many written and oral inquiries addressed to former President Johnson regarding his papers and other historical materials, the other research resources available through the library, and all aspects of the library's current and projected activities.

"The library staff performs essential services in locating and furnishing previous correspondence and information from the former President's papers necessary to respond to the continuing heavy volume of his current correspondence.

"It provides from his papers background material and data required by the former President and his staff in preparing statements, speeches and articles or other writings for publication. It also provides copies of photographs and motion picture footage intended for use by the former President in his varied activities."

The mail unit which handles Mr. Johnson's correspondence is multilingual since much of his mail comes from abroad.

The idea of the oval office, identical to the Chief Executive's work room at the White House, came from Mr. Johnson.

And this is the justification for it:

"A former President requires suitable accommodations for the reception of distinguished guests and officials, without sacrificing the privacy of his home or business office . . ."

Mr. Truman has available to him an office in the Truman Library, and Gen. Eisenhower had an office in Gettysburg.

But neither matched the grandeur and solemn splendor of the Oval Room in Texas, where no visitor will be able to forget that Lyndon B. Johnson once was President of the United States.

Mr. LONG. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE SAFEGUARD PROPOSAL

Mr. MANSFIELD. Mr. President, the Senator from New Hampshire (Mr. McINTYRE) delivered an address this past week to the New Hampshire Council on World Affairs entitled "To Strike a Balance—A Constructive Alternative to Safeguard."

I feel that this speech is a useful addition to the dialog, and, accordingly, I ask unanimous consent that it be printed in full at this point in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TO STRIKE A BALANCE—A CONSTRUCTIVE ALTERNATIVE TO SAFEGUARD

(By Senator THOMAS J. McINTYRE)

Only a few times in our Nation's history have we faced a more far reaching, more profound, more truly significant debate than we face today in dealing with President Nixon's proposal to deploy the so-called Safeguard system.

You have to look back in our history to the raging controversy over the League of Nations after World War I or the bitter discussion over Lend Lease before Pearl Harbor to find our people as involved and as deeply concerned as they are today over Safeguard.

As in those cases, the immediate question at hand is most significant as a symbol of a much broader issue. The Safeguard debate is the most visible public focus of a searching national review in which Americans are presently engaged—a review of the size and role of the defense establishment in American life.

This review involves a cluster of basic questions which Americans of persuasions are asking of themselves and their government. Questions such as:

How much defense is enough?

How much deterrent is sufficient?

How much can we afford to spend on the military when our domestic needs are so vast and urgent?

What are America's international responsibilities in a troubled, divided, and hungry world?

Are we doomed to an unending arms race or can we somehow turn the corner with a secure arms limitations agreement with the Soviets?

How do we protect ourselves and others against a Russia which invaded Czechoslovakia and which continues to pile up strategic arms at a horrifying rate?

How does a democratic society assert its legitimate control over a new, powerful, and often independent complex of military and industrial institutions which have arisen in the last generation?

These questions transcend politics, station in life, and background. I do not need to remind anyone here of President Eisenhower's frank and open warning about the possible dangers of "misplaced power" rising out of the combined influence of a huge military establishment and big defense contractors. More recently, the distinguished former Marine Corps Commandant, General David M. Shoup, one of our valiant war heroes spoke out about the increasing influence of the "burgeoning military establishment and the associated industries which fuel it."

So these are not dove questions—nor hawk questions. They are *American* questions—ones which we as responsible citizens and representatives should properly be asking.

It is not enough merely to pose these questions rhetorically—as if the answers were self-evident. Nor is it enough merely to mouth these questions solely as expressions of the human feelings of frustration, fear, and anger about the violent world we live in.

Nor is it enough to ask only some of these questions. For example, it is no more useful to inquire only into the rising cost of the military and the threat of an arms race than it is to focus exclusively on the threats to our national safety.

This national review of the size and the role of the military must be searching, open-minded, and balanced. *It must be balanced.*

I feel the need for a balanced approach is especially crucial in this particular case before us tonight—President Nixon's proposed Safeguard system.

In my review of the maze of conflicting testimony on the Safeguard, I have focused on five basic issues which I feel must be confronted and balanced in coming to a decision on the proposal.

First, will the Safeguard system work?

Second, will the deployment of Safeguard intensify the arms race?

Third, will the deployment of Safeguard help or hinder the negotiation for a secure arms limitations agreement with the Soviets?

Fourth, is there a Soviet threat to the strategic balance? And if so, is an ABM system the best way to react?

Fifth, how would the deployment of the Safeguard system affect our efforts to meet our urgent domestic needs?

Let's examine each of these in turn.

The question of whether the Safeguard system will work cannot be answered with a simple "yes" or "no." The system has five basic parts—a long-distance radar, a short-range radar, a long-range missile (Spartan), a short-range missle (Sprint), and a computer which ties together the entire system. Each of these components has been tested and is capable of working as a separate unit.

Still the Safeguard would be the most complex weapon system ever built. Since its mission is defense and since it would have to react to surprise, its requirements for accuracy, speed, and reliability would be far more demanding than in any previous system. The crucial question about Safeguard's dependability is whether its components will work together as a reliable integrated system.

Expert witnesses—both for and against the system—agree that at least three vital questions remain about the Safeguard's workability as a system:

1. Would the radars and the computers work reliably together as an integrated system?

2. Is it possible to write a computer program for so complex a system?

3. Can such an intricate system be maintained at the necessary "hair-trigger" state of readiness over long periods by operational military crews—as distinguished from the teams of scientists and technicians who tested the individual components?

I believe we would need better answers than we now have to these questions in particular, before we could deploy the Safeguard system with a high degree of confidence in its reliability.

The second basic consideration for me has been whether the deployment of the Safeguard would intensify the arms race.

The first phase of the President's proposal, which calls for deployment at two Minutemen sites in Montana and North Dakota, is designed for the defensive purpose of protecting our deterrent. The Sprint missiles travel only a very short distance and obviously could not be used to attack the Soviets. The Spartans have a longer range, but would have to be substantially modified to be used as an offensive weapon against Russia. Hopefully the Soviets would not misread our intentions.

But no matter what our actual interest, no matter what the precise military effect of the deployment of this first phase, we still would be adding more and new kinds of nuclear weapons to our arsenal if we deployed even at two sites. And this could be used as an excuse by the Soviets to add to theirs.

The probability is even higher that the later stages of Safeguard contribute to an intensified arms race. Although these phases of Safeguard are designed primarily to protect our deterrent by defending SAC bases, more Minutemen sites, and Washington, D.C., this full system would also have the incidental effect of establishing a continental radar system covering most American cities.

Soviet planners would no doubt react to this full system in the same way that we reacted to their installation of an ABM system around Moscow—by adding more and new kinds of offensive weapons.

In fact, the Soviets would probably overreact. Whatever the actual reliability of the Safeguard, the Soviet planners would respond on the assumption that it would be highly reliable as we did with their low grade system around Moscow. We would then be faced with the prospect of having to react to their over-reaction—and on and on and on.

Therefore, there is little doubt in my mind that the full deployment of the Safeguard and to some extent even the deployment of the weapons in the first phase would intensify the arms race.

Of course, no matter what we do, the Soviets may pursue their side of the arms race just as fiercely. We all must face up to that awful possibility. This potential Soviet threat to the strategic balance has been a third and very crucial consideration for me—a consideration which I deeply feel to be essential to any balanced analysis of Safeguard.

Let me make it clear at the outset that I regard this strategic nuclear balance as the surest guarantee of avoiding nuclear war now and in the foreseeable future.

We cannot choose between national security and nuclear peace. We cannot at this point have one without the other. The gravest and most horrible threat to our safety is a nuclear exchange, and nuclear peace depends on our having sufficient strength to maintain the strategic balance. Hopefully, in the future we might be able to limit, perhaps even to scale down, the level of strategic arms. But until that occurs the maintenance of the strategic balance is essential to avoiding nuclear war.

If the stability of this strategic balance were ever drastically altered so that the Soviets began to believe that they could destroy our deterrent and escape retaliation, then and only then might they be tempted to try a nuclear attack. Therefore, the credibility of our deterrent is absolutely essential to a secure peace. Everyone of the witnesses who testified on the Safeguard before the Armed Services Committee—both in and outside the government, both for and against the system—agreed on this fundamental premise.

For now, until at least the mid-1970's our deterrent and the strategic balance are secure beyond doubt, according to Secretary of Defense Melvin Laird.

But the Soviets are presently building their strategic weapons at a very rapid pace, and it is very difficult to tell whether they will be able to alter the basic strategic balance in the mid-1970's.

They are rapidly building large numbers of gigantic missiles which are clearly designed to threaten our Minuteman Force.

They are rapidly building attack submarines which might, in the future, be able

to threaten our presently invulnerable Polaris submarine force.

They are rapidly building their own Polaris-type submarines which might, in the future, threaten our SAC bomber bases.

If the Soviets continue this buildup, they might be able to threaten our deterrent forces, alter the strategic balance, and we would have lost our most secure existent guarantee against a nuclear war.

It is extremely difficult to assess the severeity of this potential threat to the strategic balance. It is unclear whether the Soviets will continue to build at such a feverish pace. It is unclear whether they would be able to overcome future improvements in our own strategic capability.

It is unclear whether they would be able to overcome future improvements in our own strategic capability. Even if they had sufficient weapons, it is very unclear whether they would be able to mount an attack with sufficient coordination and precision to destroy our deterrent forces completely.

The difficulty of assessing this potential threat to our deterrent and developing an adequate response, is compounded by the long lead-time that is required to develop and deploy weapons. By the time we would know for sure that the Soviets could threaten the balance, we might not have enough time to react effectively. This is especially crucial with the radars and computers in Safeguard which require an especially long lead-time to rest and integrate as a system.

Even if we would conclude for certain that the Soviet threat to our deterrent will be substantial by 1975, it is unclear whether the Safeguard system would be the most effective way to react.

There are other alternatives which some have proposed as being more effective at less cost. For example:

—We might super-harden our Minuteman sites—we might increase or improve our offensive weapons—or—we might develop ways of insuring the continued invulnerability of our Polaris submarines.

But however difficult it is to assess the potential threat to our deterrent—however difficult to choose an effective response—I feel very strongly that the security of our deterrent must be a prime consideration in any balanced analysis of the Safeguard system.

But if the security of our deterrent is essential to the uneasy kind of peace we now have with the Soviets, we must also seek a less tense and a less frightening kind of peace for the future.

To the human spirit, to a nation's soul, the quality of the peace is as important as its existence.

We must therefore make every effort to negotiate a secure arms limitations agreement with the Soviets. I was particularly impressed that all the witnesses before the Armed Services Committee—both advocates and critics of the Safeguard system—agreed unanimously on the importance of our pursuit of such negotiations.

Despite this agreement, there is a wide disagreement on whether Safeguard would help or hamper our progress with such negotiations. The critics of Safeguard have argued that the introduction of this new weapons system might raise doubts in the minds of the Soviets about how interested we really are in arms limitations. The critics also point out that the newness and the unknown capability of the ABM would unduly complicate an already complex task of reaching such an arms agreement.

However, the effectiveness and security of any such arms limitations agreement with the Soviets must depend on the Soviets believing that they have some interests similar to ours. Such an agreement must be rooted in this kind of mutual self-interest. I believe that our continued development of the Safeguard might drive home to the Soviets the fact that they have a stake in keeping the arms race in check, too. If they knew that we could deploy an ABM system—a new kind of system which would require heavy expenditures on their part to overcome—then this might be precisely the kind of incentive that would bring them to the bargaining table for real talks on arms limitations.

We must also be aware that in any such bargaining process, whether it be for arms limitations, or peace in Vietnam, the President's ability to negotiate effectively depends in large part on the general belief that he enjoys the confidence of the American people. A flat denial of the President's request for the Safeguard system could be construed as a vote of no confidence and might therefore hamper his ability to negotiate an honorable peace in Vietnam and an effective arms limitation with the Soviets. If at all possible, and if other considerations would permit, I want to help preserve as much as possible of the President's bargaining effectiveness as he seeks a more peaceful world.

A fifth major question I have asked about the Safeguard system is the effect its deployment would have on our effort to meet our urgent domestic needs.

It is unclear how much this system may finally cost. The President's proposal to deploy the system at only two sites would cost at least 2.1 billion dollars, not including several hundred million for related research and developemnt. This deployment would give momentum to eventual deployment of the whole system which the Administration says would cost in the neighborhood of 8 billion dollars, again not including related R and D.

Yet it might cost more. Recent overruns of cost estimates for other weapons systems—especially new ones—cast considerable doubt on the reliability of initial projections. I notice a recent article in the *Manchester Union Leader* which reported that the highly respected Defense Marketing Service at McGraw-Hill Company has completed a study estimating that the eventual total cost of the entire Safeguard system might be in excess of 13 billion dollars.

That amount of money would carry out our present hunger programs at the present rate for nearly a decade.

It would finance aid to elementary and secondary education for more than four years.

It would finance Federal law enforcement, anti-crime programs until the year 2030 (60 years).

Of course, it has been properly pointed out that if we become vulnerable to a nuclear attack, our domestic needs might go up in smoke along with the rest of our society. But it is equally true that our domestic needs are now so urgent and divisive that unless we somehow meet them, we might have no Nation to defend.

So what we desperately need is a balance of domestic and military priorities. As Senator Mike Mansfield recently said, "You have to achieve a balance somehow between external and internal security."

I feel that the American people want this balance and in order to achieve it we must somehow turn the corner on our spiraling defense costs.

During the past few months as I have tried to evaluate the Safeguard system, I have made every effort to seek the very best information I could from sources both in and outside government—both for and against the system. As a member of the Senate Armed Services Committee, a member of the Senate Preparedness Subcommittee and as chairman of the Subcommittee on Military Research and Development, I have felt a special responsibility to arrive at an independent and informed decision. I have devoted literally scores of hours in the past weeks in hearings and at briefings, questioning nearly half a hundred experts. I have read several dozen studies and reports on this subject both for and against Safeguard. I have also benefited from hundreds of thoughtful and informed communications from people in New Hampshire and throughtout the Nation. As I have weighed the mass of evidence and conflicting arguments, I have constantly sought to strike a balance of the five basic considerations I have discussed thus far.

I have concluded that a simple "Yea" or "Nay" to the President's Safeguard proposal does not in my opinion give such a satisfactory balance.

A simple "Yea" vote would deploy a system of uncertain reliability. The first phase would gain us little in actual protection of our deterrent. The cost would be enormous and the money expended might better be allocated to our internal problems. A simple "Yea" to the deployment of more nuclear weapons especailly as called for in the full system, would accelerate the arms race.

On the other hand a simple "No" vote as I pointed out above might hamper our attempt to negotiate an effective arms limitation treaty with the Soviets. A simple "No" might, to some extent, limit the President's bargaining position in his search for a more peaceful world. A simple "No" might mean that we would be unable to react in time if the Soviets continue to develop a threat to the basic strategic balance which is our essential guarantee against a nuclear war.

Since neither a simple Yea nor Nay meets the complex of issues I have discussed here tonight—issues which I feel to be crucial—I have been seeking in recent weeks a constructive and balance alternative to Safeguard.

Such an alternative must be carefully conceived. It cannot be an artificial compromise designed for political convenience. It must arise from a genuine effort to meet all the issues I've discussed.

I have heard of some such compromises which had no substance once their surface was scratched. For example, I have heard of one compromise which would deploy the Safeguard system at only one base. I guess this was designed to allow someone to say to one side: "See, we've cut back the President's proposal," and to the other side: "See, we are still deploying more weapons."

This is more a political compromise than a constructive alternative. Deployment at only one base would completely leave out the chance of an interplay of the radar and the computers between two locations. This problem of the interaction of the electronic components and related questions are the most difficult technical problems in the proposed safeguard system—problems which we must solve if we are to retain the option of meeting a clear Soviet threat in the mid-1970's. Deployment of the system even at one base, still leaves us with a system of uncertain reliability. The deployment of weapons, even if halved in number, would not relieve the fear of an intensified arms race.

But while such a political compromise is artificial and ill-conceived, I believe there *is* a constructive alternative to the Safeguard which naturally and logically emerges from a balanced review of the five considerations I've discussed tonight.

Let me state this alternative simply and briefly:

1. Deploy no ABM missiles at the present time. Require full Congressional review and approval of any future deployment of such weapons.

2. Continue our research and developmental testing of the radar and computer components of the Safeguard system, and install two sets of radars and computers so that we can test them as an integrated system.

The precise location of the two test installations is not as important as the essential features of the alternatives. There are two obvious possibilities: We could install the radars and computers at the North Dakota

and Montana sites suggested in the President's proposed first phase of Safeguard, or we could add to our present testing apparatus in the Kwajalein Island area in the Pacific. There are advantages and drawbacks to each of these.

Installations in North Dakota and Montana could be seen as the first step toward eventual deployment. But on the other hand, this location would be cheaper and would involve no substantial delay in the development of the potential to deploy in the future.

The Kwajalein location would cost us both more time and more money. It would also be difficult to continue other kinds of research and development at the same place. On the other hand, this location could not in any way be construed as a foot in the door to future deployment of an operational system.

Whichever location is chosen is not so important as the basic ingredients of the alternative:

No deployment of the weapons in the system now;

No future deployment without Congressional review and agreement;

Continued research and development of the radar and computers at two sites so that we can test the integration of the system.

If we adopt this alternative we would not be contributing in any overt way to an intensification of the arms race, because no weapons would be deployed.

The Soviets would have an incentive, rooted in their own self-interest, to enter promptly into effective negotiations for arms limitations, because we would be developing the capacity to deploy at a later date.

This alternative would save hundreds of millions of dollars which could be used at home. I am told by an authoritative source in the Administration that we would save at least 10 percent of the cost of deploying the first phase of the system.

If through our testing, we eliminate the bugs before any costly full deployment of the system, this alternative could save us billions in misspent funds.

We would preserve our ability to counter any clear Soviet threat to our deterrent in the mid-70's. I have been assured by authoritative Administration sources that we would not substantially delay our ability to deploy a Safeguard system in the future if we adopted this alternative for this year. Our development and testing of the interceptor missiles is well enough along that a decision not to deploy this year would not hamper our development of the total system. We would have more time to evaluate intelligence information on Soviet strength and to calibrate a more precise response.

The thorough testing of this system will give us a much more reliable system if we ever need to deploy it.

We would concentrate on the most difficult technical problems in the system—the integration of the radars and the computers, the development of the computer program, and the effectiveness of uniformed military operational personnel.

We would avoid any possibility of accidental firing of nuclear weapons in the early testing stages of the systems. We would have time to work on the difficult problem of maintaining Presidential control over the firing of nuclear weapons.

In sum, the alternative I am proposing would not intensify the arms race; it would help us secure an effective arms limitation agreement; it would seek to answer the hardest questions about the system's workability; it would symbolize our turning the corner on defense spending; and it would preserve our ability to meet in time any clear Soviet threat to the strategic balance in the 1970's.

I am hopeful that my proposal will appeal to a broad range of opinion.

It meets the pressing need for further testing and development of the system—a need stressed by every witness who appeared before the Senate Armed Services Committee, regardless of whether they supported or opposed Safeguard.

And above all it strikes a balance in our consideration of the twin problems of achieving national safety and a secure peace.

ORDER OF BUSINESS

Mr. PROXMIRE. Mr. President, I ask unanimous consent to proceed for such time as I may require.

The VICE PRESIDENT. Without objection, it is so ordered.

SECRETARY ROMNEY SHOULD MEET HOUSING GOALS

Mr. PROXMIRE. Mr. President, the housing goals established by the Housing Act of 1968 can be met. While I am pleased that the Secretary of Housing and Urban Development, Mr. George Romney, has accepted those goals, I am alarmed at his repeated statements downgrading our ability to meet them.

While he has accepted them in principle, he has denied them when they are expressed in specific terms. But a housing goal is no goal at all if it is not expressed in the number of units to be built or the number of people to be housed, or the degree to which the needs of all American citizens can be met for a decent home in a suitable living environment as the 1949 act called for two decades ago.

EXCUSES, EXCUSES

The Secretary says he is for the goals, but that we do not have the resources to meet them.

He says he accepts the goals but is not prepared to endorse the production schedules forecast in the past to carry them out.

He is for them, but says they cannot be carried out until three preconditions are met; namely, first, until inflation is brought under control, second, until a "systems breakthrough" to new high volumes of production is made, and third, until Congress provides the funds to get the job done.

The Secretary is wrong on all three counts. These are excuses or defenses against the Secretary's unwillingness to meet the specific goals Congress has established for this year and next year and the years which follow.

The fact is that he can meet the goals next year if he will try. They can be met before inflation is finally brought under control, before a new "systems breakthrough" is reached, and with the funds already available or which can reasonably be expected from Congress.

Mr. Romney is "poor mouthing" and making excuses now so that if he fails to meet the goals he can say a year from now, "I told you so." The Secretary should stop building alibis and start building houses.

NATION CANNOT WAIT

We cannot wait until every problem in the world is solved before we meet our housing goals. If we wait until inflation is under control, or the Vietnam war is over, and a systems breakthrough is accomplished, we will never succeed.

Let us examine the Secretary's objections.

On the point of a "systems breakthrough" alone, there is a great deal of confusion. One finds it difficult to distinguish between Mr. Romney's "Operation Breakthrough," talk of a "systems breakthrough," and the need for industrialized housing.

I think the Secretary has somewhat muddied the waters. Let us distinguish between a new "systems breakthrough," and Mr. Romney's "Operation Breakthrough."

"SYSTEMS BREATHROUGH"

The talk of a new breakthrough or of some new material or method of process of production which will dramatically change the housing industry has been going on for years. Every year such a "breakthrough" has been just around the corner. And every year that dramatic breakthrough has not come.

If we have to wait for it, we will wait forever.

If we have to count on it before our housing goals are met, we will wait for the millennium to arrive.

It would be fine if a "systems breakthrough" were reached. But that is not needed, at least stated in the way Mr. Romney has stated it.

There now exists in the housing industry an abundance of materials and a variety of methods which if organized efficiently and used appropriately could bring dramatic reductions in housing costs.

The use of existing prefabrication techniques and large scale production, both on and off the site, could bring great savings in housing costs if applied more generally.

APPLY EXISTING STATE OF THE ART

What we need to do is to apply the best techniques of the existing state of the art more widely. We need not wait for a dramatic "new systems breakthrough" either in materials or construction processes in order to realize major reductions in costs.

As the Douglas Commission said, after a full year's study, on this point:

> There are many who believe that more ambitious departures from present patterns and major technological breakthroughs are the wave of the not-very-distant-future. Engineering and architectural journals are filled with new ideas for revolutionizing the construction process and for applying advanced systems approaches to the problems of meeting the Nation's housing needs.
>
> A vision of the future is necessarily speculative, and many judgments about the potential savings and advantages of the construction technology of tomorrow remain acts of faith. Talk of major technological breakthroughs is not new; it has been part of the just-around-the-corner school for 40 years.

Mr. Romney must not wait for new dramatic breakthroughs before he tries to meet the housing goals.

That is the kind of talk which led the industry to laugh the recent "In Cities" project out of court.

If Secretary Romney waits for the dramatic breakthrough instead of combining existing prefabrication techniques with existing large-scale production, he will fail. As they say in the industry, if he

goes down that path, "He will break his pick."

The Secretary should get on with the job of organizing his Department and the industry to meet the 1970 housing goals. The public should not be misled by excuses that the new "breakthrough" did not arrive.

OPERATION BREAKTHROUGH

Now, what about the Secretary's Operation Breakthrough as distinguished from the general talk about new systems breakthroughs?

By promoting industrialized housing, the Secretary is going down the right path. By calling it Operation Breakthrough, he, unfortunately, calls up all the connotations and symbols associated with the mumbo-jumbo of HUD press releases over the last decade.

By asking for a series of prototypes to be tested for marketability and in an actual setting or physical environment, the Secretary is pursuing correct policies.

But the initial announcement that only 30 to 40 units of each prototype is to be built is wholly insufficient.

In fact, that fails to carry out the mandatory language of section 108 of the Housing Act of 1968. That language calls for at least 1,000 units a year of at least five prototypes for 5 years, or 25,000 units to test whether costs can be reduced by mass-production methods. As the author of that amendment, I think I know what I am talking about. It is required.

If we are to get a genuine test of whether industrialized housing can succeed in cutting costs, a far larger number of units must be built than the 300 to 500 units overall Mr. Romney proposes. Cost cutting can only come with volume. And industrialized builders almost universally agree that a producer needs to build at least 1,000 units before the efficiencies of mass production begin to offset the huge initial capital costs involved in factory-built housing.

Finally, while "Operation Breakthrough" is to be welcomed, it must not become an excuse to put off a major effort to meet the 1968 Housing Act goals.

The 300 to 500 units under Operation Breakthrough will not be built for 22 months or more, according to the HUD announcements. As the Secretary made the success of Operation Breakthrough a precondition of meeting the housing act goals, that means he has thrown in the towel for 1969, 1970, and 1971.

That must not be done. Operation Breakthrough, with its strengths and its limitations, must not become an excuse for inaction, postponement, and delay.

WHY THE GOALS SHOULD BE MET AND HOW TO MEET THEM

Now, let me turn to two general areas that directly relate to the housing problem. The first is what our housing needs are and why, as a society, we have a moral obligation to meet them.

The second major area is how these needs can be met, how the housing goals can be reached, and why we should no longer accept excuses from the Secretary about them.

Contrary to the Secretary's statements, the funds, the land, the resources, and the technology are now at hand to meet the goals.

We should not and must not accept additional excuses from the Secretary that the goals cannot be met.

HOUSING NEEDS

Based on census figures, there are in this country about 7 million substandard housing units which should be removed. This is the number of houses which are so dilapidated or lack elementary plumbing that they are unfit to live in and should be destroyed and replaced.

In addition, there are about 4 million standard housing units which are overcrowded. That is to say, there is more than one person per room living in the same house, which is the census test for overcrowding.

About 4 million new units need to be built to house the second family in these standard overcrowded units and in the substandard overcrowded units.

We, therefore, need a total of at least 11 million units merely to replace existing dilapidated units and to house those in overcrowded units.

CONSERVATIVE STATEMENT OF NEED

This need is very conservatively stated. This is true because:

First, the estimates are based on census data. A unit with no kitchen, with plumbing in the basement although the unit is on the second floor, with inadequate total space or sleeping space, with an absence of light or ventilation, or with low ceilings, to use several examples, would not necessarily be included as a "substandard" unit.

Because of these inadequate definitions, the census data underestimates housing needs.

Second, the data is based solely on the condition of the house and makes no judgment about the environment. If the house is unfit to live in because it is surrounded by freeways or railroad tracks; if noxious fumes pour down on it from nearby factories; if the lot next door is littered with garbage; if there are no street lights; if there is an absence of police protection; if a liquor store is on the corner in a residential neighborhood; if there is a rendering works in the block; if the noise level is excessive; or if the streets are not paved or if there are potholes in the blacktop; such a unit would not be classified as substandard if its physical condition met certain standards and it had a minimum amount of indoor plumbing.

So our housing needs based on census data are grossly underestimated.

GENERAL AGREEMENT ON NEEDS

But with all their shortcomings, the census figures are the best we have. In addition, a number of committees, commissions, and agencies have come to roughly the same overall estimates as to the amount of housing we should build if we are to meet these needs plus those brought about by new family formation, conversions, mergers, vacancy rates, and so forth.

Working independently, the Douglas Commission, the Kaiser Committee, and the Department of Housing and Urban Development all estimated that we need to build from 2.25 to 2.6 million total housing units a year if we are to meet our housing needs in the next decade. Because of the inclusion or exclusion of rehabilitated and other types of units, the estimates of our overall housing needs by these three groups vary by about 10 percent, which I think indicates their validity.

But the estimates of all three groups of the number of units which should be built each year for low- and moderate-income families are almost precisely the same.

NEED 500,000 TO 600,000 UNITS FOR LOW- AND MODERATE-INCOME FAMILIES

The Douglas Commission called for 500,000 units a year, exclusive of those for the elderly, for low- and moderate-income groups.

The Kaiser Committee and HUD called for 600,000 units a year, including rehabilitated units and units for the elderly. So I think these are about the same.

The Douglas Commission stressed building more units for the abject poor, the poor, and the near poor than did HUD and the Kaiser committee. As such units require a somewhat larger subsidy, the differences in the numbers recommended can be accounted for in large part by this difference in emphasis. In all cases, while the number of units might vary, the costs would be almost the same.

As a consequence, virtually every independent group which has examined housing needs agrees that we need to build from 500,000 to 600,000 units a year of subsidized housing if the housing needs for low- and moderate-income groups are to be met in the next decade.

These facts, in my judgment, are sufficient reason for us to insist that the housing goals be met.

MORAL OBLIGATION TO MEET HOUSING GOALS

But there are other reasons why we must bend every effort to meet our housing goals. In addition to the actual housing needs, we have certain moral obligations to meet these needs because of past failures.

Let me spell these out.

The first is the failure of society and HUD and succeeding administrations to meet the 1949 Housing Act goals.

In 1949, Congress provided that 135,000 units of public housing a year for 6 years would be built. This was a total of 810,000 units of public housing for 6 years.

The same 1949 act also authorized the urban renewal program. The compact was that when urban renewal cleared the slums, the public housing provision of the law would provide housing for many of the poor who were displaced.

Like the animals in Noah's Ark, the two programs were to proceed together.

FAILURE TO BUILD PUBLIC HOUSING

We tore down the slums. We left huge vacant spaces in the center of our cities. But we did not build the public housing.

Urban renewal destroyed some 400,000 housing units. These units by definition housed the poor, however badly. But only about 20,000 public housing units—mind you, urban renewal destroyed 400,000—have been built on urban renewal sites during the 20 years of the program.

And the unvarnished facts about the total amount of public housing built, as brought out by the Douglas Commission, are that in 20 years we built only two-

thirds of the number of public housing units we were pledged to build in 6 years.

These facts heighten our moral obligation now to meet the housing goals of the 1968 act.

MORE HOUSING DESTROYED THAN BUILT

The second fact is that through public actions over the past 2 decades, our society has destroyed more housing for poor people than we have built.

Under urban renewal, highway programs, equivalent demolitions, demolitions for public housing sites, under housing code enforcement, and through other public actions, more than a million units housing poor people have been destroyed.

The Douglas Commission estimated that another 750,000 units will be destroyed through public actions in the next 5 to 6 years.

In recent years, we have never built more than 100,000 units of all kinds of subsidized housing. Thus, if we continue at the recent rate we will destroy in the next 5 to 6 years about 50 percent more units for poor people than we build.

These facts, too, heighten our responsibility to meet the housing goals of the 1968 act.

RED LINING

A third past policy which calls for some redeeming action was that until the spring of 1967, the Federal Housing Administration—FHA—refused to guarantee loans in the ghettos of the central cities of this country.

The policies of the FHA not only failed to help the poor. The policies of the FHA were not merely neutral. But FHA policies were actively hostile to the housing needs of the poor. This is a great moral stain on the conscience of the Nation.

This policy was called red lining. It was named for the real or mythical red lines drawn around certain geographical areas of the central cities where FHA refused to insure, where banks and savings and loan companies then refused to make loans, and where, under Federal housing code laws and regulations, no funds could be spent to upgrade blighted areas or to prevent their further deterioration. These funds to the cities for housing code enforcement and for grants and loans to the occupants, could be spent only in the "declining" or the "gray areas," but not in the slums or areas designated for future urban renewal, or in those areas which had hit bottom.

The public policies followed by the FHA and urban renewal essentially abandoned the poor and the homes of the poor in the blighted areas of the central cities.

BULK OF SUBSIDIES TO MIDDLE AND UPPER INCOME GROUPS

The fourth thing we did was to provide far more housing subsidies to the wealthy than to the poor. This may surprise many who have been led to believe that housing subsidies go to the poor and that the well-to-do are somehow self-sufficient. I think it shocks many people when they hear that the wealthy in this country have received more subsidies for housing from the Federal Government than the poor have received.

Mr. Alvin Shorr of the Department of Health, Education, and Welfare has made some interesting calculations for the early years of the 1960's. He finds that the value of the housing subsidies for those with middle incomes or more was three and one half times as great as the value of the housing subsidies for the poor.

Mr. Shorr estimated that the poor received $820 million a year in housing subsidies. He included in this amount the public housing subsidy, 25 percent of welfare payments as an estimate of the payments for rent, and the actual dollar savings from income tax deductions.

But middle- and upper-income groups received not $820 million, which the poor received, but $2.9 billion a year in housing subsidies when measured by the actual dollar savings for the deductions from the Federal income tax they received for mortgage interest paid and for personal property taxes.

Mr. Shorr did not count the total deduction but only the actual tax savings. Thus, if a family in the 25-percent income tax bracket deducted $100 for interest paid, Mr. Shorr counted only $25 as the subsidy.

An even more shocking fact is that the upper 20 percent of income groups—this is only the richest one-fifth of our people—received $1.7 billion a year in housing subsidies, or twice as much as the $820 million received by the lowest 20 percent of income groups. Just think of that: The wealthiest 20 percent, since 1960, have received twice as much in subsidies for housing as the poorest 20 percent in our society.

Middle- and upper-income groups should have no objection if the Federal Government subsidizes those at the lower end of the economic ladder when the former have received so much more in housing subsidies than those who need subsidies most of all.

MORAL DIMENSION TO NEEDS

These facts—first, the failure to build public housing; second, the destruction by public action of more housing for poor people than has been built; third, the policy of red lining by the FHA, and fourth, the fact that the highest one-fifth of income groups receive twice the amount of housing subsidies as do the lower one-fifth of income groups—give a moral dimension to the statistics on housing needs which neither the country nor Congress nor Secretary Romney can ignore.

HOW TO MEET THE HOUSING GOALS

In his testimony before the Subcommittee on Housing of the House Banking Committee on May 12, Secretary Romney proclaimed time and again that while he favored the housing goals, they could not be met in present circumstances.

Among the key points he listed. "If we are going to have a chance of meeting—or even approaching—the housing goals expressed in the 1968 Act" was the "funding of programs enacted by Congress to provide housing for low and moderate income families."

FUNDS ARE AVAILABLE NOW

This also must not be used as an excuse. With the funds available now, plus those which we can reasonably expect Congress to appropriate, there is no shortage of funds which prevents the Secretary from meeting the housing goals for next year.

The funds are there if the Secretary will use them. Let me be specific.

PUBLIC HOUSING FUNDS

There is available for fiscal year 1970 some $473,500,000 to pay for the local public housing "contract reservations."

No further appropriation is needed. These funds are available and can be used now. With no further action by Congress the Secretary can start almost 160,000 new public housing units.

Secretary Romney has no reason or excuse not to meet the public housing goals of the 1968 act.

SPECIAL ASSISTANCE AND MODERATE INCOME FUNDS

There are a variety of programs administered by HUD where Congress has made funds available to the administration, and particularly to the previous FNMA—Fannie Mae—and the new GNMA—Ginny Mae—so that the mortgages under a variety of subsidized programs can be purchased by GNMA.

These funds are available and can be used with no further appropriation from Congress. They can be used for the 221(d)(3) or moderate income program.

They can be used for the special assistance programs under FHA sections 220 and 221 of the housing laws. These latter sections provide funds for subsidized housing in urban renewal areas, rehabilitation programs, and for relocation activities, among other programs.

The funds which are available under these programs are almost unlimited. They include:

First, $467 million in unused special assistance money. These funds are available and can be used by Secretary Romney now.

Second, $421 million in authority for GNMA to buy mortgages, which has not been used.

Third, $500 million in additional funds for the moderate income or 3 percent 221(d)(3) program which the Congress made available under the 1968 act. This was done so that there would be no shortage of money while the 221(d)(3) program was being phased out and the new home ownership and rental subsidy programs under sections 235 and 236 were phased in.

DOUBLE TALK

The funds are there. Under the 1970 budget proposed by President Johnson, it was proposed that the $500 million be deferred until fiscal year 1971. But in the new Nixon budget, the President unfortunately asks that these funds be rescinded.

The Secretary of HUD, Mr. Romney, can hardly claim that success in meeting housing goals is conditional upon enough funds from Congress when, under one of the main programs, the Nixon administration is asking that the funds for at least 25,000 units of moderate income housing be rescinded. This is doubletalk.

MODERATE PROGRAM CAN WORK

The moderate income housing program is just now getting into high gear. It has tremendous advantages.

Let me list a few of them.

Under it, there is little risk to the investors. Construction loans are insured. The interest rate is subsidized down to 3 percent. The program guarantees the long-term mortgages. There is what is called a "Ginny Mae takeout"; that is, Ginny Mae, the corporation, buys the mortgages and provides the money to the original financiers.

This program has widespread public support. Its sponsors are nonprofit or limited dividend groups. Some of the finest subsidized housing in the country has been built under it, such as the marvelous La Clede project in St. Louis.

Yet at the same time the Secretary is poor-mouthing and making excuses that he cannot meet the 1968 Housing Act goals because of a possible limitation in funds from Congress, he and the administration are asking that $500 million in authority for this program be rescinded.

That, I think, is ridiculous.

The fact is that the Secretary has over $1.3 billion for the moderate income and the special assistance programs which is available and can be used now with no further action of any kind by the Congress.

THE NEW 1-PERCENT PROGRAMS

Secretary Romney is correct in saying that Congress must appropriate funds before the new 1-percent homeownership and rental programs can be carried on. These programs are known as the section 235 and 236 programs and were first authorized in the 1968 Housing Act.

These programs are very popular. Funds in the amount of $25 million for each of the programs, or a total of $50 million, have already been used up. The programs were so popular these funds had to be rationed. The administration has asked that an additional $50 million for each of them be appropriated as a supplemental appropriation this year—fiscal 1969. They are asking for $100 million for each program for next year.

The House Appropriations Committee originally provided only $25 million. But, they have now increased the amount to $75 million for each program. They did this, however, only after Mr. Romney got members of his own party to switch and vote for the funds.

Congress will provide most of this money if the Secretary's own party will support him. There are enough votes from liberal and progressive Democrats in both the House and the Senate to fund these programs provided only that the President's own party supports them.

Mr. Romney has his work cut out for him. But before he blames Congress for the lack of funds, he should see to it that members of his own party support their President.

In summary, it is fair to say that there are not only enough funds to meet the housing goals for fiscal year 1970, but there are more funds available and already provided by Congress than the Secretary and the administration are prepared to use.

The lack of funds is no excuse.

URBAN RENEWAL FUNDS

Urban renewal has not been one of the major housing programs. Basically it has been a land assembly program. Nonetheless, it does have some impact on the amount of housing built. Due to the changes in the 1968 Housing Act requiring that 50 percent of the housing in urban renewal areas be built for low- and moderate-income families, it will have a greater impact on low-income housing in the future.

Thus, while not critical, this program must be considered when we ask whether or not sufficient funding now exists to meet the housing goals.

Again the answer is "Yes." Funds for urban renewal are appropriated 2 years in advance. Unlike almost every other budget appropriation, urban renewal gets a 1-year time lead.

As a result Congress has already appropriated funds in the amount of $570 million for urban renewal for fiscal year 1970. This includes those model city funds which are to be used in urban renewal areas.

Here, too, the funds are available without further need to ask Congress for appropriations.

AN ABUNDANCE OF SITES

Let us turn to the next problem usually given as an excuse for the failure to meet our housing needs; namely, the problem of land or housing sites.

URBAN RENEWAL SITES

Here, too, the answers to many of the difficulties are within the Secretary's own purview.

The first thing he should do is to pay a visit to his own Assistant Secretary for Housing Assistance who runs the urban renewal program.

Urban renewal has cleared thousands of acres of land in the central cities of this country. Vast acres still lie idle.

In the center of Cleveland, in Detroit, and in St. Louis, to name only three, there are an abundance of housing sites on existing urban renewal land.

Less than half of this land has been "committed," to use a technical urban renewal phrase. That means that no specific contract or arrangement has yet been made for the particular use of the land.

Under the 1968 Housing Act, in future urban renewal projects at least 50 percent of the units must be subsidized housing. But the 25-percent requirement does not apply to the existing projects.

This land lies empty at the same time we hear complaints that there is no land or sites for housing for low-income families.

The Secretary should call in the mayors. He should urge them to review these sites. He should press them to build public housing and 235 and 236 housing and moderate-income housing on these sites.

These sites are controlled by the city governments. They have been subsidized by Federal money. In the emergency which this country faces to house poor people in the central cities, these sites should be used.

CITIES OWN TAX-DELINQUENT SITES

There are other places to build as well. The cities have taken hundreds of sites—in Philadelphia, in Chicago, in New York, in Detroit, and in St. Louis—because of tax delinquency. Why not build on them?

USE FEDERAL LAND

Then there are hundreds of acres of land which the Federal Government owns in the central cities of the United States. Some of this land can be used.

FHA AND VA FORECLOSED UNITS

There are thousands of FHA and VA foreclosed units. Why not use more of these to house low-income families?

These are actions which the Secretary can take or urge his subordinates to take and which should be or should become public policy of the United States.

VACANT LAND IN MAJOR CENTRAL CITIES

There are other opportunities too. In Research Report No. 12 of the Douglas Commission, entitled "Three Land Research Studies," some amazing facts about land use in our largest cities are brought out.

OVER ONE-FIFTH OF LAND UNDEVELOPED

Some may not believe it, but 22.3 percent of the land inside American cities of 100,000 people or larger is "undeveloped." In the cities of over 250,000 in size, some 12.5 percent of the land is "undeveloped." The data is given city by city.

SURVEY THE LAND

Of course not all of this land is available or suitable for housing sites. But some of it is. I call upon the Secretary, using the Douglas study as a source, to join in a cooperative effort with the cities to survey the over one-fifth of their land which is "undeveloped" for its possibilities for housing sites, parks and recreation centers, and community facilities which would make it possible to build decent housing in a suitable living environment in the central cities where it is now said no, or few, housing sites exist.

Mr. President (Mr. EAGLETON in the chair), these are just some of the ways in which land and sites can be found for housing America's low-income families.

MOVE ON BUILDING CODE REFORM

Now let us look at the question of building codes, which have often prevented or slowed down or added to the cost of building decent housing in the central cities and suburbs.

These things need to be said about building codes.

THE PROBLEM

First of all, building codes are State police powers exercised by the localities. But they are "State" powers.

Second, under the provisions of the national "model" building codes, most modern practices, products, techniques, and processes are sanctioned and approved. This includes plastic pipe, plumbing trees, and electrical harnesses, to name a few.

Third, the problem arises when the localities either have no "model" code in effect, or change those codes by local ordinance, or fail to keep the codes up to date to admit new products and processes approved by the national "model" codes.

Fourth, this prevents the application of mass production techniques for industrialized builders, or even for conventional builders who attempt large-scale production, because the plans and products and specifications have to be altered every time some local municipal boundary line is crossed.

That is the problem.

THE ANSWERS

The answers are several in number.

First, the States, whose police powers are being exercised by the localities, should pass legislation providing that any local builder can build, or any industrialized housing can be erected which meets the provisions of one of the national model codes.

The States need merely provide that where there is no code, the provisions of an existing national model code should apply. Where there is a local code which is restrictive, the States should provide that any housing which meets the provisions of a national model code can be built regardless of local restrictions. Since codes are State police powers, the States have every right to do this. An alternative is for the States to adopt one of the national model codes as the "State" code and provide that its provisions take precedence over any local code provisions which are more restrictive. HUD could draft enabling legislation on this matter within a matter of days. The Governors could be called in and urged to present such legislation to their legislatures as soon as they meet.

USE FEDERAL CARROT TO REFORM CODES

Second, the Federal Government should tie the things the States, cities, and independent businesses and building institutions want, such as water and sewer grants, FHA guarantees, and perhaps highway and public works funds, tie these "goodies" to the existence in the State and localities of a model code which is up to date and which has not been amended.

Third, the urban renewal areas and on city and federally owned sites, the cities and the Federal Governments have the power now to provide that mass produced or industrialized housing which meets the provisions of existing model codes can be built. There need be no delay at all in moving in these areas.

UMBRELLA ORGANIZATION NEEDED

Finally, some mechanism needs to be established, such as the Douglas Commission recommended, to make certain that the standards used in the national model codes are both safe and up to date.

The Douglas Commission proposed that the National Academy of Sciences act as an umbrella agency for both private and Government groups to do research on new techniques and to test them once they are developed.

The research and testing would not be done by the Academy, but would be done by private industry, testing laboratories, and Government agencies. But the standards would be set by the Academy. When the standards were met, either objective or performance standards, this could be certified by the academy.

By this method, a stamp of approval from a prestigious source could be placed on new products and processes.

This would insure their adoption by the national code groups. That, combined with State legislation and conditions imposed by the Federal Government for water and sewer grants, FHA insurance, highways, and public works projects, would insure that such standards were included in local codes.

The most modern products and modern techniques and processes could be used. The only test would be, Do they meet fair and objective standards?

That is a way by which the most difficult problems associated with building codes can be solved.

HUD should get on with the job of carrying out these constructive Douglas Commission recommendations.

RESTRICTIVE PRACTICES

One of the constant and repeated assertions about the building industry is that the unions in the industry are involved in numerous and repeated restrictive practices which result in higher costs, impede the building of housing, and may prevent us from reaching our housing goals.

This issue is highly complex. It is confusing. There are more rumors and myths and misinformation about restrictive practices than almost any other subject.

Let me try to distinguish fact from fiction and indicate what needs to be done so that this issue does not impede us in meeting our housing goals.

First of all, let us state a few facts.

Eighty percent of the housing in this country is built by nonunion labor. Let me repeat, 80 percent—four out of five—of the houses in this country are built by nonunion labor. That is not generally known. Many of the arguments, true or false, about restrictive practices in the construction industry revolve around building skyscrapers, bridges, and highways, but not housing.

The fact is that in the suburban and smalltown and rural areas of this country, the workmen are nonunion and dependent on the employer. In the large central cities where unions are strong, they are often equal to and sometimes hold the upper hand over the employer in this fragmented industry.

Thus, union restrictions, even where they exist, affect only a small portion of the homebuilding industry. And that fact is generally not known.

MANY RESTRICTIONS DUE TO PRODUCERS

Fact No. 2 is the many restrictive practices in the industry have nothing or little to do with the unions. Instead, they are fights between and among producers and contractors. Or they are zoning or subdivision restrictions or are imposed as fire safety provisions. Take the most notorious restriction in recent years; namely, the prohibition of the use of plastic pipe in drain, vent, and plumbing units. Basically this is a fight between the cast iron soil pipe industry and the plastics industry. In most areas it is not a union restriction. But the unions often receive the general criticism.

In some places wood frame exteriors are prohibited for multifamily housing of three stories or less. This is obviously restrictive and ridiculous. The Douglas commission determined that wood frame exteriors were prohibited by 25 percent of the building codes in the country.

This restriction is generally not just a union restriction. It is done, allegedly, on grounds of fire safety and is a fight between the lumber interests on the one hand, and the brick and mortar and other groups, on the other.

This is another place where fact needs to be separated from fiction.

Third, some items which are said to be restrictive practices, especially with respect to the use of tools, have legitimate safety reasons behind their exclusion. In other cases, genuine job security is at stake. There are gray areas involved in both these issues. But the building industry is one of the most cyclical of all industries. It is like a roller coaster in terms of what gets built from year to year. It is also highly seasonal. There are often high hourly rates, but workers end up getting a relatively low annual income especially if tight money or the weather restricts building.

COLLECTIVE BARGAINING

Fourth, there are restrictive practices, or what outsiders might call restrictive practices, which are the result of the collective bargaining process. Unions may gain the right to certain rules or conditions, generally because it involves safety or job security, only by giving up 10 or 15 cents an hour in wages. This then becomes an agreement, reached not only by the unions but also by the employer. When, in turn, some employers organization or uninformed outside group charges the unions with an unfair restriction, they fail to mention that there were two sides and that the unions gave up something, in work conditions or pay, for the agreement.

The famous Philadelphia door case is an example of such collective bargaining agreement. The Supreme Court did not, as is widely charged, prohibit the use of prehung doors or prefabricated products.

This was a case in which the unions and the employers had a contract that prehung doors would not be handled on the job. The provision of the contract was attacked as an illegal secondary boycott under the Landrum-Griffin Act. The court determined that such was not the case. But that decision did not prohibit the use of prehung doors or prefabricated products, elsewhere or in general, as is so often charged.

As the Douglas Commission wrote on this point:

> The Supreme Court has, unfortunately, been widely misunderstood in these ruling. The door case often is cited as holding that prefabricated components are considered bad by the courts or that a union at any time may refuse to work on a job which uses such components. In fact, the decision states only that exclusion of such products, *where they threaten job security,* may be a legitimate subject of a collective bargaining agreement and enforceable as such.

RESTRICTIONS NOT PRACTICED

Finally, one finds some restrictions written into contracts which are never practiced, and some restrictions which are practiced which are never written into contracts. The latter stems most often from the fact that the national building trade unions have limited local jurisdiction which is due to the fragmented and dispersed nature of the industry.

Let me give an example. In New York City it was charged that the ironworkers required the onsite bending of reinforcing rods. It is more efficient if rods are bent in the shop before reaching the site.

When the Douglas Commission brought this charge to the attention of the union, they replied that the general rule is that materials and work which can be done or fabricated in the shop, and which by practical work operations can be moved to the field, are accepted and handled on the site when received there.

The union said that it knew of one or two local exceptions to this rule, but said that of the total tonnage of reinforcing rods installed, 99 percent or more are bent in the shop, and not on the site.

THE ANSWERS—HIGH VOLUME NEEDED

What are the answers, then, to the real or imagined restrictive practices found by organized labor in the industry?

The first is to get a high level of production. That is why Mr. Romney should meet the housing goals. Many restrictions can be overcome if we increase the total amount of new housing built each year from the present level of 1.5 million units to the 2.25 to 2.5 million units recommended by the various commissions, committees, and experts in the field.

Many restrictions will end when the reasons for them end. That is why meeting the housing goals is so important.

The second answer is to get continuity of production. Together with a high volume of production, the restrictions which flow from the highly cyclical and highly seasonal nature of the industry can end. This is another reason why the Secretary should work to meet the housing goals.

There is an old saying that a high tide floats all the boats. With high production and continuity of production, the fears and reasons for restrictions end. Trade-offs can be made. Practices necessary because of the small amount of work or the seasonality of work can be given up when work is there the year around.

ADVANCE NOTICE

There is another general rule which must be practiced. That is bring the unions and the employees in at the beginning of efforts to build new projects, to use new materials or tools, and to do things differently.

This past recess I had a chance to meet with the building construction trades people, the union people, in the city of Milwaukee. They agreed that what they were most interested in was an opportunity to consult in and be a part of the new approaches and new processes involving new technologies.

Advanced notice can avoid jurisdictional disputes. Early warning or early notice has been successful time after time.

The schools in California are now built by mass produced or systems methods. The unions were brought in at the beginning. New methods and devices have been used. But there has been no trouble, because they were informed and because they shared in the increase in productivity.

The same was true in the national homes experiment in Chicago where the unions were brought in ahead of time and where mass production techniques were used without difficulties.

PROTECT AGREEMENTS

Finally, there must be much more widespread use of project agreements. Under the Housing Act, there will be a great opportunity to aggregate markets and to build a large number of units in specific projects or in a particular city or area.

Project agreements can be and should be negotiated with the building trades for the conditions of work and hourly pay and tools and methods to be used.

Numerous project agreements involving the space industry, defense contracts, and large public works have been successfully negotiated time and time again in the past. This successful method must be applied to the housing industry.

It is the best possible way to avoid restrictions, to bring work continuity, and to provide an abundance of housing.

Thus, by a high level of production, by continuity of production, by advance notice and early discussions with the unions, and by project agreements, those genuine restrictive practices which actually impede the construction of housing can be overcome.

SUMMARY

HUD has the funds needed to meet the housing goals. These funds exist now. These funds for public housing, urban renewal, special assistance, and the moderate-income program, plus those Congress is in the process of appropriating, provide more than enough money to meet the housing goals for this year and next.

The land is available. Half the existing urban renewal areas are vacant and with no specific plan to build on them. The cities have hundreds of tax delinquent sites. The Federal Government owns vast acreages in the cities. There are thousands of VA and FHA foreclosed units where the poor could be housed under the leased-housing programs. Twenty-two percent of all land in the 130 largest cities of the country is still "undeveloped," according to the Douglas Commission study.

The States and HUD should move on the building code problem by providing through State legislation and Federal action that conventional and industrialized building can take place provided only that the up-to-date provisions of the national model building codes are met. Furthermore, it is already within the powers of the cities and the Federal Government to build without restrictions on city land, urban renewal sites, and Federal land inside cities.

The problem of genuine restrictive practices can be overcome by both a high level and continuity of production, by advanced notice and discussion with the unions, and by the use of project agreements.

For all of these reasons, there is no excuse for the Secretary to temporize any longer over meeting the housing goals established by the 1968 Housing Act.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMUNITY CREDIT EXPANSION ACT

Mr. PROXMIRE. Mr. President, on May 13, I introduced S. 2146, The Community Credit Expansion Act, which seeks to provide more credit in our troubled inner cities and depressed rural areas. The proposed legislation would operate primarily through existing financial institutions and would seek to increase the supply of business credit, mortgage credit, and mortgage credit in both urban and rural poverty areas.

One title of the bill would establish a new kind of bank whose leading activities would be confined primarily to poverty areas. While many banks have taken a renewed interest in ghetto loans. it seems evident that without some form of Federal inducement an appreciable attack upon the problem will not be forthcoming.

I firmly believe that the Community Credit Expansion Act, or something like it, would provide the incentive to the private financial community to increase substantially their financial commitment in urban and rural poverty areas.

Mr. President, an article published recently in the Christian Science Monitor described the problem of obtaining an adequate flow of investment capital in urban poverty areas. I ask unanimous consent that the article, written by Richard A. Nenneman, be published in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW BANK SETUP FOR GHETTO LOANS?

(By Richard A. Nenneman)

NEW YORK.—Money, money, who's got the money for black economic development?

The banks, the savings and loan associations, and the life-insurance companies, that's who.

Look at them: 14,000 commercial banks with $400 billion; 500 savings banks with another $70 billion; 1,600 life-insurance companies with $300 billion; and 6,000 S&L associations with $150 billion.

In any discussion of the private sector's role in ghetto development, what these institutions can do and decide to do with their money is a foremost factor. How they use their money depends on several things; the potential profits available; the risks involved; and rules, regulations, and habit.

Large blocs of money are going to come into the ghetto in two ways: through loans to black business and through real-estate lending. It is the commercial banking system that makes the business loans. The other institutions jointly hold the nation's individual savings. Savings banks, S&L's, and life-insurance companies will have their effect mainly through what they can do to upgrade real estate in the ghetto and to find ways for blacks to own their own homes.

DIFFERENT CHALLENGES

The two types of institutions operate under different kinds of regulation and face different challenges in the ghetto.

To take the banks first, they are a heavily regulated industry. Besides stiff federal rules, most of them have state interest-rate ceilings. The best credit risks pay the lowest interest rates.

But in these times of record high interest

rates, everyone is paying a stiff price for money. And the "reward" of the highest interest a bank can charge is not sufficient to cover much degree of risk. This is a major reason no large amounts of bank money have flowed to ghetto businesses in the past.

Many banks in major cities are trying to find ways to increase their ghetto lending. The First Pennsylvania Bank & Trust Company in Philadelphia has been a leader. Some banks have opened special departments to ghetto lending (mainly because they need personnel with an extra degree of understanding and experience for the job).

Yet bank lending under normal conditions can't do the job. There aren't enough blacks that qualify for loans. Their business experience often is too brief. And what they often need is equity—the original investment money—which banks by law cannot provide.

Thomas R. Wilcox, vice-chairman of New York's First National City Bank, said "We will lower our lending criteria by perhaps one notch in making a business loan in the ghetto. But we don't feel we can go much farther than that."

Yet Mr. Wilcox is personally deeply committed to economic improvement in the ghetto. How would he have the banking system do more? Through something like the legislation introduced on May 13 by Sen. William A. Proxmire (D) of Wisconsin, called the community credit expansion bill.

Senator Proxmire's bill may be rewritten before it gets as far as committee hearings. But its basics are appealing. Drawing on last fall's subcommittee hearings of the Senate Committee on Banking and Currency, it is his conclusion that none of the existing institutions can adequately fund ghetto needs.

Senator Proxmire would set up national development banks, which commercial banks could operate as subsidiaries. The development banks would have preferential access to funds. In lending, they would dig deeper down into the risk barrel, and follow through with close supervision of the loans. The banks would also have limited authority to guarantee loans made in the ghetto by other financial institutions.

DEALS REQUIRE RISKS

There is at least some evidence that this kind of development lending could work. In New York, for instance, the Urban Coalition has provided (through corporate gifts) $1.25 million in funding for a new corporation, Coalition Venture, which acts very much as a development bank. Although it has had only $1 million to lend, it has been able to leverage this money and get an additional $4 million in commercial bank loans.

John Baker, the president of Coalition Venture, said, "The banks won't make a ghetto loan unless everything is sewed up as perfectly as their other loans. We don't have many deals like that in the ghetto."

Since Coalition Venture was set up less than a year ago, it has made 31 loans. Three of them are to ex-convicts, one to an ex-junkee—"and not ex very long either," said Mr. Baker. "We require that our borrowers know their area, but not necessarily know it as businessmen."

Through taking the long end (the most distant maturities), Coalition Venture has committed its first $1 million in donated capital to ghetto loans and gotten the commercial banks to come in for another $4 million. It is peanuts compared with what needs to be done, but an exciting example of the way money can be leveraged.

The funds for Coalition Venture came from contributions from New York corporations. Nearly $250,000 of the initial grant of $1,250,000 was set aside for overhead and to pay the expenses of an affiliate organization, Coalition Management, which provides continuing management-consultant services to the companies to which loans have been made. Most of the consulting services are provided free by members of New York consulting firms.

NEW STRUCTURE URGED

While Coalition Venture is small, it seems to be an example of how a community credit bank could work closely with ghetto businessmen, ferret out those with management talent, and at the same time attract traditional sources of money for the less risky parts of their operation.

Mr. Wilcox at Citibank stresses his belief that the banking system cannot, on its traditional terms of operating, meet the financial needs of the ghetto. A local structure must be built, he feels "strong enough for the work that needs to be done."

The problem with the savings institutions and the life-insurance companies is somewhat different. Here they are dealing primarily in real estate, whose value gives some protection to their mortgage loans. There are still risks involved in collecting money from individual wage earners, but not the risks one takes on in lending to a business.

The approaches taken by the savings institutions have varied. The most widely publicized has been the $1 billion life-insurance industry commitment made last year. This April it was raised to $2 billion; more than $900 million of the original money had been committed (although not actually disbursed).

PROGRAM CRITICIZED

The savings banks and S&L's are privately somewhat critical of the life-insurance industry's approach. They feel that to a certain extent it is playing the numbers game.

However, the program is impressive. It puts the life companies on the spot, in the first place, to sign up and be on record for how much money each one will put into ghetto mortgages. Then through using the Life Insurance Association as a clearinghouse to qualify ghetto loans, it helps to see that the loans get made at normal interest rates.

Moreover, not all of the $1 billion the companies originally agreed to lend is protected by FHA insurance. Nearly $100 million has been lent to hospitals or nursing homes in or near ghetto areas; $20 million to shopping centers and supermarkets; $15 million for other retail space, and $15 million for welfare and recreation space.

These loans have helped build installations that provide both community services and jobs. In another category, at least $50 million has been lent to build factory and warehouse space. This directly increases ghetto employment.

NEW PROJECTS FOUND

The life companies are finding they can do things they just didn't think about before. For instance, John Hancock in Boston agreed to take 10 percent of the Unity Bank's initial stock offering, in effect giving the Boston black bank a partial underwriting. In the end, Hancock did not actually have to pick up that much of the stock.

The second billion is expected to go even more into nongovernment guaranteed loans than the first. But how much of a dent does this billion, or even $2 billion, make in the ghetto? "Even $10 billion a year wouldn't make a large dent in the need," says Mr. Wright. "The need is so great, and the funds have been disbursed in some 200 cities."

Yet, in getting things moving, it does represent a start. It also raises the question of where larger amounts of money are going to come from. The $1 billion a year represents about 10-to-15 percent of new mortgage commitments made by the life companies. (About half of their cash flow of $16 billion goes into mortgages, another half into securities.) If a larger percentage is going to be diverted to ghetto mortgages, obviously it must be at the expense of some other kind of lending.

SEVERAL PROJECTS NOTED

The trade associations of the savings banks and S&L's have not engineered anything as complicated as the $1 billion life-insurance program. The close to 7,000 S&L's and savings banks are mostly local institution's locally owned or controlled. The trade associations have served mainly to pass on information on what is being done and how to do it.

Several major programs, such as Boston's rehabilitation project which took in 2,000 units have been accomplished under Section 221-d-3 of the 1965 National Housing Act. The paper work is apparently rough the first time around. After that it gets easier.

Saul Klaman, economist for the National Association of Mutual Savings Banks, says massive money will flow into the ghetto only with government guarantees. He would like to see the FHA emphasize that its main interest today is in seeing money flow into the ghetto.

He also sees a big opportunity for the savings institutions in Sections 235 and 236 of the 1968 Housing Act, if it is adequately funded. These provide for the government to subsidize the interest part of a mortgage payment. This makes it easier for a poor person to own a decent home, and also gives the government the most for its dollars spent (as opposed to former programs in which the government bought the whole mortgage).

The private financial sector is on the move looking for innovative ways to use its money. Parts of it may still need a stronger motivation to get involved in the ghetto. But given the need to make a profit and the restrictions under which most financial institutions operate, the largest volume is going to get done in tandem with a system of government guarantees and subsidies. These can make further private action feasible with the best leveraging possible for the federal budget dollars that are spent.

PRIVILEGES ACCORDED U.S. OIL PRODUCERS

Mr. MONDALE. Mr. President, for some time I have been concerned about the privileges our Government has accorded oil producers. Oil producers benefit from the 27½ percent oil depletion allowance, from drilling allowances, and from import quotas against foreign oil. Recently, before the Subcommittee on Antitrust and Monopoly testimony was presented showing that despite—perhaps because of—all of these protections, U.S. oil is more expensive than it would be without the Federal import quota.

I ask unanimous consent that an editorial entitled "Oil's Special Privileges," published in the St. Paul Dispatch, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Paul (Minn.) Dispatch, 8, 1969]

OIL'S SPECIAL PRIVILEGES

Special favors long enjoyed by the petroleum industry through federal tax laws and protection against competitive imports are under attack in Washington.

Interesting information is being developed by the Senate Antitrust Subcommittee. Senators from the New England states are giving a special push to the hearings because oil burning industries in that region charge they are forced to pay exorbitant fuel prices which handicap business development.

Oil imported from the Middle East could be bought in the Northeast for about $2 a

barrel if it were not kept out by federal import quotas. Instead, consumers are paying $3 to $3.50 a barrel for oil from the American Southwest.

A Texas specialist in oil economics, Professor Henry Steele of University of Houston, said that 95 per cent of the oil produced in the United States could meet Middle East price competition and still be profitable. A combination of federal and Southwest state controls, he testified, is subsidizing this 95 per cent of domestic production unnecessarily.

The import quotas against foreign oil were put into effect in the 1950s as an "emergency" measure but have continued ever since through the influence of the petroleum industry in Washington. The New York Journal of Commerce and other eastern publications are urging that the quota system be abandoned. The Journal of Commerce says: "The program was never anything more than a crude device for the escalation of domestic oil prices for the benefit of the few at the expense of consumers." It adds that it holds no sympathy "with those who feel that this (northeast) area somehow owes a lucrative living to those who, having already the advantage of a 27½ per cent depletion allowance, somehow figure the nation owes them more."

In reference to the depletion allowance, a Yale economist, Arthur W. Wright, testified that such special tax benefits "should be scrapped as an inequitable, wasteful, problem-ridden government aid program." He said that if any section of the oil industry can prove real need for financial aid from the government, this should be provided by a small direct subsidy, not through wide open tax loopholes which cost the Treasury more than a billion dollars every year.

The petroleum industry has many powerful friends in Congress from the Southwest states. It is difficult for consumer interests to break through this protective barricade. Nevertheless, the New Englanders are hopeful of gaining some concessions. They have shown the need for a thorough reexamination of the oil quota system and the special tax benefits. All members of Congress interested in consumer problems should carry on the fight, for New England is not the only region which would benefit from reforms.

DAG HAMMARSKJOLD COLLEGE: A BOLD NEW EXPERIMENT IN HIGHER EDUCATION

Mr. TYDINGS. Mr. President, a new college, named in honor of the second Secretary-General of the United Nations, is coming to Maryland. This is no ordinary institution of higher education, but is rather a new model which to me offers real promise of relevance at a time when colleges and universities are torn by student unrest.

Dag Hammarskjold College is designed as an international college, a 4-year independent, coeducational liberal arts institution. To be located on a beautiful tract of land adjacent to Merriweather-Post Pavilion in the new city of Columbia, Md., the college will have a pervasive cross-cultural philosophy of education.

I am pleased to announce to you that I have accepted a position as an overseer of this college. The board of overseers is distinguished, I might add, by the presence of our Republican colleague, the distinguished Senator from Oregon (Mr. HATFIELD).

Dag Hammarskjold College is built on the premise that we live in a global village, that reason requires we deal effectively with rapid cultural change, and that higher education can be made relevant to our world situation.

The college has designed its philosophy and program after careful study of creative colleges, not only in the United States, but from schools around the world.

The president, Dr. Robert L. McCan, received his bachelor of divinity degree from Yale University, a doctor of philosophy from the University of Edinburgh, and was visiting scholar in higher education for 2 years at Harvard University. Since leaving the Protestant ministry in 1963, Dr. McCan has been on the frontiers of education specifically preparing for the founding of this college. While studying at Harvard he was assistant professor in philosophy of higher education at Boston University. In 1965 Dr. McCan accepted a position in the policy and planning division of community action programs in the U.S. Office of Education as Acting Branch Chief for Behavioral Sciences. Since late in 1967 he has devoted full time to the development of Dag Hammarskjold College.

Dag Hammarskjold College is scheduled to open in the fall of 1970 with a small faculty and a first class of 120 students. Total enrollment of 1,440 will be reached by 1978. Approximately a fourth of the students will be off-campus at any given time in work, travel, and study-abroad programs.

Sixty percent of the faculty and students will come from abroad. Nine countries, in addition to the United States, will be represented. These countries are in widely scattered geographical areas of the world, and provide opportunity for the building of a miniature world community on the campus.

There has been an incredibily active and dedicated group of laymen and professional educators who have nurtured the dream and developed the college to its present level. Between May and September of this year there will be a summer gifts campaign conducted by these volunteers and friends of the college. Their short-term, widely based effort is designed to provide $250,000 for specific development needs, including expansion of staff, architectural planning, and funds for a major capital gifts campaign which will begin in the fall. Persons who contribute as much as $1,000 will be recognized as founders of the college.

The board of overseers are:

Mr. James D. Grant, chairman, vice president, National Institute of Public Affairs, Washington, D.C.

Mr. Richard J. Barnet, codirector, Institute for Policy Studies, Washington, D.C.

The Reverend Gordon Cosby, pastor, Church of the Saviour, Washington, D.C.

Dr. Paul F. Geren, president, Stetson University, De Land, Fla.

Mr. Donald E. Graham, officer, Washington Metropolitan Police Department.

Mr. B. Neal Harris, Manufacturing Development, Plastics Division, Gulf State Paper Corp., Cockeysville, Md.

The Honorable MARK O. HATFIELD, U.S. Senator, Oregon, Washington, D.C.

Dr. Roy J. Jones, director, Center for Community Studies, Howard University, Washington, D.C.

Miss Jimilu Mason, sculptor, National Council of the Arts, Alexandria, Va.

The Honorable Glenn A. Olds, U.S. Ambassador, U.S. Representative to the United Nations Economic and Social Council, New York, N.Y.

Mr. Bernard Rapaport, president, American Income Life Insurance Co., Waco, Tex.

Mrs. James W. Rouse, Baltimore, Md.

Dr. Rustum Roy, director, Materials Research Laboratory, University Park, Pennsylvania.

Dr. Herbert Striner, director, Project Development, W. E. Upjohn Institute for Employment Research, Washington, D.C.

The Honorable JOSEPH D. TYDINGS, U.S. Senator, Maryland, Washington, D.C.

Dr. J. Earl Williams, director, Human Resources Center, University of Houston, Houston, Tex.

These representative endorsements of the college throw shafts of light on the enthusiastic response the college plan has received:

JAMES W. ROUSE, president, the Rouse Co. It is an exciting concept, responsive to the pressing needs of the United States and the world beyond. We are very pleased to make available to Dag Hammarskjöld College a site in Columbia appropriate for your needs.

PHILIP R. HARRIS, Ph. D., senior associate, Leadership Resources, Inc. It is a magnificent conception, well worthy of investment. You have done your planning well, consulted with a wide variety of professionals, and incorporated some of the latest and best thinking about higher education.

J. NED BRYAN, director, Special Study on Talent Development, U.S. Office of Education. There is a refreshing realism about the plan of operation. Controlled enrollment and modular units providing for meeting the objectives of close faculty-student involvement. In my judgment Dag Hammarskjöld College has the potential and promise of fulfilling an unmet need in the arena of American higher education.

CRISIS ON OUR CAMPUSES

Mr. PERCY. Mr. President, recently I had the privilege of attending a 3-day meeting conducted by Dr. Robert A. Goldwin, director of the Kenyon College Public Affairs Conference Center, with approximately 20 academicians, public officials, civil rights leaders, students, and journalists, including David Broder, national political reporter for the Washington Post. I had just returned from a tour of 10 college campuses in Illinois, where I had participated in intensive seminars with student leaders representing every point of view.

The situation on the campuses is critical, and we have much additional study ahead of us to understand fully the changing phenomena which our Nation is witnessing. The campus today stands as a microcosm not only of some of our Nation's greatest problems, but also of its greatest challenges and opportunities.

David Broder, whom I consider to be one of America's most astute and competent political analysts, has discussed this problem, with his usual insight, in a recent column. I concur with his conclusions.

I ask unanimous consent that his article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Cleveland Plain Dealer, May 14, 1969]

IS PEACEFUL ORDER VANISHING?

(By David S. Broder)

GAMBIER, Ohio.—Something very strange has happened in America, almost without our noticing it. The professor and the politician have reversed roles. The campus has become the arena of battle and the capital the place where people fretfully try to understand what is happening at the front.

For several years this reporter has had the occasional privilege of participating in the meetings of the Kenyon College Public Affairs Conference Center, which offers short intensive seminars on major issues to small groups of writers, political leaders and academics.

Customarily, the dialogue has taken the form of the journalists and politicians telling the professors how the problem under discussion looks at close range and asking the academics whether, from their rather detached perspective, they have other views and other solutions to offer.

This year, as we discussed the condition of American democracy, it was the professors, some of them still in semishock from the latest campus confrontations, who were asking help from the journalists and politicans in understanding and responding to the crisis that had overtaken their lives.

Despite their agitation, the message they brought from their campuses was plain enough. It is not one we can ignore—not when it comes from men of decency and wisdom, of both races, whose urgency of tone conveys as well as their words the danger they sense.

What they are saying, if I correctly understand them (the rule of privacy of these conferences prevents direct quotation or attribution), is something like this:

The agitation on the campuses is not simply, or primarily, a student-led effort at reform of college curricula and campus life. Whatever the effect in these areas (and there was disagreement whether they have helped or hurt the instructional program and college routine), the militants' demonstrations have introduced techniques of coercion and violence that are inimical to the life, not just of the university, but of any free institution.

Intimidation of students, faculty and administration members, both by physical means and by verbal abuse, is increasingly commonplace. (Again, the testimony comes from members of both races.)

If the tactics are inherently dangerous to freedom, so too is the philosophy of at least some of the agitators. Black militants, in control of some black-studies programs, are preaching a counsel of despair that could condition the leaders of the next generation of Negroes to believe that race war is literally the only tactic for achieving their ends.

White militants of the SDS variety are inculcating a philosophy that glorifies the realization of "self" through the flouting of established norms and the gratification of personal needs through violent action. The resulting intellectual atmosphere is hauntingly reminiscent to some refugee professors of pre-Nazi Germany.

Both the black and white militants show ignorance or disregard of the civilities by which a peaceful social order is maintained—the traditions of fair play and tolerance which underlie our democratic institutions.

All this, and more, the professors were saying. And if they are even partly correct—as I fear they are—this situation is much more critical than the ivory tower politicians and journalists like myself have realized.

PROXMIRE HEARINGS ASK IS THERE "A RIGHT TO PRY AND POKE?"

Mr. NELSON. Mr. President, "Is your yard neat and uncluttered? Do you have a satisfactory number of bathrooms? If you drink, is it because of marital trouble, business, or personal desire? And how do you get along with your wife?"

According to a report in this week's National Observer, "Senator WILLIAM PROXMIRE marveled at these and other questions as he read them from the check lists that insurance inspectors use when they investigate a new customer," at hearings of the Subcommittee on Financial Institutions.

The senior Senator from Wisconsin has "drawn up a bill to regulate the companies that investigate consumers for credit, insurance, and jobs." The evidence drawn out by Senator PROXMIRE and reported in the National Observer indicates that no area is more in need of regulation than the prying and poking into the lives of everyone of us by consumer investigators. The most astonishing revelation at the hearings was reported in the Observer as follows:

One consumer group witness told the tale of a pseudonymous "Charlie Green" who was hounded from job to job for five years by an unfavorable employment report whose existence he did not know of. "Charlie" was repeatedly rebuffed and mistrusted by employers who thought he was a dishonorably discharged soldier who lied about his past when he applied for jobs. The rules of the reporting agency kept them from telling Charlie about the report.

Charlie Green was in "absolute trembling fear for my family and myself" when a personnel officer at one company accidentally tipped him off in 1967 to the existence of the unfavorable report. With the aid of a lawyer he eventually got the credit-reporting agency to agree to collect its false report, but even now it refuses to let him or his lawyer see the corrected document. Senator Proxmire said his own staff had confirmed Charlie Green's story.

All Senators represent millions of "Charlie Greens." The hearings revealed that the liberties the credit industries take with secret dossiers on private citizens is truly terrifying. The carelessness with which the information is gathered and then disseminated to almost anyone who wants it is inexcusable and in need of regulation. I ask unanimous consent that the Observer report be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the National Observer, May 26, 1969]

DO CREDIT MEN HAVE RIGHT TO PRY AND POKE?

Is your yard neat and uncluttered? Do you have a "satisfactory" number of bathrooms? If you drink, is it because of marital trouble, business, or "personal desire"? And how do you get along with your wife?

Sen. William Proxmire marveled at these and other questions as he read them from the check lists that insurance inspectors use when they investigate a new customer. The Wisconsin Democrat has drawn up a bill to regulate the companies that investigate consumers for credit, insurance, and jobs. Last week he invited them to testify during five days of hearings by a subcommittee of the Senate Committee on Banking and Currency.

"Does an insurance company have the right to pry and poke into any aspect of a person's life?" the senator asked. Testimony seemed to show that legally they do. It also revealed that the same set of credit-reporting agencies investigate people for insurance, check on their credit ratings, clear them for would-be employers, and keep dossiers on more than 100,000,000 Americans.

KEEP FILES CONFIDENTIAL

The senator's bill would compel these companies to keep their files confidential, give citizens a chance to correct their records if mistakes turned up, and to inform them if unfavorable information was put into their files from public records. The bill would also bar the companies from stockpiling intimate information unless it had some valid business need for it. Companies that used an investigator's report to refuse credit, jobs, or insurance would have to tell the customer where the report originated.

Witnesses from the credit-reporting companies and their clients in the business community generally testified against the bill. A spokesman for a trade group of 2,200 credit bureaus said it would cost so much to implement that credit companies might stop giving credit to poor people and concentrate on better credit risks. A banker said lenders needed even more information than they were getting now, not less. An insurance spokesman said some of the seemingly personal questions they asked had a real bearing on insurance risks; a policy holder with marital troubles might be murdered by his wife, for instance.

SEVERAL INVESTIGATIONS

A succession of consumer groups, however, testified that the bill ought to be even stronger. The executive director of the Consumer Federation of America urged that consumers be allowed to see their credit-bureau record, something the Proxmire bill will not compel, and scarcely any credit bureau will allow. The general secretary of the National Consumers League suggested that it be made illegal for a credit bureau to record gossip about someone's private life. A spokesman for the Louisiana Consumers League urged that credit bureaus be barred from doubling as bill collectors, as many do.

The hearings were the most thorough of several investigations that have started in both houses of Congress because of complaints that false or misleading credit-agency reports have deprived consumers of reputations, jobs, and credit.

One consumer group witness told the tale of a pseudonymous "Charlie Green" who was hounded from job to job for five years by an unfavorable employment report whose existence he did not know of. "Charlie" was repeatedly rebuffed and mistrusted by employers who thought he was a dishonorably discharged soldier who lied about his past when he applied for jobs. The rules of the reporting agency kept them from telling Charlie about the report.

Charlie Green was in "absolute trembling fear for my family and myself" when a personnel officer at one company accidentally tipped him off in 1967 to the existence of the unfavorable report. With the aid of a lawyer he eventually got the credit-reporting agency to agree to correct its false report, but even now it refuses to let him or his lawyer see the corrected document. Senator Proxmire said his own staff had confirmed Charlie Green's story.

Other witnesses testified that credit-reporting agencies have the right to gather intimate information about anybody, and legally are free from damage caused by their mistakes. The personal information they sell to stores, insurance companies, and employ-

ers is covered by a legal doctrine called "qualified privilege," which requires a victim of their mistakes to prove that they injured him maliciously or through gross negligence. No laws specifically govern credit bureaus in 49 of the 50 states, and the manager of a credit bureau in Columbus, Ohio, said he did not even need a license for his business.

Senator Proxmire sought through questioning to show the size and power of this unregulated industry. The president of the Retail Credit Co. of Atlanta, for instance, testified that his company kept files on 45,000,000 Americans, issued 35,000,000 reports each year, and employed 8,500 investigators who interviewed 200,000 persons daily. He said 80 per cent of their work was insurance investigations, and the balance divided among credit checks, employment checks, and "other commercial purposes."

The executive vice president of the Associated Credit Bureaus, Inc., said that the 2,200 credit bureaus in his trade association had files on 110,000,000 Americans. The chairman of the board of Credit Data Corp., Harry C. Jordan, said his customers could get a report in three minutes on any of the 27,000,000 consumers recorded in his computers. Mr. Jordan said records on 7,000,000 persons had been put into his computers in the past year.

Much of Senator Proxmire's questioning was aimed at what he seemed to believe was the inexpensive and casual way in which these potentially ruinous reports were gathered, and on what he believed was a "perverse incentive to dig up dirt."

The president of the Atlanta company, for instance, confirmed under this questioning that his inspectors made an average of 10 or 11 investigations every working day, and that this included travel time between appointments with informants and, in some bureaus, typing up their own reports.

MORALS VERSUS SMOKING

"Are your inspectors trained psychiatrists?" the senator asked, wondering how these quickie investigations could determine the state of a marriage or the reasons why somebody drank. He also noted that out of hundreds of life-insurance check lists that he had examined, only one asked if the applicant smoked, while many asked for "character and morals," or "types of associates." The senator reckoned that smoking was as likely as bad morals to hasten someone's death, and complained "you rarely ask about smoking, but have on these forms again and again questions about . . . moral behavior."

Senator Proxmire also came up with a pair of manuals for the office managers of two credit-reporting companies. Both of them told managers to keep track of the percentage of cases in which investigators dug up unfavorable information about someone. One of the manuals told managers to keep after any investigator who didn't maintain the "minimum corporate standards of 14 per cent."

Most industry spokesmen said the public was well protected by the desire of insurance companies to sell insurance, of stores to give credit, of lenders to lend money, and of employers to hire employes. "If the credit-reporting agency gives out unjustified negative reports, it will soon be out of business," a banker testified. An insurance spokesman said only 0.6 per cent of new or renewed automobile insurance policies were canceled each year on grounds that could be remotely connected with reports from credit-reporting agencies.

Industry spokesmen repeatedly pointed out that the Associated Credit Bureaus had recently adopted a code of ethics for its 2,200 members, and that it covered most of the points raised by Senator Proxmire. But a spokesman for the association conceded that a television network that tried to get past the privacy clauses of the code had illegitimately managed to get records on 10 of the 20 people it asked for in December from member bureaus. And the consumer representative from Louisiana brought an affidavit from two persons who said a member credit bureau had violated a disclosure provision of the code just four days before the hearing.

Mr. Jordan of the Computer Data Corp. said his company collected information about a consumer's credit history instead of his personal life, and refused to part with it except for the purpose of granting credit to someone. He said his company did not belong to the association because its rules would compel him to share his files with other companies who used the information for employment investigations and for what the association calls "other bona fide business transactions," but which Mr. Jordan calls "virtually anything."

"If data banks of the sort we operate are to survive without creating mechanisms for a police state," Mr. Jordan warned, "they must be very carefully insulated from access for purposes other than the announced one."

MICHAEL MALLOY.

NORTH VIETNAM'S TREATMENT OF PRISONERS OF WAR

Mr. TOWER. Mr. President, one of the most disurbing aspects of the Vietnam war has been the complete refusal of the Hanoi government to abide by the Geneva Convention rules with respect to captured American soldiers. The rules developed by the Geneva Convention are simple and direct.

The legal duty of the North Vietnamese to abide by these rules cannot be questioned. It is specifically called for in the Geneva Convention rules for prisoners of war. But Communist nations have never shown any significant respect for international agreements or the niceties of law. It is probably naive to hope that they would do so in this instance.

There is, nevertheless, a compelling reason for North Vietnam to honor the prisoner-of-war provision of the Geneva Conference. That reason, Mr. President, is human decency. If the Hanoi regime would have us believe that it is sincere in its desire for peace and harmony in Southeast Asia, let it demonstrate that it understands an elemental concept of humanity—the fair treatment of helpless prisoners incarcerated in camps many, many miles from American assistance.

The United States has made every effort to induce the North Vietnamese to abide by the most elemental of the Geneva rules: The release of the names of Americans being held captive. On May 19, Secretary Laird requested that the North Vietnamese provide a list of all soldiers held in prisoner-of-war camps. This is a simple request, one which would in no way limit the exercise of any legitimate North Vietnamese right. If this simple request were honored it would bring an end to one of the cruelest tragedies of the war.

It would bring an end to the fear and doubt shared by the many wives, children, mothers, and fathers who do not know for sure whether their loved ones are alive or dead. There are many who bear the burden of North Vietnam's inhumanity: at present, more than 1,300 U.S. servicemen are listed as either prisoners of war or missing in action. Of these, nearly 800 are airmen who were downed over North Vietnam. There is reason to hope that many of the missing in action are in fact prisoners of war.

But we do not know this. The families of these men do not know. They do not know because the Hanoi regime refuses to indulge in the elementary humanity of providing a list of all American soldiers held in prisoner of war camps.

Xuan Thuy, chief of the North Vietnam delegation to the Paris peace talks, has declared that Hanoi would not promptly release a list of U.S. prisoners held in North Vietnam. This refusal in inexcusable. Its purpose and intent can only be to extend the period of worry, of doubt, of fear for the families of the Americans missing.

I urge Xuan Thuy and his superiors to reconsider. I call upon those who criticize American firmness in Vietnam to protest the inhumanity of the North Vietnamese as manifested by their callous refusal to end the needless suffering of American civilians. Perhaps the great force of world opinion with which this Nation often seems so preoccupied can provide an impetus to the North Vietnamese to demonstrate an understanding of human decency.

For myself, I can only add my voice to that of Secretary Laird and implore that Hanoi abandon its policy of needless cruelty with regard to this matter and urge it to demonstrate the spirit of humanity which is a necessary prerequisite to the establishment of peace and harmony in Southeast Asia.

Once Hanoi has responded in a responsible manner to this simple request of Secretary Laird, I am hopeful that the North Vietnamese will respond in a like manner to the Secretary's other suggestions. Specifically, the Department of Defense has urged the North Vietnamese to take the following steps:

First. Release all U.S. prisoners whom they hold. The seriously sick and wounded should be returned immediately.

Second. Assure that all prisoners receive proper medical care and adequate food.

Third. Permit regular, impartial inspections of prisoner-of-war facilities.

Fourth. Allow a free flow of mail between the prisoners and their families.

These are all reasonable requests. If North Vietnam will respond rationally and sincerely, they can be met. Its response would represent a much-needed indication that the Hanoi regime is genuinely interested in peace through negotiation.

Mr. President, so that Senators may have the opportunity to study in detail the report of the Department of Defense with respect to prisoners of war in North Vietnam, I ask unanimous consent that the report be printed in the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

BRIEFING ON U.S. PRISONERS OF WAR AND MISSING IN ACTION PERSONNEL

The U.S. Government and the Government of the Republic of Vietnam have placed great emphasis on proper treatment of enemy prisoners of war held in South Vietnam. We have recognized the requirements of the Geneva Convention relative to the treatment of prisoners of war.

At the same time we repeatedly have expressed our desire that the enemy honor its

obligations under the Convention and that it properly treat U.S. personnel captured by them.

North Vietnamese and Viet Cong forces captured in South Vietnam are detained by the Government of the Republic of Vietnam in PW camps which are inspected regularly by the International Committee of the Red Cross.

In accordance with the Geneva Convention, sick and wounded prisoners have been released and repatriated to North Vietnam. We have provided such treatment not only because it is required by the Convention but also because it is the humane thing to do.

We have hoped that our adversaries would reciprocate. Regrettably, the North Vietnamese and the Viet Cong have not followed our example. There is clear evidence that the enemy is treating the U.S. prisoners it holds inhumanely.

On numerous occasions, the United States has appealed to the enemy to respect the requirements of the Geneva Convention which North Vietnam endorsed in 1957.

The purpose of this briefing is to express Secretary Laird's continuing and deep concern regarding treatment of U.S. servicemen listed as prisoners or missing in action in Southeast Asia.

Today, there are more than 1300 U.S. servicemen classified by the Services as either prisoners of war or missing in action.

Of the more than 1300, nearly 800 were downed over North Vietnam. Most are pilots and we believe a substantial percentage of the missing may be prisoners.

The families of these hundreds of servicemen have lived for months and years under the continuing anxiety and pressure of uncertainty as to the status and well-being of their loved ones.

Despite repeated attempts by the U.S. Government and neutral organizations, the North Vietnamese and the Viet Cong have consistently refused to release the names of those U.S. prisoners whom they hold.

Secretary Laird is deeply concerned by Hanoi's continued refusal to identify the U.S. prisoners whom it holds. On several occasions, he has expressed his respect for the magnificent patience and courage shown by the hundreds of wives, children and parents who for so long have hoped to learn about the status of their loved ones.

The magnitude of this unnecessary inhumanity has increased with each passing month. There now are more than 200 U.S. servicemen listed as prisoners or missing in action in Southeast Asia who have been in those categories for more than three and one-half years. This is longer than any U.S. serviceman was held a prisoner during World War II.

We now have more than 500 American servicemen who have been listed as PWs or missing for more than two years. The first U.S. pilot, whom we believe is still a prisoner, was captured in August 1964.

The North Vietnamese authorities have made statements, both publicly and privately, to the effect that American prisoners of war were being treated humanely. However, it has been impossible to verify such claims because North Vietnam adamantly has refused neutral inspections of the places of detention.

Hanoi's claims of proper treatment and its controlled visits with a handful of selected news people are not adequate substitutes for complete and impartial inspections.

Most information regarding the status of American prisoners has come in the form of propaganda films and photographs which the North Vietnamese have sold or made available to various news sources throughout the world. It is regrettable that we must rely on such often distorted information to determine the status of U.S. prisoners.

Many of these films and photographs have implied that our prisoners were being well treated, that they were permitted to communicate freely with each other, that they were allowed to correspond freely with their families, and that they were receiving proper medical treatment. Examination of this information, however, raises serious questions as to whether such has been the case. In fact, our analysis indicates that this is not the case, and that the provisions of the Geneva Convention are being disregarded.

In some instances, North Vietnamese propaganda has generated false hopes among American families because the identity of the prisoners shown could not be clearly determined. In one case, 20 different wives believed that a prisoner shown in a propaganda photo was her husband. This prisoner remains unidentified.

It now has been more than six months since the bombing of North Vietnam was halted. During that time we have had no releases and almost no information on American prisoners. In the past five years, North Vietnam has chosen to release only six pilots. All six had been held for relatively short periods of time, ranging from three to seven and one-half months.

Three of the six returned had been listed as missing in action and, thus, the announcement by Hanoi of their prospective release was the first indication that they were even alive.

Some of the propaganda photos made available have shown U.S. pilots alive on the ground after their capture by the enemy. Regrettably, no information has been received since their initial captivity, again causing severe and unnecessary anguish to the families involved. Commander A. C. Brady and Major W. S. Gideon are two such cases.

Another example is Major J. H. Kasler who was shown as injured when captured but has not been heard from since.

One propaganda film showed a display of 18 ID cards of pilots. This is an unacceptable substitute for determining the status of U.S. prisoners.

There have been indications that American prisoners in North Vietnam have been mistreated physically. In 1965 and 1966, captured U.S. prisoners were paraded through the streets of Hanoi. Some were seriously injured, as in the case of Lt. D. G. Rehmann, who suffered serious burns when downed in December 1966.

In addition, we believe that the great majority of American prisoners have been isolated from contact with the outside world.

Several propaganda photographs released have shown U.S. prisoners in such solitary confinement. All six pilots released by North Vietnam in 1968 confirmed that they had been held in isolation for varying periods of time.

Such isolation can have serious adverse effects on the long-term welfare of those detained under such circumstances.

North Vietnam released films also raise serious questions as to whether the prisoners are receiving proper medical care. Recent photographs show that some prisoners are continuing to suffer from injuries incurred at the time they were downed.

For example, several prisoners have been shown still using crutches after many months of captivity. LCDR H. A. Stafford injured his left arm and shoulder when shot down in August 1967. Today, his left arm appears to be noticeably smaller raising questions as to what medical treatment was offered.

One photo shows LCDR J. S. McCain, III, shortly after capture in October 1967. He was pictured in extensive casts because both arms and his right leg were broken. Hanoi has not indicated what his present condition is, and thus we are concerned about what treatment Commander McCain has received in the past 18 months.

One recent film included an elaborate spread of food which only two prisoners are shown carrying. Neither is shown actually eating the suspiciously large portions.

Recently, an Italian journalist met Lt. Robert Frishman, who was captured in October 1967. In the interview, published in L'Europeo a few weeks ago, Frishman stated that his right arm is significantly shorter than his left. He also stated that he had lost a substantial amount of weight since his capture. He, too, confirmed that he had been held in isolation by indicating that the reporter was the first person he had spoken to in almost a year and a half.

Weight loss by other prisoners has also been confirmed in propaganda films. One such case is Seaman D. B. Hegdahl who weighed over 200 pounds at the time of capture and obviously has lost considerable weight in the past 18 months. We observe similar indications in photographs of Lt. J. Crecca, Jr., and Colonel R. Risner.

In viewing the propaganda information which the North Vietnamese have chosen to release from time to time, the same few prisoners appear in the pictures. This raises the obvious question as to the status of the vast majority who are not paraded before the cameras.

We welcome any information concerning U.S. prisoners regardless of the source. However, we want to reiterate that these propaganda films are no substitute for the information and impartial inspections required by the Geneva Convention.

Propaganda films and photographs are misleading. One example was the distorted information released by North Korea during the captivity of the Pueblo crew. North Korean propaganda stated that the Pueblo crew was well fed, that they were permitted to exercise regularly, and that they could communicate frequently with each other and with their families.

We now know that these photos were staged and that, for the most part, the portrayed benefits occurred only when the photographs were actually taken.

We have seen similar "staged" photographs such as this scene of a purported capture of a U.S. pilot in North Vietnam. Other photographs have implied that our prisoners were permitted to attend religious services. However, recent photographs show only a handful of prisoners actually present for such services. And, it is noted that they are carefully separated which suggests either that Hanoi wants the room to appear full or that the men are kept apart so that they cannot communicate.

Another film attempted to indicate that the prisoners were enjoying recreational activities by playing table tennis, but the facial expressions and lack of animation are positive indications that it is a staged event.

Regular exchange of mail between prisoners and their families is a guaranteed provision of the Geneva Convention. Such a flow of mail simply has not been permitted by the North Vietnamese.

In the past five years, less than 100 prisoners have been allowed to write to their families. Even at that, the frequency of writing for this limited number of prisoners averaged less than two letters per year.

If these few writers had been allowed to write the number of letters and cards as permitted under the Geneva Convention, their next of kin would have received 18,000 letters and cards. Thus far, they have received less than 600.

We have no indication that any letters were received by families from September 1968 until late April 1969. Since then, some dated in late 1968 were received by families.

A recent North Vietnamese propaganda film suggested that U.S. prisoners had received Christmas mail and were permitted to celebrate the Christmas season. In the

first place, the film shows only a handful of prisoners.

Secondly, the film purports to show prisoners opening Christmas mail when, in fact, they are reading letters dated in March, April and July of 1968. In two cases, the film indicated that the prisoners were opening Christmas cards when, in fact, the mail shown were Easter cards sent months before.

In December 1968, U.S. next of kin forwarded more than 714 Christmas packages. We have no confirmation of whether any were actually received by the American prisoners.

As part of the Secretary of Defense's concern for these men, he has directed a thorough review of the benefits available to the families involved. It is his intention that the military services and the Office of the Secretary of Defense must do all that is possible for the next of kin.

On several occasions, Defense Department officials have met with groups of wives and parents whose husbands and sons are listed as prisoners or missing in action. We can attest to the bravery and personal courage of these dedicated American families.

Secretary Laird and the Department of Defense continue to hope for meaningful progress in the Paris discussions and progress leading to the release of all American prisoners.

In the meantime, however, we appeal to North Vietnam and to the Viet Cong to respect the rights of prisoners of war and to comply with the Geneva Convention.

Specifically, we urge them to take the following humanitarian actions:

1. Release all U.S. prisoners whom they hold. The seriously sick and wounded should be returned immediately.

2. Assure that all prisoners receive proper medical care and adequate food.

3. Permit regular impartial inspections of prisoner of war facilities.

4. Allow a free flow of mail between the prisoners and their families.

AMERICAN OVERCOMMITMENT

Mr. TYDINGS. Mr. President, the National Commitments Resolution, Senate Resolution 85, authored by the Senator from Arkansas (Mr. FULBRIGHT) and the Committee on Foreign Relations, is scheduled to come before the Senate for a vote shortly. This is an extremely important resolution, one that I wholeheartedly support.

The realities of international relations are continually shifting. To be effective, the foreign policy of a nation must constantly be reappraised and revised to meet these new realities.

I am deeply disturbed by the distressing evidence that American foreign policy has failed to adjust to developments that have radically altered the international community over the past decade.

Following World War II, the United States stood alone as the sole deterrent to Soviet ambitions to fill the power vacuum resulting from the destruction of Europe and the disintegration of the colonial system is Asia and Africa. America was compelled to bring her power to bear in every corner of the globe to create a new balance of world power. To have done less would have been irresponsible and dangerous.

However, by 1960, the world was no longer a bipolarized community. A new Europe had emerged. Japan and China confronted each other once again as major powers in Asia. Latin American and African nations were struggling to chart their own destinies free from the domination and direction of outside powers.

The result of these developments is a world today in which every conflict is no longer a test of strength between Washington and Moscow. Many international disagreements simply do not constitute major threats to our security.

In addition, we have learned in Vietnam—at the terrible cost of nearly 40,000 lives and $100 billion—that we are relatively powerless to work our will in certain types of situations far from our shores.

Our inability to perceive these changes and adjust accordingly has led to an expensive and dangerous overextension of U.S. foreign commitments.

We have tragically intervened in two civil wars in the Dominican Republic and in Vietnam. We are on the verge of falling into the same folly in Thailand, where we currently have stationed more than 40,000 troops.

We have a quarter of a million American troops stationed in Europe 25 years after the end of World War II. We have 50,000 troops in Korea 15 years after the end of the Korean war. We have more than 2 million military-connected Americans stationed abroad. We have 343 major bases and 1,927 minor bases outside the country—many of which are obsolete and irrelevant—occupying 4,000 square miles of foreign soil at an annual operating expense of $13.5 billion.

The cost of this overcommitment is high. It is responsible for our balance-of-payments deficit and our gold drain. As a major component of our defense budget, it prevents us from reordering our national agenda to attack many domestic problems that challenge us at home.

Most important, this overextension of American commitments threatens to involve us in conflicts throughout the world in which we do not belong and in which American boys will needlessly lose their lives.

A thorough review of our present policies and international commitments is long overdue. If American security and world peace are to be preserved, the President and Congress can delay no longer on this pressing matter. By enacting the national commitments resolution, Congress will be taking a major step toward reclaiming its constitutional responsibilities over the conduct of our foreign relations.

HUMAN RIGHTS COMMISSION ADOPTS SPECIAL COMMITTEE PROCEDURE

Mr. PROXMIRE. Mr. President, Mrs. Rita E. Hauser, the U.S. Permanent Representative to the U.N. Commission on Human Rights recently was the keynote speaker at the 63d annual meeting of the American Jewish Committee. Pointing out that this country had acceded to only two minor treaties among the many human rights conventions developed by the U.N. Human Rights Commission and other U.N. bodies, Mrs. Hauser called the U.S. position "anomalous," "most distressing," and "illustrative of a roadblock to international human rights in countries where political power is decentralized and local prerogatives treasured."

The most serious roadblock to human rights progress, Mrs. Hauser declared, is "the slow development of implementing machinery in the growing body of human rights law."

However, she hailed as a "landmark not only for the United Nations, but for international law" the procedure adopted at the last session of the Human Rights Commission in March which allows for a special committee to review petitions from individuals or groups alleging violations of human rights. This committee will report to the Commission those petitions that reveal a consistent pattern of gross violations, she explained, and the Commission may then, with the consent of the State concerned, conduct a confidential investigation of the charges. Mr. President, I am very much pleased to see that Mrs. Hauser is taking such an early and active interest in the need for the ratification of the Human Rights Conventions, and I hope that the Senate will follow soon.

THE NEW YORK TIMES ENDORSES DDT BAN AND PESTICIDE COMMISSION

Mr. NELSON. Mr. President, this morning the New York Times joined the campaign to improve sanctions on the use of persistent pesticides, including a ban on the use of DDT.

Heeding the warnings of many scientists, biologists, ecologists, and conservationists that the continued use of persistent, toxic pesticides are contaminating the total environment, the New York Times commended Dr. Lee A. DuBridge, President Nixon's science adviser, for giving the pesticide problem top priority on the agenda of the new Environmental Quality Council.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 2, 1969]

CURBING DDT

Dr. Lee A. DuBridge, the President's science adviser, has placed the problem of DDT high on the agenda of the new Environmental Quality Council of which he has been named executive secretary. So much is already known about the damage inflicted by DDT that the Council should waste no time in mapping a program to control the use of this dangerous pesticide.

The Food and Drug Administration has had to seize a batch of coho salmon from Lake Michigan with far higher residues of that compound than the five parts to a million considered safe. Assistant Secretary of the Interior Leslie L. Glasgow told the Senate Commerce Subcommittee about shrimps imperiled by high DDT levels in their nursery areas; of the failure of Lake George trout to reproduce because of DDT in the eggs; of the extermination of "many thousands of robins" infested with the same substance; and of the decline in health of mallards and pelicans that had fed on DDT-contaminated fish.

The bald eagle—symbol of this country—is approaching extinction largely because of the effect of DDT on its fertility. David Brower, the California conservationist, recently testified before a House committee that the

average person carries more DDT in his body than is permitted in the meat he eats, with consequences that caused Senator Hart to wonder whether Americans are not already "an endangered species."

DDT has been an extremely useful weapon against malaria, encephalitis, and other historic scourges of man, but the question today is whether the dangers it poses do not outweigh the benefits. We think they do—especially since less harmful substitutes for DDT are available.

What Senator Gaylord Nelson, chairman of the Senate subcommittee, has in mind is, first, a complete ban on the interstate shipment of DDT, and, second, establishment of a National Commission on Pesticides. This would be a continuing agency, made up of representatives from the appropriate government departments and from citizens in the fields of science, conservation, agriculture and private enterprise. Its task would be to investigate problems arising from the use of pesticides, to monitor the build-up of their resides in the environment, in fish and wildlife, and in man, and to stimulate development of compounds that would break down more rapidly after use than those now known.

For pesticides in general this approach is rational and the objective unimpeachable. As for DDT, it is in no further need of study. Sweden and at least two states, Arizona and Michigan, have prohibited its use. Its harmful effects are by now scarcely more debatable than the use of ground glass in the public reservoirs.

WILLA CATHER COMMEMORATIVE STAMP

Mr. HRUSKA. Mr. President, it is with a sense of pride that I have joined my distinguished colleague from Nebraska (Mr. CURTIS) in introducing a bill (S. 2279) to provide for the issuance of a special commemorative stamp marking the 100th anniversary of the birth of a great writer, Miss Willa Cather, of Red Cloud, Nebr.

Few writers receive the widespread acclaim of literary critics and the general public. Such recognition is limited to only the best. That Miss Cather was one of the best is evidenced by the following facts:

First. She enjoyed widespread circulation of her works among the general reading public.

Second. She was awarded, among other honors, the following: the Pulitzer Prize in 1923 for "One of Ours"; the French award, Prix Femina Americaine for "Shadows on the Rock" in 1931; the Mark Twain Society Silver Medal in 1934 for "My Antonia"; and the Gold Medal, American Academy of Arts and Letters.

Further evidence of Miss Cather's greatness is found in the fact that all of her works are still in print and selling even though it is over 22 years since her death.

Miss Cather's works, which are widely studied in schools throughout the country, have always been popular in other countries. In fact, her works are widely available in translations and still enjoy great popularity in many European countries.

Mr. President, in view of Miss Cather's accomplishments it is only proper that we honor her memory by issuing a stamp marking the 100th anniversary of her birth which was December 7, 1873.

Mr. President, although Miss Cather was greatly admired and loved by people throughout the Nation and world, she holds a very special place in the hearts of Nebraskans, because she was one of us.

Although she was born in Virginia, she grew up in Nebraska; she was educated in Nebraska; she wrote and published her first works in Nebraska; and she always looked on Nebraska as her home. Miss Cather's strong feeling for our State is reflected in the fact that six out of her 12 novels were set in Nebraska.

Mr. President, I respectfully urge that all Senators join with us in this effort to honor a great American, a great Nebraskan, and a great lady on the occasion of the 100th anniversary of her birth.

THE DRUG PROBLEM

Mr. MURPHY. Mr. President, the drug problem is one of the most serious facing our Nation. It is particularly important because of its growing influence among the country's youth. In some instances, there are reports that the drug problem is reaching the elementary school grades. This is shocking! Every parent, every school, every church, and every community in this country should educate themselves to this problem, be alert to the signs of its use, and be prepared to truthfully and frankly answer questions that young people might have on drugs.

The growing concern over the drug problem is evidenced by the fact that I have received resolutions adopted by over 100 California cities urging Congress to consider closing to minors the State's border with Mexico unless they are accompanied by a parent or a responsible adult. I wrote to the Senator from Texas (Mr. YARBOROUGH), chairman of the Committee on Labor and Public Welfare urging that hearings be held in southern California on the drug problem. I am hopeful that our committee will soon be able to go to California and take a look at the situation firsthand.

Mr. President, I ask unanimous consent that my letter to Senator YARBOROUGH be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 22, 1969.

Hon. RALPH YARBOROUGH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR YARBOROUGH: As a member of the Senate Subcommittee on Health and Drug Abuse, I congratulate you for calling hearings to spotlight the growing drug problem in this nation. You may be assured of my full cooperation.

There was a time when the drug problem was a phenomenon that we associated with the slums. This is no longer true today, for drug abuse has clearly spread to the suburbs. More recently, there has been growing national concern with the use and abuse of drugs by our college students. As alarming as this was and is, we now hear that drug use has spread to our high schools and our junior high schools. We even hear reports that it has reached the elementary level. The explosive use of drugs represents a "clear and present danger" to America and to its youth.

California is particularly alarmed. I have received, at last count, resolutions from 92 cities in California and another resolution from the State Legislature expressing great concern over the drug problem and urging the Congress to hold hearings in Southern California on the drug problem. Particularly, these resolutions urge that Congress consider the closing of the California-Mexican border to minors unless they are accompanied by a parent or responsible adult. In view of the great interest and the seriousness of the drug problem in California, I would be most grateful if the Committee would hold hearings in San Diego and, perhaps, Los Angeles, to investigate the drug problem.

I appreciate very much your cooperation.

Sincerely,

GEORGE MURPHY.

Mr. MURPHY. Mr. President, Dr. Hardin B. Jones, professor of medical physics and physiology and assistant director of the Donner Laboratory of the University of California at Berkeley, has written a paper entitled "What Parents Should Know About the Drug Problem." Because of the critical importance of the subject, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT PARENTS SHOULD KNOW ABOUT THE DRUG PROBLEM

(By Hardin B. Jones, Donner Laboratory, University of California, Berkeley)

Social pressures among the young to use the dangerous drugs are widespread and, unless the trend is reversed, as much as half of this generation of young people may acquire crippling drug addiction or habituation. Although the effects of some of these drugs are said to be mild, there is reason to doubt the accuracy of such statements and more reason to accept the growing evidence of long-range harm. Every community and every school has been infected to some extent by this newly unleashed social disease. Parents must become informed about the drug movement and use their considerable influence to increase the possibility that their children will decline use of drugs, or to help them to stop if they have become habitués. Most parents with such problems do not become aware of the situation as soon as they might if they understood the common signs of use and the way people are drawn into the habit.

FACTS ABOUT DRUG HAZARDS

Drug use is not new. Mind affecting substances, especially alcohol, have been used commonly since the most ancient times. Marijuana and opiates have a long history but they are both associated with the socially impaired. Inaccurate claims are made that drugs of the present craze (marijuana, the amphetamines, LSD, etc.) are less harmful, or no more harmful, or just as socially justified as whiskey and tobacco. The intoxication produced by marijuana ("pot") is relatively mild when compared to the amphetamines, LSD, and the hard narcotics, morphine and heroin. Perhaps unfortunately, unlike alcohol, marijuana does not induce staggering or other easily visible symptoms and does not interfere noticeably with control of the muscles. The alcoholic drunk is partially protected by not being able to hide his condition or to carry out his deluded inclinations.

Pot, unlike alcohol, produces no hangover effect nor any known danger to the liver. But it does affect the mind and there is evidence that personality may be permanently changed and that effects are cumulative. Many users claim the change is for the better; they see only escape from the

problems, challenges, and satisfactions of the real world. Most chronic pot users are incapable of having long-range goals of accomplishment and some of them hold this aimless existence to be ideal.

The defense of marijuana by comparing it with alcohol or tobacco is shallow. As most parents know, alcohol and tobacco cause harm; but the measure of that harm is not widely understood. Each year about 25,000 deaths from automobile accidents (half the total of traffic deaths) are attributed to drivers under the influence of alcohol. About half of the 2,400,000 traffic injuries per year are similarly attributable to drivers affected by alcohol; more than 200,000 of the injured are left with partially impaired bodies as long as they live. Each year about 50,000 persons die from liver disease of a type which is almost exclusively the result of chronic overuse of alcohol. Heavy chronic use of alcohol is also a contributing factor to many other deaths.

Alcohol is the commonest cause of irresponsible and even criminal conduct in the adult population. It may soon be displaced in this role, however, by the mind-disorienting drugs. Alcohol has dulled many minds and kept those persons from achieving top performance; the new drugs are much more of a hazard in this way and, in comparison, the severe effects of alcohol are probably relatively negligible. But it is obvious that alcoholism is no small problem.

Tobacco and alcohol probably rank one and two, respectively, as causes of death, if we consider their direct and indirect effects and weigh the years of life lost by their victims through relatively early deaths. It is shocking to realize that both are elective diseases. Nearly one death in three in the adult population can be attributed to the fact that half of the adult population smokes and that the risks of all degenerative diseases are more than doubled for smokers. Furthermore, smokers impair the quality of their lives, since they are always less vigorous and have twice as much chronic disease as nonsmokers of the same age. There statistics indicate the serious consequences of two habits that have captured most of our adult population.

Even if marijuana were no worse than tobacco or alcohol, it would be a grave threat to future generations to let them saddle themselves needlessly with another such habit. In fact, however, drugs impart still greater hazards. The hippie cult started four years ago with sweet, naive young people being induced to "expand their perceptions." Many of them today look aged and sick. They are. A result of this kind could have been anticipated from a consideration of the physiological hazards of drug use.

Since marijuana is the most widely used drug, consider its characteristics:

1. It is habit forming.

2. With continued use, it is addictive, perhaps more so than cigarette use.

3. Although it does not lead to use of harder narcotics through *chemical* addiction, it promotes an attitude of curiosity about them and its use increases the chance of exposure to them.

4. Its effect is cumulative. One indication of this fact is seen in that usually, in initial trials, no response is noted; hallucinatory intoxication may require the use of 3 to 5 marijuana cigarettes. In later trials, intoxication can be induced with a single cigarette or less.

5. It is very mild in *immediate* harmful effects, and its harmful effects are small in comparison to the effects of the amphetamines, LSD, or Opiates and other hard narcotics. Since it does interfere with normal perception, it can place the user in situations dangerous to himself or others.

6. Long-range *physical* effects have not been established but are almost sure to include the cancer-producing result of inhaling the products of combustion and distillation of vegetable matter, as in the case of tobacco. *Mental* effects of the cumulative impact of repeated hallucinations are spectulative but probably real. Hallucination by definition is misevaluation of sensory information and disturbs the reference memory.

7. Marijuana use tends to cause the abandonment of goals and ambitions.

Some exaggerations about marijuana effects by well-meaning opponents of the drug fad have added to propaganda for its use as those points were discredited. Harm from misuse of all drugs is nevertheless evident. Exaggeration about the degree of harm is unnecessary and should be avoided lest it discredit proper cautionary views.

The drug user is unprepared to understand the long-range hazards of drugs. As with Russian roulette, which is safe until it is fatal, the individual whose personal experience with drugs has not yet created a serious problem for him is usually convinced that drug use is safe. Apparently only those who have had a frightening experience with drugs give them up readily.

Drives to satisfy hunger and sexual desire are powerful forces which can condition reasoning and decision-making. The hard narcotics produce sensual experiences that resemble these appetites. The marked linkage between drug sensation and sexual sensation may relate to the nature of some drugs and the inner workings of the brain. The claim by some drug users that drugs enhance sexual pleasure may merely reflect the fact that *any* psychological conditioning in that direction can enhance sexual enjoyment. Regardless of the mildness of the starting point, as drug use continues there is greater cumulative probability that the person will try harder, more addictive drugs. Drugs are habituating and sensually conditioning as well as addictive. Addiction to hard drugs and to tobacco can be broken, but the person remembers the sensual conditioning. Former smokers often "dream of smoking."

Although many thousands of drugs are known through discoveries from ancient times to the present, none have been found which impart sustained benefits to normal individuals. Drugs may correct certain deficiencies and abnormalities; but no drugs enhance normal function in those who are well or make the body as fit as it can be made through simple hygienic principles. No drugs increase learning, or the speed or accuracy of problem-solving. All these processes are so complex chemically and so delicately and well balanced in persons of good health that it is unlikely that any random tampering with the chemistry of the brain will ever produce beneficial changes. We expect no superpersons to emerge from drug use now or in the future.

The claim by some that marijuana does not lead to heroin use is explained as a simple matter of arithmetic. Before 1964, it was apparent that many heroin users had "graduated" from marijuana use. Since that time, marijuana use has increased by several hundred times. The limited heroin supply has increased about three times, but this increase is negligible in contrast to that of marijuana. There simply is not enough heroin to supply the potential users who have tried marijuana and want a bigger kick. They have turned instead to the amphetamines, LSD, and most recently to barbiturates. But throughout the whole recent pattern, heroin use is noted to be increasing. Heroin use seems to be limited only by the supply. Current information about increased production of opiates in China and the Middle East points to a massive danger from heroin in the immediate future due to international economic advantages from drug traffic.

FORCES PUSHING THE YOUNG TOWARD DRUGS

In the past, our culture rejected drug addiction as improper, foreign to our way of life. The drug addict was an unpopular outlaw. The general attack on all authority that is part of the recent sweep of revolutionary forces has created a pressure to use drugs of all kinds and a specific drive to liberalize restrictive laws, including legalization to use of marijuana. Supporters of this anti-establishment front choose to link drug use to protestation of the war in Vietnam. Typically, when an adult member of the academic community is cornered about his support of drug use, he immediately counters with the *non sequitur*, "But isn't the war in Vietnam a worse horror?" One such colleague at Berkeley recently said to me, in answer to my complaint about his attitude toward drugs, "This country is on the wrong side in the Vietnam War, and as long as it is, we will alienate the youth of this country."

It was once unthinkable that a segment of the educational profession, however alienated from society privately, would start the drug craze and keep it going. The schools and colleges have been flooded with drug information: how to do it and what to expect, together with suggestive phrases such as mind-expansion. Mind shrinkage would be a more accurate term, but cautionary information has, for the most part, been minimal. Timothy Leary and other high priests of the drug cult have unchallenged access to many young people.

HOW PARENTS CAN RECOGNIZE POSSIBLE DRUG USE

1. Marijuana produces redness of the eyes. Some drugs cause dilation or constriction of pupils. The facts that youngsters get red-eyed easily from lack of sleep, too, and that they have wide pupils when they are not out in the sunlight make these symptoms uncertain by themselves.

2. Some drugs produce drowsiness and clumsiness. Since most normal young people don't bump into things often, these may be signs of trouble.

3. Marijuana and LSD commonly produce abrupt changes in goals and work habits. Those who have the hardest drive for goals and performance seem to be the most affected. This is an important clue, but youngsters are changeable for many normal reasons also.

4. Know the smell of marijuana smoke and the appearance of "grass." Your police department can arrange for you to recognize this evidence. The smell is hard to hide; at illicit pot parties, there is often an attempt to cover the characteristic sweet odor by burning incense. Therefore, burning incense is often a clue.

5. If your youngster is reported to be nude in a public place or to be generally incoherent, he is possibly intoxicated with LSD.

6. A succession of disappearances of articles of value from your household would be reason to suspect that someone with access to these things has become addicted to hard drugs.

7. Diet pills are usually composed of one of the amphetamines. Drug users often take a number of pills at a time for the mental intoxication sought. An amphetamine user has an abnormal feeling of power. He is easily triggered into violence. In San Francisco's Haight Asbury hippie community, there have been nearly thirty murders in the first four months of 1969, all believed to be linked to amphetamine intoxication.

8. Barbiturates are the active substances in most sleeping pills. They are currently being used on a massive scale to induce intoxication. Their chief symptom is drowsiness.

You are more likely to pick up information about drug use by other families' children than about your own. If so, you have an urgent obligation to see that those parents are informed quickly, privately, and confidentially.

AVAILABLE COUNTERMEASURES

The greatest safeguard is candor. Today's generation is direct; most will not hide information except to protect another person. Parents have to make an effort to keep the confi-

dence of their children. Communication is always possible and success depends, in large part, upon two-way honesty.

Parents should be aware of some specific precautions and be ready to take certain measures that are of the nature of prompt first aid. If your child appears to be under the influence of LSD, don't leave him alone for whatever time it may take for his recovery. He may fatally injure himself unless closely supervised. If he seems to have taken any of the amphetamines, remember that he will tend to feel like Superman and may therefore endanger himself and others. No amphetamine user should drive a car. Many alcoholics switch to barbiturates because the cost is less and the intoxication lasts longer. If you have barbiturates at home, keep them out of reach.

If you face a drug use problem, seek help from your minister, your physician or local medical society, the juvenile authority, or some professional organization. Community associations are being formed to help with these problems. But be certain that your source of aid has a solution acceptable to you. Some plans to rehabilitate drug users involve substitution of sensual conditioning such as sensitivity training, itself controversial.

It will be unwise for you to cope with a drug addiction problem by hiding it. Most drug addicts become sly and deceitful. You will need professional assistance.

In combating marijuana use, a community effort is helpful, with coordinated efforts from other parents, physicians, schools, churches, and youth organizations such as Scouts. The law enforcement agencies are sympathetic, well informed, and usually willing to help parents confidentially by identifying evidence of drug use and suggesting local professional help.

No countermeasure is as effective as prevention. Be alert to possible dangers and offer solid opportunities to the young to participate responsibly in useful activtiy.

Let the school or college administration responsible for your child know that you expect to be informed about any use of drugs and that you hold the school responsible for giving reasonable cautionary advice on the subject.

ENCOURAGEMENT TO PARENTS

Parents and other adults have confused feelings about their own kinds of shortcomings. Smokers and drinkers are generally aware, when challenged, that these habits are unhealthful, but they rarely face the problem. Their children see the hazards easily when they are six to eight years old and worry about their parents intensely, but the parents are "hooked" on their cigarettes and liquor. Since they can't stop, except by great effort, they rationalize and minimize the problem. They don't understand enough about their plight to discuss it with their children intelligently.

At a little older age, when children are trying to find out how to be adults—and they all want to be adults—they, too, are likely to take up smoking and drinking if this is the pattern of their parents. This behavior pattern existed long before the drug craze began. Teenagers had already swung to hard liquor ten years ago, when unsupervised teenage parties began to be the fashion as a result of the cult of permissiveness. The youngsters were just mimicking the more obvious characteristics of the less responsible part of adult society. Adults are now really dismayed about the drug hazard; but many of them are in a poor position to guide their children about it since they understand little about the problem and have not done well themselves with alcohol and tobacco. For example, fifteen years ago when the first clear information became available that smoking had serious harmful consequences equivalent to rapid aging, 70% of physicians but only 45% of all adult men were smokers. Today, it is estimated that 55% of adult men smoke but only 7% of physicians have continued the habit. This is evidence that the average adult doesn't understand the facts about cigarette smoking effects.

Why shouldn't the average adult be confused about the smoking problem? His personal experience says he is alive in spite of it, the ads in his newspapers and magazines and on TV encourage him to smoke, and his rare casual encounter with scientific evidence to the contrary has added only apprehension and not real understanding. There is little he can discuss about the matter to the satisfaction of his children.

Parents have great impact on their offspring. Most parents have successfully imparted a set of values, a sense of purpose, and some reason for life. In today's turmoil, parents must do more.

Parental preparation has kept most students from being swept into the wave of sexual permissiveness. College surveys show about the same fraction of "sexually liberated" students now as in former decades. The difference is that the sexually liberated are advertising their activities and organizing groups to promote similar activities. The moral fiber of our people is a good deal tougher and of higher purpose than suggested by accounts of depraved behavior. Generally, parents can still reach their children—even as young adults—if they are accurately informed, objective, and truthful in their approach and convincing by their example.

Most teachers, most of the time, in most locations, have goals of morality and purpose which are similar to those of the average parent. Parents and school administrators should see that misguided teachers, such as the irresponsible former professor, Timothy Leary, do not have opportunities to preach the cult of drug use. If depraved behavior is unopposed or condoned, it is likely to spread. To prevent that spread, parents must be alert to recognize the condition and must learn to oppose these influences and give sound advice to their children.

Parents tend to exaggerate the hazards of drugs because they are more concerned than informed. They must become knowledgeable if for no other reason than the fact that no argument loses more quickly than that which is revealed to lack accuracy. Besides, there are so many frightful factual statements to be made about the drug problem that there is no need to exaggerate.

It isn't the parents' fault not to have anticipated this destructive wave of drug use propaganda. But parents and all responsible persons must oppose the propaganda and the drug clique. The current political disorders, of which the drug movement is a facet, involve various conflicts between the generations. The conflicts must not be allowed to grow deeper. Most youths are not alienated but only struggling to find their independent way of life.

Those of the parental generation must always impart to the young the will to achieve useful life. Today's achievement is largely through mental effort, so that disorientation of the mind threatens the individual's greatest asset. Youth can falsely perceive its vigorous, new body as indestructible, and its agile mind rejects the notion that it, too, will eventually slow to the mental pace of old age. They should be concerned to think that they will slow down faster and to even lower levels through use of drugs. The will to live for high purpose needs to be taught to the young, and it must be taught by resolute, not dissolute, adults.

"WHAT AMERICA MEANS TO ME"—ESSAY CONTEST IN WICHITA FALLS HIGH SCHOOLS

Mr. TOWER. Mr. President, every year the Rotary Club in Wichita Falls, Tex., sponsors an American Essay Contest in that city. Members of the senior classes of the five high schools in Wichita Falls are invited to submit a short essay explaining "What America Means to Me."

Because these essays express the feelings of intelligent young people in the Wichita Falls community, and because I believe they represent the unspoken sentiments of a majority of young Texans, I ask unanimous consent that the five winning essays, written by Mr. Jerry Hays, of Hirschi High School; Miss Sherley Simons, of Notre Dame High School; Mr. Tony Lynn Edwards, of S. H. Rider High School; Miss Annie Ruth Webster, of Booker T. Washington High School; and Mr. Mel Horany, of Wichita Falls High School, be printed in the RECORD, as follows:

There being no objection, the essays were ordered to be printed in the RECORD, as follows.

WHAT AMERICA MEANS TO ME

(By Jerry Hays, Hirschi High School, Wichita Falls, Tex.)

Just recently I went down and reported to my local selective service board, in short I signed up for the draft. When I signed that little slip of paper I did no more than wiggle my hand in the preprogrammed plan of writing my name. That was purely physical. In principle I was doing much more. I was putting my name down in representation of me as saying, "I will serve the United States of America if called upon." In this I am vowing to finally repay to a very small percentage all of the friendships, happiness and freedoms that this country has given me in the past eighteen years. Pay for these with my life if necessary. For fighting for the United States would be like fighting for a brother, or more rightly a father. America is my life.

The very word America stands for everything that I do every day. It stands for waking up to the sun, not barred by iron or shadowed by fear. It stands for being able to take a deep breath without having to hide my actions. And even more important, America stands for being allowed, with that first breath or any breath, to say what comes to my mind. This makes the air a million times sweeter. Make that over a billion times sweeter, because that is how often, every day, an American draws in a free breath and exhales a free thought. Everything that I do is American. My walk, free, creative, individual. Not uninformed and wide as in the march of the communist. The way that I salute my country is American. Hand over heart, warm and close, into me. Not stiff and rigid away from me, away from the individual. Not a salute of power but a salute of friendship. Tnese are the things that I do every day as an American. But there is one day on which I do these things that is more important than any other day anywhere in the world. That is Sunday. The day when an American can not only say what he wants, but he can believe what he wants. No forced marches to the church, no state religions, just freedom. What I feel on Sunday is God. And shouldn't I? For the United States of America is God's country. That is what America means to me.

WHAT AMERICA MEANS TO ME

(By Shirley Simons, Notre Dame High School, Wichita Falls, Tex.)

George Orwell, in his story, "Animal Farm," depicts a life of hard manual labor forced upon the animals. The animals win their freedom but as the years pass they find they must work from dawn til dusk and take orders from the pigs. Soon they realize that their dream of freedom is gone.

Freedom has never been a dream to me. It was given to me with no strings attached because I was born in America. Since then,

freedom has always been the value shaping me as an American.

When I wake up in the morning I can see the sun clearly through my window and as I say my prayers I can truly thank God for all He has given me.

Freedom is usually considered a privilege or a right. Of course freedom is this but it means more to me. It is something I can build on and believe in. Speaking, worshipping and believing as I wish are all guaranteed by freedom and these are the ideals that make me a proud American.

In today's society I find it necessary to know the people around me. I do this by communicating with them. This would be almost impossible if I could not speak freely. Freedom of speech is not only guaranteed in the United States Constitution but, more impressive, it is guaranteed in every free American.

I also cherish freedom of religion. Having the right to believe in God and worship Him as I want is important to me as an American. Looking at a tree or a river, I sometimes wonder what I would see if I were not living in a free country. The tree, I imagine, would be destroyed and the river would be used to transport fighting soldiers. Then, as I drift back to reality, I hear myself say, "God, please do not let it happen here." And at that instant I know how fortunate I am to be an American.

A third freedom I enjoy is believing in my purpose. Before I can share my ideas with others I have to believe that they are worthwhile. I have to believe in myself and as an American I can do this.

Finally, and most important, I possess the freedom to live. This may sound strange at first but many people cannot live. A small child born in Biafra is surrounded by hate before he has a chance to love. He lives in poverty and so many times he never even hears the word freedom. I do not consider this living.

Yet I can live. I am free to obtain any education. I am qualified to work for myself and others. And because I am an American I can walk proudly down the street every day.

Don Black, a noted composer, summarizes freedom in these words: [1]

"Stay free where no walls divide you.
You're free as a roaring tide,
So there's no need to hide.
Born free and life is worth living,
But only worth living if you're born free."

WHAT AMERICA MEANS TO ME

(By Tony Lynn Edwards, S. H. Rider High School, Wichita Falls, Tex.)

America means several things to me, not the least of which are the freedoms I can enjoy as a citizen of this country. There are an infinite number of freedoms, both great and small, which are fundamental to the American way of life. I wish to speak of but four of these freedoms which I hold most dear. The first, and possibly the most vitally needed freedom, is the freedom to worship as I please. This freedom is vital in that is supplies an important need to the human spirit, that of seeking something greater than man. It is in America that I am able to worship with the greatest freedom and without fear of persecution. On the other hand, if I do not wish to worship, I am not forced to do so. Thus, the choice of whether or not to worship is left up to the individual and not some government.

The second important freedom is the freedom of education. There is no other country in the world which offers such vast educational opportunities as does America. The teachers are well trained and educational facilities are the most modern anywhere. The most important part of this educational system, though, is the fact that I have the freedom to decide if I wish to take advantage of it. This is not always the case in other countries such as the Soviet Union or other communist countries. Under Communism, I would be forced to either go to a graduate school or a trade school after competing high school. In America, though, I could decide whether or not to go to college, or, if I did not want to go to college immediately, I could travel, or I could go to work. In any event, I would be able to make the choice as to my educational pursuits.

The third freedom I wish to discuss is the freedom of opportunity. As the saying goes, "Nowhere but in America can a man be born a pauper and grow up to be a President." This is what makes America the "land of opportunity." The right to decide what you want to do and the right to strive for this goal is possessed by all American citizens. I, as an American, can choose my life's work, whether it be to own a business, to explore space, or to lead the country. I have the chance to do these things or a thousand others because of the freedom of opportunity.

The final freedom I wish to discuss is the freedom of expression. Freedom of expression is important because it is one of the basic rights of people upon which America was founded. It is a necessary part of our democratic form of government in that democracy is government of the people, by the people, and for the people. To have this kind of government that is representative of the people, it is essential that the people be able to express their ideas and criticisms freely and without fear of reprisal. For example, if I felt that a law was endangering my constitutional rights as a citizen, I could express my feelings in this matter and attempt to get the law changed, all without fear of government reprisal. America is one of the few countries in the world where such criticism is allowed. Thus, freedom of expression is what makes American government truly a government of the people.

America means many things to me, but above all it means a land of freedom and opportunity where all people can live their lives as they please.

WHAT AMERICA MEANS TO ME

(By Annie Ruth Webster, Booker T. Washington High School, Wichita Falls, Tex.)

What does America mean to me? According to Webster's *New Collegiate Dictionary*, Americanism is defined as an attachment to the United States, its traditions, its interest, or ideas. But to me, as a senior in high school, Americanism stands for many gifts: justice, equality, individuality, unification, but more important—freedom.

Freedom, if applied incorrectly however, is the most dangerous gift anyone can receive. It can be a two-edged sword that will destroy me as an American unless I learn how to use it. Unlike my ancestors, who had only to fight for freedom, I face a greater challenge for I must live with it. As I look at the country today, I see all around me a drastic decline in morals: cheating, where once there was honesty, promiscuity, where once there was decency, crime, where once there was respect for human rights. Everywhere there seems to be a growing laxness, an indifference, too much permissiveness and a lack of integrity that terrifies people, including me, who think about these declines in morals.

Since our country won its independence, something in Americans view authority with suspicion. "Give us more freedom!" has been our constant cry. This was valid when it was directed against tyranny or oppression, but the concept of freedom has been pushed beyond that. The freedom now claimed by Americans has come to mean freedom from all unpleasantness: from hardship, from discipline, from the stern voice of duty, from the pain of self-sacrifice, from all the ideals that our country was originally based on.

As a nation, we have clamored for total freedom. Now we have just about reached that place and I have to face the bleak and chilling truth that we have discarded one external restraint after another and have not learned how to restrain ourselves. Some of the outcries for total freedom are: "Give us fewer rules, or more elastic ones!" This demand has weakened our courts of justice and has shaken the foundations of our churches. "Give us more leisure time and less work!" This one sounds inviting and alluring, but at the end of the road lies boredom. "Give us freedom to decide moral questions for ourselves!" This cry ignores the fact that, once morals become relaxed, it is hard to justify any morality at all.

It is this truth that causes, deep in my soul, the uneasiness that I feel despite America's prosperity and power. It is the knowledge that Americans have abandoned their ancient certainties and so far have found nothing to replace them. It is the premonition that unless Americans learn to control themselves, this climate of ultra-freedom may be replaced by a climate of repression. It is the fear that, if we do not learn to guard and preserve our own best values, then some form of tyranny will surely attempt to take them from us. This is no idle fear; it took Babylon one thousand years and Rome five hundred years to decline and fall, but we have no such comfortable margin. Time and distance have diminished; the clock of history ticks faster.

Therefore, I am not going to think so much about the freedom from tyranny that my ancestors won, but I will think about the chaos that freedom will bring to me if I do not use it wisely. I am going to face the fact that, in the proportion to which I dismiss my external restraints, I have a solemn moral obligation to restrain myself.

This can never be easy but the time has come when I, as an American, must look straight at some of the ugly areas of our society: the divorce statistics, the crime statistics, the weakening of family ties, the swirling clouds of racial hatred, the sex permissiveness on our campuses, the grim persistence of alcoholism, and the increase use of drugs.

Also I should ask myself, to what extent do these things stem from a distorted concept of freedom which leaves men free to be selfish, free to be weak.

If personal freedom of choice is my goal and America's ideal as a nation, then our first and fundamental choice must be not to abuse that freedom. This is what independence truly means: self-discipline. And this, we Americans would do well to remember when we see the flag we love blazing against the sky, symbolizing Americanism.

WHAT AMERICA MEANS TO ME

(By Mel Horany, Wichita Falls High School, Wichita Falls, Tex.)

If I were to say to someone foreign to this great land, "I am proud to be An American." He would probably reply, "Sure, but why, what's so great about America?"

Other than the inalienable rights, such as life, liberty, and the pursuit of happiness, America has many other qualities which are prominent, and meaningful to me. One cannot point out freedom as the basis for our country without understanding the respect that Americans have for it, and the mutual respect for other's freedom. Through the ages, Americans have lived and died for the cause of freedom; now in this contemporary world men continue to die, but as I see it their deaths are not only for the preservation of our freedoms but the freedoms of others as well.

I think America is making positive strides for the improvement of the fundamental beliefs we all enjoy, and those that America stands for such as, equality, self-improvement, and most important—peace. To say that America is faultless, or guiltless in respect to all matters of worldly concern is ridiculous, but to put the blame chiefly on

[1] "Born Free," composed by Don Black.

America is absurd. America is the heart of the free world, take her away in isolation, and the rest of the free world dies. Why, because here in America we know of no better form of government, and her people will not allow a change which might take away from their basic freedoms. Of course, not all Americans are completely satisfied that this is the best system, and those who have openly expressed their dissatisfaction are trying to cause a collapse of what I believe is the finest place on earth to live.

No, in my eyes America is not perfect, we have our share of civil strife and trouble among ourselves, but ours is not the first generation to have faced such problems, and those who advocate a separate society to solve our problems are leading us toward the greatest hypocrisy America could fall into. America has always been a symbol of the respect for all men, and equality of opportunity, and equality before the law. To separate would be an open declaration of our deceitfulness. America means to much to too many to allow misguided few to lead us astray.

Nor do I believe that youth lie at the center of the turmoil and trouble we sometimes have to endure. Today, America is youth, and youth is America, and to deny the young people their opportunity to question the established lines of thinking, would be a vicious blow to democracy. But to permit destruction of almost 200 years of learning and improvements would be an even more detrimental blow.

Yes, America is a conglomerate of many years learning, added to man's ability to think optimistically and all built on a base of compromise. I think that America is and always will be a vast compromise—white—black, rich—poor, Christian—Jew, and many other forms of people who have learned to cooperate with one another. Without compromise America would have been lost long ago, but because of it we all can claim a share in its never ceasing development.

We Americans have much to be thankful for, and for this reason we all should strive for continued lines of communication between people not only in our nation, but in other nations as well. I believe in America, and I believe in her people, and for this reason I will gladly tell anyone, "I am proud to be an American."

THE NEW CONSERVATION

Mr. NELSON. Mr. President, the Capital Times of Madison, Wis., recently published an excellent article profiling the activities and philosophy of the Environmental Defense Fund, an organization that is building the case around the country for an ecological ethic in law which gives due consideration to the impact of our activities on the environment.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Capital Times, May 19, 1969]

"NEW MILITANCY" IS TYPIFIED BY EDF: CONSERVATIONS ESCALATE FIGHT TO SAVE ENVIRONMENT

(By Whitney Gould)

Not long ago, the term "conservationist" was apt to evoke images of grey-haired ladies in sensible shoes, who planted pansies along sterile boulevards, and ruddy-faced souls who took pack trips into the Rockies.

Not that these activities were by any means unworthy. But they tended to reinforce the suspicion that conservationist were talking primarily to themselves. They were always interested in clean air and in saving the red woods, but rarely did they have an effective lever to translate their concerns into action, relying, in their confrontations with decision makers, more on moral persuasion than anything else.

Now, as the sulfurous fumes of big-city air take their toll in economic as well as physical terms; as pollutants deaden lakes and waterways; and as commerce encroaches on beauty spots—conservationists are beginning to realize that moral force, and even aggressive lobbying, are not enough.

"The sense of being fenced in—it's so obvious now," says Mrs. Owen (Lorrie) Otto of Milwaukee, one of the state's impassioned conservationists, "Before, it seemed that there was always somewhere you could go to get away from things. Now even those places are being spoiled."

Mrs. Otto's sense of urgency is shared by many. And it is at the root of a growing militancy in the conservation movement.

The movement has developed a broader base—with lawyers and environmental scientists, as well as citizens who are simply interested in conservation—and a pragmatic thrust.

Unique among the "new conservationists" is the Environmental Defense Fund, Inc., of Brookhaven, N.Y., an alliance of ecologists and lawyers who literally take their opponents to court. Their motto: "Sue the bastards."

At Mrs. Otto's instigation, the EDF, with its crusading attorney, Victor J. Yannacone of Patchogue, N.Y., was invited last year to handle the case for petitioners for a ban on the use of DDT in Wisconsin. Hearings on the petition are expected to conclude this week before the state Natural Resources Department.

Though up to now it has failed to win actual court decisions, EDF's earlier battles eventually led to a prohibition on DDT spraying for mosquito control in Suffolk County, N.Y., and a similar prohibition against DDT use for Dutch elm disease in 55 Michigan cities. (The state later banned the pesticide outright.)

When arguments in the Wisconsin case are completed some time this summer, the group will pursue its air pollution fight against a Missoula, Mont., paper pulp mill.

In its efforts to protect the environment through legal action, EDF has picked up support from older conservation groups which up to now have not been identified with such aggressive tactics. The National Audubon Society lends financial backing to EDF through a grant from its Rachel Carson Fund; the Wisconsin division of the Izaak Walton League of America is one of the petitioners in the Wisconsin DDT fight, along with the Michigan Audubon Society and the Citizens Natural Resources Association of Wisconsin. (The Wisconsin petitioners will be discussed in the second of these articles.)

EDF relies on litigation rather than lobbying for legislation because, in Yannacone's words, 'sad experience has shown that at this time in American history litigation seems to be the only civilized way to secure immediate consideration of basic principles of human rights . . . . All of the major social changes which have made the United States of America a better place to live have their basis in fundamental constitutional litigation. Somebody had to sue somebody before the legislature—in enlightened self interest—took long overdue action."

In pressing suits in courts of equity, EDF taps from its reservoir of scientists throughout the country, who are competent to testify on everything from pesticides to air pollutants. The group is also beginning to marshal an army of attorneys and law professors and students who are, in essence, writing a whole new body of common law, through which citizens can assert what Yannacone believes is their fundamental constitutional right to a clean environment.

At the core of that law is the conviction that "this generation holds all of its natural resources as a kind of trust for future generations," as Yannacone puts it.

"There is absolutely no justification," he says, "other than pure survival-of-the-fittest theory, to permit a user of water to convert a crystal brook into a sewer."

EDFers are accused, among other things, of fighting progress.

"But we're not," insists executive director Dr. Joseph Hassett, of the University of New Mexico. "We're only against progress when it leads to the degradation of the environment and the belittling of man himself."

Yannacone challenges the purveyors of this sort of "progress" to calculate the cost of replacing or restoring an ecologically unique area like the Everglades to its original state. "Come into court," he invites polluters, "and show us you have considered the long-range damage you may do."

Hassett also questions the old notion of the sanctity of property.

"A legal title," he says, "brings social responsibility, so that a piece of land is not simply 'mine,' in the capitalistic sense, but mine to use as long as it is not detrimental to someone else's rights."

The industrialist whose factory daily spews toxic compounds into the air, even though he may be turning out one useful product after another, clearly violates the right of others to a clean environment, Hassett believes.

"We have this love affair with technology," he laments. "And industry thinks it's doing you a big favor, no matter how much it degrades the environment."

EDF's "call to arms," in short, is for a redefinition of values—the surrender of the notion that man is continually at war with nature and is charged with subduing it, to the realization that he is only a small part of the total environment, and must live in it.

"We have come a long way from the days when man could move only as fast as his legs could carry him, when his house was close to the earth and his food was only what he himself could pluck or kill," writes ecologist Barry Commoner of Washington University in St. Louis, in the March issue of "Environment."

"Man knew then that he was dependent upon nature, and was a part of it. We pride ourselves on the technological marvels that make our cities the tallest, our travel the swiftest, our living conditions the most comfortable and our weapons the deadliest of any man has created. Bemused by our own accomplishments, we forget that like our primitive ancestors, we are dependent on the rest of nature.

"Unless we learn to match our technological power with an increased understanding of what it is doing to the natural world, we may stress the living environment to the point of collapse, and find that it will no longer support us."

ENVIRONMENTAL QUALITY: A GOOD START

Mr. TYDINGS. Mr. President, last Thursday, President Nixon created an Environmental Quality Council in the Executive Office of the President. Its purpose is to coordinate the many Federal activities affecting the environment and to provide a top level study group to focus on particular areas of immediate concern. The President's action is a welcome step in the difficult effort to restore and enhance the quality of man's environment. As one who is deeply concerned with conservation, I am delighted to see the President move forward in this area.

The President's action reflects the deep desire of the American people to put a

stop to the pollution of our air, land, and water. It recognizes the growing public dismay over the adverse impact that our private and public development programs have had on the environment. Too often roads, electric power plants, and other examples of our industrial and technological progress have been constructed without first considering how, and to what extent they will disturb the delicate ecological balance.

The President's action recognizes the need for the coordination from a conservation point of view of Federal projects and policies. With a government so large, the left hand often does not know what the right hand is doing and the result is governmental programs that are contradictory in purpose and harmful to the environment.

The question arises, however, if this interdepartmental council will in fact provide the coordination required. Interdepartmental councils and commissions tend to issue compromise recommendations that are so watered down to suit everyone involved that they in fact mean very little. Members, understandably perhaps, seek to protect the interests of their own departments and thus no significant common policy is achieved. I wonder whether this will happen here.

I wonder, too, whether the President can find the time to preside over this council. His time is precious and the demands of the office so great that I am afraid he simply will not be able to pay adequate attention to the council. An office in the White House concerned with environmental quality needs a chairman whose sole concern is environmental quality, who wears no other hats and can devote full time to what will be a most difficult position. He should be an individual appointed by the President with the advice and consent of the Senate to serve at the pleasure of the President.

There can be no doubt that an "overview" environmental council of this type is definitely required. I feel strongly though, that the council or agency responsible for protecting our environment should have greater muscle than that proposed by the President for his council. Both concern and coordination are indeed vital. But standing alone, they are insufficient to achieve a quality environment.

The council or agency should have the authority, as a matter of course, to review all governmental policies and programs prior to their implementation. Additionally, it should have the power to delay for a limited time specific projects deemed particularly harmful. It should operate in the area of conservation much like the Bureau of the Budget operates in the field of executive spending.

Nevertheless, the establishment of this council is a step in the right direction. The task of restoring the quality of our environment is most difficult and the President's action is most welcome. I feel strongly, however, that the authority of the council should be increased to include the power of review and delay.

On April 15, I introduced legislation, S. 1818, to create such a council by legislative action to be chaired by a full-time director. It would be called the Office of Environmental Quality and be located in the Executive office of the President. The Committee on Public Works will hold hearings on this bill and others of like intent within a few weeks and it is my hope that on the basis of these hearings the Congress will pass legislation establishing a fully staffed Environmental Quality Council with the vital, additional authority to review all governmental programs with an eye to their environmental impact and to delay specific projects which would be harmful.

OCEAN EXPLORATION AND DEVELOPMENT

Mr. MURPHY. Mr. President, on May 20, I introduced S. 2204, a bill to establish a National Oceanic Agency. At that time, I expressed my strong convictions that I felt that we should be moving ahead with ocean exploration and development. It is my contention that both economic and national security considerations compel us as a nation to look seaward.

On May 28, the Oakland Tribune, in an editorial entitled "To Reap the Sea's Resources," endorsed the establishment of a National Oceanic Agency. As the editorial observed:

Although 1969 may well be best remembered as the year man sets foot on the moon, national legislation introduced by California Senator George Murphy could be the starting point of a program of exploration and development which could conceivably have a far greater impact on mankind than a moon landing.

Earlier, on May 6, the Long Beach Press-Telegram in an editorial said that it is "time to use the riches of the oceans."

Mr. President, I ask unanimous consent that both editorials be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Oakland Tribune, May 28, 1969]

TO REAP THE SEA'S RESOURCES

Although 1969 may well be best remembered as the year man sets foot on the moon, national legislation introduced by California Sen. George Murphy could be the starting point of a program of exploration and development which could conceivably have a far greater impact on mankind than a moon landing.

Senator Murphy proposes the establishment of a National Oceanic Agency, designed to reorganize the United States' oceanography program and to coordinate an assortment of programs now being undertaken by 23 separate government agencies.

Oceanography, generally considered one of the lesser sciences, has been elevated within recent years to a place of far greater prominence.

The reason is the vast potential that oceanography promises, a potential to yield sea food and minerals of untold abundance to a world half underfed and already being depleted of its land resources.

The world's population is outracing its food supply and extensive famine is feared as early as the next decade in Africa, Asia, the Middle East and Latin America.

There is hope—indeed, perhaps the only hope—that massive famine can be avoided by a far greater reaping of the resources of the sea.

The proposed National Oceanic Agency would concentrate and coordinate activities in such areas as marine food products, mineral extraction, pollution, water supply, medicinal raw materials, exploration and mapping.

Creation of a National Oceanic Agency as proposed by Sen. Murphy would be an important first step toward assigning oceanography the national priority it deserves.

[From the Press-Telegram, Long Beach (Calif), May 6, 1969]

TIME TO USE THE RICHES OF OUR OCEANS

The oceans have long been said to contain "untold" riches.

The fact that these riches are "untold" outlines the problem facing scientists and educators interested in the relatively young field of oceanography.

This information gap is a serious one which has held back ocean development, not only in the United States, but throughout the hungry world.

Today in Long Beach a group of educators and scientists from all sections of the United States and Mexico are meeting in the second day of a three-day conference dealing with the oceans, industry and education.

Sponsored by the Pacific Western Region, American Society for Oceanography, whose president is Louis F. Jobst Jr., director of marine development for the city and port of Long Beach, the conference is a major attempt to assess the present status of education for marine science and technology in the United States and the requirements of industry for trained personnel in the field.

Discussions at the conference are ranging over all aspects of oceanography—industry and commerce, engineering-science, data, recreation, military, food and minerals.

Such wide-ranging talk is important for little is really known about what is needed to develop our ocean resources. Even such a simple thing as an up-to-date inventory of known resources would, in fact, be highly useful.

Some hard decisions are going to have to be made in this country—and the rest of the world, too, for that matter—about developing and exploiting the oceans.

As a nation we have faced up to the problem of conquering space. Certainly we can no longer neglect our last big frontiers on earth—the oceans.

Hopefully this conference—in a city which has jumped wholeheartedly into the oceanographic swim—will not only provide some obviously-needed answers but will raise some new questions—questions which will lay the groundwork for developing a national commitment to learn about and to utilize the oceans of the world.

A TIME OF TESTING

Mr. McGEE. Mr. President, the Wall Street Journal recently published an excellent article written by Mary Joan White of the Washington bureau of the Deseret News, Salt Lake City. In it, she retraced the history—at least a portion of it—which has lead the Nation to a time of testing. Now is such a time, as certainly as were Lincoln's days. There are many who would divide the American people, sure in their own minds that only their view is moral, convinced in their attitudes that they would rather ruin society if they cannot rule it. The parallel to earlier days of testing is well drawn and I ask unanimous consent that Miss White's article, entitled "A Time of Testing," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, May 20, 1969]

A TIME OF TESTING—TODAY'S TENSIONS PARALLEL THOSE OF THE PRE-CIVIL-WAR PERIOD

(By Mary Joan White)

". . . our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.

"Now we are engaged in . . . testing whether that nation, or any nation so conceived and so dedicated, can long endure. . . ."

With the omission of nine words, the opening paragraphs of Lincoln's Address at Gettysburg are forever relevant to the United States of America. Their validity in our own time is sobering.

This nation is undergoing a period of testing of a nature that it has not faced since Lincoln spoke. The parallels are sufficient to recall Hegel: "Peoples and governments never have learned anything from history, or acted on principles deduced from it."

In the 1860s the question of the place of the Negro in America society was the tinder that ignited public discourse and left the rule of law ashes in the fires of unreason. Good men saw certain questions as matters of higher moral law to which even the principles embodied in the Constitution should bow. Radicals at both extremes used the race issue to stir public passion, obscuring fundamental principles of democracy and implying that, in the immediate crisis, they were of only secondary importance. The moderates allowed it to happen. Each side practiced rule-or-ruin politics. To gain its own legitimate or illegitimate ends, each was ready to sacrifice the ideal of a people governing themselves by majority rule, one side in order to prevent its application, the other to extend it.

Between the extremes, the center itself divided. James Buchanan was still President when South Carolina seceded. Believing no minority had the right to override the majority or destroy the union, he nevertheless held that the majority could not coerce the minority as a matter of principle or of national survival.

The most frightening present-day parallel to the ante-bellum period is the tendency to permit modern radicals to divide society on the basis of "morality" instead of promoting debate on the nature of the problems confronting society and the most effective means of solving the problems.

As long as slavery was a political, economic and social problem (albeit with moral overtones), the states were able to deal with it; its extension was limited and the trade curtailed. There was hope for eventual solution as late as 1850. But when the problem was forced beyond the political arena and became a moral issue, compromise and patience were no longer possible. Where once an *institution* had been condemned, subsequently fellow citizens were castigated as immoral or evil. The government of the people ceased to exist on a national basis and only war restored it.

In that war more than 617,500 men died. Legal slavery also died. Whether slavery could have been abolished short of war is questionable, but it is certain that the methods employed by the radicals stirred public passions to the point that leaders who tried to work through to a peaceable, just solution were cut off. Nor did the fearful price buy true freedom for the Negro. The nation has not finished with the bitterness, political division and racial injustice that survived the war.

Instead of sectional lines, racial and generational lines are being drawn today. Militant blacks and radical youth are attacking the problems of an admittedly imperfect society in terms of moral issues and with any means at hand. Viewing problems primarily as moral issues, however, has major drawbacks; Oneself and one's own solutions are necessarily seen as right. Anyone who does not support one's programs is at least blind; those who oppose or offer alternatives are not only wrong but immoral. If one's opponents are immoral, why quibble about the tactics used against the ungodly?

WHERE RESPONSIBILITY RESTS

Society must not permit itself to be divided into factions, each seeing itself as the guide on the only road to light. Moderates must speak out in defense of justice, but also in defense of fair and legal roads to justice. Legitimate authority must act judiciously to curb excesses of those who would reject all authority but their own. Whether we be parents, teachers, university administrators or government officials—or simply law-abiding, tax-paying, caring voters—we are responsible.

If a diverse people are to rule themselves, the majority (or its delegates) must decide and the minority must submit, even if the decisions are repugnant or hurtful. The minority can only try by persuasion to alter the balance. If the minority refuses to submit, society fragments and chaos results: Either the majority enforces its will by any means necessary, including war, or a period of anarchy ensues, historically followed by a tyranny of those most willing and able to use extreme measures. Self-government is dead. The founders of this nation did temper the harsh requirements of majority rule in the cause of individual liberty. Perceiving the danger implicit in "the greatest good for the greatest number," a possible tyranny by the majority, they wrote into the Constitution certain safeguards.

In their attitudes and strategy, the young radicals and black militants are the direct descendants of both the abolitionists and the Southern radicals, an uneasy mix surely. Like the abolitionists, they have a rather arrogant assurance that they are so right, that they are above the law in their choice of means to their ends. Like the Southern radicals, they are so committed to their own view of the issues that they insist on being allowed to rule or ruin the system. Their attitude and more extreme methods are absolutely totalitarian.

Latter-day Buchanans find it difficult to condemn illegal methods employed in the name of reform. Like Buchanan, they deplore the excesses but deny society's responsibility to curb them.

FINDING THE PROPER COURSE

What is the proper course for a minority that finds some aspect of national or institutional policy accepted by the majority to be morally and ethically repugnant? Must conscience be sacrificed to majority will? Or must punishment be accepted as the price of exercising one's conscience? That dilemma accounts for much of the current hesitance to act in cases of clear violation of the law.

No very agreeable solution has been found. The dissenter can stifle his objections, exile himself, accept punishment—or limit his protest to legal forms. Society, of course, can ignore the violation of its laws, but it does so at its peril. Particularly when the minority is a sizable one, to ignore disobedience of the law is to encourage wholesale disrespect for the rule of law. To excuse a violation committed in the name of conscience is to set each man's conscience above that of the majority.

The response must be to examine the issue of the individual's right to heed his conscience in relation to the importance of a people's right to self-rule. The collapse of free democratic government that safeguards basic liberties ends the individual's free exercise of conscience. The obverse does not hold. The doctrine of individual nullification is no more valid in the 1960's than was its states' rights ancestor in 1795.

Harsh as it is, the paramount importance of the right of a majority to govern must be defended—even at the cost of the use of force.

The contemporary protest movement was born in the Rev. Martin Luther King's Montgomery bus boycott. Its current form is a perversion of those unquestionably legal, peaceful and productive origins. Now the movement embraces seizure or destruction of property; violence or threat of it against persons; the systematic harassment of law-enforcement personnel; the denial of the right of others to free speech and legitimate action; the impairment of academic freedom. Current tactics differ not only in degree but in nature from Dr. King's non-violent civil disobedience that constituted no threat to the persons or rights of others or the rule of law. He never demanded amnesty for violating the law; He broke only those laws whose legality he wished tested against Constitutional principles, thereby forcing the law to live up to its ideals.

Where authorities do not make the mistake of using undue force against illegal forms of protest (thereby casting the protesters in the role of innocents whose demands must be granted in recompense), legal protest will serve as well and gain more of significance: Concessions rationally evolved in a spirit of community and cooperation stand more chance of being effective, leave no residue of bitterness and division, establish no precedents of disrespect for the rights of others.

In the closing days of the Convention of 1787, many of the participants were less than perfectly satisfied with their efforts at creating a Constitution. It was understood that some of the leading political figures of the day would oppose its ratification. Nearly at the end of his public service, Benjamin Franklin rose. Addressing the dissidents, he called on each to "doubt a little of his own infallibility . . ."

As for the rest, Franklin recognized that all had some fault to find with the Constitution, yet he urged support for it because he said, "I expect no better, and I am not sure it is not the best."

ABM VITAL TO AMERICA

Mr. FANNIN. Mr. President, there has been a great deal of irresponsible and ill-considered talk on the current issue of development and deployment of the ABM to protect America from nuclear blackmail. None of this talk ever explains why it is proper for the Soviets to deploy an ABM system, but improper for us to do so.

The usual double standard regarding news seems to apply—responsible proponents of the President's system get short shrift and back pages, while any little voice raised in opposition rates at least a 20-point headline and often more.

I have mentioned this before, Mr. President, in several speeches on the Senate floor, that some ABM opponents play fast and loose with statistics; they even contradict themselves. Just a few weeks ago one voice was raised saying that ABM could ultimately cost $400 billion. This morning's press carries reports of a critic saying the cost could be $20 billion. I think the contrast and conflict speaks worlds for the value of this kind of information, Mr. President.

My colleague from Arizona (Mr. GOLDWATER) has long been a responsible voice in this vital area His reasoned and calm approach to the problem of national defense gets far fewer headlines, however, than some of the semi-hysterical screaming or half-baked notions of passing curbstone "defense experts."

In order that the record may show some balance and a measure of reason,

I ask unanimous consent that two excellent presentations on the intricacies of the ABM issue be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CAPITOL NOTES: ABM SYSTEM VITAL TO UNITED STATES

(By Senator BARRY M. GOLDWATER)

If Sen. Edward Kennedy were somehow to find himself President of the United States tomorrow, the chances are strong that he would go along with an anti-ballistic missile system like the Nixon administration's Safeguard or something very similar.

The same goes for such other staunch opponents of the ABM as Sens. J. William Fulbright (D-Ark), Albert Gore (D-Tenn) or John Sherman Cooper (R-Ky).

The reason is simple: No president and no secretary of defense can afford the risk involved in leaving the American people without any semblance of missile defense.

It is one thing to stand outside the arena of direct responsibility and inveigh against the large expenditures that would be required for an American ABM system; it is quite another to be personally responsible for the safety of 200 million Americans.

The awesome decision responsibility to forego the construction of a defense system comparable to what the Soviets already have deployed is one that neither President Johnson nor former Defense Secretary Robert McNamara could bring himself to face.

McNamara delayed several years after intelligence reported the beginning of the Russian ABM system before he proposed the "thin" ABM system known as the Sentinel.

Raising objection to huge expenditures proposed by an administration is very easy when the responsibility does not belong to the person doing the objecting. But when you consider that the lack of a missile defense could mean the difference between losing or saving more than 60 million American lives, you get some idea of the problem confronting Nixon and Defense Secretary Melvin Laird.

It makes no difference whether the ABM opponents actually convince themselves that the Safeguard system will fail to function. It is better to gamble on perfecting a workable system than to be charged with needlessly risking 60 million or so lives.

There are many paradoxes. One of the strongest reasons the Nixon administration wants to go ahead with a Safeguard ABM is the belief that such action is the surest way to bring about meaningful arms-control talks with the Soviet Union. Ironically, Senate opponents argue that its approval would provoke the Soviets, endanger the prospects for productive negotiations, and result in escalation of the arms race.

Conveniently, these senators skip the fact that the Soviet Union showed no interest in engaging in arms-control negotiations until the United States decision to go forward with the Sentinel ABM system. The Soviet Union initiated the opportunity to have arms-limitation talks just four days after the Sentinel system was announced.

The Russians no doubt believe they have an advantage over us with their well-advanced ABM system. Our best intelligence indicates that they presently have 67 ABM missile sites deployed around Moscow.

The Soviets are now in the third phase of their ABM deployment: They deployed first in 1962 in the Leningrad area; they launched the second phase in Moscow some years later and are presently developing a third generation of ABMs.

Sen. Henry Jackson (D-Wash), chairman of the Senate subcommittee on atomic weapons, reports that the Russian system deployed in the Moscow area covers far more than the capital city of the Soviet Union.

He described the Moscow deployment as an "area defense covering hundreds of miles" which is presently being modified so that it can be oriented and used against missiles coming from China as well as other geographic locations.

REMARKS BY SENATOR BARRY GOLDWATER OF ARIZONA BEFORE THE NEW JERSEY BANKERS' ASSOCIATION, ATLANTIC CITY, N.J., MAY 22, 1969

Good morning, ladies and gentlemen. It is with a great deal of pride and gratitude that I appear before you today to try and add my small contribution to your very important proceedings. I believe it is a temptation of every public official when addressing a meeting of bankers to feel that he must, per force, confine his remarks to questions of a financial nature. The mind jumps automatically, it seems, to questions of monetary policy, money supply, tax proposals, interest rates so on and so forth. But I am not convinced that this is a good idea. I'm sure I don't have to come here and relate to you, actually as an amateur in many of these subjects, what the latest developments are. I know that you all read and keep up with the statements of such experts as William McChesney Martin, Arthur Burns, David Kennedy, Congressman Wilbur Mills and all the other public officials who are at this moment contributing to and formulating economic and fiscal and monetary policies for the future.

No, today I should like to talk to you about a different, if related, subject. My reference here is to a subject which more and more is beginning to engross the attention, not only of the Congress and of the public media, but also of the American people. My subject is the anti-ballistic missile proposal. Now here we have a subject which I don't believe is being sufficiently and adequately explained to the American people by our newspapers. For example, it is difficult to find in the public print the very incisive and important pronunciations by such people as Admiral H. G. Rickover and Professor Eugene Wigner, who holds all of the big four scientific awards that this world has to offer. Nor do we see in the public press any great deal of attention given to statements by members of the Joint Chiefs of Staff and of experts in the Nixon Administration's defense establishment.

No, the emphasis is in the other direction. For example, just let Senator Edward Kennedy get two known opponents to the ABM system to prepare a lengthy report, which weighs about ten pounds and contains nothing new, and you will find papers like the *Washington Post* devoting eight and ten columns of space to its contents. The difference between this report and the great multitude of treatises and papers which have been presented in support of the ABM is that Mr. Kennedy's boys are against it. Now they use a variety of arguments, one of which is that it would cost too much. I submit the Russians have been building a missile defense for five years, and we have known about it for five years. Suppose we had started, even a year after the Russians. Think of what it would have meant in dollars and cents, when you count in inflation and what inflation has done to defense costs in the last four years. I submit that it may be costly to go ahead with the Safeguard today, but at our present rate of increase and inflation, think of what it would be if we had to start one five or ten years from now.

No, on the cost factor I cannot credit the opponents of the ABM system. And for one very important reason. You cannot estimate a cost on millions of lives and the possibility of their being wiped out in an enemy attack on this country. You cannot estimate the cost of millions of lives or even one life in dollars and cents that might, if they didn't go to an ABM system, be channeled into American ghettos.

Now, understand me well. I am not for expending this nation's entire substance in military hardware to the exclusion of welfare, to the exclusion of rebuilding our cities, to the exclusion of increasing the level of health and welfare for our many underprivileged people. No, I'm not at all. But I say to you that the welfare of these people will mean nothing at all unless they are safe.

Now it's a wonderful thing to dream of a world in which everyone is so reasonable and so civilized and so dedicated to co-existence that expenditures for defense against possible nuclear attack are unneeded. Unfortunately, we do not live in such a world. We do not have an adversary who is mellowing. Despite all the statements from the left, Soviet Russia is getting tougher and stronger by the minute. Czechoslovakia is a case in point. The Soviets' increased armaments, their growing Navy in the Mediterranean, their arming of the Arab nations, their emphasis on more and better and heavier explosives, metatonage, ICBM's—all of these things point to an adversary of ours who is arming to the teeth and deploying a defense against any possible missile attack from outside its border.

Now against this backdrop, we are told that if we go ahead with a skeleton, rudimentary type missile defense system that the Russians will regard it as provocative. Well, I'll be darned. Wouldn't that be too bad. Actually, the Russians wouldn't. Kosygin has said time and again when asked about the ABM, "Oh, that's a defensive system. That's not provocative; that doesn't mean anything." That's the way the Russians regard an ABM system.

Actually the American opponents to the ABM system want to skip the hardware of a military missile defense system and try for a political miracle instead.

The miracle, of course, would be the negotiation of an airtight arms limitation agreement with the Soviet Union protected by adequate inspection provisions.

The word "miracle" is used advisedly in the light of the long Soviet record of broken agreements plus our experience in trying to negotiate past agreements which included provision for inspection on Soviet soil.

This total reliance on the possibility of reaching mutual agreement as opposed to the deployment of even a skeleton missile defense is not just one man's argument. It was the basic theme running through each and every argument presented to the Senate Armed Services Committee for rejection of the Nixon Administration's Safeguard ABM program.

Scientists such as George W. Rathjens and W. K. H. Panofsky, for example, spoke of the possibility of agreement as though it might be just around the corner. Indeed Rathjens saw a Soviet-American agreement to curtail the strategic arms race as "the least costly, highest confidence measure of all." Panofsky told the committee that agreed limitations or reduction of armaments "appears at last to be in sight."

These assurances certainly have no basis in fact. No evidence has been brought forward to indicate any possibility of an arms limitation agreement with the Soviet Union.

And even if there were, the lack of an American counterpart to the Soviet's Galosh missile defense would have the United States entering into such an agreement from a position of comparative weakness. Of course, the opponents of the ABM system do not see it that way. For example, Abram Chayes, Harvard Law School Professor, had this to say before the committee:

"I conclude that from the standpoint of achieving strategic arms limitation agreements, we are much better off in the position we are now in—with no ABM on our side and an obsolete one, difficut to upgrade, on theirs—than if each side were engaged in competitive deployment."

If we are to accept this conclusion, we must accept a Harvard Law Professor's estimation that the Soviet ABM system, now in its third stage of advanced deployment, is obsolete. I, for one, am not willing to accept any such conclusion. It calls for a gamble that can be counted in millions of lives.

But even should we accept this argument, we have Mr. Rathjens' assurance that it cannot be accepted with confidence. He testified as follows:

"The sad fact is that while we can have almost no confidence in an ABM system working, an adversary can have almost no confidence that it will not work. Thus, we must expect the Soviet Union to react to even a "light" or "thin" deployment . . . not because an ABM system will be effective and not because it will be expanded, but simply as a conservative hedge against those possibilities."

One of the ironies of the present debate is the great emphasis the scientific community (or the most vocal part of it) is placing upon the impossibility of our even knowing whether the Safeguard ABM system would work. This is the same group which supported so strongly the Nuclear Test Ban Treaty which is what makes it impossible for us ever honorably to discover if a missile defense system is workable.

It should be recalled that the Russians made their high altitude missile tests prior to agreeing to the Test Ban Treaty. Therefore, their scientists and military men have the required knowledge to know what does work and what does not work.

It should also be recalled that the Nuclear Test Ban Treaty was supposed to facilitate and hasten the conducting of meaningful arms limitation talks with the Soviet Union. It has been some years since we ratified that treaty, but nothing has transpired to hasten the kind of talks it would take to bring about any reasonable and safe mutual reduction of arms.

One particularly baseless argument of the ABM critics is the one that states that an effort by the United States to catch up with the Soviet Union in the area of missile defense would signal the start of a new arms race. The plain fact is that our delayed decision to go ahead with an ABM was *not* the start of a new arms race; rather it was a decision not to lose a race already in progress, and one in which the Soviets threaten to leave us far behind.

It is my considered opinion that we are now debating in this country the most important question to come before this Congress in many years. I say this because, despite its many technical aspects and its possible non-workability, we are speaking here about an ultimate system to protect this nation's deterrent capabilities and to defend 200 million American lives against the possibility of an enemy attack. I am not convinced that Safeguard is the final answer, nor am I convinced that Safeguard is the most effective ABM device we could proceed with at this time. It may well be that Safeguard will not be the system ultimately deployed.

But we are not here talking about alternatives. The critics of Safeguard offer no substitutes in the form of defensive hardware. They would like us to reject Safeguard and rely on Soviet intentions. No, let us make no mistake about this. What this issue boils down to is whether this country is to have even a rudimentary counterpart to the elaborate, three-stage, Soviet defense system known as Galosh. The argument is over whether we have something to match against Soviet defenses or nothing at all. And let's make it very clear we are not here talking about an offensive weapon system.

As I see it, this controversy has a symbolic nature as well as a pragmatic side. I begin to sense that the ABM controversy arises at a time when we are actually at a crossroads in this nation's approach to the entire subject of national security and worldwide commitments in the name of freedom.

In effect, our choice is either to move ahead and keep abreast of the times, or hearken back to that period in the 20's and 30's when isolationism, disarmament and the downgrading of the military and the ROTC were being pushed the same as they are now. And conditions today have some marked similarities. People are tired of war. Many yearn for the comforting isolated days of an earlier era. Many want to risk again the dangers of unilateral disarmament in the face of rising armed strength in the potential enemy camps.

This is completely understandable, but it is regrettable that the opponents of Safeguard must appeal to this human temptation in their determined and deliberate attempts to achieve what they mistakenly believe would be a more comfortable balance of power between this country and the Soviet Union. The forces which today are mounting a concerted attack on almost every item in this nation's defense budget are also making a test case of the ABM controversy.

Thus, we are seeing all of the arguments against military activity, defense projects, security measures, lumped together in the attempt to defeat Congressional approval for an American ABM.

We are today hearing the same kind of arguments that were used twenty years ago in a futile attempt to get this nation to forego the development of a hydrogen bomb while our Russian adversaries in the Cold War pushed ahead with their own H bomb. The critics of an American ABM system tell us "ad nauseam" that if we are to approve even the most rudimentary ABM system that we will single-handedly become responsible for escalating the nuclear arms race. These so-called experts overlook conveniently—seldom even mention—the fact that the Russians have been building their own ABM system for five years without provoking escalation of the arms race. When the Russians began their deployment, our Defense Department scarcely moved a hair. In fact, it took Secretary McNamara several years even to concede what the Armed Services Committees of both the House and Senate and all intelligence agencies throughout the world knew for a fact: That the Russians had begun to erect a system for defending Leningrad, Moscow and other areas of Russian territory from the possibility of an attack from beyond her shores. It wasn't until last year, when the Russians began an advanced phase of their ABM deployment that Mr. McNamara saw fit to recommend that maybe it would not be a bad idea to explore the idea of a little protection for the United States.

I have sat through many hours of testimony in the Senate Armed Services Committee on the question of whether it is feasible for the United States to proceed with the Safeguard ABM. In addition to that, I have read a great many thousands of words on this subject and a large percentage of what I have heard and read has been arguments against the Nixon Administration's first major defense project. And I am struck by the similarity of the arguments that run through all the papers and treatises that have been presented, especially those from the scientific community and the academic world in opposition to this proposal. Boiled down, they all come around in various degrees of directness to an expressed fear that something we do in the field of defense may upset or irritate the Soviet Union. We are told with an amazing, if questionable, certitude that approval of the Safeguard ABM system will destroy the possibility of our engaging in arms limitation talks with the Soviet Union. This has no basis in truth. The fact of the matter actually is that the Russians didn't even entertain the idea of such negotiations until after we announced our determination to build a missile defense.

If the Russians are truly interested in arms limitation agreements, they can demonstrate this interest easily enough. All they have to do is to remove or destroy their own ABM system so that we will not have to build one to reach that level of "parity" about which Secretary McNamara and his aides always spoke. I must remind you that we have to assume that the Russians are sincere if we are going to credit any of the arguments of the American left which claim that the true road to peace in our times lies through speedy negotiations with the Soviet Union. We have to believe that they are as desirous of avoiding an escalation of the arms race as are the opponents of the American ABM system. And the only sound and logical way for the Russians to avoid such escalation is for them to stop building defense systems which the United States may not be permitted to duplicate.

THE PESTICIDE PERIL—XII

Mr. NELSON. Mr. President, recent claims that DDT is "absolutely safe" were refuted by a University of Wisconsin Medical School professor at hearings held by the Wisconsin Department of Natural Resources on a petition filed by various citizens groups to ban DDT in Wisconsin as an environmental pollutant.

Dr. Theodore Goodfriend, as assistant professor of internal medicine and pharmacology, said that a compound could not be determined absolutely safe until a long list of specified tests was made on the compound. Such tests would have to determine the effect of the compound on hormones, adrenal reaction, carbohydrate metabolism, and many other aspects. Those for hormones alone would have to be on fetus and embryo effect, lactation of the mother, secondary sex characteristics, and more, he said. And it would require observations over several generations to learn the effects on fertility.

Dr. Goodfriend's testimony disagreed with that of Dr. Wayland J. Hayes, formerly chief toxicologist for the Public Health Service, who claimed that DDT is "absolutely safe" after conducting experiments in which he increased the dosages of DDT for humans and no detectable clinical effect had been produced.

Dr. Hayes also said that his experiments revealed that any effects from DDT decreased when the dosage was lowered or withdrawn. This was a direct contradiction to earlier testimony from Dr. Alan B. Steinbach, a neurophysiologist from the Albert Einstein College of Medicine in New York City, who reported that the effects of DDT are irreversible.

In laboratory experiments on insects and shellfish, Dr. Steinbach found that DDT caused tremors and death or an inability to make a desired motion. He said these effects were similar to those of other toxins such as poisonous spiders or novocain in that they disrupt the passage of an impulse along a nerve. However, whereas the effects of the other toxins wear off, DDT does not.

Mr. President, I ask unanimous consent to have printed in the RECORD articles published in the Milwaukee Journal and the Milwaukee Sentinel, reporting on the testimony of Dr. Goodfriend, Dr.

Steinbach, and Dr. Hayes at the Tuesday, May 20, hearings in Madison, Wis.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee (Wis.) Sentinel]

DDT EFFECT DEBATED

(By Quincy Dadisman)

MADISON, WIS.—Nothing occurring in nature has the same effect on nerves as DDT, a New York scientist told the natural resource department hearing on a proposed ban on the insecticide Tuesday.

Alan Steinbach, a neurophysiologist, said that the toxin of botulism, which had been suggested as a cause for the decline of predatory bird populations around Lake Michigan, affects the nerve terminals, but that DDT affects the Axon conduction process in the nerve itself.

"It does not act the same as DDT," he said. "There is no reason to expect any naturally occurring toxin to act like DDT."

Steinbach testified earlier that the effect of DDT on nerves in laboratory experiments was to interfere with the passage of sodium ions through the cell membranes, either slowing the passage of nerve impulses or causing nerves to "fire repeatedly."

Steinbach said that other experimenters had worked with a polychlorinated biphenyls, compounds used in industry, which have been suggested as a cause of some of the effects laid to DDT.

He said that those experimenters had reported the effects of the compounds on nerves were different from the effects of DDT.

Wayland J. Hayes, a former head of a United States public health service toxicology laboratory and now of Vanderbilt university, Nashville, Tenn., returned to the stand for cross examination. His interrogation turned into a battle of semantics between him and Victor J. Yannacone, jr., the attorney for the petitioners for the DDT ban.

Yannacone drew from Hayes a statement that DDT is "absolutely safe."

Questions and answers were traded, with Yannacone questioning Hayes' use of "safe" while Hayes attempted to point out that by safe he meant "showing no clinical signs of effects."

Hayes said, "There's no evidence that DDT reacts chemically in the tissues. There is some evidence that it acts physically on the nerves, but there is not enough evidence to know what happens."

Hayes disagreed with Steinbach's remarks and said the "Clinical effects of DDT are clearly reversible, both as regards effects on the nervous system and changes in the cells of the liver. When DDT is removed, changes regress."

[From the Milwaukee (Wis.) Journal, May 21, 1969]

MEANING OF SAFETY ARGUED AT DDT HEARING

(By Richard C. Kienitz)

MADISON, WIS.—Arguments over the words "absolutely safe" occupied most of Tuesday's testimony at the natural resources department hearing on whether DDT can be banned in Wisconsin as an environmental pollutant.

Dr. Wayland J. Hayes, Nashville, formerly a chief toxicologist for the public health service, repeated that in tests on prisoners and DDT plant workers, DDT had been shown to be absolutely safe.

However, Dr. Theodore Goodfriend of the University of Wisconsin medical school said a compound could not be called absolutely safe unless a long specified list of tests was made. He is an assistant professor of internal medicine and pharmacology.

TWO MEDICAL DOCTORS

Hayes returned to the stand Tuesday for cross examination after having been called earlier by Atty. Willard Stafford, Madison, representing the DDT manufacturers.

The two are the only medical doctors to have testified in the hearings.

Hayes said the way to determine effect was to increase dosages until it was determined what might happen. He said this was done with DDT in tests and it produced no detectable clinical effect.

"The point is," Hayes said, "a latent effect is only latent until you can measure it in someone. We've already gone into it at (such) great length that we did try to find effects."

THE 19 YEARS OF TESTS

Any subclinical effects would have produced some observable evidence in the 19 years of his tests, he said.

Goodfriend was called as a rebuttal witness by Atty. Victor Yannacone, Patchogue, N.Y., representing the Citizens Natural Resources association, which petitioned for the declaratory ruling to get the hearing.

Goodfriend said that before he could say a compound was absolutely safe, he would have to know its effect on hormones, adrenal reaction, carbohydrate metabolism, among other things. Each would require a series of tests, he said.

Those for hormones alone would have to be on fetus and embryo effect, lactation of the mother, secondary sex characteristics, and more, he said.

Then, in regard to fertility, he said, observations over several generations would be needed.

There was a dispute over whether Goodfriend was qualified to testify on the subject. He said that while he had taken part in only one experiment with DDT, he was thoroughly familiar with the necessary methods through his other work. He has been doing research on measurement of small quantities of hormones that regulate blood pressure and blood vessels.

Hayes disagreed with another Yannacone witness on the effect of DDT on nerve muscle reactions.

Alan B. Steinbach, a New York neurophysiologist, had declared that in comparison with novocain, curare and other toxins, DDT's effect was irreversible with the result that it prolonged damage.

Hayes said that in his experience any effects from DDT decreased when the dosage was lowered or withdrawn.

He said this happened with most chemicals. Asked about radiation, he admitted that clinical evidences of damages turned up years later.

THE YOUTH VOTE

Mr. McGEE. Mr. President, despite the new left's disdain for our democratic processes, and its efforts to dissuade the young from participation in these, figures show that voting among younger voters actually improved in the 1968 election. Still, we could all wish that the actual turnout of younger voters had been better than the 50.6 percent.

Yet the record should show that, as Columnist Bruce Biossat recently wrote:

The militants are high on the decibel count but short on real influence.

I ask unanimous consent that Mr. Biossat's column, which I have taken from the Wyoming State Tribune for May 21, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MYTHS ABOUT THE YOUTH VOTE

(By Bruce Biossat)

Of the 78.5 million Americans who voted for president last November, just 7.4 per cent were under 25 years of age.

A small part of that percentage represents people under 21. In Georgia and Kentucky, eligibility begins at 18. In Alaska it is 19, in Hawaii 20.

The rest, 7.2 per cent, were in the 21–24 age bracket.

No doubt the young militants of the New Left will contend that these figures represent an effective boycott by young voters against the establishment's voting processes—or against the available major candidate choices.

Sorry. Some 50.6 per cent of the people in the 21–24 age category turned out to vote for president. That may not sound too impressive when set against the total national turnout of 67.3 per cent of the eligibles, but it is better than young voters were doing back in the 1950s—when 40 to 45 per cent was a good showing.

The fact is that young people never have had a very good voting record. Militants who try to argue that they engineered a stay-away movement will have to explain, however, why the figures are a shade better this time.

Four years ago, when the choices were Lyndon Johnson and Barry Goldwater, people under 35 accounted for 24 per cent of the Presidential vote. This time, with the choices President Nixon, Hubert Humphrey and George Wallace, people under 35 represented 25.8 per cent of the total. Those at the lower end of the age spectrum obviously contributed to this modestly improved showing.

The reasons why the young do not vote in impressive numbers have less to do with angry militancy or disillusionment than with such simple facts as extreme mobility preoccupation with either late college or early job efforts, military, and attention to the other distractions of the young.

It is interesting, too, to see how the younger population brackets vote. According to the Gallup poll, voters under 30 went 47 per cent for Humphrey, 38 per cent for Nixon, 15 per cent for Wallace. Voters lumped by Gallup in the 30- to 49-year bracket were a few points weaker for Humphrey and stronger for Nixon, with Wallace exactly the same.

Thus if Gallup's age breakdowns matched the Census Bureau's source of other figures in this report, the proportion under 35 voting for Humphrey would be down a bit from the pollster's "under 30" category.

Nevertheless, the Humphrey vote stands out as strong. The figures make it hard to remember that the young militants' ugly, disruptive noise in the 1968 fall campaign was directed heavily toward the Democratic nominee.

Most of the time the disrupters left Nixon entirely alone. And much, though not all, of the anti-Wallace noise in the campaign halls was produced by young blacks.

So, for all their noise, the Young Uglies did not prevent young people in America from voting for Humphrey by a substantial margin. And they did not stop Wallace from doing slightly better with the younger elements than he did in the population as a whole.

The conclusion has to be that the militants are high on the decibel count but short on real influence. They expended a great deal of energy for very little effect—positive or negative.

More than a year and a half ago, election expert Richard Scammon told this reporter that the proportion of Americans under 35 voting for president in 1968 would rise to about 26 per cent from the 24 per cent level reached in 1964. He made the forecast before he knew that even one young college autocrat would be out in the streets in 1968 trying to shout Hubert Humphrey down. And he missed the actual percentage figure by .2 per cent only.

HILLSDALE COLLEGE COMMENCEMENT

Mr. GRIFFIN. Mr. President, on Sunday, June 1, I was privileged to deliver

the commencement address at Hillsdale College at Hillsdale, Mich. It was an inspiration to meet members of the faculty and the student body at this outstanding small college.

That the Hillsdale campus has experienced no student disruptions in recent months is due in part. I am sure, to the quality of leadership and administration provided by President J. Donald Phillips.

I ask unanimous consent that a copy of my commencement address be printed at this point in the RECORD, and that it be followed by a letter from President Phillips dated July 22, 1968, which was sent last summer to all students and prospective students of Hillsdale College.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COMMENCEMENT ADDRESS BY THE HONORABLE ROBERT P. GRIFFIN, U.S. SENATOR, HILLSDALE COLLEGE, JUNE 1, 1969

President Phillips, distinguished guests and officials of the College, members of the faculty and graduates:

I am pleased to see that all 200 members of this graduating class are still in their seats. As yet, no one has walked out—and no one is shouting obscenities or even carrying a sign.

Since this is such a peaceful and orderly setting—at the moment—Hillsdale College may not seem like the place for a commencement speaker to focus upon the current wave of student unrest and violence that has aroused the Nation. But I submit that this is an ideal place to discuss such a topic—for a number of reasons.

First of all, let me remind the graduates here that you are about to become members of the alumni association. If not already, you are soon to be taxpayers and parents—in short, part of the "establishment" that is under attack. Very soon you will be looking at the "generation gap" from the other side of the divide.

Mark Twain once wrote:

"When I was a boy of 14, my father was so ignorant that I could hardly stand to have the old man around.

"But when I got to be 21, I was astonished at how much he had learned in seven years."

My purpose today is not to condemn the aggressive impatience of youth. Rather, I thought I might take this opportunity to welcome you into the ranks—and, perhaps, to provide a bit of insight and perspective concerning the challenge which you are about to face as new members of the "establishment."

Within the past two weeks, state troopers had to clear Dartmouth's administration building; 45 students were fined and sent to jail for 30 days.

At Purdue, state police moved in with chemical mace to disperse demonstrators. Tear gas was necessary in the Nation's capital when 100 students occupied buildings at Howard University.

Needless to say, the list is longer. Here in Michigan, student violence has rocked the campus at Ferris State.

At Berkeley, the Hamburger Hill of higher education—thousands of national guard troops are necessary to maintain order.

Movement leaders who demanded free speech several years ago are the very ones now who deny free speech through violence to any one who opposed their views.

Surely, the greatest shock of all for the Nation came with the appearance of guns in the hands of students on the campus at Cornell.

Some who assess the current scene believe that a mood of violence has spread across our land—that a kind of madness is loose which threatens our very existence as a nation. In this season of bewilderment, there is an unfortunate rush to generalize—to indict all college administrators and to condemn all college students. Surely, this is a time to keep your head—even when those about you seem to be losing theirs. This is a time to reach for solid ground—to maintain some perspective.

As we survey with deep concern the violence disrupting our society today, it is no consolation to note—but still it is a fact—that violence is not peculiar to our nation or to our time.

Back in 1741, more than 30 years before the Boston tea party there was a terrible riot. When it was over, 13 Negroes had been burned alive, more than 100 Negroes and whites were convicted of arson, and 22 people were hanged.

In 1863, during the Civil War, some poor Irish immigrants started a riot in New York City. They complained bitterly that the burden of the draft fell inequitably upon them, and they feared the loss of their jobs to newly-freed Negro slaves.

When the riot was over, 1,000 people had been killed, more than 8,000 were injured, and vast areas of New York City had been put to the torch.

Our times are new, our circumstances are different, and our problems are more complex. But it may be important—though certainly not comforting—to keep in mind that even such violence as we have known is nothing new.

Today, in different ways, young Americans are saying to their elders: "You have failed us."

And in a very real sense, they are right. But, let me suggest that, throughout human history, no matter how great the progress, each generation has always fallen short of its own hopes—as well as the expectations of the new generation.

As brand new members of the "establishment," perhaps you may not fully appreciate an explanation provided by the thoughtful, liberal George Kennan. But I'll bet your parents will. He wrote this:

"In most of the reproaches with which our children shower us, there is an element of justification.

"But there is a point somewhere along the way in our adult lives when enthusiasm flags, when idealism becomes tempered, when responsibility to others—yes, and affection for others—compel greater attention to the mundane demands of private life.

"There is a point when we are impelled to place the needs of our children ahead of a defiant idealism, and to devote ourselves to the support and rearing of these same children—in order that at some future date they may have the privilege of turning upon us and despising us for the materialistic faint-heartedness that made their maturity possible."

We hear a great deal today about the "generation gap." There is, and there has always been, a generation gap. Incidentally, every reliable study and survey confirms that the new generation of Americans is not only more "hip" and "hippie," they are more intelligent, better educated, more interested in politics and government, and they have greater potential than any generation in the history of our nation.

Although it may not have been apparent to those who read the newspapers or watched television newscasts during the past several weeks, nevertheless it is a fact that the vast, overwhelming majority of the nearly 7 million college students in this nation were not involved in riots. Instead, they have been very busy preparing for final exams.

And it seems important to point out that while there are more than 2,500 colleges and universities in the United States, only about 20 have been hit by violent disruptions.

At the same time, it could be a serious mistake to take too much comfort from historical comparisons or such statistics. A national Gallup poll, released only a week ago, indicated that a majority of college students today are in sympathy with goals of the revolutionaries. Thus, it is possible that we may have seen only the beginning—or a part of the iceberg, so to speak.

It is important to recognize that the current crop of college students is not only blessed with higher IQs—but their circumstances are quite different from their predecessors in other important respects. For the first time in our history, most college students are not preoccupied today with concern about bread and butter for themselves. They are products, and live in the environment of, an affluent society. Not having to worry about their own economic survival, they have the time and opportunity—as well as the burning desire—to concern themselves with the problems of others.

College students today are issue oriented. In many cases, their relative affluence, youthful enthusiasm, and genuine idealism have generated a deep, personal concern about the Vietnam War, the thrust of nuclear war, the importance of the individual, those who live in poverty, as well as the plight of our cities and other social, political and economic issues of the day. Many are appalled by the gap between the promise and the performance of our society.

Of course, most students simply have not experienced many of the things that make their elders a bit more cautions. Living through a depression has had an indelible imprint on those over 50. The rationing of gas and sugar during World War II is still a memory for those over 30. But a vast majority of those in college today have known only affluence and relative economic security.

In a sense, then, the unrest and dissatisfaction of our campuses today is a phenomenon of our affluent society—a byproduct, if you please, of the very progress and economic success which the older generation has produced.

This should not be a problem. Instead, this concern, this enthusiasm and idealism of youth—this unselfish eagerness to deal with the needs of others—can, and should be, a great blessing for our nation—rather than a curse.

The challenge before us is to make sure that will be the case.

We would take a long step in that direction, I submit, if somehow we could focus a little more attention on what's right about our society.

We hear a great deal about the few who destroy. But there is plenty of evidence that the energy and idealism of today's youth is being channeled in positive, and constructive activities.

Let me read from an editorial which appeared recently in the student newspaper at Allen University:

"The student body has united to initiate a plan to build up Allen University, rather than tear it down. The plan originated because one senior had a dream. He dreamed that Allen had new buildings, a broader curriculum, a larger student body, and was an accredited institution.

"Being aware of the turmoil on college campuses today, Allen students realize that this is a reverse twist, but we have decided to work with the administration to make Allen University one of the top-rated schools in the nation. . . .

"We have announced that instead of protesting and throwing bricks, we are joining hands, and with the help of God and our college president, raising $100,000 for the preservation and uplifting of our Alma Mater.

"Certainly we could demonstrate, boycott classes, occupy an administration building but what would be achieved? . . . We believe that activism in the manner of a positive program will result in far more progress than would the negative program of violence and demonstration. . . .

"Be assured that we, the students of Allen University want to be heard . . . But we feel that we will be heard because we don't have to shout above the clatter of the militant battle cries. We are not accepting what the militants are saying, which is to fight the establishment.

"Yes, we have to admit that we are different.

"The difference is that we are thinking about ourselves and for ourselves, and we are proud of the difference.

"We are also proud of being black. We, too, think that black is beautiful. We are also proud of our black schools; proud of our black ancestors who toiled to build and maintain a black university: a university owned and operated by blacks. If we tear it down, we will not be fighting the establishment; we will only be fighting ourselves."

The other day, I put another item in the Congressional Record. It revealed that administration eyes were lifted several weeks ago at Kalamazoo Valley Community College when a flyer began circulating on campus, which began like this:

"When a college has a poor administration, it is the right of the students to protest."

And the flyer continued as follows:

"Further, if a college has a good administration and faculty, it is the right of the students to show their appreciation."

Whereupon, to make a long story short, the 1,500 students in that small college proceeded to demonstrate peacefully their appreciation for the wonderful education they have been receiving.

Not a building was occupied, not an office was ransacked, not a single non-negotiable demand was made.

All in all, I guess you'd have to say that they seem to be a pretty square bunch of students and professors at Kalamazoo Valley Community College—square, that is, in the very best sense of the word.

I do not suggest that we can ignore or seek to minimize the danger posed by some elements on some campuses today. Ordinarily, it is not easy to shake the indifference of the vast silent majority in this country. But, as James Reston pointed out in a recent column, the sight of guns and endless headlines about campus violence has aroused them—the middle aged and the middle class—those who are caught in the middle between rebellious kids and aging parents—between the mounting burdens of inflation and taxation. It is not surprising that this silent majority is putting great pressures on Congress to get this movement of student violence under control.

I do not say that there is nothing that Congress can, or should, do about the situation. Senator McClellan's Permanent Investigating Sub-committee, of which I am a member, is currently undertaking an in-depth investigation of the organization, the financial support and objectives of the S.D.S. and other extremist groups which have been involved in campus disorders.

But, at the same time, I raise a concern that under the strong emotional pressures of the moment, there is some danger that Congress could over-react—that Congress could go too far in subjecting education to the control and direction of a centralized government.

Perhaps we can pass some new laws. But what good will that do, if laws already on the books are not enforced. It seems clear to me that any meaningful answer depends necessarily upon the existence and support at each college and university, of an enlightened, understanding but firm administration.

Whatever the politicians may say or promise, in the final analysis, each college and university must decide for itself whether it will be a center of learning or a battleground for undisciplined rebels.

I'm extremely proud to be here today, on this beautiful campus at Hillsdale College, and to commend President Phillips, the board of trustees, the faculty and the student body for the splendid example which all of you, working together, are providing for the rest of the Nation.

And, now, at the cost of being considered a bit square, I should like to conclude by sharing with you some words of hope expressed by Gen. Douglas MacArthur to the members of another graduating class:

He said:

"I hope your education . . . has molded you for your roles as custodians of the Republic; that it has taught you to be strong enough to know when you are weak, and brave enough to face yourself when you are afraid; that it has taught you to be proud and unbending in honest failure, but humble and gentle in success; to learn to stand up in the storm but to feel compassion for those who fall; to have a heart that is clear and a goal that is high; to master yourself before you seek to master others; to learn to laugh, yet never forget how to weep; to reach into the future, yet never neglect the past; to be serious, yet never to take yourself too seriously, and, finally—in all these ways—that it has taught you to be a good citizen of your country and the world."

Thank you.

HILLSDALE COLLEGE,
Hillsdale, Mich., July 22, 1968.

To Our Hillsdale College Students:

We are looking forward to greeting you in September and hope that the summer has been good to you.

The following expression is probably quite unnecessary for any of our students and is not made because of any special knowledge or expectation. But, these increasingly tense and complex times seem to require that we know in advance what the college position will be in certain areas.

Attendance at Hillsdale College is a privilege and not a right!

Hillsdale College is dependent financially on the philanthropy of alumni, business and industry, trustees and friends. Their support comes from knowledge and approval of the college's purposes, methods and products. It is this philanthropy which has paid the difference between the actual cost of your education and the amount which you pay.

Such historical support must identify, even to a casual observer, certain continuing moral obligations. Furthermore, there is a legal continuing obligation to the States which gives our college the corporate right to exist.

These obligations can only be fulfilled if the administration of the affairs of the college remains with the duly nominated officers and offices: The Board of Trustees, the President, other administrative offices and the faculty.

Wisdom would direct that in these fast-changing and complicated times, and with the improved preparation of young people for college, their ideas, suggestions, and desires should be sought and should be thoughtfully considered. But, organized society calls for the use of representatives by reason of the fact that insufficient time would be available to deal with each student separately on each idea that may develop.

Therefore, the Student Federation is the vehicle through which students should typically find the means of having their ideas heard, discussed and transmitted. In addition, many faculty an administrative committees, where appropriate, will invite student representation in order to give greater assurance that the ideas of students get into the main stream of thoughts for the management of the college. Nor will any individual student be denied access to a hearing of his ideas within available time.

The author of this statement has been a national spokesman in defense of the good intent and high purposes of today's youth. No one believes more strongly nor deeply in the intelligence, the high ideals, and the good objectives of youth. But, this conviction does not accept anarchy as a solution, nor does it permit turning over the authority of the campus to youth or adults who lack the experience to carry out the avowed purpose and responsibility of Hillsdale College.

The right of dissent has been an honored American tradition. That privilege has always been and will be respected at Hillsdale College.

But, the administration may never deny the rights of those students whose principal objective is the peaceful and orderly use of the resources of personnel and facilities of the college for gaining their formal education. Nor has the administration the legal or moral right or privilege to delegate governance of its institution to students whose intelligence and creativity is earnestly respected but whose perspective for and experience in organizational management is yet far too limited to take on the management of affairs of the college.

Therefore, let it be known that any act of violence or intimidation, any seizing of any portion of property or any unauthorized activity which prevents the normal operation of the college in any way by any individual or groups of individuals will be considered in direct opposition to the necessary operation of the college, and action sufficient to the cause will be taken immediately, including the possibility and probability of suspension or expulsion, regardless of the number involved. Similar action will be taken against those who advocate such described activities.

This statement is made to clarify any remaining doubt of what our policy shall be regarding this phase of our relationships. It is submitted now in order that any student may still have adequate time to select another college if the above terms are not acceptable. Moreover, the college shall use its offices to help such a student find a college or university more acceptable to his or her personal purposes.

Cordially,

J. DONALD PHILLIPS.

ECONOMICS OF ST. LAWRENCE SEAWAY

Mr. PROXMIRE. Mr. President, Eric Schenker, associate dean for social sciences at the University of Wisconsin, is one of the foremost authorities on the economics of the St. Lawrence Seaway. As associate director of the Center for Great Lakes Studies, Dean Schenker has devoted a great deal of time and energy to the manifold problems confronting the Seaway-Great Lakes system.

At a recent appearance before the Canadian Transportation Research Forum, Dean Schenker delivered a paper entitled "The Future of U.S. Great Lakes Transportation With Particular Reference to Containerization and General Cargo." His paper includes a detailed analysis of traffic forecasts for the seaway over the next few decades, and considers various approaches toward improving the traffic picture on the seaway. Among other things, Dean Schenker concludes that any across-the-board hike in seaway tolls would not be advisable at this time.

I ask unanimous consent that Dean Schenker's analysis of the St. Lawrence Seaway be printed in the RECORD.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

The Future of U.S. Great Lakes Transportation With Particular Reference to Containerization and General Cargo*

(By Eric Schenker, professor of economics and associate director, Center for Great Lakes Studies; project assistant, Stephen M. Hagins)

In any discussion of the future of transportation on the Great Lakes, general cargo and containerization assume unique roles, the former because of its effect on the port and community, the latter because of its untold potential. It is the purpose of this paper to inquire into the roles of general cargo and containerization in the future of Great Lakes overseas shipping, and to point out some of the policy issues which must be resolved for Great Lakes Seaway transportation to have a bright future.

Although general cargo represents only ten per cent of Great Lakes-Ocean shipping, "general cargo traffic has the greatest impact upon the port and the community. It produces the highest revenue per ton for the dock workers, shipping services, and the port—generating an estimated $23 per ton of direct community income." [1]

While the stream of benefits from general cargo traffic on the Great Lakes has been substantial since the opening of the St. Lawrence Seaway in 1959, containers and their substantial cost advantages have not yet made really significant appearances on the Great Lakes. By permitting more efficient handling of cargo, containers substantially reduce the time necessary for ships to be unloaded and reloaded; since the majority of transport cost is incurred while the ship is in port, the fast turnaround offered by containerships can itself cut costs by 25 per cent.[2] In addition, containerization substantially lowers packing costs, the incidence of damage to cargo, losses due to pilferage, and therefore insurance rates. It is not unreasonable that efficient use of containerships at modern container facilities could cut the costs of shipping to 25 per cent of the cost now incurred by conventional vessels at conventional terminal facilities.[3]

The future of containers however bright, is not without its problems. The efficient use of containerships and containers requires a specialized terminal facility, with an open quay, a large apron, and an open marshalling area of ten to twelve acres; such a berth would presently cost about *$4.5 million.*[4] While it is true that conventional ships and conventional general cargo facilities can handle some of the smaller containers, much of the efficiency and much of the resulting cost reduction are lost. In addition, the cost of deadheading necessitates that there be some reasonable balance in trade between container-using areas. A similar problem arises in delivery of containers from the port to respective consignees.

With this brief background for general cargo and containers as a starting point, it is appropriate for us to turn our attention to the present and future of general cargo and containers. The U.S. Army Corps of Engineers has compiled an excellent analysis [5] of Great Lakes-Overseas general cargo traffic and projections for overseas general cargo traffic at individual U.S. Great Lakes ports.

Assuming (1) that there will be no major wars, national or world-wide depressions, (2) that the controlling depths at major Great Lakes harbors will be deepened to the 27 foot depth of the Great Lakes connecting channels, the Welland Canal, and the St. Lawrence Seaway, (3) that canals and waterways between Lake Erie and Lake Ontario and in the St. Lawrence River will be adequate to handle the projected volume of traffic, (4) that terminal facilities will be available to accommodate berth service ocean vessels, and (5) that *certeis paribus,* an overseas shipment will move by the most economical route, the Corps of Engineers makes the following projections:

Footnotes at end of article.

TABLE I.—PROSPECTIVE TOTAL DIRECT GREAT LAKES-OVERSEAS GENERAL CARGO TRAFFIC[6]

[In thousands of short tons]

Ports and harbors	1,975	1,985	1,995	2,005	2,015
All harbors	5,600	6,700	7,600	8,450	9,200
Some selected harbors:					
Oswego, N.Y.	65	80	95	108	120
Rochester, N.Y.	35	50	60	65	70
Port of Buffalo, N.Y.	305	355	395	435	475
Erie, Pa.	130	160	183	204	224
Ashtabula, Ohio	100	120	125	130	130
Cleveland, Ohio	565	720	825	930	1,035
Rouge River, Mich.	310	345	380	410	440
Saginaw River, Mich.	95	15	130	145	160
Muskegon, Mich.	86	99	111	122	133
Burns, Ind.	165	240	285	330	370
Port of Chicago, Ill. (including Calumet Harbor and River, Lake Calumet, and Chicago Harbor)	2,080	2,330	2,520	2,710	2,900

Milwaukee, Wis.	615	715	805	885	960
Manitowoc, Wis.	5	6	7	7	8
Green Bay, Wis.	152	185	198	207	215
Other harbors	831	1,112	1,408	1,685	1,880

Source: U.S. Army Corps of Engineers, Great Lakes-Overseas General Cargo Traffic Analysis, North Central Corps of Engineers, Chicago, Ill., March 1967, p. 133.

[6] These figures exclude the commodity classification of iron and steel scrap from general cargo.

Another study was made for the Department of Commerce by the Stanford Research Institute in November, 1965. Their projections, made in terms of high and low estimates for general cargo traffic on the St. Lawrence Seaway are summarized in Table II below:

TABLE II.—PROJECTED SEAWAY GENERAL CARGO TONNAGE

	Short tons
1970:	
High	5,500,000
Low	4,100,000
1975:	
High	6,700,000
Low	4,900,000
1980:	
High	7,600,000
Low	5,600,000
2000:	
High	11,200,000
Low	7,400,000

Source: Stanford Research Institute, Economic Analyses of St. Lawrence Seaway Cargo Movements and Forecast of Future Cargo Tonnage, U.S. Department of Commerce, 1965, p. 83.

In January, 1969, the Department of Transportation issued a set of traffic forecasts for the St. Lawrence Seaway prepared by the EBS Management Consultants, Inc.[7] This was an exhaustive study which included 1980 traffic projections for all major groups of commodities which are transported via the Seaway. The EBS estimates of 1980 cargo traffic on the St. Lawrence Seaway are summarized in Table III.

The reader will note that there is a slight problem which arises in the comparison of Corps of Engineers, SRI, and EBS estimates. The Corps of Engineers' definition of general cargo excludes iron and steel scrap. The SRI estimates include this commodity. In addition, iron and steel products represent such a large part of general cargo traffic that EBS saw fit to make separate projections for these commodities; therefore, when comparing EBS figures to the others, it is necessary to consider "Iron and Steel" and "General Cargo" as general cargo. It is also important to bear in mind that the Corps of Engineers projections do not include Canadian general cargo estimates while both SRI and EBS estimates include Canadian traffic in their analyses.

TABLE III.—1980 TRAFFIC FORECASTS FOR THE ST. LAWRENCE SEAWAY

[In thousands of short tons]

Major commodities	1966 (actual) base year	1980 (estimate)			
		Present system			
		Unchanged competitive position	Expected competitive position	4-week extension	Enlarged system
Wheat	11,191	10,335	11,160	11,445	11,160
Corn	3,388	7,070	6,535	6,785	6,725
Barley and rye	1,495	1,765	1,765	1,840	1,765
Soybeans	1,230	2,325	2,140	2,655	2,239
Minor grains and oilseeds	1,280	815	740	740	740
Iron ore	15,506	14,500	14,500	14,620	14,500
Coal	1,225	1,350	1,350	1,350	1,350
Fuel oil	2,085	3,150	3,150	3,150	3,150
Other bulk	966	2,445	2,445	2,445	2,445
Iron and steel	3,422	4,945	4,606	4,606	4,606
General cargo	7,462	9,300	5,676	6,337	5,676
Total	49,250	58,000	54,067	55,973	54,356

As is obvious from Table III, EBS made several different projections, the first being based upon the assumption that the competitive position of the Seaway relative to railroads, Atlantic, Pacific, and Gulf coast ports would remain stable. Their second projection took into account their estimate of the change in competitive positions by 1980. It is noteworthy that the EBS projection, after estimated diversions to competing modes of transportation, is substantially higher than either the Corps of Engineers or SRI projections.

Additional projections were made for the St. Lawrence Seaway Authority of Canada by the firm of Kates, Peat and Marwick.[8] The KPM projections were in terms of total tonnages, and not broken down into bulk cargo and general cargo figures, so that those forecasts are of limited usefulness in our present discussion. The Battelle Institute has made estimates for future general cargo and container-suitable traffic at the port of Cleveland [9]; while informative, these projections were based on a less rigorous analysis than the Corps of Engineers or EBS study. Prior to the publication of the EBS study, we carried out an estimation of the future

container-suitable general cargo traffic on the Great Lakes. Since the Corps of Engineers projections lay between the SRI high and low projections, we deemed it reasonable to conduct our study in terms of the Corps of Engineers' estimates.

Certainly not all of the general cargo traffic will be suitable for containerization. To project the level of container-suitable traffic on the Great Lakes, as shown in Table IV below, this general cargo was divided into three categories: (A) goods that will fit into a container and are of sufficient value to warrant the expense of using a container for their overseas movement, (B) low-valued goods that would physically fit into a container but, because of their relatively low value, would only be containerized in order to fill boxes that might otherwise move to or from a port empty, and (C) general cargo that won't fit into a container, is of very low value, or that for some other reason would not be containerized. It is important to remember, however, that in 1964 fully 657,927 short tons, or 21.8 per cent of general cargo traffic at the ports of Chicago, Cleveland, Detroit, Milwaukee, and Toledo were container-suitable,[10] but only a small amount of this container-suitable traffic was actually shipped in containers.

TABLE IV.—ESTIMATED CONTAINER-SUITABLE TRAFFIC ON THE GREAT LAKES

[In short tons]

Year	Imports	Exports	Total
1975	756,000	616,000	1,372,000
1985	905,000	737,000	1,642,000
1995	1,026,000	836,000	1,862,000
2005	1,141,000	930,000	2,071,000
2015	1,242,000	1,012,000	2,254,000

Source: Eric Schenker, The Effects of Containerization on Great Lakes Ports, Center for Great Lakes Studies, University of Wisconsin—Milwaukee Special Rept. No. 2, 1968.

On the basis of the Corps of Engineers' estimates of 6,700,000 tons of general cargo traffic on the Great Lakes in 1985, we have projected that 1,642,000 tons, or 24.5 per cent, would be container-suitable. A similar percentage of the EBS 1980 projection of general cargo traffic would be 3,800,000 tons of container-suitable traffic. Therefore it would seem that the opinion expressed by EBS [11] that 3,400,000 tons of general cargo traffic would be diverted from the Seaway because of containerization would seem to approach an absolute maximum in losses of cargo due to a deterioration of the Seaway's competitive position.

Perhaps more important to our discussion of the future general cargo traffic on the Great Lakes than the projected level of container traffic on the Lakes is the distribution of this container traffic among the major Great Lakes ports. These projected figures are presented in Table V.

As pointed out by the above projections, general cargo traffic and containers have a great potential on the Great Lakes; however, realization of the potential depends on the favorable solution of a large number of problems which currently face the Seaway. The following discussion attempts to point out some of the controversial issues which have arisen in the Seaway's first ten years, but this list should by no means be considered complete.

PUBLIC INVESTMENT

While this paper will not enter into the long standing debate over the relative merits and demerits of public enterprise, it must be pointed out that in the absence of public investment, Seaway trade would be almost non-existent. The Federal government invested over $400 million in the Seaway route.[12] In addition, the U.S Army Corps of Engineers has undertaken costly dredging operations at Great Lakes harbors, so that deep-draft ocean vessels may be accommodated. At present, the Canadian government is discussing a $180 million project of twinning locks on the Welland Canal, in order that recently experienced traffic jams of ships waiting to pass through the canal might be avoided.

TABLE V.—PROJECTED CONTAINER—SUITABLE GENERAL CARGO TRAFFIC AT PRINCIPAL GREAT LAKES PORTS

[In short tons]

Port	1975	1985	1995	2005	2015
Chicago	478,000	536,000	580,000	623,000	667,000
Cleveland	175,000	223,000	256,000	288,000	320,000
Detroit	171,000	205,000	233,000	258,000	282,000
Milwaukee	169,000	196,000	221,000	243,000	264,000
Toledo	97,000	117,000	133,000	148,000	160,000

TABLE VI.—U.S. GREAT LAKES PORT DEVELOPMENT EXPENDITURES 1946–70

[Dollar amounts in thousands]

Year	Grand total outlays	Average annual outlay	Outlays for general cargo facilities	Average annual outlay for general cargo facilities	Outlays for special purpose facilities	Average annual outlay for special purpose facilities	Percent of annual outlays going for general cargo facilities	Percent of total outlays going for special purpose facilities
1946–55	$97,840	$9,784	$10,840	$1,084	$87,000	$8,700	11	89
1956–57	49,196	24,598	15,474	5,737	33,722	16,861	31	69
1958–60	50,089	20,036	27,965	11,186	22,124	8,850	56	44
1961–62	17,622	7,049	13,296	5,318	4,326	1,730	75	25
1963–65	35,891	11,964	14,541	4,847	21,140	7,147	41	59
Projected 1966–70	11,500	2,300						

Source: American Association of Port Authorities, Port Development Expenditure Survey, Washington, D.C., table III, p. 10A.

Local governments, too, have invested millions of dollars in port facilities to serve and attract overseas traffic. Port development expenditures since 1946 are summarized in Table VI. Not only are the proposed expenditures for the 1966–70 period the lowest (in terms of average annual expenditure) for the Great Lakes since World War II, they will be much smaller than the proposed expenditures for the development of competing ports on the Atlantic, Pacific and Gulf coasts.

In 1966, of the 63,905,553 tons of Canadian cargo traffic that passed through the St. Lawrence Seaway and the Welland Canal, only 1,403,452 short tons, or 2.2 per cent, were general cargo.[13]

Furthermore, there are no fully integrated container facilities on the Great Lakes, nor are any planned. Toronto and Hamilton, however, have stressed container needs at several new general cargo terminals, which emphasizes an unprecedented open dock area for boxes and vehicles.

SEAWAY TOLLS

Hand-in-hand with the issue of public investment goes the debate over Seaway tolls. Although the original agreement on tolls expired in 1966, the United States and Canada have agreed to maintain tolls at 1966 levels until 1970. However, Canada's share of toll revenues has been increased from 71 per cent to 73 per cent; this represents a decline in U.S. toll revenue of 7 per cent. In addition, Canada has begun charging lockage fees in the Welland Canal, fees which will be increased by $20 per annum per lock to a maximum of $100 per lock in 1971.

The legislation authorizing the development of the Seaway required that the Seaway be self-supporting and that the bonded debt incurred in construction of the Seaway be retired in 50 years. However, it is a long standing premise that all waterways in the continental U.S. be open to use without charge. Since the Great Lakes are forced to compete with toll-free facilities on the Atlantic Coast, on the Mississippi system, etc., some misallocation of resources is inevitable.

Whether the Seaway will be able to pay off its bonded debt in the required fifty years is an open question; the wisdom of paying off the debt within that time period is still another. It is often suggested that the way to make the Seaway pay for itself is to raise tolls. It is readily seen that for some commodities, notably wheat, barley, and rye, there is no effective competitor with Seaway transport. Therefore, it would not be anticipated that a change in tolls would cause a diversion of traffic of sufficient magnitude adversely to affect Seaway revenues, and, in truth, one would expect that Seaway revenues would rise. However, in the transportation of those commodities for which the Seaway faces strong competition, e.g., general cargo, a rise in tolls could be expected to cause a change in the volume of, say, general cargo, which could be sufficient in magnitude actually to decrease the revenue of the Seaway obtained from the transportation of general cargo. Therefore, it would seem that an across-the-board toll hike to raise Seaway revenues would be ill-advised.

GOVERNMENT CARGOES AND TRANSPORT REGULATION

The role of investor is not the only role that the Federal government plays in shipping on the Great Lakes. Military and related cargoes shipped by the Department of Defense and relief cargoes shipped by the Department of Agriculture constitute a considerable portion of the volume of Great Lakes-Overseas traffic. Although a large percentage of Defense Department exports are produced in the dense metropolitan areas of the Great Lakes region, relatively few of them up to now are shipped overseas from Great Lakes ports. The reason for this incongruous situation lies in the U.S. Cargo Preference Laws. These statutes prohibit Defense Department cargo from moving in foreign-owned vessels, when an American-owned vessel is in the same administrative district. This restriction is doubly detrimental to the Great Lakes shipping because (1) Great Lakes-Overseas traffic is carried predominantly in foreign-owned vessels, and (2) the Great Lakes ports lie within the same military administrative district as New York and other North Atlantic ports. There is no incentive for ships' captains to bring their vessels into the Great Lakes for government cargo when this cargo will be brought to them at Atlantic ports (at reduced rail rates as allowed under Section 22 of the

Footnotes at end of article.

Interstate Commerce Act). There exists an analogous problem with rail rates in general, for Eastern railroads often charge lower rates from the Midwest to the Atlantic coast than to closer Great Lakes ports. In one instance, it was cheaper to ship from Kalamazoo, Michigan to New York (750 miles) than to Muskegon, Michigan (75 miles).[14]

In January, 1969, the Department of Defense announced that military vessels would begin transporting cargo via the Great Lakes. The vigor with which this new policy is pursued and the future transportation needs of the Department of Defense will determine both the benefits reaped by the Great Lakes ports and the extent to which old inequities are rectified. However, it would be clearly premature to make any estimate of the change in policy at this time.

In addition, Great Lakes-Overseas shipping is currently hampered by a seasonal interruption in traffic. Freezing temperatures and other factors force a shutdown of the Seaway for about four months of the year. Whether the 370 miles of Seaway subject to severe ice problems can be kept ice free is a difficult technical question. Finding economic justification for such an undertaking is quite another one.

The EBS study included estimated costs of an extension in the Seaway season, as well as estimates of the costs of pairing all locks, and deepening channels. Summaries of those estimates are presented below.

After making the above capital cost estimates, EBS made annual cost estimates (assuming a 4.6 per cent rate of interest) and projected the annual benefits, based on their traffic projections, that would accrue from the following four projects.

Project A: Expanding the entire Seaway system to the maximum dimensions of the new Poe Lock, which are 1200′ x 100′ x 33′ with a channel depth of 31′ and a channel width of 600′.

Project B: Enlarging the system to 32′ channel depth throughout to permit vessels with maximum dimensions of 1200′ x 115′ x 30′.

Project C: Extending the Seaway season by four weeks.

Project D: Both B and C.

With the estimated benefits from each of the above projects discounted at a 4.6 per cent rate of interest, only Project C paid for itself within 25 years; the four-week extension of the Seaway season was estimated to pay for itself in (what seems to be a fairly rapid) seven years.

TABLE VII.—ESTIMATED CAPITAL COST OF EXTENDING THE SAILING SEASON OF THE PRESENT SEAWAY SYSTEM

Length of season extension	Total cost	Icebreaking	Locks, aids to navigation, etc.
2 weeks	$259,000,000	$246,000,000	$13,000,000
4 weeks	343,000,000	299,000,000	44,000,000
6 weeks	494,000,000	358,000,000	136,000,000

Footnotes at end of article.

REGIONAL INTERESTS AND THE PORT PROMOTION PROBLEM

Conflicting regional interests sustain the political and regional competition controversies which surround the Seaway. Metropolitan areas near the Great Lakes are anxious to see the Seaway developed to its full potential. Atlantic and Gulf coast interests oppose development and extension of the Seaway, as they opposed the initial construction of this competing transport facility.

Great Lakes ports handle only one-tenth of the import-export traffic of their hinterland. When one considers that a shipment of one ton of general cargo creates between $35 and $50 of direct and secondary income for local workers, it is evident that increased hinterland traffic would provide enormous economic gains. Needless to say, such gains would be largely at the expense of Atlantic and Gulf coast ports.[15]

Since there is so much to gain by increasing the share of the Great Lakes imports and exports which its own ports handle, it is indeed surprising that the Great Lakes ports do not unify their promotional efforts to compete traffic away from the Atlantic and Gulf coasts. Table X summarizes the promotional expenditures of the Great Lakes ports.

There is some tendency for the Great Lakes ports to treat each other as competitors; they certainly compete for traffic in some areas of their hinterlands, but in truth, their fortunes rise and fall as one. While it might not be profitable for a ship to travel the Great Lakes only to call at a single port, it might be quite profitable to include stops

at several Great Lakes ports en route. It would therefore behoove the Great Lakes ports to embark upon a unified campaign promoting the Great Lakes as a transport facility. To make this need even more obvious, it is only necessary to point out that the $1.2 million that the Port of New York spent on promotional expenditures in 1964[16] is more than the 1968 expenditures of all the Great Lakes ports put together!

CONCLUSION

After a decade of operation of the St. Lawrence Seaway system, Great Lakes shipping faces a tremendous potential. The future of general cargo traffic, the container revolution, and Great Lakes ports offer great promise, but this promise cannot be realized until some substantial obstacles are overcome.

One of the greatest problems now facing the Great Lakes is the declining level of public investment. The nature of public investment is a discontinuous one; projects are undertaken and their results thoroughly scrutinized before new projects are contemplated. The future of Great Lakes shipping rests heavily upon the twinning of the locks of the Welland Canal, the building of container and other terminal facilities, perhaps some extension of the Seaway system, and other public projects. If the decline in public investment that we now observe is merely a momentary pause in the flow of investment funds, then it is possible that the potential of the Great Lakes may yet be reached; meanwhile, Atlantic, Gulf, and Pacific coast ports continue to improve their port facilities at a rate far greater than that of Great Lakes ports. If the decline in investment improvements in Great Lakes ports' facilities is not soon arrested and reversed, the outlook for Great Lakes overseas transportation will be indeed bleak.

While it is necessary to look ahead to new investment possibilities, we must also focus our attention on the repayment of debts incurred for previous projects, notably retirement of the bonded debt on the St. Lawrence Seaway. There is considerable disagreement over the sufficiency of present tolls to provide adequate funds for debt retirement. There is still further disagreement over the effect of a toll increase upon total Seaway revenues and the ability of the Seaway to meet its financial obligations. However, there is no doubt that higher Seaway tolls would result in less traffic through the Seaway than there would have been in the absence of the toll increase.

In addition to being a builder of transport facilities, the government is also a user and a regulator of them. The Departments of Defense and of Agriculture ship a considerable volume of cargo overseas; the future amount of this government cargo, and the share of it which is transported on the Great Lakes, will contribute significantly to either the growth or the stagnation of Great Lakes shipping. The share of government cargo which Great Lakes ports will handle depends on what action will be taken to eliminate inequities in the U.S. Cargo Preference Laws and in inland rail freight rates as permitted under present legislation and regulation.

Certainly any of the gains that the Great Lakes ports could realize from the alteration of government statutes and regulations might be made partially at the expense of other ports on the Atlantic, Gulf, and Pacific coasts. We therefore would expect, and indeed have seen, unified opposition to changes in the legal structure by other ports and railroads. It would appear to be in the interest of Great Lakes ports to lobby for favorable legislative changes, much as rival ports and railroads have done. In addition to promoting their own interests in the halls of Congress, it would behoove the Great Lakes ports to unite in promotion of the Great Lakes as a transport facility. Effective pursuance of their common interests on the part of all Great Lakes ports is a *sine qua non* for a prosperous future of transportation on the Great Lakes.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDING OFFICER laid before the Senate the following letters, which were referred as indicated:

REPORT ON DONATION OF CERTAIN SURPLUS PROPERTY TO THE EAST CAROLINA CHAPTER, INC., NATIONAL RAILWAY HISTORICAL SOCIETY

A letter from the Under Secretary of the Navy, reporting, pursuant to law, the intention of the Department of the Navy to donate certain property to the East Carolina Chapter, Inc., National Railway Historical Society, Post Office Box 3096, Greenville, N.C. 27834; to the Committee on Armed Services.

PROPOSED FOREIGN ASSISTANCE ACT OF 1969

A letter from the Acting Secretary, Department of State, transmitting a draft of proposed legislation, to promote the foreign policy, security, and general welfare of the United States by assisting peoples of the world to achieve economic development

within a framework of democratic, economic, social, and political institutions, and for other purposes (with accompanying papers); to the Committee on Foreign Relations.

PROPOSED LEGISLATION TO AUTHORIZE APPROPRIATIONS FOR EXPENSES OF THE OFFICE OF INTERGOVERNMENTAL RELATIONS

A letter from the Acting Director, Bureau of the Budget, transmitting a draft of proposed legislation to authorize appropriations for expenses of the Office of Intergovernmental Relations, and for other purposes (with accompanying papers); to the Committee on Government Operations.

PROPOSED LEGISLATION TO AUTHORIZE APPROPRIATIONS FOR EXPENSES OF THE PRESIDENT'S COUNCIL ON YOUTH OPPORTUNITY

A letter from the Acting Director, Bureau of the Budget, transmitting a draft of proposed legislation to authorize appropriations for expenses of the President's Council on Youth Opportunity (with accompanying papers); to the Committee on Government Operations.

REPORTS OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the administration and effectiveness of the work experience and training project at the Gila River Indian Reservation, Arizona, under title V of the Economic Opportunity Act of 1964, Department of Health, Education, and Welfare (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on legislation needed to avoid servicemen's bearing war-time mortality costs under the Servicemen's Group Life Insurance Program, Veterans' Administration (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on opportunities for reducing costs of hospitalization, medical services, and drugs provided to Federal employees for job-related disablements, Bureau of Employees' Compensation, Department of Labor (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the audit of the Export-Import Bank of the United States for the fiscal year ended June 30, 1968 (with an accompanying report); to the Committee on Government Operations.

PROPOSED LEGISLATION TO AUTHORIZE APPROPRIATIONS FOR EXPENSES OF THE NATIONAL COUNCIL ON INDIAN OPPORTUNITY

A letter from the Acting Director, Bureau of the Budget, transmitting a draft of proposed legislation to authorize appropriations for expenses of the National Council on Indian Opportunity (with accompanying papers); to the Committee on Interior and Insular Affairs.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. JACKSON:

S. 2302. A bill to amend title 37, United States Code, so as to clarify the status of Guam with respect to pay and allowances of members of the uniformed services; to the Committee on Armed Services.

(See the remarks of Mr. JACKSON when he introduced the above bill, which appear under a separate heading.)

By Mr. MONDALE:

S. 2303. A bill for the relief of Mario Augusto Roca; and

S. 2304. A bill for the relief of Luis Arturo Espana; to the Committee on the Judiciary.

By Mr. MUNDT:

S.J. Res. 116. Joint resolution to authorize appropriations for the expenses of the President's Council on Youth Opportunity; and

S.J. Res. 117. Joint resolution to authorize appropriations for expenses of the Office of Intergovernmental Relations, and for other purposes; to the Committee on Government Operations.

(See the remarks of Mr. MUNDT when he introduced the above joint resolution, which appear under separate headings.)

S. 2302—INTRODUCTION OF A BILL TO CLARIFY THE STATUS OF GUAM WITH RESPECT TO PAY AND ALLOWANCES OF MEMBERS OF THE UNIFORMED SERVICES

Mr. JACKSON. Mr. President, I introduce a bill "To amend title 37, United States Code, so as to clarify the status of Guam with respect to pay and allowances of members of the uniformed services."

The very able Representative of the Territory of Guam, Mr. Antonio B. Won Pat, has brought to my attention that section 101(2) of the 1962 Uniformed Services Pay and Allowances Act defines Guam as a "possession." Of course, Guam is and has been since 1950 an unincorporated territory of the United States. It would appear that the provision in the 1962 Uniformed Services Act relating to Guam was an oversight. In order to clarify the situation, Mr. Won Pat has requested that I introduce amendatory legislation.

I ask unanimous consent that the letter addressed to me by Mr. Won Pat, under date of April 23, 1969, be inserted in the RECORD following my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 2302) to amend title 37, United States Code, so as to clarify the status of Guam with respect to pay and allowances of members of the uniformed services, introduced by Mr. JACKSON, was received, read twice by its title, and referred to the Committee on Armed Services

The letter, presented by Mr. JACKSON, follows:

TERRITORY OF GUAM, U.S.A., OFFICE OF GUAM'S REPRESENTATIVE IN WASHINGTON,
Washington, D.C., April 23, 1969.

Hon. HENRY M. JACKSON,
U.S. Senator, Senate Committee on Armed Services, Old Senate Office Building, Washington, D.C.

DEAR SENATOR JACKSON: This letter is addressed to you in your dual capacity of a ranking majority Member of the Armed Services Committee and Chairman of the Committee on Interior and Insular Affairs. The subject matter involves the political status of Guam.

As you know, in 1950 the 81st Congress enacted Public Law 630 (64 Stat. 384), the Organic Act of Guam. The bill that became the law was worked out in the Senate Interior Committee on large measure by Senator Anderson, who headed an *ad hoc* subcommittee to consider the Organic Act bill which was submitted to the Truman Administration.

Sec. 3 of this Act provides:

"SEC. 3. Guam is hereby declared to be an unincorporated territory of the United States . . ."

This language is substantially that of the Virgin Islands Organic Act (See 48 USC 1541), and throughout the years, Guam and the Virgin Islands have been deemed to be on a basis of equality, politically speaking.

Yet, the realization recently has been brought home to us that the cited provision of the Guam Organic Act has been repealed, in some substantial aspects, by Section 101(2) of the 1962 Uniformed Services Pay and Allowances Act (76 Stat. 451; 37 USC 101). This Section states: "(2) 'possessions' includes the Canal Zone, Guam, American Samoa, and the Guano islands."

This provision reduces the political status of Guam, with respect to the Pay and Allowances Act at least, to that of the Guano islands despite the unequivocal declaration, in substantive language, in the Organic Act that we are a territory of the United States. It is perhaps significant to note that the status of the Virgin Islands is undisturbed by the Pay and Allowances Act, and is specifically recognized in Sec. 305 of the Act relating to foreign duty pay.

Manifestly, it is desirable that the Armed Services and the Armed Services Committees be aware of Guam's status as a "territory", and therefore I ask that, on behalf of the people of Guam, you introduce legislation to amend the Uniformed Services Pay and Allowances Act by striking the word "Guam" from the definition of "possessions" as set forth in Section 101(2). For your convenience, I have taken the liberty of drafting such an amendment, and respectfully submit it to you herewith.

Sincerely yours,

ANTONIO B. WON PAT.

SENATE JOINT RESOLUTION 116—INTRODUCTION OF JOINT RESOLUTION TO AUTHORIZE APPROPRIATIONS FOR EXPENSES OF THE PRESIDENT'S COUNCIL ON YOUTH OPPORTUNITY

Mr. MUNDT. Mr. President, I introduce a joint resolution to authorize appropriations for expenses of the President's Council on Youth Opportunity.

I ask unanimous consent to have printed in the RECORD a letter on the subject, together with a copy of the proposed joint resolution.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection the letter and joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 116) to authorize appropriations for the expenses of the President's Council on Youth Opportunity, introduced by Mr. MUNDT, was received, read twice by its title, referred to the Committee on Government Operations, and ordered to be printed in the RECORD, as follows:

S.J. RES. 116

Resolved by the Senate and House of Representatives of the United States in Congress assembled, That there is hereby authorized to be appropriated such sums as may be necessary for the expenses of the President's Council on Youth Opportunity, established by Executive Order No. 11330 of March 5, 1967.

The material presented by Mr. MUNDT follows:

EXECUTIVE OFFICE OF THE PRESIDENT, BUREAU OF THE BUDGET,
Washington, D.C., May 23, 1969.

Hon. SPIRO T. AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed for your consideration and appropriate reference is a draft of a proposed Joint Resolution to authorize appropriations for expenses of the President's Council on Youth Opportunity.

The President's Council on Youth Opportunity was established by Executive Order No. 11330 of March 5, 1967. The Council is responsible for coordination, evaluation and encouragement of Federal youth opportunities' programs and for assuring effective program planning for summer youth programs. The Executive Order designates the Vice President as Chairman of the Council and provides for a membership consisting of representatives of the Departments of Agriculture, Commerce, Defense, Health, Education, and Welfare, Housing and Urban Development, the Interior, Justice, and Labor, the Civil Service Commission, and the Office of Economic Opportunity.

The President's Budget for 1970 includes an estimate of $357,000 for the expenses of this Council, the appropriation of which is dependent upon the enactment of authorizing legislation.

Accordingly, I urge early and favorable consideration of the enclosed draft resolution.

Sincerely,

PHILLIP S. HUGHES,
Acting Director.

SENATE JOINT RESOLUTION 117—INTRODUCTION OF A JOINT RESOLUTION TO AUTHORIZE APPROPRIATIONS FOR EXPENSES OF THE OFFICE OF INTERGOVERNMENTAL RELATIONS

Mr. MUNDT. Mr. President, I introduce, for appropriate reference, a joint resolution to authorize appropriations for expenses of the Office of Intergovernmental Relations.

I ask unanimous consent that a letter, and the attached proposed joint resolution, be printed in the RECORD.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the letter and joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 117) to authorize appropriations for expenses of the Office of Intergovernmental Relations, and for other purposes, introduced by Mr. MUNDT, was received, read twice by its title, referred to the Committee on Government Operations, and ordered to be printed in the RECORD, as follows:

S.J. RES. 117

Resolved by the Senate and House of Representatives of the United States in Congress assembled, That there is hereby authorized to be appropriated such sums as may be necessary for expenses of the Office of Intergovernmental Relations (referred to hereafter as the "Office"), established by Executive Order Numbered 11455 of February 14, 1969.

SEC. 2. (a) The Director of the Office shall be compensated at a rate of basic compensation not to exceed the rate now or hereafter provided for level IV of the Federal executive salary schedule.

(b) The Deputy Director of the Office shall be compensated at a rate of basic compensation not to exceed the rate now or hereafter provided for GS–18.

SEC. 3. The Director of the Office is authorized—

(a) to appoint and fix the compensation of such personnel as he deems necessary without regard to (1) the provisions of title 5, United States Code, governing appointments in the competitive service, and (2) the provisions of chapter 51 and subchapter III of chapter 53 of such title, relating to classification and to general schedule pay rates, *Provided,* That, except as provided in section 2 of this Act and subsection (b) of this section, no person shall receive compensation in excess of the rate now or hereafter provided for GS–15;

(b) to fix the compensation of two employees at rates of basic compensation not to exceed the rate now or hereafter provided for GS–17; and

(c) to obtain the services of experts and consultants in accordance with section 3109 of title 5, United States Code, at rates not to exceed the daily equivalent of the rate now or hereafter provided for GS–18.

The material presented by Mr. MUNDT follows:

EXECUTIVE OFFICE OF THE PRESIDENT, BUREAU OF THE BUDGET,
Washington, D.C., May 23, 1969.

Hon. SPIRO T. AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed for your consideration and appropriate reference is a draft of a proposed Joint Resolution to authorize appropriations for expenses of the Office of Intergovernmental Relations.

The Office of Intergovernmental Relations was established by Executive Order No. 11455 of February 14, 1969. The purpose of the Office is to advise and assist the Vice President with respect to his intergovernmental relations' responsibilities as the President's liaison with executive and legislative officials of State and local governments.

The Executive Order places the Office under the immediate supervision of the Vice President and provides for a Director and Deputy Director of the Office to be designated by the Vice President. The proposed resolution would provide that the Director would be compensated at a rate not in excess of that for Level IV of the Executive Schedule and the Deputy Director at a rate not in excess of that for GS–18. In addition, the resolution would provide that compensation for two other positions may be at a rate up to the maximum pay for GS–17.

Upon signing the Executive Order establishing the Office of Intergovernmental Relations, the President stated that ". . . the Office will assure State and local officials access to the highest offices of the Federal Government, especially those having a direct impact on intergovernmental relations, so that Federal programs, policies and goals will be more responsive to their views and needs. It will seek to strengthen existing channels of communication and to create new channels among all levels of government."

I urge early and favorable consideration of the enclosed draft resolution.

Sincerely,

PHILLIP S. HUGHES,
Acting Director.

ADDITIONAL COSPONSOR OF A BILL

Mr. SPARKMAN. Mr. President, at the request of the Senator from Kentucky (Mr. COOK), I ask unanimous consent that, at its next printing, the name of the Senator from Kentucky (Mr. COOK) be added as a cosponsor of the bill (S. 1832) to provide for the more efficient development and improved management of national forest commercial timberlands, to establish a high-timber-yield fund, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE CONCURRENT RESOLUTION 28—SUBMISSION OF RESOLUTION EXPRESSING THE SENSE OF THE CONGRESS WITH RESPECT TO THE INCORPORATION INTO THE INTERSTATE SYSTEM OF U.S. ROUTE 219

Mr. SCHWEIKER, on behalf of himself, Mr. BYRD of West Virginia, Mr. JAVITS, Mr. RANDOLPH, and Mr. SCOTT, submitted the following concurrent resolution (S. Con. Res. 28); which was referred to the Committee on Public Works:

S. CON. RES. 28

Concurrent resolution to express the sense of the Congress with respect to the incorporation into the Interstate System of U.S. Route 219

Whereas U.S. Route 219 passes through the Appalachian Region of New York, Pennsylvania, Maryland, West Virginia, and Virginia where one of the most critical problems is the lack of good access into and through the area, and

Whereas making U.S. Route 219 a part of the Interstate System will help remove this portion of the Appalachian Region from its isolation, and

Whereas U.S. Route 219 passes through or is adjacent to more of the natural resources of America than any other highway east of the Mississippi River, and

Whereas U.S. Route 219 as a major north-south artery would play a key role in improving the national defense capability, and

Whereas the present U.S. Route 219 is largely inadequate, obsolete, and dangerous: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of Congress that the State highway departments of those States within which U.S. Route 219 is located, together with the Secretary of Transportation, should designate, as soon as possible, such route as a part of the National System of Interstate and Defense Highways in accordance with, and for the purpose of, title 23 of the United States Code.

NOTICE OF HEARINGS ON MINING AND MINERALS

Mr. JACKSON. Mr. President, on behalf of the Subcommittee on Minerals, Materials, and Fuel of the Senate Interior Committee, I announce that public hearings on S. 719, for the establishment of a national policy on mining and minerals, has been scheduled for Thursday, June 12, at 10 o'clock in the committee room, 3110 New Senate Office Building.

This proposed legislation is of potential far-reaching importance to our national security and economic development as well as of immediate concern and interest to all of the mineral-producing States and the minerals industry.

The participation in the hearing of any Member of the Senate as well as that of other interested and informed persons will be welcomed.

S. 719 is sponsored by the distinguished senior Senator from Colorado, Senator ALLOTT, for himself and Senators BELLMON, BENNETT, BIBLE, CANNON, CHURCH, DOMINICK, FANNIN, HANSEN, HRUSKA,

JORDAN of Idaho, MCGEE, METCALF, MOSS, STEVENS, and YOUNG of North Dakota.

AUTHORIZATION FOR SECRETARY OF SENATE TO RECEIVE MESSAGES DURING ADJOURNMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that during the adjournment of the Senate from the close of business today until noon, Thursday next, the Secretary of the Senate be authorized to receive messages from the President of the United States and from the House of Representatives and that they may be appropriately referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR COMMITTEES TO FILE REPORTS DURING ADJOURNMENT

Mr. BYRD of West Virginia. Mr. President, I further ask unanimous consent that during the same period all committees be authorized to file reports, including all minority, individual, and supplemental views.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT TO THURSDAY, JUNE 5, 1969

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock noon on Thursday next.

The motion was agreed to; and (at 1 o'clock and 40 minutes p.m.) the Senate took an adjournment until 12 o'clock noon, Thursday, June 5, 1969.

NOMINATIONS

Executive nominations received by the Senate May 29, 1969, under authority of the order of the Senate of May 29, 1969:

RENEGOTIATION BOARD

William Henry Harrison, of Wyoming, to be a member of the Renegotiation Board, vice Jack Beaty, resigned.

William Scholl Whitehead, of Virginia, to be a member of the Renegotiation Board, vice Herschel C. Lovelass, resigned.

COMMISSION ON CIVIL RIGHTS

Stephen Horn, of California, to be a member of the Commission on Civil Rights, vice John A. Hannah, resigned.

U.S. ATTORNEY

John P. Milanowski, of Michigan to be U.S. attorney for the western district of Michigan for the term of 4 years, vice Harold D. Beaton, resigning.

James M. Sullivan, Jr., of New York, to be U.S. attorney for the northern district of New York for the term of 4 years, vice Justin J. Mahoney, resigning.

U.S. MARSHAL

Frank M. Dulan, of New York, to be U.S. marshal for the northern district of New York for the term of 4 years, vice James E. Byrne, Jr., resigned.

James W. Norton, Jr., of North Carolina, to be U.S. marshal for the eastern district of North Carolina for the term of 4 years, vice Hugh Salter.

Walter J. Link, of North Dakota, to be U.S. marshal for the district of North Dakota for the term of 4 years, vice Anson J. Anderson.

CONFIRMATIONS

Executive nominations confirmed by the Senate June 2, 1969:

EXPORT-IMPORT BANK OF THE UNITED STATES

John Conrad Clark, of North Carolina, to be a member of the Board of Directors of the Export-Import Bank of the United States.

DEPARTMENT OF THE TREASURY

Murray L. Weidenbaum, of Missouri, to be an Assistant Secretary of the Treasury.

SECURITIES AND EXCHANGE COMMISSION

Hamer H. Budge, of Idaho, to be a member of the Securities and Exchange Commission for the term of 5 years expiring June 5, 1974, reappointment.

EXTENSIONS OF REMARKS

NEW EEOC CHAIRMAN SUPPORTS INCREASED POWERS TO ENFORCE CIVIL RIGHTS LAWS

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. HAWKINS. Mr. Speaker, equal opportunity for all Americans is a goal with which I am greatly concerned. During this and the preceding Congress I have introduced legislation to remedy a salient weakness in Federal civil rights law—the inability of the Equal Employment Opportunity Commission to enforce its decisions.

There is a pressing need for this legislation. Millions of our citizens still suffer under discriminatory employment practices that while prohibited, manage to survive because the relevant law has no teeth. As a result, these people see the Federal commitment to equal opportunity as empty, surely not a healthy situation in a democratic society.

Hopefully, a meaningful law will be passed. In the meantime, we have been assured that the limited powers presently available to EEOC will be vigorously implemented. William H. Brown III, the new EEOC Chairman, has forcefully indicated that despite recent political rumblings by some Members of Congress, he does not intend to soft-pedal the Commission's efforts. This is as it should be.

Mr. Brown's personal style combines the diplomatic and legal arts that are suitable to his position, and not incidentally, will be absolutely necessary when the Commission gets "cease and desist" powers. His views were the subject of a very informative article in the Christian Science Monitor of May 21, which I include in the RECORD so that it will be available to all concerned. The article follows:

JOB BIAS CHIEF SETS RIGID GUIDES

(By Lya Shepard)

WASHINGTON.—If the public can expect anything from William Hill Brown III, the slender, soft-spoken Philadelphia lawyer insists, it is that "the law is going to be enforced—vigorously and fairly."

That sort of assurance hardly makes news when uttered by most federal agency heads. But the case of Mr. Brown is special.

The onetime postman and taxicab driver has just replaced tough-talking Clifford L. Alexander Jr. as chairman of the embattled Equal Employment Opportunity Commission.

Mr. Alexander, target of Senate conservatives over alleged "harassment" of businessmen, never minced words in attacking job bias to which minority workers were subjected.

By contrast, the man tapped by President Nixon to head the five-member EEOC lacks the outgoing Democrat's fiery style, but not his fervor for civil-rights causes.

During an interview in his 12th-floor office near the White House, Mr. Brown indicated that his sense of EEOC priorities is very much in line with that of Commissioner Alexander.

"Too many times people in business have tended to equate the idea of hiring hardcore [unemployed] workers with "equal employment,'" he said, gazing through a window at the Potomac and the faraway hills of Virginia.

"They've forgotten about the many, many thousands—if not the millions—who have been employed steadily at jobs without hope of being upgraded. This is an area of prime concern to me."

Mr. Brown, now the holder of a $38,000-a-year post, may have been recalling his own father who has worked as an elevator operator and starter in a Philadelphia department store for most of the past 40 years.

"So many times," he observed, "the businesses are willing to employ people at entry-level positions. But as you move up the ladder to skilled and white-collar positions, the percentage of minority workers drops off dramatically."

In its controversial Los Angeles hearings this March, the EEOC found what Mr. Brown terms "horrendous examples" of such black ceilings in the areospace and filmmaking industries.

BARRIERS DEPLORED

During these hearings even the mild-mannered Mr. Brown joined Mr. Alexander and Commissioner Vicente T. Ximenes in deploring the barriers facing blacks and Mexican-Americans.

"If you think you've done a good job," he scolded one television network spokesman, "then not only ABC but the country is in bad shape."

Last week in a Denver speech before electrical-power executives, the new EEOC chairman charged that the industry was "the worst employer of minorities of any industry grouping."

The same accusation was leveled a year ago. Since then, Mr. Brown said, "we have seen more motion than action by most of you, and I am not disposed to see another such year go by."

Though Mr. Brown is a Republican (appointed to the EEOC by President Johnson), Sen. Everett McKinley Dirksen (R) of Illinois sought at first to block his confirmation. A meeting between the two men arranged by Sen. Hugh Scott (R) of Pennsylvania managed to persuade the GOP floor leader to relent.

Today Mr. Brown would like to strengthen the EEOC's structure in several ways. He says he has solid White House backing. "Just prior to the time I was sworn in," the new chairman recalled, "the President told me the commission would have the 100-percent support of his administration to do the job we were charged with doing."

Mr. Brown maintains that "the key thing" is the EEOC quest for "cease and desist" powers to back up its fact-finding efforts. The commission now must rely on the Justice Department's Civil Rights Division and the Labor Department's Office of Federal Contract Compliance (OFCC) to enforce the law.

"It's absolutely imperative that we have this power," the chairman says. He also hopes to coax Congress to grant a larger budget and staff for EEOC investigations.

At present, it takes the commission's field staff from 18 to 20 months to process a complaint—"much too long" in Mr. Brown's opinion.

A Brookings Institute report recently suggested that the Labor Department's OFCC should be transferred to the EEOC to end duplication and overlap. Mr. Brown said he would favor that step only if given the added personnel to perform the larger job.

CONSOLIDATION SUPPORTED

"We're already running shorthanded both in terms of money and people," he explained. "If we were to get any added obligations, we would need a substantial increase in budget and staff."

Yet the EEOC chairman admits that such a consolidation would muffle many of the red-tape complaints often voiced by businessmen.

Before Commissioner Alexander stepped down as chairman, he fired a broadside at the Justice Department for its slow start in filing "pattern or practice of resistance" suits. The criticism prompted Assistant Attorney General Jerris Leonard to suggest that it would be "morally wise and sound" for the Democrat to resign from the commission.

Mr. Brown was asked to comment on Mr. Leonard's remark. He responded by upholding "the inherent right of every public servant to be critical." But he gently reproved Mr. Alexander in the same breath.

"I think both Commissioner Alexander and Mr. Leonard have a right to be critical of each other, if they wish," he said, noting at the same time that his colleague's jab at the first three months of GOP civil-rights enforcement might have been thrown too soon.

"The more equitable thing to do," Mr. Brown contended, "would be to look at this administration a year from now to find out what it has done."

PETITIONS CONCERNING POLITICAL REPRESSION IN SOUTH VIETNAM

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 2, 1969

Mr. FULBRIGHT. Mr. President, I have received several petitions signed by a number of teachers and students at the University of California concerning political repression in South Vietnam. I understand that the petitions originated with Dr. David Marr, a lecturer in Southeast Asian history at the university who served as an intelligence officer with the U.S. Marines in South Vietnam.

I ask unanimous consent that the petitions and the names of the signers be printed in the Extensions of Remarks.

There being no objection, the petitions were ordered to be printed in the RECORD, as follows:

REPRESSION IN SAIGON AND THE FATE OF PEACE NEGOTIATIONS

We, the undersigned University of California teachers and students call your attention to a number of acts of political repression engineered in the past three months by our "duly elected allies," the regime of Nguyen Van Thieu in Saigon. Some highlights include: smashing by police of a nonviolent Christmas eve, 1968 Catholic peace procession; continuous harassment of Saigon University Student Union functions and long-term jailing of student leaders who favor an immediate cease-fire; recent sentencing of Thich Thien Minh, a popular Buddhist monk, and a number of young followers to terms from three to twenty years hard labor.

In addition to the undoubted (and hardly new) perversions of justice and humanity involved here, we consider such Saigon government actions to constitute a serious obstruction to negotiated peace in Paris. President Thieu *knows* how many Vietnamese want an immediate settlement, *knows* how small the chances are of his surviving politically the massive readjustments implicit in such a settlement, and is determined to prevent at all costs the re-emergence to his left of a significant urban coalition that can negotiate meaningfully with the NLF.

By condoning Thieu's actions, the United States is helping to condemn thousands more Americans and Vietnamese to bloody graves. We therefore call on President Nixon at minimum to send an official letter of diplomatic protest to President Thieu regarding the ongoing political repression. If this has no effect, we ask the U.S. Government to consider a temporary withholding of selected aid allocations to Saigon—until President Thieu perceives just how serious is the desire of the American people for Peace.

KILLED IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. LONG of Maryland. Mr. Speaker, Capt. John L. Nalls, and Pfc. Stephen M. Thompson, two fine young men from Maryland, were killed recently in Vietnam. I would like to commend their courage and honor their memory by including the following articles in the RECORD:

CHEVY CHASE MARINE DIES—CAPT. JOHN L. NALLS IS KILLED IN VIET AIR COLLISION

WASHINGTON, May 20.—Capt. John L. Nalls, a Marine pilot from Chevy Chase, Md., was killed in a midair collision Sunday over the South China Sea the Department of Defense announced today.

Captain Nalls, who was 26, was killed when, as his fighter was being refueled by an air tanker, a helicopter crashed into the tanker. Seven other persons were killed.

He was the husband of the former Corrie van Hemert, a secretary in the office of Senator Charles McC. Mathias, Jr. (R., Md.). The couple lived at 4711 Cumberland avenue.

A native of Washington, Captain Nalls graduated from Woodrow Wilson High School there in 1960 and George Washington University in 1965. He played baseball in both high school and college.

He joined the Marine Corps in March, 1966, and went to Officers Candidate School in Quantico, Va., and then received flight training at Pensacola, Fla.

In addition to his wife, he is survived by his parents, Mr. and Mrs. James W. Nalls, of Washington; three sisters, Mrs. Patricia Dixon, of Rockville, Mrs. Janet E. Nazarian, of Glen Falls, N.Y., and Mrs. Mary Lou Baden, of Edgewater, Md., and two brothers, James W. Nalls, Jr., of Silver Spring, and Charles H. Nalls, of Washington.

A memorial service will be held at 3 P.M. Saturday at the Chevy Chase Presbyterian Church.

VIET BLAST KILLS S. M. THOMPSON—MARINE PRIVATE DIES AFTER BLAZE SETS OFF SHELLS

Marine Pfc. Stephen M. Thompson. son of Mrs. Regina Traguccio, of 4028 Southclare road, was killed by an accidental explosion in Vietnam May 13, the Department of Defenes announced yesterday.

Private Thompson was trying to put out a trash fire when the blaze detonated some artillery shells. He suffered fragment wounds and third degree burns of the entire body.

The incident occurred at a fire support base about 25 miles south of Quang Tri where Private Thompson was stationed with the field artillery of the 3d Marine Division.

NATIVE OF BALTIMORE

A native of Baltimore, Private Thompson graduated from Herring Run Junior High School.

He worked in the records department of the Johns Hopkins Hospital before enlisting in the Marine Corps in September, 1967. He had been in Vietnam since September, 1968.

In addition to his mother, his survivors include five sisters, Mrs. Sheila Milligan, of Baltimore; Miss Mary Thompson, Miss Agnes Tranguccio, Miss Phyllis Tranguccio and Miss Toni Tranguccio, all at home; a brother, Robert Thompson, of Baltimore, and his maternal grandparents, Mr. and Mrs. Leonard Cacano, of Baltimore.

MADISON AVENUE READIES ATTACK ON INFLATION

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. O'HARA. Mr. Speaker, I recently read an article in the Los Angeles Times about the Advertising Council's plans for an intensive, nationwide advertising campaign against inflation. I looked with great care at the dateline on the newspaper, and it said May 19, 1969. I still think I may have been reading from a newspaper to be printed in 1984.

"The campaign," the story said, "will not tell consumers to slow down their spending, give advice to businessmen, campaign for renewal of the income surtax, tell workers to moderate wage demands, or blame the Vietnam war for inflation." No, Mr. Speaker, it will do none of these things. Instead, quoting Archie K. Davis, chairman of the Wachovia Bank & Trust Co. of Winston-Salem, N.C., the campaign "will condition the collective mind so that when something is done, they will know it will be to their best interests."

That is about the most frightening sentence I have read this year.

The Advertising Council, a "nonprofit" offshoot of the U.S. Chamber of Commerce, is going to "condition the collective mind" so that when something—anything, I guess—is done about inflation, the "conditioned collective mind"—that means you and me and our constituents, Mr. Speaker—will simply warm up with delight, like one of Dr. Pavlov's conditioned dogs, drooling at the sound of a dinner bell, whether there is any food there or not.

Mr. Speaker, I agree wholly with the Advertising Council that inflation is a bad thing. But I think it is very frightening when tax-exempt funds are to be used to "condition" the American people to accepting whatever they are told will fight inflation.

The newspaper story continues:

Coincidentally, this mind conditioning effort is getting underway at a time when the Nixon administration is opening its campaign to win congressional approval for renewing the surtax passed last year as an anti-inflationary weapon.

The newspaper reporter's use of the word "coincidentally" suggests he may not have had the experience some of us have had with the splendid understanding and rapport that exists between the U.S. Chamber of Commerce, the Advertising Council's parent organization and the present administration.

I do not care how anyone feels about the surtax—whether one agrees with candidate Nixon that it ought to be repealed, or with President Nixon that it ought to be made permanent. That is a matter of judgment, on which honest men will differ. But I feel very deeply that the American people and their Congress should be left free to make up their own minds about what they want to do about inflation, whether they want to continue the surtax, or perhaps cut back on the high interest rates that have themselves become a major cause of current increases in the high cost of living, or whatever. I certainly think we should be wary of attempts to "condition" the public mind so that any measure that is described as "anti-inflation" will get some kind of automatic knee-jerk reaction of approval.

One of the most dangerous trends in the politics of this Nation has been the tendency—and it has been equally visible on the right and on the left—for a few people to decide for themselves what specific measures are needed to serve a broadly approved goal, and then to proceed to denounce anyone who does not accept those tactics as being against the goal. The extremist right-wing says it is "for patriotism" as all of us, indeed, are, and then denounces anyone who does not share the ultra-right wing's specific views on what is patriotic as being "against patriotism." The New Left decides that almost anything that can be done to end racism is "inadequate," and so it proceeds to denounce anyone who advocates any such steps as "racist." Now along comes the Advertising Council seeking to implant in everyone's mind a laudable dislike for "inflation," and "coincidentally" along comes the Nixon administration with a tax measure it supports as "anti-inflationary." I will not delve into the intentions of the Advertising Council, Mr. Speaker; I will ask only if the effect of the Advertising Council's "conditioning" program would not be to make impossible opposition to any proposal adequately ballyhooed as "anti-inflationary."

There is a splendid story told about Abraham Lincoln.

Lincoln once asked a friend, "If we agree that 'dog' means 'horse,' can we say that you rode to town today on a dog?"

When his friend answered that, under those conditions, he could indeed agree that he had ridden to town on a dog. Lincoln pointed out, "I don't think so, you and I can't change a horse into a dog just by saying so."

In an age of highly sophisticated advertising techniques, it becomes dangerously possible to change a horse into a dog by just saying so. In such an age, proposals like that of the Advertising Council are deeply disturbing indeed.

I include the article entitled "Madison Avenue Readies Attack on Inflation" at this point in the RECORD:

[From the Los Angeles Times, May 19, 1969]

PRIVATE, FEDERAL DRIVES DOVETAIL: MADISON AVENUE READIES ATTACK ON INFLATION

(By Murray Seeger)

WASHINGTON.—Like litter in the streets, forest fires and automobile accidents, inflation is to be a target of a million dollar advertising campaign.

"We have done Savings Bonds, Zip Code and Smokey the Bear," Robert P. Keim, president of the non-profit Advertising Council, reminded reporters at the White House.

Now, with a budget of $8 to $10 million in donated air time and print space, the Advertising Council will take on "inflation, the current form of economic instability."

"This will be a good tough one for us," Keim said.

The council is a 26-year-old industry-supported organization that conducts public service advertising campaigns.

Although Keim and a committee supporting the new project were introduced by Treasury Secretary David M. Kennedy after meeting with President Nixon, the council stressed that this is not a federal program. The President issued a statement in conjunction with the council's announcement reiterating his position that "we can cool inflation only if we deal with fundamentals."

In addition, Mr. Nixon said, "We must curb 'inflation psychology.' When people understand what is behind the sharply rising cost of living, they see that tax measures essential for a strong budget are better than the cruel tax of inflation." He said he did "indeed welcome" the advertising campaign.

CONDITIONING PROCESS

The campaign will not tell consumers to slow down their spending, give advice to businessmen, campaign for renewal of the income surtax, tell workers to moderate wage demands, or blame the Vietnam war for inflation.

Instead, it "will condition the collective mind so that when something is done, they will know it will be to their best interests," said Archie K. Davis, chairman of the Wachovia Bank and Trust Co., Winston Salem, N.C., and also chairman of the National Chamber Foundation.

An offshoot of the U.S. Chamber of Commerce, the foundation is paying for a five-year economic education program prepared by the Joint Council on Economic Education. The Advertising Council will carry the message of that program to the public.

Coincidentally, this mind conditioning effort is getting under way at a time when the Nixon Admiinstration is opening its campaign to win congressional approval for renewing the surtax passed last year as an anti-inflationary weapon.

The Administration's economic "troika," Secretary Kennedy, Budget Director Robert P. Mayo and chief presidential economic adviser Paul W. McCracken, have been invited to appear before the House Ways and Means Committee Tuesday for the first time since they took office.

At that time, they will plead for the Administration's plan to continue the full 10% surtax beyond its June 30 expiration date until Dec. 30. It would then fall to 5% for the next six months.

Still, according to congressional sources, the Administration will have a tough fight on its hands to win renewal of the surtax.

Some liberal members of Congress are insisting on action to reform the tax laws before the surcharge is moved. But the official view is that the attitude is a blind.

To counter this attitude, the Administration is beginning to step up its anti-inflation public relations campaign. Herbert Stein, a member of the Council of Economic Advisers, made a new speech on the subject Thursday. Three Cabinet members, Kennedy, Labor Secretary George P. Shultz and Commerce Secretary Maurice H. Stans, made similar pleas during the last week.

Previously, the Administration had concentrated on setting what it considered the proper policy lines for slowing down economic activity and removing inflationary pressures. It avoided the type of public exhortations common to the Johnson Administration.

SERVICE TO THE BLIND

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. DERWINSKI. Mr. Speaker, the Hammond, Ind., Times recently carried an article telling of the unusual service to the blind which my constituents, Dr. and Mrs. Ray Sanders, of Lansing, Ill., have developed.

At a time when international and national news media continually focus on the radical and ruthless elements of society, it is refreshing to read about a humanitarian project of this type.

The article follows:

GIFT TO SPOUSE CREATES "TAPESPONDENTS"

(By Edith Ladick)

Little did Mrs. Raymond Sanders realize four years ago when she gave her husband a tape recorder that the gift would completely monopolize her free time and give a new dimension to her life.

Mrs. Sanders was recently appointed assistant director of the newly formed Blind

and Handicapped Division of Anselm World Tape Forum. Its aim is to develop friendships all over the world.

It is part of Anselm Forum, Inc., formed 37 years ago to further human relations and is directed by Reuben Olson of Gary, Indiana.

Mrs. Sanders is presently taping with 30 blind and handicapped "tapespondents."

In 1966 Dr. and Mrs. Sanders visited the Middle East and developed a professional colored slide show in three 40-minute sections, complete with appropriate background music and commentary. Tape and slide shows were also developed from their 1967 trip to Spain, Portugal, and Morocco and 1968 trip to Great Britain. The shows are sent all over the country and shown throughout the Calumet area to clubs, churches, and schools as well as in their home at 3328 S. Manor Drive.

Dr. Sanders, who is an osteopathic physician in Schererville, designed a projection room in the basement of their home where as many as 27 have been seated comfortably. The projection screen is hung permanently in front of the room.

Dr. Sanders has also built a control panel at the side of the projection room to operate the lighting, slide projector, and tape recorder simultaneously. He has remodeled another room in the basement into a tape recording studio, complete with tape library. The library contains tapes which are not erased. Of particular interest to the blind are the tapes of Harold Ewins of Capetown, South Africa. They have sounds of jungle animals, capture of an elephant, and sea gulls fluttering above the water. Another are the tapes of Nellie Sweeney, New South Wales, Australia, blind singer, organist, and composer. She plans to publish her own hymn book.

The Sanders have made many other friends through taping. After viewing a tape slide show of Weymouth, England, they decided to include the area in their tour last summer. A tape was sent to Eric Stillwell, overseas representative of the Indiana Recording Club. He opened his home to them and was their guide on Labor Day weekend. Mrs. Sanders contributes taped material for his monthly taped magazine to the blind.

Palm Banks, blind tape enthusiast in Decatur, Georgia, played Santa Claus at Christmas for Mrs. Sanders' mother, Mrs. Olga Carlson. She took the many knitted socks made by Mrs. Carlson to the Home for Handicapped Children in Decatur.

Mrs. Sanders received a letter this week from Frank Senn, Jr., blind organist at the Holiday Inn of Buffalo, New York. After hearing her sing on tape, Senn wants to play the organ on tape, send it to Mrs. Sanders, and have her add the singing.

Mrs. Sanders has sung with the Merchandise Mart Chorus, Trinity Evangelical Covenant Church Choir, and the Aristocrats of Song. She is an international judge and member of Sweet Adelines, Inc., women's barbershop harmony group.

In addition, Mrs. Sanders is quite creative and has numerous handcraft projects, but her first love is serving the blind and the handicapped.

RETIREMENT OF CHARLES L. VICKERS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. HOSMER. Mr. Speaker, on June 30, Mr. Charles L. Vickers will retire as general manager of the Port of Long Beach, a post he has held for the past 11 years. During the time he has been in his present position, the port has experienced the greatest growth in its 58-year history in both physical development and cargo movements, going from 7 million tons 11 years ago to nearly 20 million tons in 1969.

Mr. Speaker, I would like to pay tribute to Charlie Vickers for 45 years to dedicated service and leadership in building the Port of Long Beach into the world's most modern port.

Charlie was born in Ethan, S. Dak. He came to Long Beach when he was of high school age, attending Poly High School.

When he first came to work in the harbor, silt was still being dredged out of the entrance channel from the devastating 1913, 1914, and 1916 floods in the Los Angeles River. Back then, the port only had one wooden pier with two berths on it. Now it has 60 deepwater berths.

During his early years in the port, Charlie was employed by the city and the Army Engineers, working on beach erosion problems, dredging, breakwater construction, shoreline contours, and surveying.

From 1937 on he rose successfully from surveyor, assistant harbor engineer, assistant general manager, and to general manager in 1958.

Perhaps, the most dramatic way to describe how the port has developed over the years he has served is to say that in the early days it was hard put to handle an 11,000-ton oil tanker drawing 25 feet of water. Today it can handle supertankers weighing over 100,000 tons and drawing 50 feet of water.

The Port of Long Beach's top executive has a broad engineering background and his thinking is international in scope.

By increasing the size of the port and by providing the most modern facilities obtainable, it attracts more shipping. This increases imports and exports, which in turn raise the annual income of everyone directly and indirectly involved in world trade.

This is especially true in the Pacific Basin area where the majority of our foreign trade is generated. So in developing the port, it has helped hundreds of millions of people to raise their standards of living.

Vickers has served as a director of the Long Beach Community Hospital, International Association of Ports and Harbors, Community Chest, and has been president of the Los Angeles-Long Beach Propeller Club, World Trade Week, and first vice president of the California Association of Port Authorities.

He was made a knight in the Order of Leopold II by the Belgium Government, a member of the National Defense Executive Reserve. Local 13 of the ILWU honored him as the City of Hope Man of the Year.

His successor will be the port's assistant general manager, Thomas J. Thorley. We wish him well.

Mr. Speaker, I would like to add my personal congratulations to Charlie Vickers for all he has done for the port, the city of Long Beach, the State of California, and the Nation. I wish him a pleasant retirement.

DRISKILL ERA ENDING

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. PICKLE. Mr. Speaker, as a member of the Capitol Historical Society, I have more than a passing interest in preserving the history and traditions of the Nation's Capital.

This interest has quite naturally spilled over into a separate, but related, field. There is in Austin, Tex., a building that has been a part of the history of my district since 1886—I refer to the fabulous and old Driskill Hotel. This magnificent old building, fittingly marked with a plaque and medallion designating it a historic Texas landmark, this fine reminder of our past may be torn down. It may even be leveled and a gleaming, antiseptic parking garage erected in the spot where history once dwelled.

The Driskill closed today. No more rooms are to be rented. The hotel was to be closed earlier, but was kept open in deference to the Texas legislators and lobbyists who have resided there during the current legislative session. But the Texas Legislature said they would adjourn sine die today—and so did the Driskill.

It is a pity. This grand old lady has been hostess to a President, scores of Governors, even more legislators, hordes of reporters, lobbyists, and socialites of eight decades.

Part of the first floor will remain open for an indefinite period—just the essentials: The barbershop, two private clubs, and a few offices. But the elegant charm of a bygone era may be lost forever.

On a typical day, the Governor of Texas can be found breakfasting in the elegant dining room. A score of the wiser reporters are nearby waiting for some big news of the day.

In the past, inaugural balls have been staged here for Gov. Preston Smith, Gov. William P. Hobby, Gov. Miriam Ferguson, and Gov. Dan Moody.

Many a political caucus has been held here and much of the legislative history of Texas written within its walls.

An early historian wrote:

> Governors have walked through its lobby arm in arm with legislators and confidential advisors on their way to conferences at which grave problems of state were resolved or more seriously complicated.

Among the historic decor of the old hotel are the eight mirrors which Emperor Maximilian ordered as a gift for his wife, Carlotta. The gold leaf framed mirrors were to hang on the walls of Chapultepec Castle in Mexico. Maximilian was executed and Carlotta died in Europe. The mirrors now hang in the Maximilian room, which was specially designed for them.

An Austin historian, Mary Starr Barkley, once said:

> Probably no place in the Austin area is more heaped with history than the Driskill Hotel.

Financial troubles, which have plagued the hotel since its opening, have become too burdensome. The managers of the hotel would keep it open if they could, but the daily operations have become daily losses. They have treated their help right, however, in closing the hotel. Over $200,000 was spent in severance pay—but that is little consolation for people who have invested their lives in that romanesque structure.

For example, we might lose one of Austin's finest gentlemen—Theodore Youngblood. About 46 years ago, Youngblood became a busboy at the Driskill while he tried to support two boys, a wife, and attend college in the same breath. Youngblood made it fine—his boys have both graduated, his wife is still by his side, and he is now the supervisor of the hotel's party and banquet service.

He may also be out of a job now.

This is a nostalgic pill for a man who was once the only man the Secret Service would let enter the President's quarters.

There is a faint breath of optimism in the wind. A save-the-Driskill group has been organized and an Austin architect, Max Brooks, is doing his best to save the hotel from the bulldozer and the sledge hammer.

He only needs two things: Public support and money. Public support can be mustered because the hotel is loved by nearly all Austin natives and visitors. The money may be another story altogether.

If the Driskill goes, I want it to be remembered. Once it was called the finest hotel south and west of St. Louis. It could be again.

I hope so. The hotel was closed once before. During those troubled times, one faithful employee kept a key to the front door. I wish I knew where that man could be found today.

RESOLUTION AGAINST THE ABM

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. ROSENTHAL. Mr. Speaker, the New York City Council recently received a resolution, with broad sponsorship, against the construction of the ABM. The sponsors of this resolution represent many communities and neighborhoods within New York City. They respond, I believe, to the growing determination of the citizens of New York, and other cities, that popular expression of views on national policy must be organized and effectively directed to elected public officials.

I welcome this initiative by New York City and its representatives. I hope the Congress will respond by a decisive rejection of the ABM.

The resolution follows:

RESOLUTION 1959

Resolution by the City Council of The City of New York Calling Upon the Congress of the United States to Refrain from Appropriating the Funds Necessary for the Deployment of the Safeguard Missile System and urging that the monies saved by Such Action be Spent Towards the Promotion of Equal Opportunity and Social Harmony within Our Nation's Cities

(By Messrs. Manes, Bernstein, Weiss, Merola, Mrs. Greitzer, Friedland, Low, Katzman, Lazar, Moskowitz, Scholnick, Knigin, Lebron, Sadowsky, Cohen, Rios, Sharison, Thompson, Maze.)

Whereas, The cost of the recent presidential decision to deploy the Sentinel Anti-Missile system is conservatively estimated at $6,000,000,000 to $7,000,000,000 and

Whereas, The system has provoked considerable disagreement as to both its technical feasibility and political desirability and

Whereas, The Defense Department has exhibited a history of spending billions of dollars on weapon systems that become obsolete before they are completed and

Whereas, It is universally accepted that millions of Americans are daily faced with a multitude of problems that severely limit their present and future well being and

Whereas, An enlightened government has the responsibility to endeavor to provide equal opportunity for all of its citizens and

Whereas, The greatest danger facing the United States is the slow disintegration and polarization of our Nation's social framework, and

Whereas, Needed economic and social programs within our Cities are not properly funded or are non-existent and

Whereas, This intended deployment will only further siphon off funds badly needed for our Cities and

Whereas, It will be more practical as well as morally correct for our national government to make the commitment needed to eliminate social imperfections before our nation's flaws become its permanent failures and

Whereas, The deployment of these systems may abrogate a portion of the newly ratified treaty to prevent the proliferation of nuclear weapons; now therefore be it

Resolved, That the City Council of The City of New York does respectfully call upon the Congress of the United States to refrain from appropriating the funds necessary for the deployment of the Sentinel Missile System and be it further

Resolved, That the City Council urges that money saved on this action be spent towards the promotion of equal opportunity, social harmony and badly needed capital projects within the Cities of our nation.

Referred to the Committee on General Welfare.

MEAT CUTTERS' UNION SEEKS TAX REFORM

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. COHELAN. Mr. Speaker, the Executive Board of the Amalgamated Meat Cutters & Butcher Workmen, AFL–CIO, has issued a strong policy statement on tax reform legislation. This 500,000-member food industry labor union emphasizes the inequities in the present tax system and points out that "it asks sacrifice of those Americans least able to provide it."

I want to congratulate the executive board of this important union for its stand and action. I know from my past work with the Amalgamated—especially in the battle against the Mexican farm labor importation program—that it is a determined group which will fight against great odds until it wins.

Mr. Speaker, I include the policy statement on tax reform of the Amalgamated Meat Cutters & Butcher Workmen, AFL–CIO, in the RECORD:

POLICY STATEMENT OF THE INTERNATIONAL EXECUTIVE BOARD OF THE AMALGAMATED MEAT CUTTERS AND BUTCHER WORKMEN (AFL–CIO) CONCERNING TAX REFORM, APRIL 29, 1969

The Amalgamated Meat Cutters and Butcher Workmen (AFL–CIO) has long called for actions to correct the inequities and injustices of the existing federal, state and local tax systems. We have long urged (1) the closing of loopholes, which allow the rich to escape their fair share of payments, and (2) the reduction of low and middle income rates, which impose special hardships on wage earners.

At long last, the nation is aroused about tax inequities. A "taxpayer's revolt" is in progress. Increasingly, a large number of Americans are seeking tax reform.

We are delighted with these developments. We fully support the hard-hitting letter which our Union's Executive Officers, President Thomas J. Lloyd and Secretary-Treasurer Patrick E. Gorman, sent to Chairman Wilbur D. Mills of the House Ways and Means Committee. It is an important and forthright statement of the views of our Union. We urge the Committee to heed the proposals of the letter.

The present tax system represents nothing short of robbery of wage and salary earners. It asks sacrifice of those Americans least able to provide it. It bestows tax benefits and credits upon those Americans who have the greatest means to meet their tax responsibilities.

It literally undermines other national policies established by the President and Congress concerning the economy, agriculture, poverty and urban reconstruction. It undermines the citizen's belief in justice and his adherence to law and order.

The time for change is now.

We urge Congress to overhaul completely the tax system by eliminating every single loophole which distorts the tax structure in favor of corporations and the upper income brackets. This includes the investment credit, oil and resource depletion, hobby farms, capital gains, real estate, and other gimmicks.

We urge Congress to reduce the tax burden shouldered by lower and middle income families.

We urge Congress not to renew the surtax unless tax reform legislation is previously enacted.

We urge state and local governments to reconsider their tax laws and to make them just and equitable. (In many cases, these tax structures are even worse than the federal one. Some states and communities, in fact, depend largely on the tremendously retrogressive sales tax.)

The Amalgamated recognizes that wishing changes will not make them come about. Action is necessary. Our Union has worked and will continue to work to make tax reform a reality.

We therefore instruct our Washington Office to continue the campaign for tax reform in collaboration with the AFL–CIO and other Unions and allied Organizations. To support the efforts of the International Union, we strongly urge our Local Unions:

1. To conduct meetings and forums among their members and other interested citizens on the injustices of the present tax system and the need for tax reform, and

2. To accelerate sharply the letter writing campaigns now underway to Congressmen and Senators urging the speedy enactment of thorough-going and meaningful tax reform.

ON CITIZENSHIP, PATRIOTISM

HON. W. C. (DAN) DANIEL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. DANIEL of Virginia. Mr. Speaker, we are all aware that violent actions and so-called nonnegotiable vocal demands of some of our young people receive widespread publicity, while all too often discerning and perceptive dissertations by other young people get comparatively little notice.

A few days ago a senior from James Blair High School in Williamsburg, Va., Mills A. Bradshaw, Jr., presented a penetrating analysis of the general unrest being evidenced by members of the younger generation. The occasion for his remarks was an assembly program at Oak Hill Academy, a small Baptist-operated secondary school in Grayson County, Va.

Young Bradshaw's remarks were considered of such import the editor of the local newspaper, the Galax Gazette, reprinted the speech in full. I concur in the editor's thinking and feel this young high school senior's remarks are deserving of even wider distribution and include them in the RECORD:

ON CITIZENSHIP, PATRIOTISM

(EDITOR'S NOTE.—Last Friday at Oak Hill Academy, Mills A. Bradshaw, Jr., a senior at Williamsburg's James Blair High School, spoke at the Oak Hill Academy assembly on "Citizenship and Patriotism." He was introduced by Richard C. Gwathmey, of Bruington, Va., Commissioner of Revenue of King and Queen County and whose daughter, Emmi, attends Oak Hill. Because of the pertinence of the talk, The Gazette reprints it in full.)

(By Mills A. Bradshaw)

Not too many months ago we read in the newspaper about a group of individuals who became dissatisfied with the conditions under which they were living. It was a group of Negroes in Watts. They were living in poverty and they blamed their condition on society as a whole. They demanded a change and when it didn't come they used violence. They rioted and burned and looted and killed. When I read about it I condemned them.

Another time it was a group in Detroit. When I read about their rioting I condemned them. Another time it was a group of students in Berkeley, California. They were dissatisfied with the role of the students. They wanted a greater role in governing the campus. They protested, they demonstrated, and they seized control of the administration building. When I read about them I condemned their actions.

It happened again at Columbia University, Duke and Cornell and many more colleges across the nation. When I read of these, I was angered at their demonstrations. Another time it happened at Concord in New England. These protesters were dissatisfied with their government and in the end tried to overthrow it. They protested and even used gunfire to win their cause. The administration they were overthrowing was King George of England and the year was 1776. When I read about them I couldn't condemn these dissenters; they founded our mighty nation.

It was a confrontation similar to this that I came against when I met at Williamsburg with the Student Burgesses. The theme for the conference was Patriot and Protester—Can we be Both? Here I was, condemning the dissenters of today and yet my country was founded by dissenters in an age of protest. I was sure that I was in favor of the protest and even violence our forefathers resorted to, and I was just as certain that I was against the rioters and protesters of today. But the circumstances seemed similar so I had to decide what justified protesting and what were the limits to protest techniques.

After considerable thought I came across three basic differences between the American Revolution protest and many of those we see today. The first is the cause being fought for. In the Revolutionary War the cause was one of basic political freedom. The colonists had been taxed without having a voice in the government. They had been forced to feed and house soldiers placed in the colonies against the desires of the colonists. Their commerce was restricted by taxes and finally by the closing by the king of one of their harbors. They were restricted from voicing their opinions about their government. Basic freedoms that I wouldn't hesitate to protest for.

Each of these is a political freedom necessary for the very existence of democratic principles and they aren't petty violations of total freedom. Our society wouldn't survive if we weren't able to vote at least indirectly on our taxes, if we were forced against our will to provide food and shelter for troops in our homeland that we didn't request, if we were not able to trade with other nations because of unbearable taxation, or if we were unable to vocally express our thoughts on our government.

Looking at the racial disturbances we see slightly different causes. The National Advisory commission on Civil Disorders blames most of them on "frustrations of powerlessness". In other words, many of the rioters felt that they couldn't change their present status. They felt unable to get out of poverty, unable to gain the respect of the nation, unable to get a decent job. They felt unable to get a proper education. From their frustrations they turned to violence. But freedom from frustration is not a basic political freedom. Our constitution doesn't provide for a guaranteed good job, it doesn't guarantee freedom from poverty, it doesn't guarantee a good education. Our society provides the opportunity for all of these but they aren't basic political rights.

Looking now at student revolts we get even further from basic freedoms. Most of the student protests in high schools center around dress codes. Students complain because the administration won't allow long hair or short skirts. They complain that their right to freedom of expression is being violated. Perhaps by not too great a stretch of the imagination we can agree that total freedom of expression is not being allowed. This is where we have to consider what freedoms and expressions of freedom are worth fighting for.

Some individuals argue that we should promote the exercise of First Amendment rights and not merely tolerate it. In other words we should encourage people to do whatever can be justified as exercising the rights of free speech, free press, freedom of religion and so on, and not just put up with people who do this. It seems to me that this is an attitude of: do everything you can get away with. Just try to imagine what would happen if eveyone tried to practice whatever he could justify as freedom of expression. Our soldiers in Vietnam would be unable to fight because the long hair would be in their eyes, we wouldn't have many students in school because they would all be off expressing themselves at the beach, and our parents could be expressing themselves by boozing it up in the middle of mainstreet every night.

We certainly don't want to see how far we can stretch our rights, we just want to protect our basic rights. If the only complaint students have is the dress restrictions they should be thankful.

More recently on the college level the complaints have centered around the fact that students don't have a major voice in school administration. They complain because they can't set up the school curriculum and they can't help hire and fire teachers. But what basic freedom is being violated here? I don't remember anywhere in the Constitution where I was given the right to choose what teachers I wanted to teach me and what I wanted to hear them talk about. Each student has the choice of what college he wants to attend. If he doesn't like the instructors or the influence of the students at any institution he doesn't have to go there. He should consider himself fortunate to have been accepted at the college of his choice and he should abide by the rules that he asked to live under as a student at that institution.

The student revolts aren't in defense of any basic political freedom.

The second difference is the methods used before violence was resorted to. Before the American revolution our colonial fathers sent emissaries to the king asking him to give them the rights of all Englishmen. They sent letters requesting the same. All these were ignored. They sent stronger notes and finally boycotted English goods. They formed Committees of Correspondence to explain to people their complaints and reasons for their protest. Finally when the king sent troops against them they used force in return.

Generally speaking, we didn't see a similar restraint before the racial disturbances. Many of them began without the general public even knowing that a problem existed. To my knowledge, peaceful means were often neglected and demands and violence were the starting point.

Student revolts are often similar. They begin by demanding specific changes and if they don't come immediately violence does.

I have to speak in generalities here because some of the student protests have come only after exhausting any other means of action. The same is true in many of the racial disturbances and if we look closely even our colonial forefathers used unnecessary violence. There was no compelling reason for them to have the Boston Tea Party. They could have peacefully just refused to purchase the tea rather than destroy it.

What I'm suggesting is "Don't fight the administration; use it." If you can accomplish your objective by legal, peaceful means don't resort to violence. The success of your mission will often depend on it. Use tactics that won't alienate the crowd if possible. Supposing I had a date this weekend and since I live in Norge, which is ten miles from anything, I would need the car. Would I go up to my Dad and say, "Dad, give me the car or I'll put sand in your gastank." You can bet your life I wouldn't. Even if I had needed the car to go get him a birthday gift, if I go about it that way I'll never get the car. Instead of that I'd use the line of least resistance. "Dad, you remember Karen, the girl who thinks your mustache look's so neat? How about loaning me the car, so I can take her out this weekend? And if you want me to clean up the yard for you I'll be free all Saturday morning."

It's just common sense to use a bit of diplomacy along the line of least resistance.

The third difference is the respect each group gave to the rights of others. In the American Revolution only rarely did the colonists infringe upon the rights of others. With the Boston Tea Party they destroyed the property of some merchants whom they didn't agree with. But for the main part they only protected their own rights. They defended their homes, and only destroyed in self-defense when attacked. They remained within their own lands, they didn't disrupt other lands.

Our racial disturbances certainly didn't follow this standard. The looting and burning that took place wasn't in protection of anyone's rights. It was a grave infringement upon the rights of others. And the students aren't following the rules, either. They occupy buildings, they destroy records, they block

traffic, they deface public property. What rights are they defending? None at all. In fact they go so far as to deny others the right to protest. Just last month we read about some students from the University of Virginia who were demonstrating on the lawn of the Capitol in Richmond. In and of itself this was not illegal although it didn't gain much support for giving 18-year-olds the right to vote. The problem was that when some pages came out to demonstrate in favor of the current administration, they wouldn't allow it. The student demonstrators attempted to tear down the banners of the pages. They not only wanted to exercise their rights to the fullest extent but they wanted to deprive all others of this same right.

There's the old adage: "A friend is a friend to the end of my nose." But as soon as he steps on my rights he has lost my support. If more dissenters would remember this they would be a lot more successful and a lot more popular.

And a lot of the things people are demonstrating for would not violate the rights of others.

Protest is justified for protection of our basic rights if we can't achieve our objective peaceably and so long as we don't violate the rights of others. The only problem is, how do we know which rights are basic? What we can do without violence? and what the rights of others are? Perhaps the protesting students think that the right to decide what they want to wear and hear in class is a basic right; maybe the poor think it's a government responsibility to provide food, clothing and shelter for them, maybe students don't realize they can have an administration voice legally by evaluating the teachers responsibly and informing the administration, maybe they don't know what restrictions there are at college and that they can choose what college they want to attend. Maybe the poor don't know that they can elect candidates to office, receive job training, help themselves under the present system. Maybe students dont' know they are violating another's rights when they destroy records, occupy buildings, and block traffic; maybe rioters don't know they are violating another's rights when they loot and burn.

This is where we find a job to do. If people don't know what their basic rights are, if they don't know how to effect a change peaceably and legally and if they don't know the rights of others we can't expect them to act responsibly.

"Education makes a people easy to lead, but difficult to drive; easy to govern but impossible to enslave." This is why we must educate ourselves and help to educate others. We need this education not just in how our government works but in all skills. Anyone who does receive a good education will understand his role in society, he will have the knowledge and skill necessary to obtain a good job and keep out of poverty. He won't have reason to riot and loot and burn. If he has a good education he will know how to correct evils in our society without using violence.

"Education makes a people easy to lead, but difficult to drive; easy to govern but impossible to enslave."

THE POSTAL CORPORATION

HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. OLSEN. Mr. Speaker, it was most interesting to read in the June 4, 1969, issue of the Federal Times an editorial entitled "The Postal Corporation." I am confident it will be of interest to my colleagues since it points out some of the pitfalls embodied in the administration bill we received last week regarding the conversion of the Post Office to the postal service.

I sincerely hope my colleagues, especially those who may have been misled by some of the administration propaganda, will take time to study this editorial carefully.

THE POSTAL CORPORATION

The plan to turn the post office into a corporation again is in the limelight. It is there because it is politically expedient for this course of action at this time.

The needs and the problems of the post office are growing. The public is demanding more and better service. The postal employes are tired of poor working conditions and substandard salary levels.

The Congress is in a quandary. Legislators know they will face the wrath of the voters if they try to put through additional postage rate increases at this time.

The easiest way for them to get rid of the problem is to pass it on to someone else. Thus, the postal corporation looms as a possible answer.

The corporation could raise postal rates and trim service. The public could complain, but the complaints would have far less effect than they now have when directed at the congressmen.

Just how effective would a corporation be in actually solving the problems and improving the service? We doubt it could contribute much.

The basic need of the postal service is money—scads and scads of money. A switch to a corporate structure is not going to reduce this need. On the contrary, it could increase it substantially.

It has been the refusal of Congress to provide the funds in the past which has created many of the problems the department faces today.

Advocates of the corporation plan talk of the need for modernization and automation. This is not a new concept. We had experimental post offices and "test periods" on new equipment decades ago. Some of the "test equipment" still is in the test stage because the money was not available to put it into widespread use.

If the corporation is unable to get the money from the congress, it will have to turn to the only other source—the mail user. The effort to turn mail delivery from a service to the public into a service which can at least break even financially is bound to bring major rate hikes.

Recent testimony before a congressional committee put the amount needed for modernization at five billion dollars.

Former deputy postmaster general Fred Belen summed up the problem beautifully in his appearance before the House Post Office and Civil Service Committee.

He said: "Change of name or skeletal form will not result in the change or disappearance of the problems which result primarily from growth rates. The postal system will take its problems with it regardless of where it goes, what it is called, or who heads it."

There is no magic in a corporation plan which will answer this. If more money and better management is the need, why not provide it within the framework of the present structure, or at least in a modification of the present system?

Congress ought to ignore the political pressures and face up to its responsibility to provide the nation with an adequate postal service. Instead, it seems to be leaning toward finding a convenient dumping ground to bury the problem.

The answer is not simple. The cost of the Vietnam War is staggering. The demand for domestic anti-poverty programs is compelling—and will have to be met. The congress will have to decide the priority it wants to put on postal service. And, the growing mail load makes it urgent that the decision be made now.

Further complicating the proposed transfer is the matter of the post office share of the retirement fund deficit. Who will pick up the tab for it?

Construction costs are immense. Even if the new corporation inherits all of the existing real estate, it still will be faced with a huge building program to eliminate the deplorable old buildings and accommodate the burgeoning mail volume.

In the light of all these problems, we do not feel that the change to a postal corporation would be the best course of action—at least, not for the present.

OMNES ESTES SIGNIFICANTES—DEAN CARLSON MAKES EVERYONE FEEL IMPORTANT

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. JOHNSON of California. Mr. Speaker, for more than a quarter of a century, Dean Wallin J. Carlson, better known to generations of students as "Dean C," has served as registrar for Chico State College. In this impersonal era of statistics, computers, and numbers, Dean Carlson had the warm personal ability to treat people as individuals, as important individuals.

Dean Carlson is retiring and I want to join his many friends in paying respect for the wonderful job he has done over the years and to wish him well for the future.

No better tribute to this outstanding man can be made than that which was made by the Chico Enterprise-Record. So that this may be shared with my colleagues, I include the Enterprise-Record editorial, entitled "Ommes Estes Significantes," in the RECORD at this point:

OMNES ESTES SIGNIFICANTES

Down through the years, one of the hardest things about going to college always has been "getting in." For millions of young people throughout the nation, the period between high school graduation and actually sitting down in a classroom as a bona fide college student has been one of great nervous strain.

The tension and worry always has been enhanced, of course, by what youngsters describe as "the cold, impersonal, mathematics-like nature of the process of application, acceptance and registration."

We've had youngsters who were going away to college tell us: "Gee Whiz, it makes a fellow feel like some kind of a little number in a gigantic lottery. It's as if you were trying to communicate through a deep fog with some sort of a machine that is regarding you with a chilly eye. Oftentimes, this initial feeling stays with a guy for months and months. Some kids never are able to lose the feeling that they are considered by the institution as a factor rather than a person."

Needless to say, the process can be even more nerve-wracking for exceptional cases, such as transfer students (with another institution inserted between the high school and the college) and foreign students (whose prep work or other secondary records may even stem from a different nation).

Surely the difficulties of this initial period have contributed greatly to the general unrest which now is sweeping many institutions of higher learning throughout the land. The feeling of being a "little number in a big lottery" and the general lack of recognition as a "person" has left thousands of students less than comfortable in their campus surroundings.

Happily, however, all the foregoing would have to be relegated to the rank of the "exception rather than the rule" insofar as our own Chico State College was concerned during the period in which colleges and universities boomed after World War II.

And the credit for making Chico State a place where "getting in" did not amount to a traumatic and depersonalizing experience must go to an unusual educator named Wallin J. Carlson, better known to generations of students and alumni as "Dean Carlson" or simply "Dean C."

Dean Carlson originally came to Chico State as an instructor in business in 1938, making him one of the two or three "true pioneers" insofar as current oldtimers on the faculty are concerned. Within a few years after his arrival, however, Dean Carlson was named Registrar—and it was in that post, for the better part of a quarter of a century, that he built the record under which thousands of students over the years were enabled to regard Chico State as a "college" rather than as an institution. First impressions are of deep importance, of course, and Dean Carlson and his staff made such a deep and warm impression of multitudes of incoming students that they came to regard his as "Mr. Chico State," and continued to do so through their time on the campus and into their post-college adulthood.

To the fresh-cheeked high school graduate from either a Shasta County whistle-stop or the sophisticated neighborhood of a metropolitan area, Dean Carlson was the one who made the transition from prep school to college a procedure in which the youngster felt that he (or she) was being regarded as a person and that his case was being considered across the desk or through the mails by another person, a person who truly was interested in him.

To the veteran who was returning to studies after time out for service in World War II or Korea, Dean Carlson was the one who helped shake the dust from his educational records of the past and helped him undergo the intricacies of the GI Bill—and, in a sense, helped him feel more comfortable returning to the classroom "as a guy older by several years" than his classmates.

To the foreign exchange student (in this realm, Dean Carlson was an innovative pioneer), the Registrar was an understanding and helpful link between a far distant land and the green lawns and ivy-grown buildings of Chico State. Language barriers notwithstanding, Dean Carlson somehow managed to enable this young person to get off to a good start in adapting to the strange culture of his new campus "home away from home."

Even when enrollments began to feel the brunt of the post-war "baby boom" and necessitate the introduction of mechanization in the registration process, Dean Carlson and his staff managed to maintain the personalized attitudes so many other colleges and universities had long ago lost. This aspect of Dean Carlson's tenure was, of course, perhaps the chief hallmark of his ability to imbue his entire staff with interest and zeal to match his own.

Up until a year or so ago—whether he went by the title of Registrar or Associate Dean of Students in Charge of Admissions and Records—Dean Carlson played a major role in shaping Chico State College and, more importantly, in making the procedures of "getting in" an easier and happier one for the young people.

It is not surprising, then, that word of Dean Carlson's impending retirement this year has spread among alumni throughout the nation, even throughout the world, and that nostalgic and laudatory comment has begun coming in.

It is appropriate that Dean Carlson's faculty colleagues and former students already are planning several functions to officially record the mark he has left on Chico State College in particular and on education in general. One such session was scheduled today by the Student International Club and the MacArthur Scholarship Committee.

Even without such formal manifestations, however, the place of Wallin J. Carlson in educational history is secure. To faculty colleagues, students, alumni, and even to admiring townspeople, he always will be "Dean Carlson" and regarded as one of their happiest links with Chico State College. It seems reasonable to say that, had there been more like him during the past quarter century, higher education on a national basis might be far less a battleground than it is today.

We don't know if Dean Carlson ever adopted a motto. But it strikes us that an appropriate one might be devised from the philosophy he adhered to and practiced: Omnes Estes Significantes—Every Person Is Important.

OEO DIRECTOR RUMSFELD'S STATEMENT ON POVERTY

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, Donald Rumsfeld, the new Director of the Office of Economic Opportunity, testified this morning before the House Committee on Education and Labor.

His statement deserves the attention of the Congress. It is forthright, candid, and perceptive. I was pleased to find the Director call for a 2-year extension of the Economic Opportunity Act.

It is my belief that Don Rumsfeld, in his first appearance before the Congress in his new role, has set a sound course for improving OEO and its operation.

His statement follows:

STATEMENT OF HON. DONALD RUMSFELD

Mr. Chairman, Members of the Committee, I am pleased to appear before this distinguished Committee on proposed amendments to the Economic Opportunity Act of 1964.

During my first week as Director, I have been wrestling with the details, problems, and prospects of the Office of Economic Opportunity. I will attempt to be as complete as possible in my responses to your questions. I do not presume to have all the answers, or all the information, but I am determined to pursue the answers we all seek. A comprehensive review of the OEO and its activities is needed, and I intend to complete it as soon as possible.

President Nixon is sending to the Congress a proposed amendment to the Economic Opportunity Act of 1964 to extend the authorization for appropriations from June 30, 1969 to June 30, 1971. This extension, providing for a request for $2.048 billion for FY 1970, will furnish a sound framework for change in the agency's policies and operations. More comprehensive improvements, he feels, should be made after careful study by the new Director and the staff of the Agency.

A two-year extension, the President believes, will improve the management of this program by allowing longer-range planning and making possible more orderly and efficient allocation of funds. It will lead to better recruiting by guaranteeing to those whose talents are needed that the commitment to deal with these problems exists. It should improve the potential for results by insuring the continuity and flexibility that an innovative agency needs. The extension will give greater assurance to those who initiate experiments that even though a particular program may not prove successful, the lessons learned will be put to use, and the larger effort will continue.

This is not a commitment simply to continue present programs. It is a commitment to find out what works and what does not, to review the performance of these programs, and to utilize new knowledge. Our efforts over the past years have not been as successful as we might have hoped. We must develop more systematic approaches to identifying the needs of the poverty population and to devising effective solutions to those needs.

The people served by OEO deserve this. The people of the Nation require it.

I believe that the Office of Economic Opportunity should assume the role outlined in the President's February 19 Message—to be the innovating agency, an incubator for new programs, devising and developing new approaches to the problem of poverty. The changes being made—the delegation of Head Start and the Job Corps—should enable the Office of Economic Opportunity to fulfill this role more effectively. Organizing and managing innovation in the social field is no easy task. In developing new programs, as well as evaluating on-going ones, we must apply tough standards of measurement. We must set our goals high—but we must also set them precisely and clearly enough so that we will know whether or not they have been achieved.

Innovation will be meaningless unless it is coupled with penetrating evaluation. We must define objectives in both qualitative and quantitative terms. We must test alternatives, and we must be equipped to measure progress or failure against defined goals. We must not be afraid to admit failure, for we may learn as much from programs which appear to fail as from those which succeed.

In the same sense we must admit how little we know about the problems of the poor. The admission of a lack of knowledge may be the first step toward knowledge—and toward solving these problems.

I am now searching for new talent, men and women with the energy, dedication and intelligence needed to carry out the tasks ahead—the research, planning and evaluation necessary for improvement in these programs. I am seeking people with the competence to institute higher standards of operation. At the present time, some 20 of the top 59 positions in the Office of Economic Opportunity are vacant.

I am establishing a number of study teams to examine some of the more critical issues. I don't anticipate that these teams will produce fully satisfactory answers to our questions, but they will be at least help to outline some of the ways to get answers—some of the information we must have to reach decisions.

One issue which we must study is the relationship between the Community Action Agencies funded through the Office of Economic Opportunity and the Community Demonstration Agencies funded through the Department of Housing and Urban Development. Over 30% of CAA funds are spent in the present 150 Model Cities. The need for close coordination and cooperation between these two programs is of a high priority to the Administration.

Another critical issue concerns the role of the states in OEO programs—How do we bring states into a more meaningful and

active role in programs funded through the Office of Economic Opportunity. OEO provided some $6.5 million to fund State Economic Opportunity Offices in 1969, for technical and planning assistance to the Governors and local agencies. The Administration is now engaged in an intensive review of the role of States in many federal activities. I believe that we can find new and better ways to involve the States in dealing with the problems of poverty.

The Office of Economic Opportunity has been devoting roughly 28% of its resources to rural poverty, but there is still a lack of sufficient information in this area, due in part to insufficient research and experimentation. OEO, working with the States, should be able to help to develop mechanisms for dealing with elements of rural poverty, such as scattered pockets of the poor over large areas. I know that members of this Committee have expressed concern about this problem and, with your support and advice, I would hope to devote greater attention to it.

The evaluation of programs must be one of the most important activities of the Office of Economic Opportunity. It appears to be one of the most neglected. OEO has only recently completed the first evaluation of the national impact of one of its major programs. Until last year, this Agency had no systematic process for initiating and conducting evaluation. The state-of-the-art of evaluating social programs is still primitive. I intend to devote more of OEO's resources to evaluation and to work with other federal agencies in developing a more effective evaluation capability. I believe that the Congress should be made aware of the results of such evaluations so that the Legislative and Executive Branches are dealing with the same set of facts.

Also important is the question of delegation—how best to insure that a program's focus is preserved once direct operating responsibility is passed to a department. The recent debate on the delegation of Job Corps and Head Start raised such questions as: How should a delegated program be monitored and evaluated so that it continues to accomplish its original goals? What, ideally, should be the stages of delegation or transfer? Should the experimental activities of the program be left to OEO? How should delegation relate to transfer?

It was the original intention of those who developed the anti-poverty program that this process of delegation would be a means of disseminating and strengthening the programs of the Office of Economic Opportunity. There has been a negative attitude toward delegation—a tendency to avoid it—because a program ready for delegation usually has a degree of acceptance and a constituency, and there has been a concern that delegation might weaken support for the OEO. The process of delegation can be developed as a positive process. To be able to make sound decisions and defend them intelligently—decisions that really help the poor—we must develop a policy for relating delegation to the goals and operations of our programs. This is particularly significant in that roughly two-thirds of OEO funds will not be under the direct control of OEO.

We must find a means of fulfilling more effectively the goals of community action. The questions being raised concern means of achieving greater responsiveness, of strengthening and improving performance. Much of our domestic controversy focuses on the issue of whether a particular institution—a government agency, a legislature, a university—is sufficiently responsive to the needs of the time and to those it serves. The basic strength of our system—and its capacity to deal with poverty—springs from the fact that the institutions of our society do change and can respond. Progress here lies not only in encouraging institutions to be more responsive, but in convincing non-participants that they can participate in and benefit by the change.

To conclude, I must confess my concern at how little hard analysis of these questions there has been. None could have expected the problem of poverty to be totally eradicated in four years. But I believe that by this time we could have hoped to accumulate a useful body of knowledge about the problem and about the impact of programs now underway, and the success or failure of our efforts. I believe that the people of the Nation have a right to ask why so little is known about the effects of these programs.

I assure this Committee that I will work with you to devote the agency's resources and energy to producing answers, and to attempt to use this knowledge. The President has indicated the spirit in which we must proceed: "The men and women who will be valued most in this Administration," he said in his Message to Congress of February 19, "will be those who understand that not every experiment succeeds, who do not cover up failures but rather lay open problems, frankly and constructively, so that next time we will know how to do better."

The founders of this program, some of whom are on this Committee, clearly recognized the need for flexibility: "As conditions change," President Johnson stated in his Message to Congress in 1964, "and as experience illuminates our difficulties, we will be prepared to modify our strategy."

Many of our conventional attitudes about problems of poverty and the Office of Economic Opportunity ought to be re-examined. The men and women to be served by this program will not be content with words and gestures. Posturing cannot replace accomplishment.

We must heed the hardship and despair of the poor, the deep hurt of poverty and its impact on individual human beings. We must build the knowledge and stamina to provide for real gains in opportunity and human dignity. The President has made this commitment. I join him in it. I look forward to working with this Committee on these and other questions now facing the Agency.

LETTER TO THE EDITOR OF THE WASHINGTON DAILY NEWS

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MAY 29, 1969.

The EDITOR,
The Washington Daily News,
Washington, D.C.

DEAR SIR: As a former newspaper editor myself, I can well appreciate the wide latitude of reportorial expression and judgement that determines both the news content of a story as well as its placement in the newspaper.

Whether a sensational crime story is placed on Page 1, Page 3 or Page 35 would depend on the editorial propensities of three different editorial points of views such as the *New York Daily News, The Chicago Today* and the *New York Times.*

But one practice which has diminished significantly in American reporting is the labelling of people involved in crimes or court cases. Years ago, most white newspapers labelled people by race—today, very few do. *The Washington Daily News* is a rare exception.

In a city which is now 74% Black, the relevance of race is even more archaic in reporting the apprehension or conviction or trial of a suspect. What does it prove?

Yes, when a serious crime is committed and a suspect is at large, his race is indeed quite relevant. But, how does the factor of his race become significant after his apprehension or his court trial?

Why not label people by religion as well—John Doe, Catholic; Ellen Doe, Jewish; Joseph Jones, Protestant? Or, if the *Daily News* is going to be consistent, why not label all races: thus, John Doe, Chinese; Mary Doe, Spanish; Albert Jones, Philippino.

Perhaps the *Washington Daily News* believes that the identification of criminal suspects and others contributes to a healthier racial climate and to a better understanding between the black and white races. If the editors so believe, of course, then one cannot quarrel with their decision as editors.

But from the heavy volume of mail which I have continued to receive protesting the *Daily News'* practice, I am convinced that the *vast majority* of the District's Black citizens are deeply offended by this editorial practice. And since black people comprise the majority of the nation's Capital, the *Daily News* has placed itself in the curious position of publishing a newspaper which ignores the expectations and personal feelings of that majority.

With every good wish.

Very truly yours,

ADAM C. POWELL.

SOVIET MARITIME STRATEGY

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. HOSMER. Mr. Speaker, the Center for Strategic and International Studies at Georgetown University has just completed an incisive study of Soviet seapower. The 14-member panel of American and European experts, cochaired by Hanson Baldwin and Lawrence W. Martin, concluded that the Soviet Union has developed a plan of strategic priorities and a highly coordinated maritime program which challenge the basic interests of the world's major non-Communist seapowers.

Because of the timely importance of this topic, I have asked that the panel's findings as reported in the New York Times, May 30, 1969, be set forth below:

SOVIET IS FOUND BY STUDY GROUP TO SEEK CONTROL OF WORLD'S SEAS

BRUSSELS, May 28.—A panel of American and European analysts has concluded that the Soviet Union has embarked on a maritime strategy of challenging the United States and other non-Communist sea powers for control of key areas around the Eurasian land mass.

This Soviet policy is based on the continuing expansion of the navy and merchant marine, the panel noted in an analysis issued today. The study was made by 14 analysts assembled by the Center for Strategic and International Studies of Georgetown University in Washington.

The policy means that the Soviet Union will "attempt to control the Baltic Sea, the Black Sea and ultimately the Mediterranean," the panel said.

"The policy also envisions," it continued, "Soviet predominance in the Sea of Japan to the east, the Greenland-Iceland-Faeroe Islands gap to the west, and the Indian Ocean to the south."

STRAITS MAY BE GOAL

Control of the Bosporus and the Dardanelles, through which its fleets pass to the Mediterranean, is a probable objective of the Soviet Union.

"Beyond these goals," the panel reported, "the Soviets want to gain dominant influence at several major junctions of the world's seaways." The group identified these as the Suez Canal, the Bab el Mandeb, leading from the Red Sea to the Gulf of Aden, the Strait of Malacca, between Malaya and Sumatra, and the Strait of Gibraltar.

The panel predicts that in pursuit of these ends the Soviet Union will "mostly likely" try to limit and eventually stop non-Communist naval operations in areas they consider strategically important to their plans.

Hanson W. Baldwin, one of the panelists and former military editor of The New York Times, called "the substitution of blue water horizon for the landlocked concepts of the Soviet past" one of "the epochal events of the 20th century" that probably insures the extension of the frictions of the first half of the century to "distant seas and many continents."

The panel's report has been welcomed by diplomatic and political leaders of the North Atlantic alliance. Long concerned by the growth of Soviet sea power and the apparent complacency and indifference with which the process has been viewed, they hope the analysis will promote efforts to meet it.

This means, in the first instance, the United States for the report makes clear that the Soviet challenge is directed first of all at the United States Navy, the world's largest and most powerful.

In important categories of sea power, the panel found, the Soviet Union already surpasses the United States and is gaining in others. The Russians may have many more conventionally powered submarines, "unparalled" long-range surface-to-surface cruise-missile systems on surface ships and submarines and a sizable missile-equipped fleet of patrol boats, the report said.

The Soviet Union is said to be "catching up" in Polaris-type ballistic missile submarines and helicopter carriers. Its modern fleet and land-based air power in the Mediterranean is said to pose a "major political threat" to the United States Sixth Fleet.

The North Atlantic Alliance acted today to meet this threat when the Defense Planning Committee agreed to organize an emergency naval force in the Mediterranean. But the ultimate force envisaged, six destroyers, is far weaker than the Soviet squadron.

THERE OUGHT TO BE A LAW

HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mrs. HECKLER of Massachusetts. Mr. Speaker, "There Ought To Be a Law" was the title for a very thoughtful editorial by WBZ Radio-Television in Boston earlier this month. Contrary to the idea conveyed by the title initially, the editors maintain that Government's responsibility in dealing with campus disorders is not through Federal intervention on the university campus, but through the implementation of action-oriented programs to conquer the pervasive ills of our society which kindle social anger and disturbance. I offer the full text of the editorial for consideration of all my colleagues, who share my concern over the crisis on our campuses:

THERE OUGHT TO BE A LAW

(Delivered by James R. Lightfoot, general manager, WBZ Radio, and Winthrop P. Baker, general manager, WBZ–TV)

Campus rebellions continue to dominate the news across the country. And as usual, in times of such unrest, many people are inclined to mouth that old phrase—"There ought to be a law against that sort of thing." So it's no surprise that there are a host of proposals for government intervention into campus affairs, a real crackdown on students.

We don't profess to know just how this campus mess will be straightened out. But we're convinced of one thing. Congressional or legislative intervention of this sort would be a disaster. There are ample legal means of dealing with campus disorders right now. Police action has already been taken to clear buildings and restore order at Harvard, Dartmouth and a number of other campuses. We support this type of move as an unpleasant necessity.

One of the men who had to make that type of decision was Harvard's Nathan Pusey. Significantly he told a "Meet the Press" audience on WBZ–TV that the answers to the crisis must come from within the university itself—primarily from the faculty and students.

This doesn't mean that there's nothing for government to do, that there shouldn't be a law. But what's needed is local, state and federal action to deal with the rot in our society—poverty, prejudice, slums and materialism. These are conditions that have angered many responsible students. They have been trying to give American society a message it ought to listen to. Unfortunately much of it has been garbled by the actions of a maniac minority. The university and if necessary the police can deal with the troublemakers. The challenge for government is to defuse the anger of the responsible majority—not with negative acts of repression but a positive attack on society's many ills.

VIOLENCE AND UNREST ON THE CAMPUS

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. DON H. CLAUSEN. Mr. Speaker, recently, I testified before the House Special Committee on Education which is investigating campus violence and unrest.

With the thought that my remarks might be of interest to some of my colleagues, I include them in the RECORD. This problem is the greatest domestic problem we have today. It must be brought under control immediately. My remarks follow:

STATEMENT OF CONGRESSMAN DON H. CLAUSEN BEFORE THE SPECIAL HOUSE SUBCOMMITTEE ON EDUCATION REGARDING CAMPUS VIOLENCE, MAY 15, 1969

Mr. Chairman, members of the House Special Subcommittee on Education, I sincerely appreciate this opportunity to briefly outline my views and those of the majority of my constituents from the 1st District of California who, in ever increasing numbers, are expressing their impatience and their growing concern over the problem of campus disruptions and violence.

Twice in my lifetime, I've heard talk and seen evidence of anarchy or revolution in America. The first time was in the late 20's and early 30's when, as a young boy, I heard people talk about changing a system of government that permitted people to go hungry in a land where food was plentiful, but money was short.

Today, such talk is being heard again. Not from people who are hungry or without jobs, but, surprisingly enough, from people of affluence who are personally convinced and advocate that the only way to bring about "meaningful change" in America is through the destruction of our educational, governmental and social institutions. Regrettably, many young people, today, are not sure, or so they say, that they want to belong to this society.

At the outset, then, I want to comment on the timely, articulate, and profound statement made to this special subcommittee by Dr. Nathan M. Pusey, President of Harvard University on May 8. I applaud Dr. Pusey's statement that "very serious injury is being done to the academic enterprise" and I commend his conviction that it is the responsibility of the academic community to resolve the conflict now raging on our campuses.

I feel compelled to say, however, that, in my judgment, there is far more at stake than just the "academic enterprise" and I question whether or not the academic community is prepared to deal with open anarchy or revolutionary style guerrilla warfare at our educational institutions, should it come to that.

I also question if the academic community is prepared to cope with the reaction that is now beginning to set in as a result of the disruptions and violence that have occurred at our colleges and universities. Throughout the Nation, we are witnessing what appears to be a growing "citizens reaction" to this turmoil. I refer, specifically, to the ever-increasing school bond and school tax elections going down to defeat, which is but one manifestation of what is becoming known as the "taxpayers revolt."

We are also witnessing, I believe, the beginning of a reaction by those students who, until now, have been standing on the "sidelines" and watching quietly or completely ignoring the destruction of their schools and the disruption of their educations. Many of these students, and I don't think the militants should take them for granted much longer, are now saying: "We are the losers—the militants don't care about an education"! The overwhelming majority of our students are dedicated and responsible citizens with a genuine desire to acquire the best our educational institutions can offer. These students see how their future and their educational opportunities are jeopardized by these "rule or ruin radical revolutionaries."

Although the circumstances are much different, we have seen what happened in Communist China when even government-sanctioned violence got out of hand, as was the case in this instance. As a result of the thorough job the Red Guards did there, many of mainland China's universities are still closed today. The ultimate confrontation that erupted between students who wanted an education and the rampaging Red Guards resulted in an unprecedented blood-letting.

At present, there is a minority (although their numbers grow daily) that has achieved a significant measure of success in turning responsible dissent into militant anarchy. Dr. Pusey calls them "active revolutionaries" and, in my judgment, I believe we should accept his term because it has, indeed, become a "revolution in the making."

Within the past sixty days, guns have been used by students and police against each other on the campus. Just this week I read a story appearing in the San Francisco Examiner titled "Get Guns, Reds Tell Berkeley Militants". It describes an organization known as the Bay Area Revolutionary Union as "Communist-inspired" and reports it has

circulated leaflets urging Berkeley militants to "arm themselves with guns against the police". Reportedly, the leaflet tells readers to "reach informed groups to discuss and apply the thoughts of Mao Tse-tung"!

While I agree that our educational administrators have the fundamental responsibility for maintaining order within their areas of jurisdiction, to date, there has been too little evidence that, as a group, they are willing to exercise that basic responsibility or have demonstrated any real willingness to stand up to the confrontation that threatens to destroy their institutions. And, it may be later than we think.

With few exceptions, student demands have been met with an attitude of "let's not rock the boat". Many unreasonable and unwarranted and even non-negotiable demands have been meekly accepted and agreed to. Too often, student violence and specific violations of law have resulted in amnesty or a mere "wrist-slapping".

It is fitting, I believe, that Bayard Rustin, one of the most active and ardent Negro civil rights leaders, should remind us that: "There is a great irony in the demands now being made by black college students for separate black studies departments, for in essence those students are seeking to impose upon themselves the very conditions of separatism and inequality against which black Americans have struggled since the era of Reconstruction . . ."

And I share Mr. Rustin's view that: "I reserve my most severe criticism for those white students and faculty members who are aiding and abetting the separatist's demands and for those frightened administrators who do not have the courage to reject their demands."

This is not the summer of 1968 and it is not just academic freedom that is at stake now! We are rapidly approaching the summer of 1969 and neither campus violence nor student revolution can any longer be condoned in the name of "academic freedom" or (in the current cliche) in the name of "meaningful change".

With more and more schools closing daily, and with more and more teachers and faculty members quitting their jobs in disgust or fear, I believe we in the Congress have a responsibility to the people in this country to be aware of and, if necessary, to respond to the serious crisis that now exists on many of our campuses today.

Many students today are raising political, not academic, questions—yet we in the "political arena" have, in effect, been told to stay out of the campus turmoil. The most militant students allege that we, in government, are not addressing ourselves to the compelling questions of our time—yet they resort to public confrontations rather than communication or dialogue in an attempt to seek solutions.

Recently, Attorney General John Mitchell said: "I recognize that the students of today are an 'involved generation' who wish to tell us—as strongly as possible—that they are dissatisfied with many aspects of American life . . . but I must draw the line at those actions which seriously disrupt a university and which involve a substantial denial of rights for those students who wish to pursue scholarship and civility."

While I grant and feel strongly that our colleges and universities remain autonomous in academic affairs, I too must draw the line when violence and criminal conduct or the denial of basic constitutional rights are being practiced and tend to disrupt or deny the dedicated and responsible students and faculty members the basic right of acquiring and/or dispensing the best education our institutions can provide.

In that regard, I believe violence in a school is not unlike violence in any other institution; whether it be a factory, a labor union hall, a sport arena, a church, or a public facility or building. If it is beyond the capability of local officials to control, then it is clearly in the best interest of public safety, good order, and domestic tranquility to call in those security forces necessary to maintain and restore order.

The fact that present disorders are a nation-wide problem, that they involve taxpayer supported schools and often disrupt Federally-financed programs, and that Federal criminal statutes are being violated, gives the Federal government not only a substantial interest in the problem, but an inherent responsibility to those who are "footing the bill."

All of us in representative government are anxious to see the leadership of the academic community resolve campus problems. But, unless they do, there is going to be a mighty outcry from the people in this country who are getting fed up with disorders and disruptions on the campus.

Unless the administrators of our educational institutions can and do restore order and some semblence of discipline, then I predict that one of two things will happen. Either an increasing number of responsible and concerned citizens will demand that their elected representatives intervene and insist that educational appropriations be curtailed, or they will intensify their efforts to defeat every school bond and school tax election presented to them.

In addition, those volunteer contributors to higher education endowments and scholarship funds will be withholding their donations.

And this, in the final analysis, could achieve what these revolutionary anarchists are trying to accomplish—the total destruction of our educational system in this country!

So, in my judgment, it has become abundantly clear that we, as a Nation, have no choice but to demand from the academic community a much firmer policy of control over their institutions and a closer and more coordinated line of communication with local, State, and Federal security organizations in order to rid ourselves of these "campus destroyers" once and for all.

The future of America and her educational institutions is at stake—this emergency must be resolved quickly before it is too late!

D-DAY REVISITED—BLATANT DISRESPECT TO THE GALLANT MEN WHO FOUGHT AND DIED AT NORMANDY BEACH

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. HORTON. Mr. Speaker, one of the bloodiest battles in the history of this Nation was fought June 6, 1944—just 25 years ago—on the beaches of Normandy in France. This was D-Day, marking the beginning of the final drive to end the decade of tyrannical rule by Adolf Hitler.

The men who died on those now famous beaches—Omaha, Utah, Red, Juno, and others—gave up their lives in hopes of creating a better world. It was a good and solemn thing in which they participated.

It is regrettable that on this anniversary, 25 years later, some find it necessary to capitalize on what these brave soldiers, sailors, and airmen took part in. The television program—"D-Day Revisited,"—which was viewed last night could have been a fitting and informative tribute to the men who took part in the Normandy invasion. But instead it was a transparent attempt to capitalize on their efforts to promote the rerunning of Darryl F. Zanuck's "The Longest Day," a motion picture produced a few years back and now ready for re-release.

There may be some historical justification for such motion pictures. But it seems to be in bad taste to tie the marketing of such entertainment to the gallant efforts of the men who died on those beaches a quarter century ago.

The facade fell away quickly as soon as the first promotion spot came on the television screen, advertising the fact that the motion picture "would soon be seen at your neighborhood theater."

It is Mr. Zanuck's business when and how he merchandises his products. However, a 60-minute commercial in prime viewing time on television stretches the creditability that he produced this show for any reason other than making money.

The poor taste of this television program is only compounded by the fact it was broadcast just 2 days after Memorial Day and less than a week before the solemn 25th anniversary of this momentous invasion.

Such a transparent commercial effort can only discredit the valiant deeds of those who shed their blood on the beaches of Normandy. The lives and memories of these men are far too valuable to be used for such crass commercialism.

REMARKS OF HON. JOHN P. SAYLOR AT THE 75th ANNIVERSARY OF THE ST. ROCHUS LODGE, CROATIAN FRATERNAL UNION, JOHNSTOWN, PA., MAY 18, 1969

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. MORGAN. Mr. Speaker, I come from a district in western Pennsylvania where there are many Americans of Croatian extraction. It is a pleasure therefore, for me to insert in the CONGRESSIONAL RECORD the fine tribute to the members of the St. Rochus Lodge, Croatian Fraternal Union, Johnstown, Pa., by my colleague from Pennsylvania, the Honorable JOHN P. SAYLOR, on the occasion of their 75th anniversary. His remarks follow:

REMARKS OF HON. JOHN P. SAYLOR AT THE 75TH ANNIVERSARY OF THE ST. ROCHUS LODGE, CROATIAN FRATERNAL UNION, JOHNSTOWN, PA., MAY 18, 1969

Of all American freedoms, the two most basic, certainly, are freedom of political expression and freedom of religion. And to Croatian people throughout the world these particular freedoms have a special historical significance.

Following the experience of centuries of toil and drudgery without political power of any kind, the people of the Balkans began to organize, politically, toward the close of the Sixteenth Century. Feudal masters were taxing their hard-earned wealth to the point of rendering every man a pauper and regulating all they did in the most oppressive

manner. The people protested, quietly at first, then angrily. In 1573 a spontaneous peasant uprising rocked all of Croatia and in that moment the Croatian political conscience was born. Repressive governmental measures stamped out the peasant uprising, but could not stifle the burning desire for political reform.

The struggle for religious freedom was no less drastic and no less painful and disturbing. When the Reformation movement attracted the attention of the Croatian people, in the 1590's, it was savagely suppressed by edict of the Archduke Ferdinand, and many Croatians fled the country in fear of their lives, a large number settling in Prussia. As time passed however, the Prussian government began to utilize oppressive measures to prevent the free expression of the people, and many of the Croatian group decided once again to move on, in search of liberty and religious independence. Their goal became the far-off American hinterlands, where it was said that freedom really existed.

One group of Croatians accompanied an expedition to the Colony of Georgia, settling on the Ebenezer River, there to introduce to the New World the silkworm industry. They found that here indeed was true freedom of religion and, comparatively speaking, freedom of political expression. They wrote home of this phenomenon and in short time other Croatians were on the way.

A port-of-call for most Croatians sailing to the New World was New Orleans. Until the middle of the Nineteenth Century this was the chief Croatian settlement in the Country. There they engaged in the oyster industry, controlling it for many decades. Not all of them were fishermen, however. With the discovery of large iron and coal deposits, to the Northeast, shortly preceding the American Revolution, many Croatians traveled up to Pennsylvania and Ohio and other places where the mining industry was starting up. As time passed, more came, and, as the industry grew, so grew the Croatian communities in the mining areas. Centuries of hard physical labor had fitted the Croatian people to the task, and many hundreds of them took advantage of the fact. Out of this migration, Johnstown came into being.

Development of the locomotive and the establishment of the Baldwin Locomotive Works in 1831 gave steel a tremendous new outlet in eastern Pennsylvania, and in short time western Pennsylvania was equally active. Johnstown became a major coal and steel center, and from the start the Croatian people had much to do with its productive capacity.

Croatians also were subject to the call of adventure, and when gold was discovered in California, many of them joined in the Gold Rush. These advised their friends and relatives in the old country of the fortunes to be made in mining the wonderful "shiny metal" on the Pacific Coast, and soon a host of ships were sailing from their native shores carrying scores and scores of Croatian prospectors to the Golden State of California. There, they found, of course, that there were far more prospectors than there was gold enough to go around, and many of them responded by returning to the ways of their fathers, taking up again the tools of agriculture.

Croation immigrants are generally recognized today as the pioneers of the apple, grape, and fishing industries of California and along the whole Pacific Coast. It is recorded that a Croatian apple dealer was the first man engaged in the apple business in Watsonville, in the Pajaro Valley, in the 1870's. This date marks the beginning of this universally-known industry. The author Jack London described in his novel *The Valley of the Moon* the magnificent creation of the apple industry in the Pajaro Valley—an industry which, in London's words, transformed 12,000 acres of veritable jungle into an "Apple paradise." As London observed, the work of the Croatians in the Pajaro Valley was "one of the most wonderful demonstrations of the United States," and a true credit to its creators.

In the matter of a century's time, following the arrival of the first Croatians at the Ebenezer River, in Georgia, there were some 50 Croatian colonies throughout the land. Ties of race or kinship, language and culture, and the need for social exchange inevitably drew the Croatians together, to a remarkable extent. Adjustment to the New World was rendered easier where the immigrants from the same village or district could settle together and speak their own language, sing their own songs, eat their native food, and follow their old customs.

As noted in the matter of a century's time, following the first arrival of Croatian immigrants in North America, there were some 50 Croatian settlements in existence. By the close of the Revolutionary War there were more than 200. By the close of the Civil War the number was up to 600. At recent count, the number exceeded 1,000.

From an early date the Croatian people in America banded together, for many worthwhile purposes. Predominantly wage earners, they understood the value of cooperation in time of need, when jobs were scarce, when sickness plagued the land, when debts piled up, and when other emergencies prevailed. In addition to all this was the common background of everyone involved. No wonder, then, that fraternal organizations came to be a feature of the Croatian American way of life.

Soon upon arriving here, the Croatian immigrant came to realize that when he got sick there was no household group to take care of him as there had been in Europe. In America, he was dependent on the sympathy of his companions, who were not as close to him as his family had been. Accordingly, mutual benefit societies were established to provide for him in case of sickness or other difficulties.

At the beginning, the societies remained merely small local organizations, but eventually a trend developed toward federation along national lines. Your organization, the Croatian Fraternal Union, is a case in point. Chartered in 1894, it has attracted a following throughout the Country and stands today a leader in every Croatian American community from Maine to California.

The great strides, natural and spiritual, made by the Croatian Fraternal Union during this Century must be attributed, at least in part, to your remarkable leadership, which has invariably kept in mind the interests of the Croatian community, in general, and the organizations membership, in particular. The courage, initiative, industry, perseverance, and foresight of their policies has helped to build a better Croatian American community in every respect. Without such leadership, the tremendous gains of the last generation would have been impossible.

It is a great pleasure to have been with you on this occasion, and I wish you well in the knowledge that you will ever persevere in the manner that has rendered the Croatian people among the outstanding members of American society.

SCHOOL CRISIS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. BOB WILSON. Mr. Speaker, one of San Diego's most distinguished publishers, Mr. Joe Holmes of the San Diego Dispatch, recently published a gutsy editorial essay on the current crisis in the schools. I include as a portion of my remarks the following editorial from the San Diego Dispatch of May 23, 1969:

BABY, YOU ARE NOT GOING TO RUN THE SCHOOLS

(By Joe Holmes)

To the militant, rebellious students of this country, I have a message.

You will not be given administrative control of the schools you are now attending.

You will not be allowed to violate the law in pursuit of either a worthwhile or meaningless case.

You will not be allowed to publish school publications which are permeated by filth.

You will not be allowed to disrupt the educational pursuits of the majority of fine young people attending school.

You will not be allowed to berate, maim or malign those public and school officials who have the courage to disagree with your mass protests.

You will not be permitted to seize and wreck school buildings as you attempt to intimidate school administrators.

You will not be permitted to march in force as a guerilla tactic under the guise of orderly dissent.

Who am I to bark these orders at you?

I am a member of the silent majority or as you would call me . . . the establishment . . . the older generation . . . those symbols to you of decadence and decay.

We don't do much marching. We don't do much protesting. In this competitive society we work to survive. We work to keep what we have and fight for a bit more, whether it be a house, car, job, business, bank account or semblance of well-being.

And when any of this seems to be in danger, we react.

We react by a different sort of march of protest than what you have developed. We march to the real expresso house of a democracy, the voting booth.

That's where we tell it like is. And like it is, is like this.

Your attempts to gain voice in schools is, largely, unacceptable.

Where there are administrators who give in to you, they will be replaced. Where there are schools which are constant caldrons of turmoil, the funds will dry up from the silent majority taxpayers and the silent majority benefactors.

Because of your tactics, what you hope to achieve is going to cost you what you now have.

Baby, you are not going to run anything until you grow up and only then, when you earn it.

BREAKTHROUGH IN THE CONTROL OF INFANT MORTALITY

HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. POFF. Mr. Speaker, one of my distinguished constituents, Dr. Leon J. Arp, professor of industrial engineering, College of Engineering, Virginia Polytechnic Institute, Blacksburg, Va., has made what experts in the field acknowledge to be a major breakthrough in the control of infant mortality.

In cooperation with authorities at Roanoke Memorial Hospital, Roanoke, Va., Dr. Arp has demonstrated the utility of a new respirator which he designed. When used with special nursery techniques, the respirator has proven to

be remarkably effective in reducing the present high mortality rate for infants who suffer respiratory distress. The impressive empirical data is sketched briefly in a letter dated May 23, 1969, addressed to me by Dr. Arp, and which I quote in its entirety.

The letter follows:

VIRGINIA POLYTECHNIC INSTITUTE,
COLLEGE OF ENGINEERING,
Blacksburg, Va., May 23, 1969.

Hon. RICHARD H. POFF,
U.S. Capitol,
Washington, D.C.

DEAR CONGRESSMAN POFF: Eight years ago one of my infant twin sons developed some respiratory distress shortly after birth. Although he seems to have survived this difficulty without apparent ill effects, I have remained concerned about the general inability to be able to effectively cope with this problem.

Two years ago (June 1, 1967) a study was started at the Roanoke Memorial Hospitals in Roanoke, Virginia to determine if a new respirator, which I designed specifically to meet the special and critical requirements of the newborn with R.D.S., would be effective when used with special nursery techniques in reducing the present high mortality rate for these distressed infants. The answer to that question has been an unqualified "yes."

I am enclosing a copy of Table 4 from our paper which will appear in the (July-August) issue of *Anesthesia and Analgesia.* This paper presents the clinical applications of the new infant respirator. A paper which analyzes the special requirements of the newborn and the new respirator appears in the (May–June) issue of the same Journal. I will forward reprints of all of our publications to you just as soon as I receive them.

I would like to make a few comments in regard to the data which is presented in Table 4. As you know, one can never be certain with the larger infants whether they would have survived without intervention or not. Therefore, I believe it unwise to try to show statistically that infants have been saved in the weight groups above 1,500 grams. I, of course, believe we have saved many in this group, but proof would be difficult to obtain. How does one really prove how sick a baby is without delaying treatment so long that only God could save him?

The situation is entirely different, however, for the low birth weight infants. No one denies that only about 29.3% of the infants weighing no more than 1,500 grams survive. Likewise, the reported survival rate for those weighing no more than 1,000 grams has been a dismal 10 to 15%. These figures include those infants who had no respiratory distress and survived.

Since the beginning of our work at Roanoke Memorial Hospitals we have been able to obtain the first massive reduction in mortality from newborn respiratory distress in more than 20 years. The survival rate for infants weighing no more than 1,500 grams, all with respiratory distress, is now 46.3%. The survival rate for those weighing no more than 1,000 grams is now 31.6%. These figures show a tremendous improvement over any figures reported in the past. It should be noted, in order to stay on the conservative side, that I have not included those who survived with no respiratory distress. If I had included those infants, as was the case in the reported figures of 29.3% and 10 to 15%, our figures would be almost unbelievable.

One final comparison should be made. From June 1, 1965 to the beginning of our study, June 1, 1967, the survival rate for infants, all with R.D.S., and weighing 1,500 grams and less at Roanoke Memorial Hospitals was 14.4%. During this same two year interval prior to this study the survival rate for those with R.D.S., and weighing no more than 1,000 grams was 5.9%.

There can be no doubt or argument about what has been done for the low birth weight infants. It is also very unlikely that what has been done for the small infants would not also apply to those weighing more than 1,500 grams. However, with all of the variables involved with the larger infants, it would be nearly impossible to prove this beyond any doubt for everyone, even with a controlled study. Common sense, however, will tell everyone that what has obviously worked for the smaller infants must also work for the larger ones.

To this date, I have been reasonably successful in persuading the lay press not to publish what they had been able to learn about this work until after we were well published in the official medical press. I have been forced, because of this, to make a decision on whether to work with them to try to insure the technical accuracy of what they will print or to let them do the best they can on their own. Past experiences with the lay press have been so bad in the field of medicine that I believe it would be far better to try to control the technical accuracy of what is printed by having a news conference with prepared releases rather than take a chance on their usual inaccuracies and exaggerations. In an attempt to to try to obtain a reasonable sense of proportions and accuracy we are going to hold a news conference at Roanoke, Wednesday, May 28, 1969 in the auditorium of the Roanoke Memorial Hospital at 10:00 A.M. to publicly announce this brekathrough and the availability to physicians of the Flying Intensive Care Nursery service. A second conference, like the first, will be held at the Plaza Hotel in New York City at 10:00 A.M., May 29, 1969.

All of the information to be presented at the news conferences has been published by Medical Journals. The Journal publications are: *Anesthesia and Analgesia* (May–June) 1969, and (July–Aug.) 1969. *Virginia Medical Monthly* (May) 1969, *Pennsylvania Medicine* (May) 1969, *Medical Annals of the District of Columbia* (May) 1969, *Michigan Medicine* (June) 1969, *Journal of the Indiana State Medical Association* (June) 1969, and the *Ohio State Medical Journal* (July) 1969.

It is my sincere hope that this rather long letter has been worth the effort and time which was required to read it. If I can answer any questions which you may have in regard to our work, I can be reached at 552–6574.

Sincerely yours,

LEON J. ARP, Ph. D.,
Professor of Industrial Engineering.

TABLE 4.—SUMMARY OF RESULTS FROM THE CLINICAL APPLICATIONS OF THE ARP INFANT RESPIRATOR

	All weight groups combined		0 to 1,000 grams		0 to 1,500 grams		1,001 to 1,500 grams		1,501 to 2,000 grams		2,001 to 2,500 grams		over 2,500 grams	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent	Number	Percent	Number	Percent	Number	Percent
Total number of live births	4,156	100.0												
Number with respiratory distress	200	4.8	19	9.5	41	20.5	22	11.0	38	19.0	45	22.5	76	38.0
Number with mild respiratory distress and not treated with the respirator (all infants in this group survived)	99	49.5	1	5.3	5	12.2	4	18.2	15	39.5	25	55.6	54	71.1
Number with more severe respiratory distress and treated with the respirator	101	50.5	18	94.7	36	87.8	18	81.8	23	60.5	20	44.4	22	28.9
Number treated with the respirator to survive	73	72.3	5	27.8	14	38.9	9	50.0	21	91.3	19	95.0	19	86.4
Total number with respiratory distress to survive	172	86.0	[1] 31.6		19	[2] 46.3	13	59.1	36	36	94.7	44	97.8	73	96.1

[1] The average survival rate for all infants, including those not in respiratory distress, weighing no more than 1,000 grams, given by Yerushalmy, is about 15 percent (26).

[2] The average survival rate for all infants, including those not in respiratory distress, weighing no more than 1,500 grams, given by Yerushalmy, is about 29.3 percent (26).

Note: This table includes only infants with respiratory distress syndrome.

THE SISTER IN TODAY'S COMPREHENSIVE MEDICAL CENTER

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. HAYS. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an article by Sister Mary Immaculata entitled "The Sister in Today's Comprehensive Medical Center," which appeared recently in the magazine, Hospital Progress. Sister Mary Immaculata has received a master of science in nursing degree from the Catholic University of America and is assistant administrator of St. John Hospital, Steubenville, Ohio.

The article follows:

THE SISTER IN TODAY'S COMPREHENSIVE MEDICAL CENTER

(By Sister M. Immaculata, RN, OSF)

Today, the concept of the hospital center is changing from that of an institution which provides general medical-surgical care to one which provides the broadest possible scope of health care and health facilities. Within this changing system, the sister, whether she be an administrator, nurse, medical secretary or technician, must redefine her role and function if she is to effectively fulfill both her apostolic and professional obligations.

Rapid changes in technology and in the basic philosophy and funding of medical and social care, and an awareness of overwhelming and no-longer-to-be-ignored needs have prompted a major reappraisal of the goals and functions of various health professionals. This reappraisal has led, on the one hand, to experimentation in role expansion and role change and, on the other, to some experience of role confusion, discomfort and concern.

In reappraising her own position, the hospital sister should begin by evaluating her attitude toward changes in the health profession. The modern voluntary health center

presents new challenges to a sister's religious life; the ever-increasing complexities of hospital administration, nursing care, nursing service, and other hospital services place great pressure upon her spiritual and professional life. As a professional she must keep abreast of current developments in her area of work; she must act as a leader and, at the same time, maintain the standards of patient care and service. Urged by the Church to greater apostolic endeavors, the hospital sister, as a religious, must be far more zealous than ever before.

Efforts must be made to eliminate any conflict between the sister's apostolic and professional obligations. Religious communities should aid each sister in this task by providing her with the *means, time and education* necessary to fulfill these obligations. Continuing education must be provided and encouraged so that the sister will be prepared to participate and contribute in a manner equal to or above that of her average lay counterpart. Religious community leaders are responsible for providing such educational opportunities in the form of workshops, institutes, conferences, seminars, up-to-date tests, reference books and other resource materials.

In addition, each sister must be willing to recognize her own assets and liabilities. Likewise, the religious community must take a personal interest in each sister and attempt to discover how she best fits into the medical center's work. A sister should be evaluated according to her intellectual ability, her competence and her interests. Efforts should be made to assign a sister to work in an area for which she has both preparation and preference. There seems to be no obvious gain in assigning a sister to a position which makes her dissatisfied and unhappy and in which she can function only as an obedient religious. On the contrary, those sisters who are properly prepared and placed in their desired areas of work contribute greatly to the successful operation of the health center. This contribution need not be made on a key or administrative level. Numerous positions are filled effectively by the sister who performs to the best of her ability with true zeal and personal satisfaction.

It cannot be denied that religious and laymen are equally responsible for ensuring the most effective, comprehensive, comfortable and safe care to all people at a price they can afford. Beyond this, it is expected that the hospital sister's performance will be an inspiration to patients, co-workers and other personnel. It will be, only if it is governed by the rules, regulations and procedures which affect lay personnel. The sister should not operate as if her religious status exempts her from adhering to the policies and regulations which govern all other employes.

Effective planning demands consistent regulations. Personnel policies governing sick leave, vacations, holidays and leaves of absence and fringe benefits should be the same for the sister and the layman. By such consistent professional relations with their coworkers, hospital sisters show their respect for and approval of policies that are concerned with equitable treatment of employes and effective patient care and service.

The principle of "convincement by involvement" is applicable to the sister in the medical center. Sir Leslie Stephens has said, "The only way in which one human being can properly attempt to influence another is by encouraging him to think for himself instead of endeavoring to instill ready-made opinions into his head." A program is acceptable only if all the persons involved are given a chance to participate in the planning and operation of the respective program.[1]

Here again the religious community must allow the sisters to be creatively active in the medical center's programs and activities. On this point, a statement issued by The Catholic Hospital Association in February, 1968, under the heading "Staff Nurse Experience for Young Religious Who Are Nurses," is worth noting. The CHA Committee on Nursing Service recommends to major superiors, administrators and directors of nursing service the following consideration:

"All religious graduating from preservice nursing programs—associate degrees, diploma, and baccalaureate—should be assigned as staff nurses in their first positions in nursing. Promotional opportunities should be considered the same as for their lay counterparts—either vertically in administrative positions in nursing or horizontally in clinical specialist positions."

The above recommendation was approved by the CHA Council on Professional Practice and Patient Care in March, 1968, and by the CHA Board of Trustees in April, 1968.

EVALUATE LIMITED ASSIGNMENTS

The time has come when religious communities engaged in care of the sick must re-evaluate the traditional policy of reassigning a sister every six to eight years. If a sister is doing a good job, is happy in doing it and is considered an asset to the center, she should be permitted to remain in her position. Often we fail to realize the amount of regression that takes place when lines of continuity and long-range as well as intermediate planning are interrupted by replacing an individual who is considered merely "instrumental." It is very doubtful that such actions are beneficial to the medical center since additional time and money are required to develop job competence in an "understudy." Too often such changes prove expensive, and the public whom we are serving becomes the victim of higher medical expenses. Sisters have a maximum responsibility to seek ways to minimize such drawbacks.

The recommendation made above does not preclude the fact that the hospital sister should be subject to performance evaluations. If she is unhappy in her position or is performing unsatisfactorily, she should be transferred to another position in which she can more readily meet expected requirements and achieve personal satisfaction. Religious community leaders have a grave responsibility to help the sister overcome the obstacles she may encounter within the framework of her assignment.

Because the hospital is gradually becoming a community health center, an institution able to assume the responsibility of providing comprehensive health services, the hospital sister must recognize the need for change. She must recognize, as well, that some Catholic hospitals have long been noted for their resistance to change. Yet change is an inevitable element in the world and the essence of progress.

Why must present patterns of patient-care services change? What factors indicate the need for a new approach to patient care? The reasons are many. The demands of hospital care are far greater today than they were a decade ago. Doctors are demanding closer and steadier care for their patients; administrators are having difficulty getting enough nurses to staff even the critical areas, and the cost of nursing care is rising to such an extent that hospitals are finding it hard to budget and balance their books. Nor is the patient more content. Recent figures show he receives professional nursing care only eight minutes of every eight hours. The nurse is probably unhappiest of all. She would like to spend more time with her patients, but her many other responsibilities do not permit it. One solution to such current problems is the concept of progressive patient care.

PROGRESSIVE PATIENT CARE

Progressive patient care may be defined as the organization of facilities, services and staff around the medical and nursing needs of the patient. A hospital that has implemented progressive patient care is comprised of five units: an *intensive care unit,* for patients who are critically ill; an *intermediate care unit,* for patients requiring a moderate amount of nursing care; a *self-care unit,* for patients who are either physically self-sufficient but still require a great deal of restorative care, or who were admitted to the hospital for diagnostic studies; *long-term care unit,* for patients needing prolonged or rehabilitative assistance, requiring the services of the hospital; and an organized *home care program* that is hospital-based.[2]

Progressive patient care regards the individual patient's medical and nursing needs as the pivot of hospital services. Hence this concept of patient care is especially suited to the establishment of comprehensive medical service centers in which a wide spectrum of services and facilities for both inpatients and outpatients are available.

The concept of the clinical nurse specialist is another suggested approach to a more effective system of patient care. The image of the professional nurse has changed from one who administers direct nursing care to one who guides and administers the nursing care of patients. The clinical nurse specialist is to nursing what the physician specialist is to medicine. Her primary responsibility is quality nursing care. She diagnoses the nursing needs of the patient and formulates a nursing care plan for other members of the nursing team. In this role, there are many possibilities for the sister who is a clinical nurse specialist, as Sr. Leon Douville, DC and Sr. Marilyn Emminger, DC, point out in their study of *The Sister as a Clinical Specialist.*[3] Such possibilities cannot be overlooked by religious communities, who have been searching for ways in which to use their sisters to the greatest advantage both for the Church, the community and the sisters' own spiritual and professional development.

PENETRATING QUESTION

Any long-range plan which proposes change should be based on the answer to this question: "Is our primary objective to exercise control or influence?" Today's hospital sister must answer this question in terms of her philosophy, her Christian commitment to people requiring health care and her concern for the best interests of the community.

Modern organization of health services radically departs from some traditional patterns. It demands that the sister become directly involved in today's community health center on a level equal to or above that of the secular professional and along lines suggested by David B. Wilson, MD, director of University Hospital, Jackson, Miss., and past president of the American Hospital Association. Dr. Wilson identifies four issues as being particularly pertinent to hospitals today: *manpower, reimbursement, planning* and *effectiveness.* The federal government is very active in all of these areas. Hospitals are living in a fishbowl and must be prepared to reveal to the public the complete details of their operations.[4] If those details are not in order, hospitals may be forced to face some very embarrassing revelations. Sisters, too, must recognize the part they play in the *manpower, reimbursement, planning* and *effectiveness* issues of today's medical health center.

The personal needs of the hospital sister can be met through her role in health service only if she is prepared to respond totally and effectively to the challenge presented by the health needs of society. In addition to the challenges described above, she, as a religious, must commit herself to Christ's work of healing. The sponsors of a Catholic-affiliated health facility must commit its unified strength and continuity to health care. Moreover, as a civic as well as Catholic health facility, the medical center must strive to identify unmet needs and help meet them through community effort.

Footnotes at end of article.

APOSTOLIC AND PROFESSIONAL LIVES

Today's hospital sisters undertake many functions that are recognized by their communities as integral to the sisters' apostolic and professional lives. Within the comprehensive medical centers, effective interaction between the sisters and the employes of the various departments permits the philosophy of the institution to permeate the different areas and levels of the medical center. At the same time, this interaction does not prevent the sister from being with the community at the times prescribed or from participating in the "family life" of the sisters. What is required of her are individual planning and the willingness to function as a dedicated and competent member of her religious community and of the health team in today's comprehensive medical center.

THE JOURNEY AHEAD

HON. MARVIN L. ESCH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. ESCH. Mr. Speaker, to commence is to begin. Commencement ceremonies mark the conferring of diplomas, the closing of a period of education and the beginning of a new chapter in the lives of the recipients of the diplomas.

Commencement addresses sometimes emphasize the closing aspect, sometimes the beginning. Ideally, they tie the two together with a thought that enhances the value of what has gone before by relating the past to the journey ahead.

The commencement address delivered by our colleague, JOHN N. ERLENBORN of Illinois, at St. Procopius College in his district, clearly falls in this category. What he had to say, however, has meaning, I believe, not only to the students who were that day graduating from college but to us in Congress, as we contemplate solutions to the many problems this Nation faces.

The address follows:

COMMENCEMENT ADDRESS AT ST. PROCOPIUS COLLEGE BY JOHN N. ERLENBORN, MAY 25, 1969

I am going to refer to two texts today in developing a theme about Freedom and Slavery; and in doing so I am going to borrow, first, from the Bible, and, second, from English literature.

The first is one of the most famous lines from the Bible—so famous, indeed, that many are surprised to learn that it is in the Gospel according to St. John. In speaking to some of the Jewish elders, Jesus said, "You shall know the truth, and the truth shall set you free."

All of us want to be free, and perhaps the most stirring line of our National Anthem tells the world that we are the land of the free and the home of the brave. There is a certain poetic license in this, for not very many of us are truly free; and there are even some of us who aren't very brave.

The second element of my text comes, as I say, from English literature—from the poem *Herakles* by Robert Browning. "A man in armour," wrote Browning, "is his Armour's slave."

He does not intend it that way. He intends that his armor shall protect him from harm—that it shall free him from the slings and darts of his enemies while he goes about smiting his opposition hip and thigh.

So much for my two texts on freedom and slavery.

In this country, men for the first time were privileged to establish a government based upon the consent of the governed; and to seek—in the words of the Constitution—"to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity . . ." That was quite an undertaking, and of course we haven't fully lived up to it yet. But we're working on it.

Man hasn't lived up to the Ten Commandments, either; but we keep trying.

We believe that men are most likely to solve their problems if they are free to discuss them, to find probable solutions, to test those solutions, and then to learn to apply what is good in them while discarding what is bad.

Sometimes, I hasten to add, it is difficult to know what is good and what is bad, what is true and what is false. There was a time, I suppose, when it was safe to judge by the appearances—but today, the woman who looks like a dumb blonde may be, in reality, a smart brunette.

All too often, men have rallied to labels, have wrapped themselves in the appearance of virtue rather than in virtue itself. They have been more interested in strengthening their point of view, or—if you will—in strengthening their prejudices, than in finding what is best for our country or how they can best serve their fellow men.

Over the years, for example, some have prided themselves on their liberalism; and these people have sneered at conservatives. At the same time, others have declared themselves to be conservatives. To them, "conservative" is a title of honor and it is shameful—well, almost shameful—to be a liberal.

Both of these kinds of men have wrapped themselves in the armor of a label; and they are, as Browning wrote almost a century ago, enslaved by their own armor.

It is my privilege to serve in the House of Representatives. In that place there are drawn together 435 men and women from every part of the country. Some are from wealthy constituencies and some from poor; some are from literate constituencies and some from illiterate; some are from farms and some from cities; some are good men and some are bad; and I cannot close this list without mentioning that some are conservative and some are liberals.

Some wear these labels only for convenience and make up their minds on a basis of good sense; but others wear the labels as armor—and they are enslaved.

On any controversial question—the anti-ballistic missile, or the boycott of grapes, or Federal aid to education—the armored liberal first inquires—not, "What are the facts?"—he first inquires "What is the liberal position?" "What side are my liberal friends on?"

At the same time, the enslaved conservative moves instinctively to the opposite pole—to where his fellow conservatives are.

To these people, the only thing worse than being on the wrong side of the argument is being in the middle.

Now let me sketch for you a most interesting journey—or, rather, pair of journeys—of recent years, journeys in which the liberals have moved from left to right, and the conservatives from right to left.

By definition, a liberal is said to be interested primarily in individual freedom and, by common consent, a conservative is more likely to emphasize law and order—compliance with the mores and the laws of the community.

In the furtherance of the individual freedom in this century, the liberal has fitted the individual workman into unions and has fostered the growth of big government; while the conservative has sought to avoid a vast accumulation of power in Washington and has spoken favorably of individual liberties.

A generation ago, in the quest for peace, the liberal espoused internationalism. The cause of peace would be served, he said, if we in the United States were more concerned about our brothers across the sea. We are all citizens of the world, he told us; and some conservatives used the epithet, "One Worlder," as one of scorn.

This conservative tended to be a nationalist, and even isolationist. We were secure, he said, behind our moats, the Atlantic on one side and the Pacific on the other. He heeded to the letter Washington's farewell admonition about staying out of foreign alliances. The conservative dominated our foreign policy in the 1920's and 1930's.

The liberal stood for more trade and tariffs for revenue only; the conservative was prone to blame our entry into World War I on the liberals, and he kept us out of the League of Nations.

Twelve million of the sons of this liberal and this conservative went off to fight in World War II; and they went to places their fathers had never heard of—Guadalcanal, the Murmansk Run, and Remagen Bridge.

These young men came back. They had that world-wide vision that the liberals had been talking about; and the United States helped organize the United Nations. We led in the formation of the North Atlantic Treaty Organization. The liberals purred and the conservatives fulminated against the Marshall Plan and, a little later, foreign aid.

All these things were done in the interests of collective security, and that was the key to peace. While the liberals went merrily on their way, conservatives had to content themselves with deploring Communist infiltration into almost every department of government.

The liberal, priding himself upon his tolerance of change, was often scornful of this preoccupation of the conservative. For his part, the conservative often became so suspicious of Communism that he opposed all change.

Each drew his label about him like armor, and each became a slave to that armor.

In the middle fifties, we sent a few hundred men to help some little country in Asia, but it was no war. Our men were advisers. Nobody was much concerned when President Kennedy increased the number of advisors from 750 to 15,000 in 1961 and 1962, nor even in 1964 when we raised the number of advisers to 23,000 and Congress approved the Gulf of Tonkin Resolution.

During the years 1966 and 1967 it began to dawn on the liberals that collective security agreements and treaties might not of themselves guarantee peace, and could lead to our armed intervention in other parts of the world. And about the same time conservatives were embracing the concept that Communist Aggression and expansion could be thwarted only by credible mutual security agreements.

Parallel evolution had taken us to the point where the conservatives had become internationalists and the liberals changed to neo-isolationists.

Now, we began to hear eminent liberals reasoning that we were in a war because, in the first instance, we had given aid to a little country called South Vietnam; and may-

---

Footnotes at end of article.

be we wouldn't be involved in that far-away place if we had kept our aid to ourselves.

Suddenly, it was the liberal who told us that we cannot police the whole world. Suddenly, the liberals were urging us toward a new isolationism.

The conservative shouted, "Win or get out!" But he didn't really mean that we should get out. He meant we should win. The liberal shouted, "Hell, no! We won't go!" And strangely enough both of these people want peace. Each believes he is pointing us toward a path of peace.

I may be guilty of foolhardiness when I suggest that we might—and let me underline the tentative character of my verb—we might have avoided this war in Vietnam if our liberals had spent a little more time listening to our conservatives; and our conservatives had given some more consideration to the liberal point of view.

President Nixon touched upon this point in his Inaugural Address. He said, in part:

"We cannot learn from one another until we stop shouting at one another, until we speak quietly enough so that our words can be heard as well as our voices."

I say, be careful about shouting at your fellow man. Inflammatory words don't often sound the same to the listener as they do to the speaker. A label which may serve as armor against having to think things through may also serve as a prison which prevents a man from hearing both sides or from thinking about what's right and what's wrong.

We must shed this type of armour and practice a bit of tolerance of the views of others. You know what tolerance is. It's that uneasy feeling that comes over you when you begin to realize the other fellow may be right after all.

In our busy and complex world, it is both easy and convenient to substitute names for thinking. It is easy to brush off a discomforting statement with a curt dismissal: "Look who's talking—just a young punk with long hair who needs a bath. He's a hippy."

And it's convenient for a college student to reject the advice of his elders: "Just a bunch of old fogies. They haven't had a new thought since the gay 90's."

In this kind of world, police quickly become fascist pigs, student activists become revolutionaries, and college presidents become agents of the military-industrial complex.

It doesn't matter what these people say, for obviously nobody needs to listen to a pig, or a revolutionary, or an agent of the military-industrial complex. And as I mentioned a few minutes ago, no liberal needed to listen to a reactionary isolationist; and no conservative ought to consider what a muddle-headed liberal might be saying.

How willingly we wrap ourselves in the armor of labels and become its slave!

Perhaps it would be well for the youngsters to listen for a while to the older people; and to consider that their parents' generation has contributed much to the betterment of the world. The material improvement is most often mentioned, because it is visible and measurable. I submit, however, that the generation which was born between—let us say—1905 and 1935 and which now ranges in age from the mid-thirties to the mid-sixties—these are the people who make up what is known as the Establishment, and they have contributed greatly to the betterment of their fellow men.

These contributions have been intellectual, scientific, cultural, physical and even spiritual.

They have a right to be heard. Their words need to be considered.

By the same token, it may be well for the oldsters to examine some of the articles of faith which our young people are trying to proclaim. To be sure, the youngsters have not been particularly adept at getting their message across. They might do better, now that they have gotten our attention, if they would pay more heed to good grooming, to well-combed hair, and to a schedule of regular baths.

What I want to say is:

Let's not be overly concerned about labels.

Is he a liberal? Let's not place as great importance on that as on what he has to say.

Is she an old fuss-budget? Let's forget her age for a time and give her an opportunity to express her point of view.

Is he a hippy? But perhaps if we listen we can find something with which we can agree—perhaps we can find some common ground on which we can meet. And perhaps we can expand that common ground.

Let us go to the root of the questions before us, concerning ourselves less with labels than with the good that can be done.

Let us remember that labels change—and times change—and people change.

You know, throughout most of my life—until just the past few years—the flapper has been regarded as the epitome of the new freedom for women. It was the flapper who raised women's skirts so as to show her ankles and even the calves of her legs to her horrified elders.

I was about the age of these seniors—perhaps a little younger—when it came to me one day (and I don't mind saying it was a shocking revelation) that, before I was born, my mother had been a flapper.

I had always regarded her as old fashioned. Nice, of course, but not really with it. And—let's face it—when I was 20, she was old fashioned. She was no longer the carefree young thing who defied the Establishment. Now, whether she liked it or not, she was part and parcel of the Establishment.

I repeat, labels change, and liberals become conservatives. Times change and peace becomes war. People change, and flappers become matrons. Customs change and Catholics may now hear the Mass in English.

My friends, if we spend our time on these external things—if we wrap ourselves in the armor of labels, such as flapper, hippy, or moss-back, or Establishment—then we become the slaves of the wrappings and the labels become our masters.

Abraham Lincoln had this thought when he sent his annual message to Congress in 1862. He wrote:

"If there could ever be a time for mere catch arguments (which is another term for labels) that time surely is not now. In times like the present, men should utter nothing for which they would not willingly be responsible through time and eternity."

I am sure you seniors will know what I mean when I say that the certificate which you are about to receive is only a wrapping; and the degree is a label. Wrap yourself in the armor of that degree, and you will become a slave to it.

On the other hand, if you use your education as a weapon to cut your way through the catch arguments to discover truth, then you will be free—and your 16 years of schooling will have achieved its purpose.

I suppose I could have said all that I have intended to convey today in a very few words—in a few short sentences: The best advice I can give to any young man or young woman upon graduation is this: Keep an open mind, receptive to the wisdom others may possess regardless of the label they wear. And don't allow the label placed upon you to become your prison, for remember in your research for truth, and that is what our lives are all about, "A man in armor is his armor's slave."

With these precepts in mind you may be successful in your search for truth "and the truth shall set you free."

And now I remind you that you have only 11,000 working days at your disposal before you will be ready to retire at age 65.

Young people! Get busy! Make the most of those days!

LAKE OKEECHOBEE, FLA.

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. ROGERS of Florida. Mr. Speaker, I am today asking the Secretary of the Army to cancel a proceeding which he personally ordered involving an application to mine minerials from Lake Okeechobee, Fla., and to deny the permit request on the grounds that the company no longer holds title to the minerals.

The Secretary ordered the Corps of Engineers to proceed with the processing of a permit application filed by Coastal Petroleum Co., to remove minerals from the submerged lands under the 700 square mile fresh water lake, in spite of the known opposition of the State government which owns title to the lands in question, and contrary to a published official agreement which existed between the State and the Army districts having jurisdiction in Florida area matters.

The basis of the Coastal permit application was a lease which had been granted by the State over 20 years ago. That lease has now been canceled by official action of the State cabinet.

Coastal Petroleum no longer has a lease on the submerged lands, and therefore cannot mine minerals. The permit request should be denied forthwith, and the public hearing scheduled for June 12 canceled.

The company may wish to contest the lease decision in the courts. But there is no longer any grounds for an Army public hearing on an application which can now be denied on the simple fact that the company does not have title to the minerals it seeks to mine from the lake, until the courts may determine otherwise. If the courts reinstate the lease, the company may reapply and I would hope the Army would deny the application on the basis of the damage mining will cause to fish and wildlife, flood control, and water pollution. But as of today, there is no legal basis for the permit application, and the Secretary should so order by denying the application without hearing.

STEUBEN SOCIETY OF AMERICA OBSERVES 50TH ANNIVERSARY

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. REUSS. Mr. Speaker, this spring, the Steuben Society of America is observing its 50th anniversary. The Steuben Society was founded to further un-

derstanding between Germany and America, and between Americans of German descent and Americans of other origins. More broadly, members of the society have dedicated themselves to pursuit of the ideals of public service and patriotism exemplified in the life of General von Steuben, the German-born military adviser to George Washington who helped train the Continental Army and who subsequently became an American citizen. Over the years, members of the society, in my own State of Wisconsin and across the Nation, have compiled a notable record of civic leadership and service to those in need. The society has never faltered in its adherence to the guiding principles of unity, tolerance, charity, and justice. Today, those principles are as relevant to American life as they were when the society adopted them in 1919. I wish to salute the Steuben Society and its members for their many accomplishments over the past 50 years, for their continuing work on behalf of national unity and international understanding, and for their contribution to the vigorous life of communities throughout the Nation.

WHEN IS A DETERRENT A DETERRENT?

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. MOORHEAD. Mr. Speaker, one of my constituents, Mr. K. H. Wood of Pittsburgh, has recently written to me expressing his concern about many of the world's problems, particularly the missile system.

He has enclosed an article written by Dorothy Thompson which incorporates some of the views concerning deterrents expressed by the late General Eisenhower and Winston Churchill after World War II.

Though written 14 years ago, the philosophy expressed in the article is timeless, and I include it here in the RECORD for the attention of my colleagues:

[From the Post Gazette, Mar. 11, 1955]

IS H-BOMB SUPERIORITY A DETERRENT OF WAR?

(By Dorothy Thompson)

NEW YORK, Mar. 10.—In reading Churchill's sober—and, in passages, sublime—speech to the House of Commons on March 2, I recalled a talk I had with General Eisenhower in Paris on April 1, 1952. President Truman had just declared his intention not to seek the presidency again and it seemed certain that the general would do so, but he had not yet spoken and would not discuss political questions. Instead we talked about his philosophy of life.

I now recall his affirmation that the world had had no ease from tension in which fully to digest the "enormous and tragic" experience of World War II. That, perhaps, is the root of the matter. This generation has endured that experience without innerly evaluating it. One thought during the war that nobody would emerge from it as he had been before; that the experience of slaughtered millions, falling cities, unexampled brutality and unforgettable heroism, would induce a universal conversion, rendering insignificant the various contending ideologies and ushering in the great revolution for civilization and humanity.

But the soul is not purged by pity and terror except as it spiritually digests the experience of them and sublimates it into new moral values impelling new actions. Only thus does suffering purify.

There was such recognition in Churchill's speech on defense and the hydrogen bomb; of wonderment that the abyss is still there, yawning with infinitely more hideous depths than the one into which he gazed without falling in 1940. He still gazes without falling. Interpidity is the core of his character. But he does not gaze without being profoundly shaken. He spoke far more candidly than any other leader has done of the world in which we find ourselves, the prime fact of which we prefer not to face—treating it as though it were not really a fact, but rather a Jules Verne popular science tale.

The fact, of course, is the H-bomb. And even Churchill, who has foreseen the possibilities in nuclear fission since 1931, does not pretend to know how it can be controlled. He said, "It may well be that by a process of sublime irony, we have reached a stage in history where safety will be the sturdy child of terror, and survival the twin brother of annihilation."

This is the theory of mutual possession as a deterrent. The Russians, he is convinced, will not start a war as long as the United States has great nuclear superiority, though "in three or four years or even less" the Soviets will probably be capable (as America already is) of inflicting "crippling if not mortal injury" on any country. He thinks that at such a point the risk of war may be less "when each realizes that global war will mean mutual annihilation," and the aggressor can count on instantaneous massive reprisals. At that point, he hopes, genuine and effective disarmament may be achieved.

It boils down to building deterrents and postponing disarmament until each side will be able to annihilate the other. Then, at last, that great act of conversion may occur.

But suppose it does not? We assure Moscow that we will not make a preventive war. But the fact is that preventive war is the only logical form of war in the H-bomb era.

The overwhelming advantage is with the side that delivers the first "crippling, if not mortal injury," above all, at the nuclear plants of the main enemy. With effective nuclear parity the deterrent of "massive reprisals" would not offset that advantage if either or both sides believed war unavoidable.

The "deterrent," therefore, is only in the goodness or badness of the human heart; only in the act of conversion.

Churchill spoke movingly of "watching little children at their merry play and wondering what would lie before them if God wearied of humanity."

But God endowed humanity with the freedom to weary of him. It will not be because of God's weariness if man destroys mankind.

VIRGINIA MILITARY INSTITUTE GRADUATION

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. MARSH. Mr. Speaker, the class of 1969 of Virginia Military Institute, Lexington, Va., was privileged to hear, on Sunday, May 18, 1969, an address by the Honorable Stanley R. Resor, Secretary of the Army.

Because I believe Secretary Resor's remarks will be of interest to the House, particularly with respect to his assessment of the importance of the ROTC program to the readiness of our defense forces, I include the text of his address at this time, as follows:

REMARKS BY THE HONORABLE STANLEY R. RESOR

General Shell, Members of the Board of Visitors, Members of the Class of 1969 and their Parents and Friends, Ladies and Gentlemen:

I am grateful for your invitation to share this important day with you. As General Shell noted, it is a day of mixed emotions—a day that affects each of us here in quite different ways. Some are filled with nostalgia; others are eager with anticipation; a sense of continuity is mixed with a feeling of change. It is a time for looking forward and a time for looking back.

In the words of your most illustrious graduate, General George Catlett Marshall, at a commencement address here in June of 1940, "This is a day of high emotions to you men of the graduating class; it is the culmination of your period of preparation for life. You step off this morning on your own, to make your way in the world. To your parents this is a morning of profound pride and satisfaction, far beyond any such previous reactions. Maybe to some of them it is the moment for a sigh of profound relief. The hazards of youth have not sunk your ship. You are across the bar and safely started on your way." From those words it would appear that a concern for the hazards of youth is not one peculiar to today's parents.

As Cadet Smith has so well noted, we are today in a time of questioning—and the defense establishment is not going unnoticed. The ABM, our involvement in Vietnam, the size of the defense budget, our overseas bases and commitments are all under close public scrutiny. I want to address today that aspect of the debate which concerns the role of ROTC in our educational institutions. This seems a particularly appropriate time and place, for all of you have had ROTC training, and many of you have accepted commissions in the armed forces. I have chosen this subject not only because of its topical interest, but because I believe that resolution of the issues which are involved in ROTC on the campus bears on some of our most vital concerns.

Let me start by emphasizing the importance which ROTC has in our system. The ROTC program is now the primary source of officers for the active Army, and a significant contributor to the officer corps of the other Services. We plan that it will continue to be. But its full importance is not indicated solely by counting the number of lieutenants commissioned. To appreciate its importance fully we must recognize the influential positions to which its graduates have advanced. For example, there are currently 147 general officers on active duty in the Army who were commissioned through the ROTC program. At one point both of our Field Force Headquarters in Vietnam were commanded by lieutenant generals who started their careers as ROTC cadets. At another time five of our divisions in Vietnam were commanded by major generals with ROTC backgrounds. At the present time, the Assistant Vice Chief of Staff of the Army, the principal military advisor to the Paris negotiating team, and newly appointed Deputy Commanding General of our forces in Vietnam, received their commissions out of the ROTC program.

This is by no means a full catalog of the successful ROTC graduates. But it emphasizes the important contribution the ROTC program makes to our military leadership and our national security.

ROTC is more than a means for procuring officers. It serves two larger goals of greater

importance to the nation and to the men who are involved. First, as it appeared to General Marshall when he spoke here in June 1940, so it appears to us today, that for the foreseeable future we must maintain the ability to provide for our national security through an adequate defense establishment. Second, we must all of us be prepared individually to commit time and make sacrifices in public service, both out of obligation to our nation and for reasons of self-fulfillment.

Taking the first point, we have since the end of World War II based our security on collective defense. We have learned that we cannot rely on a "Fortress America." Our lives and our nation's welfare and well being are inextricably tied to other free nations. History has taught us that it is better to help those nations remain free than to have to rush to their defense as we did in World Wars I and II. Further, the existence of an open, outward-looking, humane society in the United States depends upon the vitality of similar societies elsewhere. Nothing has changed to warrant a retreat to isolationism. We still have our commitments to aid free nations of the world in their struggle to preserve independence and live in peace. This does not mean that we have, or must assume, the role of "world policeman." It does mean that it is in our interest to fulfill our commitments, for which we have already paid a heavy price, to those international arrangements which help to preserve world peace. So long as we pursue those commitment, it is necessary to maintain a sizable military establishment and to possess the ability, if the need arises, to expand that establishment. ROTC, as the principal source of officers for our armed forces, is essential to both those goals.

I mentioned that ROTC is important also in that it provides a way for men both to fulfill their obligation of service to their country as well as achieve personal fulfillment. The first point needs no elaboration. In justification of the second I remind you of the ancient Greek conception of happiness, namely, the exercise of vital powers along lines of excellence in a life affording them scope. I believe that in our nation today it is in the arena of public service where happiness, as described by the ancient Greeks, can most likely be found. Nowhere is this more true than in military service. The challenges of military service and a military career require the exercise of all of a man's vital powers, intellectual and physical. The traditions of our military services insist on excellence, and the scope of concerns of the military are as broad as one can possibly envision for any single institution.

There is another, and fundamentally important reason why we should preserve ROTC in our institutions of higher learning. As an authority on the process of revolution has pointed out, "Brave men are not uncommon in any system, but there is a tendency in most systems to make courage and a disciplined openness of mind to the significant facts, mutually exclusive." He saw in this tendency the explanation for the downfall of many nations. We can avoid this tendency, and we can ensure that our officers possess a disciplined openness of mind to the significant facts, only so long as they come to the armed services with the best possible education. The best way to do that is to draw our officers from our college graduates.

It is not only important to the Services that we keep men of breadth of vision in our military establishment, it is important to the nation as well. Our military leadership is called upon to make decisions vital to us all. It is thus not only desirable but necessary that that leadership be as enlightened and as broad of vision as possible. Again it is to our universities where we must turn for such men.

For example, our attention is currently fixed on the war in Vietnam. We recognize that there are several wars in Vietnam: the tactical war, the political war, the psychological war, the economic war, the war of the military advisor and the war of the negotiator. At all levels of all of these wars, from platoon level to national level, you will find American military officers leading, counseling, or advising. It is thus a matter of prime concern to the people of this country whether these Americans in uniform are equal to the tasks before them and whether they are representative of the nation whose uniform they wear. I can assure you that they are, and I know of no better way to assure an affirmative answer to such questions in the future than through continuation of ROTC.

There is a somewhat more practical reason why we need to draw heavily from our universities in manning the officer corps of our defense system. The tasks that lie ahead in all of our armed forces are of ever-increasing complexity and diversity. They will challenge the best of minds, and a fair share of such minds are needed in the uniformed services to meet this challenge. Some thirty years ago when our present general officers were commissioned, none of us could have anticipated the responsibilities they now fulfill. Similarly, none of us can foresee the world in which you members of today's graduating class will live and work thirty years hence. We do know, however, that to cope with that world our leadership must have the benefit of a broad education, such as you and our ROTC graduates throughout the country receive. It is only with such leadership that we can have confidence for today and hope for tomorrow.

ROTC has proven itself the most successful way to assure a broad representation of backgrounds and philosophies in our officer ranks. It is fortunate that no single institution can meet the Services' requirements for officers. The Army alone commissions over 15,000 new officers through the ROTC program annually. They come from all over the nation. They are educated in some 350 different colleges and universities and in a wide variety of academic disciplines. Thus the ROTC officers entering the Services each year provide the best possible guarantee of a truly representative and diverse officer corps. To be strong and healthy, our Service leadership must be as varied in background as the nation itself. ROTC assures that it will be.

Acceptance of the importance of ROTC to the nation's defense and to the men it serves does not mean that the program cannot be improved. Indeed, its very viability depends on constant improvement to keep it abreast of the changes occurring in the field of education and to meet the changes occurring in the military profession itself.

In recognition of the expanding fields of knowledge, the academic and intellectual content of the ROTC curricula continue to be increased. By capitalizing on improved instructional techniques, the time devoted to the more mechanical phases of training continues to be reduced without loss of effectiveness. We do not resist change but use it for progress and improvement. We are striving to make the ROTC program reflect the fact that there can be a mutually reinforcing relationship between the academic and military disciplines in the education of the whole man. The history of VMI proves that it can be achieved.

The ROTC program is reviewed regularly not only by the Services but also by distinguished civilian educators. It is a large program, hosted by a multitude of autonomous institutions. They embrace a great diversity of educational philosophies, and their academic programs may differ from one college to another and within the same university. For these reasons, the program must allow latitude for harmonizing the Services' requirements with the colleges' requirements. We have recently adopted policies which will go further toward ensuring that such harmony can be achieved.

It is for these reasons that I am deeply convinced of the importance of ROTC to the nation. It is much more than a means of procuring officers for our armed forces. It provides those who choose, an opportunity to serve their country and exercise their vital powers in the pursuit of excellence. It is a way to ensure that our armed forces are led by men who are not only brave but who have a disciplined openness of mind to significant facts. It is a way to ensure that our armed forces are led by men educated to deal with the complexities of the modern world. And it is a way to ensure that the leaders of our armed forces are representative of all of the people of the United States.

It is in this broad context that I look with such admiration on VMI. The present Corps of Cadets has been drawn from 43 states and 3 foreign nations. The members of this graduating class will join the ranks of the more than 9,000 who have graduated from VMI since it was founded 130 years ago. Those graduates have established an enviable record and have been recognized in many ways, including the Medal of Honor and the Nobel Peace Prize. So too, many in this graduating class will go on to distinguished careers in the military service and in the public and private sectors of civilian life.

Sixteen or more years ago you began your education. Now you have completed four years of arduous college studies. A foundation is laid, built on your innate abilities, your enthusiasm, your ideals. Now the education of adulthood and leadership begins. You go forth to serve your country in positions ever more challenging and responsible. A great opportunity to learn and to grow and to serve lies ahead of you, positions which afford a great opportunity for acceptance of responsibility of which your valedictorian has spoken so eloquently. Here at VMI you have made the beginning which will enable you to seize that opportunity. The future of our nation, and its security, depend on your achievements. I have the utmost confidence in that future.

I know that you can say of your experience at VMI what General Marshall said: "This institution gave me not only a standard for my daily conduct among men, but it endowed me with a military heritage of honor and self-sacrifice."

Good luck and Godspeed.

GEN. OMAR BRADLEY SPEAKS OUT ON THE 25TH ANNIVERSARY OF D-DAY

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. TEAGUE of Texas. Mr. Speaker, General of the Army Omar N. Bradley, who was known during World War II as the "GI's General," has made some profound remarks in a D-Day tribute to those men who gave their lives on the eventful day. His remarks entitled "That We May Learn To Live as Bravely as They Died," appeared in the Sunday magazine supplement This Week for June 1, and I am privileged to insert it in the RECORD:

A D-DAY TRIBUTE BY GENERAL OF THE ARMY OMAR N. BRADLEY: "THAT WE MAY LEARN TO LIVE AS BRAVELY AS THEY DIED"

Twenty-five years ago next Friday the largest amphibious assault in history invaded the continent of Europe, denying the designs of aggressors who would covet and destroy the free world. I was there that day. I can recall that mist-shrouded dawn, the camouflaged LST's, the strong bodies that hurled them-

selves across the sands and into battle on the Normandy beaches.

Many of those earnest young men who left their homes to defend them returned to those homes to live, work and worship in freedom. Too many never returned. They lie buried on the quiet cliffs overlooking Omaha Beach, beneath rain-whipped elms in our national cemeteries in England, or in a hero's grave in their home communities. Our allies, England and France, gave us land on which to bury our dead. They gave us courage and friendship when our need was desperate. And they gave us their sons to fight side by side with our own.

We honor on this anniversary not only those brave soldiers who died on D-Day, but the generation after generation of young sons who have had to die in conflicts visited upon them by issues remote from their everyday lives, in bitter struggles that have scarred the progress of all mankind, wasting the youth and resources of all nations.

We pause today to take comfort and strength from those of our dead who have already given this nation so much. We pause to learn—if we can—how men might live as charitably together in peace as they die for each other in war. We pause to ask why it is that men cannot live as bravely as they die.

Our lost young sons are partly the victims of your folly, and mine. They are the victims of all peace-loving peoples who turn their backs on the ills of the world. And if the United States ever stoops to expedients to avoid the difficult decisions that come with defense, we shall once again run the dangers of all half-way measures and waste our strength and conscience as a force for good.

If we cringe from the necessity of meeting issues boldly—with principle, resolution and strength—then we shall simply hurdle along from crisis to crisis, improvising with expedients, seeking inoffensive solutions, drugging the nation with an illusion of security which does not really exist.

The United States has matured to world leadership; we must steer by the stars, not by the lights of each passing ship. If we are to scamper from crisis to crisis, fixing principles and policies to the whim of each day, we shall place ourselves supinely and helplessly at the mercy of any aggressor who might play on our public opinion and decimate our resolution at will.

In this 25th anniversary week of D-Day, we pay homage to the strong, the weak, the leaders, the led, the brave, the fearful—to all who perished where only God could witness their charity to their fellow men.

Proudly—but reverently, sadly—we honor them. We pray they will ever rest in peace.

MEDICAL FACILITIES CONSTRUCTION AND MODERNIZATION AMENDMENTS OF 1969

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. PICKLE. Mr. Speaker, the Hill-Burton hospital construction program has been one of our most outstanding contributions in the field of health care, and I am proud to serve on the committee which has jurisdiction over it.

There have been several unique features of the Hill-Burton Act which, in my view, have proven especially valuable in providing health care.

The matching grant, which has been the mainstay of Hill-Burton for over two decades, has worked to assure that health care is a joint venture between the Federal and State governments. This approach has increased from 50 percent in 1946 to 90 percent today the supply of hospital beds needed as compared to the available supply. These figures reveal a tremendous success, and I believe it is wise that we continue in this basic method.

Admittedly, there are now certain reasons for departing from the strict requirements of the matching grant, but by and large these reasons do not outweigh the entire program, and the bill reported by the committee recommends new programs to handle needed loan guarantees and interest subsidies.

Another aspect of the traditional Hill-Burton program is that individual projects within each State are subject to clearance by a State Hill-Burton Advisory Committee. This point has been one of the most flexible features of the program, and it is one which has helped to have the question of health priorities within a State solved by those most knowledgeable of the facts. It has been one of the best possible vehicles for assuring that the States use the funds in the way which will give the greatest improvement in the State.

State Hill-Burton Boards now have the authority—and they have had it since 1964—to transfer all or any part of its funds for new hospitals and other facility construction to modernization if the State agency determines that the purposes of the program will be better served by making such transfer. This is another point of great flexibility in the existing program, and I believe it adequately responds to the challenge that the present Hill-Burton program does not place adequate emphasis on modernization as compared to new construction.

It is also significant that the committee has not changed the present formula for determining each State's entitlement under new construction funds or under modernization funds. Under existing law, grants for construction are allotted among the States on a formula based on population and per capital income of a State. Modernization grants are allotted among the States under existing laws on the basis of population, financial need and the need for modernization of the respective States.

The committee examined these formulas very closely. They were the subject of criticism by some, but I feel that the choice of keeping the existing formula is a good one. It has served us well since 1946, and it has given us marked improvement in our hospital capabilities.

Perhaps one of the most important features considered in this new legislation is that of balancing geographically the supply of health facilities. Hill-Burton already has made a significant contribution toward supplying our national hospital needs, and the real problems remaining are not now so much problems of adding new beds, but rather are problems of getting the maximum use of those we do have. The committee has found that there is a greater need to balance the supply of beds between rural and urban areas, and in this connection there is an important question of the proper role of the comprehensive State and area health planners.

In an effort to get the most mileage out of each health dollar, the committee has recommended that planning agencies be given the opportunity to comment on any specific project, but that they not have authority to veto or override the Hill-Burton advisory agency. The report goes on to specify that the views of the planning agency will be given "considerable weight" by the sponsors of the projects, and I believe it is important that this point be clearly stated.

As medicine becomes more sophisticated, the question of comprehensive health planning becomes a question of getting the most out of every available medical item; it becomes a question of coordination. With medical equipment and facilities becoming more specialized and expensive, it is only logical that a community of interest and cooperation be established among all hospitals in a given area. Before new facilities are constructed or modernized, a hospital should look to its neighbor to see that the course to be followed is in fact the one which will make the greatest overall improvement in the health care available in that area.

This kind of coordination should be done for all types of hospitals—public, private nonprofit, and governmental.

But at the same time, I feel it is important that we keep the proper perspective between the respective importance and size of the comprehensive planning programs and the Hill-Burton program. The latter has been with us for many years; it has demonstrated important improvements in our health care; and it unquestionably is the moving force in all Federal health programs.

For this reason, I strongly support the policy now set by the committee whereby comprehensive planning is achieved, but the traditional Hill-Burton programs are also preserved.

Mr. Speaker, when H.R. 11102, the Medical Facilities Construction and Modernization Amendments of 1969 comes before the House this week, I am hopeful that it will have the strong and wide support of my colleagues.

OUR NATION'S CRIME PROBLEM

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, I have joined with many other of my colleagues as a cosponsor of House Resolution 17, a bill to create a select House committee to study and investigate all aspects of crime in the United States.

My past experience, as a practicing attorney and a local judge, coupled with my service on the Judiciary Committee of both the Michigan Constitution Convention and the Michigan Senate before I came to the U.S. House of Representatives, adds to my particular concern about the national crime problem and our response to it.

House Resolution 17 established the purposes of this committee to be the full and complete investigation and study of all aspects of crime in the United States, including:

First. Its elements, causes, and extent;

Second. The preparation, collection, and dissemination of statistics thereon, and the availability of reciprocity of information among law-enforcement agencies, Federal, State, and local, including exchange of information with foreign nations;

Third. The adequacy of law enforcement and the administration of justice, including constitutional issues pertaining thereto;

Fourth. The effect, directly or indirectly, of crime and disturbances in the metropolitan urban areas;

Fifth. The effect, directly or indirectly, of crime on the commerce of the Nation;

Sixth. The treatment and rehabilitation of persons convicted of crimes;

Seventh. Measures for the reduction, control, or prevention of crime;

Eighth. Measures for the improvement of detection of crime; law enforcement, including increased cooperation among the agencies thereof; and the administration of justice; and

Ninth. Measures and programs for increased respect for the law.

The prime author of this legislation, Mr. PEPPER, the distinguished gentleman from Florida, has outlined the special areas of concern of the committee as being crime in the District of Columbia, police complaints against Supreme Court rulings on the rights of accused persons and violence on college campuses which involves violation of the law.

But the whole focus of the investigation must of necessity be the present outcry of decent people who feel threatened by our rising crime rate. This includes inner-city residents here in Washington, D.C., and all across the country who fear for their safety, suburbanites who find their homes vandalized, add parents who hear that crimes among our young people, both the privileged and the underprivileged, are continually on the rise. No element of our society seems to feel safe. In fact recent national statistics show the greatest percentage increase in crime to be occurring in the residential suburbs.

This problem is too big to ignore any longer. It deserves the most concerted expenditure of our energies and resources that we can muster. Our people are restive; they are truly troubled by the problem and they look to us for help. Some even blame us. If we had only passed this or that law, if we only had overruled certain Supreme Court decisions we would not be faced with our present crime problems. Certainly we must hear them and weigh the suggestions we receive.

As a citizen and a lawyer and as a representative of the people of my congressional district I have searched for answers to these problems as every concerned citizen must. When I or anyone close to me is victimized my temper shortens. Yet beyond this immediate angry reaction, which I think everyone has at one time or another, we must search for solutions that will really work if we are to get at the problem and not just make a lot of noise accompanied by table thumping and hand wringing.

I hear people I know to be otherwise decent, contributing citizens, who out of a sense of total frustration with crime, advocate actions which come close to the measure of a repressive totalitarian society. Their frustration with the problem is great. They see our present effort to deal with crime, and I am not talking only of organized crime, but crime as it affects the average American citizen, as a miserable failure. They see the courts, not as upholders of the law, but as betrayers of the law.

Knowing this I am pleased to see established a committee, with a distinguished and balanced composition, including our own Congresswoman from Michigan, Mrs. MARTHA GRIFFITHS. This committee can take an overview of present efforts. They can examine the problem objectively and hopefully come up with some sensible recommendations.

Crime has been with us since the dawn of civilization. All of our efforts have failed to eradicate it from our lives. Being realistic, I do not think that in our lifetimes we will see the end of it. Yet it can and must be controlled. Proper approaches can reduce crime rates, can eliminate the environmental conditions in which much crime breeds today, and can return the average citizen once again to a certain sense of security.

There are many avenues of approach to the problem, but I think the committee should address itself first to the ones that we hear most frequently. Although I have strong reasons to doubt that Supreme Court decisions such as the Mallory, Miranda, and Wade cases are causing our rise in crime rate, I think the best way to determine that is to fully investigate the matter. Once we examine the effects of these decisions I think we will find that their impact on the crime rate is minimal. Yet in the uncertain world we live in I am ready to listen and to be persuaded by the facts as they are developed.

It has been my understanding that the vast majority of those who perpetrate "reported" crimes are never apprehended and a majority of those arrested are never brought to trial because prosecuting officials cannot make a sufficient case to justify bringing them to court. This leaves our courts dealing with and applying those Supreme Court cases to a very small percentage indeed of the crime rate rise we hear about.

The recommendations of the District of Columbia Crime Commission offer a model that we would do well to study. If crime is a big business, then let us attack it in a big way.

The interconnection between types of crimes deserves far more analysis. For example, there is strong indication that narcotics addiction causes a rather substantial percentage of the crimes against property, and often against the person. Narcotics addicts commit crimes in order to support a very costly "habit." Our efforts at narcotics addiction control and efforts to go after narcotics suppliers should be greatly increased—not only in an effort to stop addiction per se, but for the resulting reduction that this will cause in crimes such as larceny and burglary.

Murder most often occurs between family members. The New York City Police Department has an exemplary program of special police forces trained to deal with family disputes. Their example should be carefully examined in any effort to reduce murder rates.

Fifteen-year-olds have the highest crime rates for any age group. The crime rate for men is higher than it is for women. Why? These are all dull dry statistics—but we can learn from them and we should. Along with the war in Vietnam and the need for tax reform, crime is the biggest topic of citizen concern in this country. We should not be afraid to ask unthinkable questions in our search for new solutions. The old solutions are not working and people are disallusioned because of this. It is always hard to adapt to change, but we must, for the present crime situation is just not acceptable.

FULL FUNDING FOR EDUCATION PROGRAMS

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. O'HARA. Mr. Speaker, on May 20, Mr. William Simmons, deputy superintendent of schools for Detroit, testified before the Subcommittee on Appropriations for the Departments of Labor, and Health, Education, and Welfare. His testimony related to the necessity of full funding for the educational programs which the Congress has enacted and for which the present administration has scheduled major budget reductions. Mr. Simmons' testimony speaks for itself, but I cannot refrain from adding my emphatic endorsement to the point he makes when he says:

> One can but wonder why additional dollars cannot be made available for educational programs for a nation so wealthy as ours. It appears that funds can be found for a variety of activities that pertain to the general welfare, except in the field of education. Yet, it is seldom that our leaders do not cite adequate education for all as the basis for a more progressive and stabilized nation.

Indeed, Mr. Speaker, in an age when we can always find a few extra billions here or there to send men to the moon or to pay for increasingly complex and expensive weapons systems, it is remarkable that we seem unwilling to provide the kind of schools which are necessary if we are going to have people literate enough to fly spaceships and man complicated weapons. There are better reasons, I believe, than these to support full funding for education, but even if military and space hardware are our primary interest, education pays off in those terms, too.

Under unanimous consent, I include Mr. Simmons' testimony in full at this point in the RECORD:

TESTIMONY OF WILLIAM SIMMONS, DEPUTY SUPERINTENDENT, DETROIT PUBLIC SCHOOLS, BEFORE THE U.S. HOUSE OF REPRESENTATIVES, COMMITTEE ON APPROPRIATIONS, SUBCOMMITTEE ON LABOR, HEALTH, EDUCATION, AND WELFARE, TUESDAY, MAY 20, 1969

Mr. Chairman and Members of the Committee: I am William Simmons, Deputy Superintendent of Schools, Detroit, Michigan.

I am pleased to have this opportunity to appear before this Committee to testify in support of a new nationwide movement for full funding of all educational programs.

My testimony today will be offered in two parts. The first part will be a discussion of the need for full funding of all educational programs in Detroit. The second part will be a discussion of the need for full funding of the impacted area legislation, Public Laws 815 and 874. All programs are fully operative in Detroit and, combined, represent a major part of our educational expenditures.

Before I begin my basic discussion, I would like the Committee to know that I completely endorse the comprehensive statement made by Carl D. Perkins, Chairman of the House Labor and Education Committee, before this body on Wednesday, May 14. This statement of the need for full funding of all educational authorizations is a document that clearly details the case. The fulfillment of the goals enunciated rests now in the hands of this Appropriations Committee.

PART I

The financial plight of the urban school districts is well known to this Committee. The Detroit Public Schools, for example, face a grave fiscal situation that, if not reversed, will seriously impair the educative process for boys and girls served by the School District of the City of Detroit. This fiscal year the school district requires an additional $8.4 million if a deficit is to be avoided. To begin school in September with a continuation of the present program, an additional $23.1 million will be required. Where these amounts, totaling $31.5 million, will come from is a part of the dilemma.

The State has been petitioned for additional funds to help meet this financial crisis. Should funds be forthcoming, it is probable that there will only be some $5 million made available to the City of Detroit. The local taxpayers, in November of 1968, were asked to approve a millage increase with no success. This situation is typical of the situation in most of the large city school districts. The only difference is a matter of degree relating to numbers of pupils and the rate of decline in local taxation. Upon consideration of the monetary demands that are now being made on the school district from the community and from professional organizations, combined with existing deficits, it can be concluded that the fate of the schools is not hopeful.

In the midst of fiscal crisis, federal funding from such pieces of legislation as the Elementary and Secondary Education Act has provided the only monies that the Detroit Public Schools have had for program improvement for several years. Funds allocated to the school district under the various pieces of legislation, especially ESEA, have made possible a concentrated attack on problems related to the education of educationally and economically disadvantaged children of the city. The funds received have provided the only dollars available for some beginnings in the explorations necessary in the area of compensatory education especially as it relates to curricular improvement and teacher training. The major difficulty has been that the funds available from federal sources have not been sufficient. Indeed, the funds have only produced "pilot" or "demonstration" programs and, therefore, do not speak to the total needs of students in the school district, particularly so-called disadvantaged students.

Public education, especially urban public education, must, in the midst of inadequate local and state funding, look to federal grants-in-aid to help remedy the multiplicity of problems which confront it. This is true for all public education, but especially true for public education as it relates to urban centers which have become the depositories of the economically disadvantaged children of the nation.

The extension of the Elementary and Secondary Education Act for two years represents a step in the right direction; that direction is the provision of funding assurances for local school districts for more than one year at a time, allowing for more sensible planning and greater continuity in programming. Inasmuch as action in the United States Senate on this matter is still pending, the possibility of a five-year extension is still hoped for.

The school community and staff are agonized and perplexed with the "on again, off again" planning that is experienced by public school systems. Greater understanding of educational planning and the solution of educational problems would be a result of assurances of funding for longer periods and the more effective programming that could take place.

Education as a behavioral science must have the opportunity to operate long-term projects as necessary to accomplish definitive results in modifications of pupil behavior. This longer funding assurance and program life will provide the opportunity for modification of program elements to favor the inclusion of only those elements that show signs of success. This implies that more reliable information about successful program components would be possible through more carefully applied and longer lasting evaluative techniques.

Where forward funding exists, it exists in only a modified way. That is, funding guarantees are uncertain and dependent on annual congressional action or they are limited to a percentage of the present funding level. Not even is there an allowance for normal "cost-of-the-program" increases experienced as a result of wage and product cost increases. Indeed, there is not the kind of assurance that would lead to planning which can guarantee at least continuity of the existing degree of service to clients from one year to the next.

Federal funding legislation, therefore, must begin to establish forward funding statements within their text which will guarantee the continuity of program that leads to more effective solutions to educational problems.

The problem of inadequate appropriations to finance federally funded educational programs is well known. Authorizations passed by Congress are realistically recommended and are based on known needs. Final appropriations, on the other hand, are almost always far less than the amount originally authorized. This immediately indicates that existing needs will be met only to a limited extent. At no time during the operation of the Elementary and Secondary Education Act have adequate appropriations been made to meet the needs of those who expected to be served. Indeed, the appropriations for the present fiscal year were not adequate to continue the federally financed programs of the prior year because the maintenance of the same level of appropriations did not take into consideration the increased cost of doing business that is experienced in every part of the private and public sector.

The restricted allocations of federal funds have put the conduct of most programs under an operational uncertainty that strikes at the effectiveness of the program itself and simply invites unrealistic criticism.

Therefore, one of the decisions that must be made if we are to expect anything other than minor degrees of success with federal funding is the establishment by the Congress of higher levels of appropriations as compared with authorizations.

The appropriations by the Congress for federal educational programs administered by the State have not been sufficient to maintain educational programs in the State of Michigan or in the school districts of the state. The 1966–67 expenditure for all school districts in Michigan for federal educational aids for all programs was approximately $125.48 million. In 1967–68, the appropriation level provided only $121.5 million to Michigan, and in 1968–69 the appropriation had declined to $112.5 million. The decline in the allocation to the State of Michigan, in effect, caused a shrinkage of funds in the local units. ESEA, Title I, has barely maintained its average allocation, and the only program with a constant increase over the three-year period was the impacted area program, Public Law 874.

The Nixon budget for fiscal 1970 reduces even further the allocations for the State of Michigan, which, without question, will mean less funds for the local educational agencies. A review of that budget shows that there will be $3.85 million less to spend on educational programs in Michigan in fiscal 1970 than in the current fiscal year.

The effect of the decreases in Michigan on the Detroit Public Schools is especially significant, since Detroit has 16% of the total school population and 39% of the children who qualify as educationally deprived under Title I programs. Should the Nixon budget be adopted, there would be no funds for ESEA, Titles II and III, or NDEA, Titles III and V-A. The only programs where there might be a possible increase in allocations to Detroit would be ESEA, Title I, Vocational Education, and Adult Education. The increases in these programs, based on the statewide allocation, would be insignificant.

The recommendation for the elimination of all but "A" category pupils under Public Law 874 would remove an allocation of approximately $1 million to Detroit, and almost double that amount should the public housing pupils be added to the act. The point which must be made is when allocations in a budget are shifted from one program to another without additional funds being added to the total, urban school districts suffer the most because these districts participate fully in all of the federally funded programs. What we need in the urban school districts is full funding of all educational programs. A table showing the effect of the Nixon budget on certain of the educational programs in Michigan that have provided substantial amounts to Detroit is shown in Attachment No. 1. The allocations to Detroit for the ESEA programs are shown in Attachment No. 2. Needless to say, the decline in the state allocations will mean discontinuation of certain program elements in the Detroit Public Schools.

The impact of the cuts in ESEA, Titles II and III, NDEA, Titles III and V–A, and LSCA, Title I, were described by Dr. Ira Polley, State of Michigan Superintendent of Public Instruction, in a letter to all members of the Michigan congressional delegation. The reasons for continuing of funding these programs, to which reasons Detroit concurs, are dramatically described program-by-program in his attachement to that letter as follows:

Regarding Title II, ESEA:

1. 400 libraries have been opened in public school buildings.

2. 2½ million books have been purchased for those libraries.

3. Districts with very limited resources, or with large numbers of poor children have been able to obtain special help to provide learning materials to their children.

4. School systems have expended their own funds to train library aides and to support the education of additional professional school libraries.

5. Librarians are personally convinced of the value of this service, as the following quote from a librarian to the state department indicates: "The Title II materials have given us much more flexibility in the classrooms, many more supplementary materials and excellent resources for the children's studies. We are not conducting classes in the traditional manner where children all sit in rows and recite from memory. Instead, children are taken on field trips out of the institution to become familiar with community living. Title II supplementary books, such

as "Who Will Milk My Cow" and "Bin-Bang Pig" or lovely big colored picture charts of animals, give tremendous motivation to the children. Traditional textbooks are also outdated for most retarded children. Instead, the teachers use many creative materials which are most applicable and encompass many of Title II materials."

Regarding Title V-A, NDEA:

1. In 1967-68, 339 school districts, including 680,000 students, participated in NDEA-supported counseling services, and 388,000 students participated in NDEA-supported testing.

2. In 1967-68, over forty schools experimented with elementary guidance programs for troubled young children.

3. Under a new approach by the state department, four community colleges have employed recruitment counselors who recruit and help poor students go on to college.

In the words of this program's director, "Total loss of NDEA V-A will terminate counseling and guidance services to students in several communities where such services have recently been implemented, and the LEA cannot yet carry programs without help."

Regarding Title III, NDEA:

1. Requests for NDEA funds received from the local school districts have been double the amount of the allocations by the federal government; out of present federal appropriations, the state department, therefore, is able to match only one-half of the requests for equipment.

2. The number of submitted projects has ranged from 480 to 575 each year in this decade.

3. Participation in the program has averaged 93.2% of the public school membership. Those schools which have not participated are the smaller school districts which do not feel they would receive sufficient funds to make the effort worth-while.

4. This year, 462 school districts with 1,825,390 pupils requested funds under the "regular" NDEA, Title III, distribution. In that distribution districts which have a lower SEV behind each child receive a larger share of NDEA funds.

5. This year, for the first time, the state department has made a separate distribution of funds to schools which have large percentages of poor children. Under this program 39 school districts in the state are using $975,000 in equipment grants to improve instruction in schools serving many poor children.

6. In the words of the NDEA, Title III, program director: "With the present economic situation in the State of Michigan and the voter resistance to voting extra allocated operational millage, the elimination of NDEA, Title III, will merely compound the problems in local districts of providing sound educational programs. It is also our feeling that NDEA, Title III, is one of the better federal programs because equipment and programs developed under this Act are financed by the cooperation of federal funds and matching local funds. The matching of federal funds by local school districts, I am sure, means that much more effort and thought is given to the need, type and use of equipment in the educational process."

Regarding Title III, ESEA:

1. A cutback of approximately 30-32% being proposed by the United States Congress in the FY 1970 Title III funding levels will require the state department to reduce the budgets of most Michigan projects by 40% with the following implications:

Approximately 500 school districts are being served by Title III projects. Thirty-five districts, acting as fiscal agents, will receive reduced budgets.

There are over 1.7 million public and nonpublic school children touched in some way by these projects. These children will receive less.

The two areas critical to the success of Title III, dissemination and evaluation, will be reduced or eliminated.

The number of children and professional personnel receiving innovative services will be reduced.

Some excellent projects will decide to terminate and have so indicated such action at this date.

Overall quality, a distinguishing feature of Title III, will be reduced.

2. Other cuts may be:

An out-door learning laboratory in Traverse City, where potential school dropouts find a way to stay in school until they graduate.

A Metropolitan-Flint program to help the parents of deaf children help the child learn at home during his first years of life.

A program which brings learning specialists to Kent County rural schools to work with individual children who seem unable to achieve in their classes.

A seven-county effort in the midpart of the state to strengthen elementary and junior high instruction in seven districts.

A program in an urban center to cut class size sharply in schools serving poor children.

A program in the Upper Peninsula to help retarded children learn new job skills.

Regarding LSCA I and II:

1. As a result of federal aid, the state has been able to grant from $350,000 to $400,000 to libraries throughout the state for books and for hiring of additional librarians and library aides. These libraries have employed staff, rented space, and started services in anticipation of continued federal support.

2. The state legislature has raised the level of its spending for the libraries of the state, partly in response to the federal presence.

3. The state department of education has employed consultants to work with local library people in improving their services to all citizens.

4. Magazines and other periodicals are purchased by the state libraries and circulated statewide, a service particularly useful to isolated rural libraries.

5. Films and records are made available where none would be otherwise.

6. The construction program has provided over 44 new public libraries, including both branch libraries in the inner city and new facilities in rural communties.

PART II

The extension proposed for the impacted area legislation coincides with the extensions proposed for all other educational programs enacted by the House in H.R. 514. Public Laws 815 and 874 are now scheduled to expire June 30, 1972. The extension proposed will make possible full implementation of forward funding and will remove many of the uncertainties that will undoubtedly affect the level of appropriations for fiscal 1970 and future years, while, at the same time, providing local educational agencies with an opportunity to achieve program continuity that is not possible under shorter extensions. Since the federal revenues provided under Public Law 874 become part of the general fund operating budgets of local school districts, such assurances are necessary at an early date because of their impact on the total school program. The dependence of local educational agencies on this vital revenue source has become increasingly important as school districts across the country are planning educational programs in the face of serious revenue deficits.

The appropriations for the impacted area legislation have been a hotly debated issue before every session of Congress since the laws were enacted in 1950. The regular appropriation process generally has not provided for the funds necessary to permit 100% payment for all applicants. It is only through the supplemental appropriation process that adequate funding has been made possible.

This year, the impacted area legislation is faced with a most serious situation. The Johnson budget recommendations for fiscal 1970 propose that the expenditure level of Public Laws 815 and 874 be limited to $300,000,000. The Nixon Administration further reduced the $300 million to $187 million. The latter budget limitation, if enacted by the Appropriations Committee, would, in effect, eliminate payment to all school districts except those with large concentrations of "A" category pupils. The Johnson Administration recommendation carried with it recommendations for the revisions of the basic legislation to the extent that almost all districts receiving impacted area funds would be eliminated from the program.

The proposed program limitations from the former Administration are detailed hereafter, and it is assumed that the estimated entitlement for full payment would be $622 million. It now appears that the program would not be fully funded at less than $650,594,000. Significantly, nothing was provided in either budget for the funding of the major disaster section of the act. Should payments under this section be required, there would be a proration of payments under the $187 million limitation to both the "A" category pupil and the Section 6 pupil.

Fiscal year 1970

[In millions]

A. Estimated entitlement under present law	$622
B. Proposed amendments:	
1. Require school districts to absorb the cost of education equal to 6% of enrollment for section 3(b) children	−140
2. Reduce the rate of payment to 25% for section 3(b) children where the related Federal property is in another school district	−117
3. Eliminate one-half State and National average per pupil payment rates for both sections 3(a) and 3(b)	−75
4. Eliminate from the definition of Federal property those properties which are outleased by the Federal Government and on which taxes are paid	−21
5. Eliminate counting children in 13th and 14th grades	−4
6. Savings provision to prevent more than 25% reduction per school district in first year	+35
Total reductions (net)	−322
C. Entitlement adjusted for proposed reductions	300
D. President's budget for 1970	300

The budget proposals of both the Johnson and the Nixon Administrations are completely inadequate in terms of the impacted area program. Since it is apparent the latest budget intends to fund only a small portion of the program, the inadequacies of the initial budget should be discussed.

The total impact of these drastic amendments, which provide a budget saving of $322 million, would vary from school district to school district, since there are few instances where all amendments would be applicable to a given local educational agency. It is apparent, however, that the 6% absorption proposed in Amendment No. 1 and the change in the definition of federal property proposed in Amendment No. 4 would eliminate most large school districts now in the program. Proposed Amendment No. 2 would provide a serious cutback in funds to all school districts across the country that could meet the new qualifying requirements. The elimination of the floor provision in proposed Amendment No. 3 would seriously reduce the level of payment to districts qualifying under the new restriction and would have a serious impact on those

southern states which are now participating under the national average floor provision. Proposed Amendment No. 5 would eliminate those school districts that are now counting as eligible pupils in grades 13 and 14. This amendment is particularly damaging to school districts in California and other states where the counting of such pupils is permitted under state law.

These two laws appear to be caught in the revenue cap that has been placed on all educational programs in the proposed budget for fiscal 1970. An analysis of the educational appropriations recommended in the budget for fiscal 1970 reveals what appears to be little more than a shifting of funds. The increases in Elementary and Secondary Education Act funds, particularly in Title I, appear to be made at the expense of other educational programs. The tragedy of this type of an approach is that it takes money from one educational pocket of the local educational agency and places it in another pocket. The philosophy that federal educational funds should be concentrated to do a particular job loses its impact because all federal funds that are received in most school districts are combined in such a way that they have the maximum effect on federally supported educational programs.

The impacted area school districts of this nation are caught in a budget squeeze. The limitations proposed by the Administration are premised on the theory that the large city school districts do not get impacted area school aid. The Committee hearing record on H.R. 514 will show that all of the superintendents from the largest cities in this nation who testified during the second week of testimony supported the impacted area program. They suggested these funds would, in part, permit them to reduce the revenue deficits they are facing in the general fund budgets which must be maintained if they are to adequately satisfy the maintenance of effort provisions in the other programs that produce funds for the disadvantaged.

One can but wonder why additional dollars cannot be made available for educational programs from a nation so wealthy as ours. It appears that funds can be found for a variety of activities that pertain to the general welfare, except in the field of education. Yet, it is seldom that our leaders do not cite adequate education for all as the basis for a more productive and stabilized nation. What we need in the support of all educational programs is more dollars, not dollars shifted from one educational program to another. While one can debate the possibility of combining programs, new programs, and the possibility of greater local and state funds for education, the fact that exists today is that the federal educational dollars, almost without exception, determine whether a school district is making forward progress or whether it has simply deteriorated into a balanced budget approach to education.

The House, in enacting H.R. 514, added a new category to Public Law 874, that of children living in public housing. The thrust of this proposal is to relieve in part the serious situations that have developed in many communities across this nation, particularly in impacted areas, when federal housing brought in pupils and then left school districts to provide school buildings and school services that were not possible without depleting the regular program of the school districts involved. Under the housing provision, this section would require an appropriation of $250 million.

The need for separate funding of this new provision was made clear in the enacting legislation and the discussion that preceded the adoption of this program by the committee. All categories of this legislation should be fully funded at the rate required for each category, and not one category at the expense of another.

The continuation of the impacted area program in school districts across this nation is not inconsistent with the need for more educational funds for the educationally disadvantaged. Funds provided to most impacted area districts are the funds that make the difference between a marginal educational program and a complete educational program. Pupils with expectant mobility must have a complete education if they are to fit into new school situations without becoming a burden to the receiving district.

I would make one further plea in behalf of the school construction provisions of Public Law 815. School districts presently qualifying under this law which has provided so many classrooms for the children of the nation are in a fiscal bind. Even though they have qualified for grants under this law, construction programs are not possible in many cases because of budget limitations during the fiscal year in which the classrooms are most needed. Indeed, there is a question as to whether or not the priority system, made necessary by the lack of funds, will not exclude many school districts who, under the laws as authorized by the Congress, will meet all eligibility requirements. An appropriation of $255 million to pay applicants eligible during fiscal years 1967, 1968 and 1969 is required if the housing needs of these districts are to be met. An additional $80 million will be required to pay out in full the requirement for fiscal 1970.

CONCLUSION

In conclusion, I would urge the Committee to report an appropriation bill that would provide for the full funding of all federally authorized educational programs. Less than full funding during these days of edducational crisis, in effect, places education low on the list of national priorities when there is little question that the education of our boys and girls should appear in the highest order of any national rating scale.

ATTACHMENT NO. 1.—MICHIGAN DEPARTMENT OF EDUCATION—EFFECT OF NIXON BUDGET RECOMMENDATIONS ON FEDERALLY FUNDED EDUCATIONAL PROGRAMS

	1967–68 spending	1968–69 allocation	1969–70 Nixon budget	Increase or decrease

RESTRAINT IN SPEECH

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. WYMAN. Mr. Speaker, recklessness in the use of words—overstatement, exaggeration, describing merely troublesome events as catastrophic disasters—all these contribute materially to public confusion on the subject of freedom of speech. Every thoughtful citizen owes it to himself, as well as his community, to use appropriate restraint in speech whatever the subject.

Unless such restraint prevails, reckless overstatement in speech nationwide can become as calamitous as the lack of judicial restraint has proved to be in many decisions of the Warren Court. In this connection the letter of R. M. Vassell, appearing in yesterday's Washington Star, is deserving of widespread consideration:

LIMITS FOR FREE SPEECH

YOUNG REPUBLICAN CLUB,
Omaha, Neb.

SIR: The right and privilege of free speech is a precious commodity produced only in those truly democratic nations of this world. America is a mass producer of free speech, and the quality of our product is generally excellent. I say "generally excellent" because there are those citizens of the United States who abuse free speech and who rail against society without sense or reason. If America is ever destroyed, it will be by the cult of the ranters from within and not by ICBMs from without.

The ranters attack the President's peace moves on Vietnam and the strategy of battlefield generals, in the comfort of the dome of the nation's Capitol or on the country's campuses. The ranters do not practice responsible free speech, but loose speech which is unlike responsible free speech. Loose speech will lose the war in Vietnam faster for the U.S.A. than any amount of infiltrators from the Ho Chi Minh Trail. Use the product called free speech carefully, lest it become loose speech, which is a weapon against democracy.

R. M. VASSELL,
Moderator, St. Mary College.

JOB CORPS CAMP CLOSING: FALSE ECONOMY, LITTLE SENSE

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. BROWN of California. Mr. Speaker, nobody allows cost overruns for the Job Corps.

Priorities certainly do not seem to matter, not at least when poor and underprivileged persons are at stake. Congress feels free to allocate billions of dollars to longrun investments such as public works, highways, the supersonic transport, but when it comes to human—rather than physical capital—the tendency is to demand huge and immediate returns.

The decision to eliminate 59 Job Corps centers is a hasty, foolish, indeed, costly solution that the Nixon administration has found in its searching of where to pare Government programs. I oppose the President's move; in fact, I would favor expansion of the Job Corps program, and the establishment of even more rural camps.

In April, the Los Angeles County Board of Supervisors went on record strongly protesting the closing of Job Corps centers in general, and specifically the Fenner Canyon Civilian Conservation Center near Palmdale in Los Angeles County. The board asked that, if the Fenner camp is closed, then it should be turned over to the county for juvenile camp work or possibly for road camp work. The motion before the board was made by Supervisor Warren M. Dorn, and I would like to put his motion in the RECORD at this point. I would also like to include an article from the May 22, 1969, Los Angeles Times, entitled "Closing of Job Corps Center Causes Rush on L.A. Facility," which is a poignant reminder of the effects that will be seen nationwide from camp closings.

I include the following:

MOTION BY SUPERVISOR WARREN M. DORN, APRIL 22, 1969

I move that the Board of Supervisors go on record as favoring the retention of the Fenner Canyon Civilian Conservation Center near Palmdale in the Fifth District. This job training camp was established four years ago with the cooperation of the Forest Service and the County Fire Department, based in part upon our county's success with the juvenile camp work in fire prevention and conservation. The U.S. Forest Service has supervision of this job corps center and estimates that over half a million dollars worth of work was done last year by the young men at this camp to help prevent forest fires, as well as to build and maintain camping areas for recreational purposes.

I further move that if the federal government does close down this facility, that it be turned over to the county for juvenile camp work or possibly road camp work. It is my feeling that rather than curtailing and closing down these kinds of training facilities, they should be expanded. If this facility is no longer needed by the federal government, then perhaps the county could lease it for $1.00 a year, and use it in our welfare training program or in fire prevention, camp construction and maintenance, road building, etc. In any event, there are over 11,000 able-bodied people on welfare in this county today who lack skills or who are just not employable who could be trained at this facility or who could work there in lieu of a mere handout in the way of welfare from the county as directed and controlled by the federal and state government.

I further move that a copy of this board's motion be sent to the Secretary of Labor, to our California delegation in Congress, and to the President and Vice President.

[From the Los Angeles Times, May 22, 1969]

CLOSING OF JOB CORPS CENTERS CAUSES RUSH ON LOS ANGELES FACILITY

(By Jack Jones)

A Los Angeles facility to help former Job Corps enrollees readjust to city life has found itself deluged because of the closing of 59 Job Corps centers around the nation.

Los Angeles Gatehouse at 955 S. Western Ave., established more than a year ago by the federal Office of Economic Opportunity (OEO), had 180 returning corpsmen checking in last week—more than usually appear during an entire month.

As a result, said Larry E. Sommers, Gatehouse director, his staff is scrambling to find jobs and training positions for the young people being phased out of Job Corps—many with training incomplete.

At the same time, regional OEO officials are working with two volunteer groups—Joint Action in Community Services (JACS) and Women in Community Service (WICS)—in an effort to enlist citizens willing to help find jobs, places to live, transportation and other services for returnees.

CORPSMEN BEING HUNTED

Although displaced job corpsmen are being notified by the closing centers to check in with Gatehouse, Sommers said he feels "there are 400 to 500 in town that we don't even know are here."

As soon as notification is received that a Los Angeles youth has left a Job Corps center, Sommers attempts to contact him by

mail. In many cases, it turns out, the address given is phony. Some former enrollees are unhappy and have no desire to be found.

Sommers said locations are then made by staff counselors. Some are lured in by mailed notices that final checks are waiting.

Gatehouse has placement specialists who work closely with the California State Employment Service and private industry to find jobs or training spots for the former corpsmen.

Under a directive from the U.S. Department of Labor, CSES can provide interim stipends of $52 a week for up to four weeks for those waiting to find work or training.

Sommers and his placement supervisor, Jerry Steorts, indicated they are getting some good community support in the way of volunteer help and job offers—but need much more to catch up.

Neighborhood Youth Corps jobs are now being made available to Job Corps returnees, they said, and some welding program slots have been opened for ex-corpsmen at both the Watts and East Los Angeles skills centers.

Sommers said one problem is that most of the returning trainees live in those areas already with the highest unemployment and the poorest transportation.

"It's hard to shake them out of those areas," he observed.

Gatehouse also is facing some difficulties in compiling all the training achievement data necessary to place numerous returning job corpsmen because paperwork is not always completed at those closing centers where staff personnel are moving out to new jobs themselves.

In the rush on Tuesday, Leon Massey Jr., 17, back from the Oak Glen Job Corps Center 27 days ago, was one who was headed for a job.

Barry Kelly, former football coach at the clearfield (Utah) Job Corps Center and now a placement specialist at Gatehouse, had found him a spot as a cook in a hamburger stand on Vermont Ave.

But Massey was fairly lucky. He had nearly completed his cook training in Job Corps and was about ready to come home anyway.

"It was a good program," he said. "I was there long enough to get something out of it."

INDIVIDUAL RESPONSIBILITY

HON. JERRY L. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. PETTIS. Mr. Speaker, it is my sad duty to report the passing of a great California legislator and a great American, L. Stewart Hinckley, of Redlands, Calif. Mr. and Mrs. Hinckley were killed in an airplane accident May 8, 1969, a tragedy that saddened their many thousands of friends all over the State and Nation.

Stew Hinckley served as the assemblyman for the 73d District in San Bernardino County from 1946 to 1954 and again from 1962 until his retirement this year. A Republican, he had great support from the Democratic Party and won the nomination of both parties each time he ran for assembly until California abolished the open primary. He never lost an election.

From 1954 to 1961, Mr. Hinckley served the Eisenhower administration as Director of the Farmers' Home Administration for the Western States.

With his military service, when he was a member of the 63d Antiaircraft Artillery in the Army during World War II, Mr. Hinckley had compiled 26 years of service to his State and Nation.

Mr. Hinckley brought to his legislative duties a broad background with his firsthand knowledge of agriculture, familiarity with business and alertness to labor's needs. His supporters called him "a businessman with a workingman's outlook." He was lauded by educators as one whose voting record showed that he had the welfare of schools and children at heart. He fostered legislation to combat organized crime, narcotics traffic, vice, and gambling. He was outspoken in his concern for conserving California's natural resources. He called for stronger support for mental hospitals, and as chairman of the Assembly Fish and Game Committee, he devoted much energy toward improving the legislation so important in that field.

Stew Hinckley counted as his greatest legislative achievement his successful effort in getting the first bills through the assembly which established the Feather River project. This is the greatest public works project ever conceived by man, and it will soon bring vitally needed water more than 400 miles from northern California to the south. This project will stand as a fitting monument to Stewart Hinckley.

Bertha and Stew Hinckley were devoted to their family, their community, and their country, and they will be greatly missed by all.

EISENHOWER LEFT VALUABLE LEGACY

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. LIPSCOMB. Mr. Speaker, during these times of riots, disrespect of law and order, and advocacy of extremisms, the voice of moderation is critically needed. Dwight D. Eisenhower bequeathed to us that creed of moderation.

The general's legacy is reviewed in a May 19 editorial of the Progress Bulletin, Pomona, Calif., which I am inserting in the RECORD under leave to extend my remarks:

[From the Progress-Bulletin, May 19, 1969]

EISENHOWER LEFT VALUABLE LEGACY

Dwight D. Eisenhower accomplished many things in a long and brilliant career of public service. It may be, however, that he will be remembered longest for the legacy of moderation that he has left the nation. Moderation was the basis of the General's Middle-of-the-Road political philosophy. But, moderation was obviously more than a political philosophy to Eisenhower. It was a creed. And, in these critical, turbulent times, the creed of moderation bequeathed to us by the former president is a foundation upon which all Americans can stand and face the future with confidence.

In one of his last messages to his fellow citizens—an article appearing in The Reader's Digest, under the title "We Must Avoid the Perils of Extremism"—General Eisenhower applied his philosophy and his creed to the contemporary scene, and he did so with a heartening sense of optimism. In one passage he said, ". . . I for one refuse to become pessimistic about America's future. Granted that storm signals are up, I believe nevertheless that we as a people have the good sense to place patriotism and human understanding above the arrogance of personal prejudice—and that we can and will solve peacefully the problems that beset us. I believe that we will do so through our traditional reliance upon the philosophy of moderation—or Government by Common Sense."

As a student of American history, Eisenhower noted that most of our great presidents—Washington, Lincoln and Theodore Roosevelt among them—were men of the Middle Way. He characterized the extremists of both left and right as people who spill off the ". . . one-way highway of progress" into the gutters. He believed that extremism comes easily" . . . to men who have doped themselves with delusions of their own unblemished virtue and the rascality of others . . . The Middle-of-the-Road American—Negro or white—has put up with a lot from the extremists." Eisenhower never felt that a Middle-of-the-Road American is simply a fence-sitter and pointed out that it often takes more courage to occupy the center than any other position ". . . for you are then subject to attack on both flanks."

Eisenhower was not above compromise and considered it a highly useful tool within the limits of basic principles. He was keenly aware of the dangers of today's extremism. On the one hand, he pointed out that there are those who want to socialize everything. On the other, there are the far-out conservatives who want to do away with the graduated income tax, stop social security, abolish all regulatory agencies, smash the labor unions and confine the functions of the federal government to running the military establishment and the post office and conducting our foreign affairs. While accepting a measure of governmental responsibility in social welfare, he warned, ". . . I have said to those who espouse the completely paternal government that they are advocating the road to national bankruptcy and human ruin . . . you cannot place millions of citizens on a permanent dole and leave them there to rot in mind and spirit . . . This today is at the root of our tragic difficulties in the slums."

Eisenhower left a word of advice to youth: "It will soon be your country to run . . . When you have a just and reasonable cause, protest all you wish, but remember that there can and should be order and decency in democratic protest. Stand up and be counted when troublemakers try to rob you of your right to an education. If it becomes necessary for the forces of law and order to move in and quell such disturbances, give them your support." At the conclusion of his brief article, the General and former President of the United States said, "In this article I have tried to set forth some of the guideposts of the Middle Way. I would hope with all my heart that during the next few years our country will unite under the President in giving this Common-Sense approach a chance."

The Eisenhower legacy of moderation will be considered by many the foundation on which to build an even greater nation in the future.

MEMORIAL DAY

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. WALDIE. Mr. Speaker, the Nation has paused this past weekend to honor its gallant men and women who died in the service of this country. Many citizens have visited the resting places of the hon-

ored dead, others have given but a moment to reflect on the complete sacrifice.

One man, Mr. William Stone of Walnut Creek, Calif., wrote a moving poetic tribute to those we honor on Memorial Day and I submit it for the RECORD and for the edification of all the Members of Congress:

MEMORIAL DAY
(By Bill Stone)

White crosses gleaming row on row,
Ghost like in the twilight glow;
For those who gave their last full measure,
Of their devotion, blood and treasure,
Making resolute our nation great,
Regardless what may have been their fate;
Lying silently in a lonely grave,
Remembered for the life they gave.

The sacrifice so nobly paid,
For freedom's cause were not afraid;
Faced bayonet, heard cannons roar,
Knowing full well what lay in store.
Vigilance the price for liberty,
Compassion for the enemy.
Greater love hath no man than this,
Giving his life for a friend of his.

With thankful hearts we decorate
The grave of our fallen comrade;
Praying to God that He will give
Our nation courage it may live,
Refreshing daily our memory,
This debt we owe to keep us free.
The nation sorrowful with bowed head,
Reverently honor our valiant dead.

AN OUNCE OF PREVENTION FOR LABOR AND MANAGEMENT

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. ASHBROOK. Mr. Speaker, several years ago, on July 20, 1967, I inserted in the CONGRESSIONAL RECORD a document issued by the Progressive Labor Party entitled "The Vietnam Work-In," a manual of instruction for radicals directed at reaching and influencing American workers against the war in Vietnam. As is generally realized by now, the PLP is a revolutionary-motivated organization which split off from the Communist Party U.S.A. early in the 1960's over ideological differences involving Red China. The manual outlined the proper approach for radicals to take in securing jobs in industry with a view to winning over workers to PLP's anarchistic goals. Although the project met with little success at that time, the idea of reaching the American worker was not forgotten.

Just recently the work-in manual reappeared again with but minor changes in its text. This time the target is not exclusively the war in Vietnam but any issue which can win supporters to the camp of the revolutionaries. The latest version of the manual is being circulated by Students for a Democratic Society—SDS—the organization which has been the driving force fostering disruptive activities on college campuses.

Leaders in business and industry should give careful attention to this latest program of the SDS. One problem that our leaders in the business and industrial world can do without is the disorder and violence which paralyzed campuses throughout the Nation in recent months. SDS leaders seek to sow discontent among the Nation's workers as they did among small factions of duped students. Needless to say, it takes but a comparatively small number of malcontents skilled in the science of disruption to amplify worker's complaints, heretofore peacefully mediated, with the hope of creating disorder.

Labor leaders, too, should be concerned with the SDS workers program. The latest issue of the FBI Law Enforcement Bulletin, the June issue, features a statement by Director J. Edgar Hoover concerning the possible takeover of the SDS by Communist elements oriented to both Moscow and Peking. Years ago labor leaders had the good sense to rid their ranks of a number of unions whose priorities of allegiance ranked Moscow before the United States and the American workingman. Like management, the ranks of labor can well do without the ill will, disorder, and destructive agitation visited upon college campuses in recent months. Management and labor will continue to have their honest differences which are eventually resolved by compromise and mediation. Without vigilance and resolute action both segments of our society might well be faced with a rule-or-ruin force "bent on anarchy and nihilism," to quote Director Hoover.

Barron's, the national business and financial weekly, in its issue of May 19 called attention to the presence of revolutionary elements which, if unchecked, could create serious trouble for both labor and management. Plainly called for here is a joint effort by leaders of both factions to alert all involved concerning the destructive plans of these revolutionary groups. As in the case of the college campuses, appeasement and concessions will result in losses to both management and labor.

I include the article, "Comes the Revolution," from the May 19 issue of Barron's in the RECORD at this point:

COMES THE REVOLUTION—U.S. INDUSTRY HAD BETTER LOOK TO ITS DEFENSES

Henry Ford II, chairman of the board of Ford Motor Co., and Walter Reuther, president of the United Auto Workers of America, may sit at opposite ends of the bargaining table, but they really have a good deal in common. One way or another, of course, they both make a living from the production and sale of cars. Moreover, each man in his own right can point with pride to a richly deserved reputation for social consciousness. A recent head of the National Alliance of Businessmen, Mr. Ford worked tirelessly to find jobs for the so-called hard-core unemployed; in 18 months his own concern has put some 13,000 on the payroll. The redheaded Mr. Reuther is the very model of a flaming liberal, under whose aegis the UAW has proclaimed its solidarity with the California grape workers, contributed to the notorious Child Development Group of Mississippi (which the Office of Economic Opportunity, for legal reasons, once felt compelled to disown); and helped launch the militant Citizens Crusade Against Poverty.

Late last month Messrs. Reuther and Ford, albeit unwittingly, happened to share another distinction: that of being denounced as ruthless exploiters of minorities and racists to boot. On Friday, April 25, at Ford Motor's assembly plant at Mahwah, N.J., a group of workers known as the United Black Brothers walked off the job, and, with help from Students from a Democratic Society and the Black Panthers, threw up a picket line and temporarily disrupted production. "The fight against Ford's racism and abuse . . . has been joined . . . ," shrilled a UBB flier; "Power to the workers." In an interview published in the Guardian, self-styled "independent radical newsweekly," a spokesman elaborated: "At Mahwah, the watchword is production . . . everything is sacrificed for production. The company doesn't care about human beings, just units. . . . The workers' only tool against management is the union, but under the last contract the local union officials' salaries are paid by management, so who do you think they represent? The UBB is a black organization, but it represents all workers, black, white and Puerto Rican, because all workers are sacrificed equally for the sake of production. . . . We know we have no representation; we have no redress in the UAW."

Life-long champions of the underdog and perennial good guys, Messrs. Reuther and Ford must have been jolted to find themselves so abruptly cast in the unfamiliar role of villain. Along with the rest of U.S. industry, however, and perhaps much of organized labor as well, they had better get used to the idea. "Enlightened" or otherwise, capitalism today has come under direct assault from a hit-and-run coalition of radical students and alienated members of minority groups who seek not to achieve higher wages, improved working conditions or more jobs, but—as in colleges and universities throughout the country—to shake the Establishment and ultimately bring it down. Scorning such bourgeois expedients as collective bargaining, they opt for tactics like infiltration—SDS has issued its members detailed instructions for a summer "work-in"—intimidation, boycott, sabotage and violence. "If production is the central arena in which capitalism will be slain," solemnly explains a Guardian pamphlet called Black Workers in Revolt, "it follows that the hand that holds the wrench shall be the hand that holds the gun." Hard to believe, perhaps—as most Cubans must have found Castro, or Cornell a handful of armed undergraduates. But like their comrades on campus, the revolutionaries on the picket and assembly lines mean business. They also play for keeps.

After the fashion of totalitarians from Karl Marx to date, they make no secret of their aims. At a meeting last winter at the University of Michigan, the national council of SDS endorsed a proposal to "continue efforts to expand . . . beyond the campus and into working-class constituencies." A former SDS leader, now a New Left journalist, went on to observe: "SDS must become more than an organization of college students and broaden its base to include all young people oppressed by capitalism. The proposal urges new efforts in organizing among high school students, young people in the military, drop-out and forced-out unemployed young people, and especially young workers in factories." Toward this end, SDS (and an offshoot, Movement for a Democratic Society, or MDS) are working hand-in-glove with various radical labor splinter groups which have sprung up of late, notably among rank-and-file auto workers. Starting with the Dodge Revolutionary Union Movement (DRUM) last summer, the radical coalition, now known as the League of Revolutionary Black Workers, has branched out to embrace Ford and two other Chrysler plants. A spokesman recently was quoted as saying, with more passion than grammar: "I think it's inevitable that there has to be a revolution in this country, that the ruling class has to be overthrown. . . ."

Such rhetoric sounds like the old jokes that started "Comes the revolution. . . ." However, these people are in grim earnest and they are not stopping at words. On the contrary, the past few months have seen one radically inspired thrust after another at corporate enterprise. In February hundreds of students from riot-rocked San Francisco State College joined the picket line of refinery workers striking against Standard Oil Co. of California. (Last week a smaller group picketed the annual meeting of Standard Oil Co. of New Jersey; "we know the companies are separate," said one, in a new departure on collective guilt, "but they've run by essentially the same kind of people.") In Seattle the University of Washington SDS pinned a United Fruit recruiter against an office wall and forced him to watch a film purporting to depict his company's depredations in Latin America; a GE recruiter was driven off the Queens College campus. In the nation's capital, nine anti-war demonstrators broke into the offices of Dow Chemical Co., ransacked the files and splattered blood over the walls. In Detroit DRUM and its allies have staged a series of wildcat walkouts and are constantly threatening the Big Three with boycott.

The latest outburst of the kind, at Ford's assembly plant in Mahwah, N.J., was ostensibly triggered by a racial epithet which a supervisor is alleged to have hurled at a Negro worker. Be that as it may, the radicals lost no time in exploiting the affair. Within 48 hours—though nobody outside the plant ordinarily would have known about it—a picket line, beefed up by SDS members and Black Panthers, appeared at Mahwah, menacing enough to intimidate workers into staying home and compel management to suspend two night shifts. While things have quieted down, sporadic picketing continues and tension runs high. The United Black Brothers have set forth a list of eight demands. If management fails to meet them, the aforementioned flier warns: "We will not be responsible for any actions taken against the oppressive and racial (sic) policies of the Ford Motor Co."

Mahwah ought to open industry's eyes. For if Henry Ford II, with his flawless liberal credentials, can be attacked as an economic royalist and racist, anyone can. Devotion to good works, including finding jobs for members of minority groups, plainly yields no immunity. Indeed, there is reason to suspect—as Barron's ("The Jobmongers") argued last July—that such efforts are begging for trouble. Turnover among beginners tends to be high, a condition that builds up resentment against both organized labor (which collects a non-refundable initiation fee and several months of union dues) as well as management. Layoffs hit hardest at low-seniority workers recruited from the hard-core unemployed, an unfortunate fact of life into which Ford Motor Co. now has run. To judge by Mahwah, finally, industry is sadly unprepared for what may come. For management has failed to take a firm stand. After warning 16 workers about breach of contract, it discharged only three. Meanwhile, though no witnesses to the alleged affront could be found, the offending supervisor has been quietly removed from the scene—to defuse the situation, so a company spokesman told us—and his future is uncertain. All we can say is that Ford has had better ideas.

Like university presidents and college deans, who until lately pooh-poohed warnings from such careful and courageous reporters as Alice Widener ("Ten Days in April"; "The Detonators"), corporate executives may try to shrug off the mounting evidence of a radical conspiracy against private enterprise. We can only remind them that those who refuse to learn from history—or from what's happening in front of their noses—are doomed.

OBSCENITY IN THE MAILS

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. ULLMAN. Mr. Speaker, we have waited too long to regulate the flow of obscene advertising through the U.S. mail. We must no longer grant free license to advertisers who have no respect for a common code of decency or for the privacy of the average American family, and who use sexual sensationalism to promote their products. For this reason, I have introduced legislation, H.R. 11110, which would not interfere with the right of free expression, but would provide citizens protection against the intrusion into their home of this unwanted, offensive mail.

My measure is patterned after the President's proposal which was recently introduced as a part of a broader bill affecting postal operations. I fully support the administration on this issue, and have introduced this bill because I think that it takes the most effective approach to the problem, and has the greatest possibility of being acted upon by the House.

The people who are probably the most indignant about the recent proliferation of sexually oriented advertising are those parents who wish to protect their minor children from exposure to this literature. Some high State courts have already held that it is the proper role of the government to protect minors from lascivious material, and have supported the absolute prohibition of mailing sexually oriented advertising to children. I think that the Federal Government should go further than this to permit all citizens, whether or not they are parents, to request that advertising of this nature be kept out of their mailboxes.

I do not quarrel with the necessity of protecting our right to free speech, and respect of the court's efforts to safeguard these essential guarantees for a free society. However, I think that in the case of pornographic advertising, the right must be counterbalanced with an equally important right to personal privacy. The American public needs a means of preventing the steady intrusion into their homes of this offensive material.

There are laws on the books which were designed to provide the individual this sort of protection, but they have proven inadequate and unworkable. Under these laws, it is not until the addressee and his family have received and inspected the literature that they have any recourse. Often the envelope is unmarked, giving no clue to its contents. Many residents complain that when they do take steps to have their names removed from a company's mailing list, their postmaster tells them that he has no way of guaranteeing that this can be done or that the individual will not continue receiving such mail. I think that the most workable means of providing protection is to allow citizens to request that none of this mail be delivered from anyone, and have this request respected, by providing stiff penalties to those who persist in sending such advertisements.

I am not advocating that the Federal Government act as a censor of the public's reading material. However, I believe that we must consider how far the freedom of one individual can go before it becomes an infringement of another's right to privacy. This is why I am asking Congress to create a method which will not ban a certain class of literature, but will simply enable the American public to protect itself from the unwanted intrusion of this offensive advertising into their homes.

REPRESENTATIVE EILBERG INTRODUCES THE EXTRAORDINARY TAX RELIEF ACT OF 1969

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. EILBERG. Mr. Speaker, today I have introduced the Extraordinary Tax Relief Act of 1969. This bill is designed to provide relief to certain individuals over 65 years of age who own or rent their homes and who are paying a disproportionate share of their limited incomes for property taxes. My bill will provide them some relief through a system of tax credits and refunds for that portion of their property tax which is more than they can afford.

Low income and old age is not a transitional problem that given present trends will solve itself. Unless action is taken now in a variety of areas most of our senior citizens will not have sufficient incomes to live out their retirement years in a manner which allows normal participation in community life. Three out of every 10 people who are age 65 and older—in contrast to one in nine of younger people—were living in poverty in 1966. Yet many of these people did not become poor until they became older. Half of all people now 65 and over are 73 and older. In the years ahead, the increase will be particularly great in the older age brackets. With the population 65 and older projected to rise by some 50 percent during 1960–85, the population 85 and older may double. Thus the retirement revolution in this Nation reflects two trends. At one end, there is an increase in the number of persons over 73 and, at the other, more and more early departures from the work force are taking place.

National economic growth, while putting added dollars into the pockets of the working group, increases the pressures on the retiree substantially. A rise in earnings of 4 percent annually—not an unrealistic estimate in view of present conditions—means that consumption levels will approximately double in two decades. This eventuality will place those living on fixed incomes in an increasingly difficult position in the marketplace. Earnings drop as advanced age curtails already limited earnings opportunities. In comparison to the age group 65–72, only half as many men 73 and over and a third as many women worked in 1962 and the earnings of these older workers

were significantly lower. The overwhelming proportion of people retiring today receive total pension income—from both public and private pensions—which is only 20 to 40 percent of the average earnings they received immediately prior to retirement. Of families retiring in the next decade and a half, it can be projected that almost 60 percent of those with preretirement earnings between $4,000 and $8,000 will receive a pension income which is less than half these earnings. Projections to 1980 indicate that about half the couples and more than three-fourths of the unmarried retirees will receive $3,000 or less in pension income.

Figures which I have gathered indicate that there are now some 20 million Americans in the age brackets over 65. Nine million of these are men and 11 million are women. Nine out of every 10 older men and 8 out of 10 women live in their own households either as heads or wives of heads of households. For most older people, the major—and often only asset—is the home they own. Assets readily available for daily living are meager, especially for the aged with the lowest incomes. Financial assets amounted to less than $1,000 for 37 percent of the couples and for more than half the unmarried men and women according to a 1963 survey by the Social Security Administration. Almost all aged persons saved for their retirement years and have accumulated some resources in the form of liquid assets, equity in their homes or real estate, and so forth. Persons in the retirement ages have more financial assets and less debt than the population generally. Two estimates of asset holding by the aged in 1962 are available.

	Federal Reserve Board estimate	Social Security Administration estimate
Average assets:		
Total	$30,008	$15,109
Liquid assets and market securities	4,957	3,783
Median assets:		
Total	9,860	5,840
Liquid assets and marketable securities	950	570

These two estimates of asset holding differ because the surveys differ, not only in definitions, but in the units surveyed. The survey unit used in the Social Security Administration's study produces a lower value of assets because each aged couple or nonmarried person is treated as a separate unit. In the Federal Reserve Board Survey, data for such persons who are members of a family—and these are the older persons who have the least assets—are pooled with data for the family unit.

Regardless of which dollar amounts are used, the major asset of older people is the owned home—not readily convertible to cash for daily living—and the lower the income, the lower the assets.

The hope that assets are an important potential for improving the income situation of today's older people has focused attention on the possibility of raising incomes through conversion of assets into income prorated over the remaining life expectancy. Data from the 1963 Social Security Administration survey provides a measure of such potential income. Each unit's assets were assumed to be capable of earning a 4-percent rate of return. The principal and appropriate interest amounts were then divided over the expected remaining years of the unit's life in equal annual sums so that the assets would be exhausted at the end of that period. The annual amount computed in this way was added to current money income—less income actually received from assets.

Use of this procedure obviously ignores the question of feasibility or desirability of this form of asset management for the individual. Particularly unrealistic, for example, is the conversion of the owned house or farm or other business assets into prorated assets. The effect on median income of assuming that assets are converted into life annuities may be summarized as follows:

Unit	Actual income	Potential income	
		Excluding home equity	Including home equity
Married couples	$2,875	$3,130	$3,795
Nonmarried men	1,365	1,560	1,845
Nonmarried women	1,015	1,130	1,395

The median potential income is about 10 percent greater than actual income when home equity is excluded and more than 30 percent greater when home equity is included. This reflects the fact that asset holdings are greater at the higher income levels than at the lower. The addition of distributed assets to income increases the inequality of income distribution. Of those with incomes of less than $3,000, fewer than one in four, had asset holdings great enough to shift their income to a higher $1,000 interval. Use of potential income other than the home equity would still leave more than one-third of the aged couples and about two-thirds of the nonmarried group with insufficient income to live independently at the modest but adequate standards established by the Department of Labor's Bureau of Labor Statistics for that period.

I have introduced legislation in this Congress which would provide for an annual cost-of-living increase for social security beneficiaries tied to the upward trend in the Consumer Price Index. I have also stated my belief that the President's action in reducing the social security increase request from 10 percent as proposed by former President Johnson to 7 percent is foolhardy. I do not believe that the way to achieve a budget surplus is to take the money for the surplus out of the pockets of social security recipients. Also, I have sponsored legislation which will increase to $3,000 the amount which a social security beneficiary can earn and not suffer any reduction in his benefit level. Finally, I have sponsored legislation which will improve the Federal civil service retirement system substantially and insure the solvency of the retirement fund. I have striven during my years in the Pennsylvania State Legislature and during my two terms as the representative of the Fourth Congressional District to initiate and support measures which are designed to increase and at least maintain the buying power of those older Americans living on fixed incomes.

The Extraordinary Tax Relief Act of 1969 which I have introduced today is, in my opinion, part of the answer to assuring that those of our citizens living on fixed incomes can have the buying power of these incomes maintained and increased. From the statistics on increases in the property tax nationwide, and the analysis of the incomes of our senior citizens which I have given here, it appears obvious that homeownership is becoming an increasing burden on our older citizens.

I do not believe that any of us want our senior citizens to sell their homes and convert the money they receive into lifetime annuities if they desire not to. The majority of these citizens have worked most of their adult lives to get these homes and for us to allow them to lose them because they cannot pay their increasing property tax bill would be doing both the Nation and these citizens a grave disservice.

The Extraordinary Tax Relief Act of 1969 which I have introduced is designed to ease the property tax burden on those low-income elderly persons whose property taxes are excessively high in relation to their total income by allowing them a credit against their Federal income tax for that portion of their property tax which is determined to be excessive.

We all know that older people living on fixed incomes have trouble making ends meet and that increasing property taxes have made this more and more difficult. When these people purchased their homes, property taxes were much lower than they are now and they had a regular income. In urban areas especially, the problem of rising property taxes and their effect on the limited-income senior citizen has been substantial. In these areas also, incomes have been substantially eroded by inflation. We know that these elderly people do not want to move from their homes. We also know that moving is a traumatic experience for these people more than for any other group.

To cope with this problem, the bill I have introduced today provides property tax relief to those over 65 who have a total annual income of $3,500 or less. Those whose incomes are too low to pay Federal taxes will receive a tax refund on the excessive amount of their property taxes while others will receive a tax credit. To assure that the relief which the bill provides will go only to those who need it, applicants will be required to list all forms of income which they receive including: Adjusted gross income, support money, public assistance, the gross amount of any pension or annuity, nontaxable interest received from the United States or any other governmental entity, workmen's compensation, and the amount of "loss of time" insurance payments. Claimants will not have to report gifts from nongovernmental sources, surplus food, or other relief of this kind supplied by a governmental entity.

The maximum amount of property

taxes which can be considered in establishing the Federal tax credit or the tax refund which would be accorded to low-income senior citizens under my bill is $300. The tax credit or refund will be available not only to homeowners but to apartment dwellers as well. For renters my bill assumes that, to the extent that landlords can shift the property tax burden to tenants, low-income senior citizens in rented quarters also feel the pinch of increasing property taxes. Thus the bill provides the assumption that 25 percent of the annual rent payment will be considered as the property tax credit for the purposes of the tax credit or tax refund.

Property taxes are considered as unusually high if they exceed a certain percentage of household income. These percentages are increased as household income increases. After determining the amount of the tax which is excessive, a percentage of this excessive part will be relieved under my bill.

To determine how much of a tax credit or refund a claimant under this bill will receive the following formula is used:

I		II	III	IV	V
"If household income is—					
At least—	but not more than—	Then the allowable claim is the product of—	times the amount by which eligible property taxes and rent exceed the sum of—	plus—	of household income in excess of—
0	$500	.75	0	0%	-----
$500	1,000	.75	0	3%	$500
1,000	1,500	.60	$15	6%	1,000
1,500	2,000	.60	45	9%	1,500
2,000	2,500	.60	90	12%	2,000
2,500	-----	.60	150	15%	2,500

Some examples of the tax refund or credit which a household would receive under my bill are as follows: A family with an annual household income of $400 would receive $225. A family with an annual household income of $700 would receive $221. A family with an annual household income of $1,200 would receive $163.80. A family with an annual household income of $1,600 would receive $147.60. A family with an annual household income of $2,200 would receive $111.60. A family with an annual household income of $3,000 would receive $60. A family with an annual household income of $3,500 or more would receive no refund or credit under the bill.

In States which have enacted legislation similar to the bill which I have introduced today, the fiscal impact on the economy has not been too great. However, I feel that my bill will help the State and local governments avoid even this slight drain on their available resources since it appears that the major reason why more States than Wisconsin and Minnesota have not enacted such legislation is because even the minimal financial impact of the tax credits or refunds involved could well push them over the brink to fiscal disaster.

The Wisconsin law was passed in 1964 and liberalized in 1966. In 1967, it provided tax relief to 69,000 low-income elderly families who own or rent their homes with an average payment of $94.78. Thus, $6.3 million was lost to the State treasury even though the amount granted came to about 1 percent of the total property tax collections in the State. About 98 percent of the money paid out under this law was in the form of tax refunds to households whose income was low enough so they did not have to pay taxes.

The Advisory Commission on Intergovernmental Relations has recognized the need that some property tax relief be provided for the elderly in its reports, State and local finances—significant features. The most serious problem with the property tax, especially as it applies to low-income senior citizens, is that it tends to be regressive and those with lower incomes tend to pay a larger percentage of their incomes in property taxes than those with higher incomes. I believe my bill will reduce the regressivity substantially without causing the slightest fiscal dislocation to State or local governments. Most importantly, this bill will increase the buying power of our senior citizens living on fixed incomes and allow them to keep their hard-won homes.

INVESTORS LEAGUE INC. WILL RECOGNIZE OUTSTANDING MEMBERS OF HOUSE AND SENATE

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. FISHER. Mr. Speaker, the prestigious Investors League, Inc., devoted to the cause of good government, is wielding a wholesome influence in behalf of a lofty cause. The league is advancing the cause of free enterprise—which is the very soul of Anglo-Saxon civilization. This is indeed a commendable objective, for which this organization is being widely acclaimed.

Under leave to extend my remarks in the RECORD I include a letter recently received by me from the Investors League. The letter follows:

Congressman O. C. FISHER,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FISHER: In our tours around America, we continually see our fellow citizens, the majority of whom are working, raising families, contributing their money and talent to community betterment, voluntarily paying their taxes, and still having the energy to ponder the many problems of our times.

The American private enterprise system has helped almost 90% of us to enjoy a piece of the American dream. Too often today we are prone to criticize individuals and institutions including our economic system which is based on risks and rewards and has enabled Americans to enjoy a gross national product larger than the next five countries of the world.

Last fall the Investors League formed a Congressional Awards Committee to honor annually the two United States Senators and two Congressmen who, in the opinion of the Committee, have contributed the most to the American enterprise system in each session of Congress. This is one way in which the 24 million Americans who have invested in our business system can acknowledge the contribution made to strengthen the country.

What a wonderful goal it would be if 100 million Americans could be helped to become investors in the private enterprise system!

Sincerely yours,

WILLIAM JACKMAN,
President, Investors League, Inc.

JOHN T. MCCARTY,
Chairman, Congressional Awards Committee.

VIVA CHAVEZ

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. BROWN of California. Mr. Speaker, California's Imperial Valley is part of what Nicholas von Hoffman, the astute young Washington Post feature writer, terms "the other California—the valleys, flat, hot, laborious, where they grow the food, the fruit, the grapes."

Two weeks ago, my friend Cesar Chavez led a group of grape strikers on a march through Imperial Valley, through the area in which I was born and where I grew up, through the beauty and the heat over the Mexican border to bring attention to the maneuverings of some grape producers who are bringing laborers across the border in an effort to break the 4-year strike.

I have supported the huelga over these past 4 years, and I will extend my backing—and whatever else I can do—for as long as this vital drive continues to extend and maintain decent working and living conditions for grapeworkers.

Nicholas von Hoffman accompanied the marchers through Imperial Valley. He was there in Brawley, and reported on problems faced by Mexican-American students in the local high school. And, as von Hoffman points out:

The students' complaints are the usual ones you can hear from minority kids if you care to listen to them talk about their schools.

I picture not only the problems of Brawley, but also those same sentiments which are raised almost daily in my constituency of East Los Angeles.

I would now like to insert Nicholas von Hoffman's article, "Viva Chavez," into the RECORD along with a story from the May 23 Los Angeles Citizen describing further the Imperial Valley march.

[From the Washington (D.C.) Post, May 21, 1969]

VIVA CHAVEZ

(By Nicholas von Hoffman)

BRAWLEY, CALIF.—There are two Californias. There is the California of the beaches, the mountains, the good places to eat, the resorts, the places where you do your California dreamin.' The other California is of the valleys, flat, hot, laborious,

where they grow the food, the fruit, the grapes.

Bakersfield, Delano in the San Joaquin are in the second California of stoop-labor and heat. So is this town, Brawley, a green place in the desert of the Imperial Valley, about 30 miles from the Mexican border. It's not too much of a place with its drive-ins and its used car lots, their plastic pennants forever fluttering. It's a town that reminds you a little bit of Greenwood, Miss., except that the Government-subsidized irrigation has made it richer and there are palm trees, those giraffes of the vegetable world.

The other day there was a Mexican man on the highway which runs south from coachella through desert where there is nothing to see but sand, scrubble brush and the signs of real estate developers proclaiming the coming of lakes, marinas and planned retirement cities. A robust old man he was, not feeble, but bowlegged, redfaced, wearing a strawhat and carrying a sign which read, "Slow Down, Marchers Ahead." Heavy, articulated diesel semis hauling onions and alfalfa and sugar beets drove with undiminished speed and noise past him. Their wind almost blew him off the hot highway, but he held his position, following them with his head and his eyes as they rolled off into the desert. He wouldn't give up.

A half mile up the road came the marchers. They wouldn't give up either. There weren't many of them, maybe 40 or 50 grape strikers walking down the highway being led by a woman in a straw cowboy hat. She carried the gold and white canvas painting of Our Lady of Guadaloupe on a staff. Slightly behind her on either side were men carrying the American and Mexican flags.

For four years the Mexican-Americans have had their strike, their *huelga* as they call it, against the grape growers and for social justice. They and their leader, Caesar Chavez, have marched, picketed, vigiled, struck, fasted, implored and prayed to little purpose. Only 11 companies have signed contracts with the union. But they're like the old man. They don't give up. Instead they think up more tricks and stunts to perform so they can catch the national attention and press their claims on somebody who will honor them.

This latest contretemps which ended on the Mexican border a few days ago is an attempt to hook up with the Mexican labor movement to prevent the importation of strikebreakers from the other side, something the American government is suppose to stop but does not. It is another example of the growing number of complaints that the government primarily serves the powerful and the well organized and not the weak and disorganized.

Recently Washington has paid the farmworker's union some attention. However, Chavez wishes the Secretary of Labor hadn't bothered because he regards the Administration's proposals for new legislation as a union-busting scheme wrapped up in the language of philanthropy. "For 35 years the growers have opposed all legislation, they've been against everything, including child labor regulation and minimum wages, but now they turn around and support this law," says Chavez, a quiet, pious man around whom a cult of admiration akin to Martin Luther King's is building.

Chavez, like King, has integrated non-violence into his working philosophy of life, but unlike King, Chavez can be very specific about law and technicality. He is not only a leader of "la raza" as the Mexican-Americans collectively call themselves, but a man who heads a labor union and wants the protection of government supervised union elections, something farmworkers have never had. He doesn't want what the Nixon Administration is offering because he believes it would put farm workers under the jurisdiction of the grower-controlled Department of Agriculture, would forbid strikes during harvest time, and then, after defanging and disarming the union, would force it into compulsory arbitration. It would also make secondary boycotts of grapes in supermarkets illegal. It's been the attempt to boycott grapes being sold by supermarket chains that have dramatized the strike and spread the word of it across the country. The marchers here carried signs saying "Abajo Safeway" (Down with Safeway).

"They should give us a Wagner Act as they did the other unions in the 1930s when they were young and weak. They should give us the same protection and freedom the Wagner Act gave the other unions for an equal length of time. If we had an equal chance in the local courts and in the importation of strikebreakers, we could beat them in the fields anytime," says Chavez who emphasizes it was only after the unions were organized under the Wagner Act that restrictions on boycotts and striking were put on them in the form of Taft-Hartley law which was designed to limit the power of overly strong unions, but which effectively destroys new unions.

When the marchers reached Brawley they were joined by several hundred high school kids who are in revolt because the school has forbidden them to wear a button proclaiming the "Mexican-American Revolution," or so says Loupe Sabala, their 18-year-old leader. "They said our button meant violence even after we explained that we meant revolution through education. They said they were for our goals but the button would cause so much turmoil that they had to ban it," he explains.

The students' complaints are the usual ones you can hear from minority kids if you care to listen to them talk about their schools. They say they are discouraged by the teachers from trying to enroll in the academic classes that lead to college and the professions, that they are put down, that their culture and history is ignored and that kids who speak Spanish only are dumped into classes for the mentally retarded. Now they are aroused, imbued with a new sense of la raza that makes them identify themselves with all Mexican-American aspirations and pushes them to take their place in the line of march when their parents hang back with the frightened conservatism of older people whose whole lives have been one long squelch.

They are marching in the valleys of the second California. The laws of Washington or not they will walk on, hopefully without violence, hopefully still believing in our system of government and economics, hopefully still reciting their litany of militance and progress:

"Que Viva La Hulga!
Que Viva Virgen de Guadaloupe!
Que Viva Caesar Chavez!
Que viva La Causa!
Que Viva La Raza!"

[From the Los Angeles (Calif.) Citizen, May 23, 1969]

LONG MARCH PAYS OFF: ANOTHER GRAPE STRIKE LOOMS WITH "GREEN CARDER" SUPPORT

(By Sal Perrotta)

The countdown for another grape harvest showdown between the United Farm Workers and Coachella Valley growers is ticking off the final days toward a strike in the vineyards.

A meeting set for tonight in Coachella may signal the start of picketing in a matter of days, according to Jim Drake, United Farm Workers organizing Committee (UFWOC) administrative assistant to Cesar Chavez.

Full scale grape picking is slated to begin in early June.

Optimism for a successful strike has pervaded planning especially since last Sunday's rally in Calexico, which culminated a 100-mile trek by grape pickers through the desert to the Mexican border.

Drake said that Mexican nationals—pickers permitted to work on the U.S. side of the border on temporary green cards—are more responsive than ever to UFWOC's appeal for support.

"We hope to consolidate previous inroads we've made with gains last Sunday in communicating with 'green carder' crew leaders," Drake said.

"We're offering to treat them the same as our own members in asking that they respect picket lines."

This would include a guarantee of seniority in the union once contracts are signed and the possibility of strike benefits, according to Drake.

The UFWOC official said that the strong prospect of greater support from Mexican pickers is the result of a combination of several factors.

The United Farm Workers first of all has taken a different course in communicating with "green carders," Drake said.

"We're not just asking them to stay away," he said, but have appealed to them to join us because our intention is not to shut them out of their jobs."

The Mexican press also has been "more positive" in coverage of the situation and the march was a singularly important element in changing attitudes, he said.

"The march came across as a 'gut issue' to the Mexicans," Drake said. "I think they really saw for the first time the plight of farm workers on this side of the border."

Another major factor was the appearance of Sen. Edward M. Kennedy at last Sunday's rally.

"His personal support of the strike and his urging 'green carders' to listen to Cesar (Chavez, UFWOC director) to respect picket lines and join the union had a tremendous effect," according to Drake.

Kennedy told a crowd of about 1000 in Calexico last Sunday that he had traveled the 3000 miles from Washington to tell farm workers that "the voice of Cesar Chavez is being heard in Congress."

"Injustices to farm workers can no longer be tolerated," he declared.

He also told the cheering throng that it has been 50 years since child labor was abolished in the textile mills in Massachusetts and that it is about time child labor be prohibited in the fields.

Since then, leaflets printed in Spanish and distributed at the border inform readers of Kennedy's position—"respect the picket lines, join the union."

Growers attempting to counter apparent gains of UFWOC with "green carders" are taking full page ads in newspapers painting a picture of lush jobs awaiting pickers in the vineyards.

Sharing the platform with Kennedy at Calexico were Sen. Ralph Yarborough (D-Texas) Sen. Walter Mondale (D-Minn.), and Rep. John Tunney (D-Riverside).

Yarborough and Mondale had led the last five miles of the march to the border, started in Indio May 11 to dramatize UFWOC's campaign to organize the Mexican farm worker commuters.

The number of marchers reached its peak Sunday after a low of 35 during the week as the group braved intense heat of the Coachella and Imperial Valleys, at times hitting a sweltering 106 degrees.

While UFWOC officials made final plans for the strike, their boycott of California table grapes gained more international significance.

Dominion Stores Ltd., the largest retail grocery chain in Canada, agreed to support the boycott. Canada represents the largest export market for California grapes, having purchased about $20 million worth a year in the past.

A GROUP OF QUEENS COUNTY, N.Y., ATTORNEYS PRESENTED BY CONGRESSMAN BENJAMIN ROSENTHAL

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. ROSENTHAL. Mr. Speaker, this morning it was my distinct pleasure to sponsor a group of attorneys from the Queens County Bar Association—New York City—for admission to practice before the U.S. Supreme Court.

I was delighted to have been asked to participate in the presentation of these individuals to the Court, and am taking the liberty of listing their names herewith in the RECORD, as follows:

A GROUP OF QUEENS COUNTY, N.Y., ATTORNEYS PRESENTED BY CONGRESSMAN BENJAMIN ROSENTHAL

Harry Berlin, Lee H. Bostic, Thomas J. Dillon, Terry S. Eleftheriades, Albert I. Gilman, Miss Patricia F. Gilmartin, Ira M. Hariton, Kenneth R. Hendra, Eli Katz, John W. Kenny.

Robert P. Leighton, Arthur W. Lonschein, Robert I. Mandel, James J. McDonald, Harold B. McLaughlin, Raymond F. O'Brien, Miss Marjorie O'Connell, Andrew J. Orensky, Miss Joan E. Osterndorf, John F. Osterndorf.

Joseph J. Regan, Jr., Milard K. Roper, Lawrence R. Schneider, Ronald J. Schwartz, Joscelyn E. Smith, Francis J. Valentino, Donald Warren, Jerome M. Weinberg, Fritz Weinschenk.

KILLED

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. LONG of Maryland. Mr. Speaker, Sp4c. Robert M. Higginbotham, an outstanding young man from Maryland, was killed recently in Vietnam. I would like to commend his courage and honor his memory by including the following article in the RECORD.

HIGGINBOTHAM, MATHEMATICIAN, DIES IN VIETNAM

Army Spec. 4 Robert M. Higginbotham, a promising theoretical mathematician who was named the outstanding senior in the University of Maryland's 1967 graduating class was killed in action in Vietnam last week, the Defense Department reported yesterday.

The father of the 23-year-old Rockville soldier called his son's death "a complete and tragic waste. His life has gone for nothing in a senseless military adventure."

Specialist Higginbotham, a member of the Americal Division, was killed May 14, the Pentagon said, when the armored personnel carrier he was driving was hit by enemy rocket fire near Chu Lai in Quang Tin province southeast of Da Nang.

TANK, APC DRIVER

"Bob left here feeling he was never coming back," the soldier's father, Charles A. Higginbotham, said yesterday. "He thought things were looking up, but his first feelings were right."

Specialist Higginbotham had been in the Army for a year and a half and for the past eight months had been driving tanks and the lumbering personnel carriers around Vietnam.

"His greatest fear," his father said, "was that he would get caught in one of those carriers when it was hit. The survival rate of their drivers is almost zero."

PLANNED GRADUATE WORK

The Rockville soldier had joined the Army after college graduation when his draft deferment ended.

He had planned to do graduate work in theoretical mathematics—where his talents had won him honors at Maryland—but decided to delay his further studies when he was reclassified, his father said.

"We never could understand," Mr. Higginbotham said, "how the Army decided to make a tank or personnel carrier driver out of him. The Army's placement people must have majored in stupidity, it always seemed to us."

Specialist Higginbotham, who was born in Washington and lived in the metropolitan area most of his life, was a graduate of Our Lady of Good Counsel High School in Wheaton, Md.

He is survived by his parents, Mr. and Mrs. Charles Higginbotham, of 14416 Pecan drive, Rockville; a sister, Pamela, and his grandmothers, Mrs. Ida Higginbotham, of New Martinsville, W.Va., and Mrs. Florence Evart, of Santa Rosa, Calif.

ACT NOW TO PROTECT THE U.S. SHOE INDUSTRY

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. WYMAN. Mr. Speaker, the time to act to ward off the threat of extinction to a major segment of our national footwear industry is now. Not only are there many domestic jobs at stake in this situation—a factor which should be a principal consideration when the Federal Government enters into import agreements—but also involved is the prospect of economic chaos in those small towns and cities across the Nation which literally survive from local shoe plants. Supporting industries are also concerned and the danger signals for these are flashing.

The evidence is undeniable that the products of many of our factories cannot compete with low-labor costs overseas. The wage disparity factor involved results in a general loss of American production due to reduction in demand for the product produced under the necessarily higher wage scale.

The answer should rest on what will best benefit the American industry. This does not require a complete cutoff of foreign imports. But we should make certain our domestic interests are protected in this matter. All that is needed is a fair competitive situation—and I am certain American industry, given this opportunity, will still come out ahead.

The following two articles written by Lloyd M. Hampton, Washington editor of Leather and Shoes magazine, are illustrative of the chaotic condition in certain segments of the footwear industry at this time. There is no doubt but that, unless something is done now to offset this situation, the same conditions will spread throughout the entire footwear industry and into supporting industries.

Congress can and should act on H.R. 7696 to achieve orderly marketing in place of the chaos now prevailing for much of the American footwear industry.

The above-mentioned articles follow:

[From the Leather and Shoes magazine, Feb. 1, 1969]

TARIFF FAILS TO MENTION WAGE DISPARITY FACTOR

(By Lloyd M. Hampton)

The sobering testimony offered by domestic shoe industry witnesses before the U.S. Tariff Commission in the fall of 1968 indicated repeatedly that the crux of the rapidly escalating imports crisis lay in the existing chasm-like U.S.-versus-foreign wage differential.

As succinctly expressed last Oct. 28 by Alan H. Goldstein of the National Footwear Manufacturers Association, "The price advantage of imports is due entirely to the difference in labor costs between American factories and factories in Europe and Asian countries. Practically all imported footwear is producted at wage and hour costs that would be illegal in the United States."

In another statement, Irving R. Glass, representing U.S. tanners, made it clear to Tariff hearing panel members that "The strength of import competition and the growth of shoe imports rests on comparative labor costs."

Yet interestingly, a careful review of the Commission's Jan. 17 report to the President on its probe of the economic state of the U.S. nonrubber shoe sector failed to turn up any reference—cursory or otherwise—to the wage differential question, this despite the important consideration it would seem to deserve if expert testimony by high, responsible industry officials is any criteria.

According to industry spokesmen, the U.S. footwear manufacturer views the wage difference factor as something with which he is unable to cope. This, in addition to the shoe trade's admitted inability to offset higher labor costs here, although the industry enjoys a 25 to 30 percent greater productivity than any other nation, would appear to provide an adequate incentive for any force investigating trade, Tariff included, to want to study in-depth an issue as pertinent as the wage disparity matter.

Unfortunately, however, this most central wage question about which many say the shoe imports situation primarily revolves apparently was not held by Tariff at the time of its investigation to be of sufficient significance to warrant even mentioning in its recently-released report to the White House.

As a result, the report's incompleteness becomes a matter of sizeable concern. Why? Because it was widely understood at the probe's outset last year that the study was to be as President Johnson termed it a "comprehensive" one. It would appear to have fallen short of that request. Thus, a report that was supposed to thoroughly acquaint the new Chief Executive and the Congress with all facets of the footwear imports problem instead supplies only part of the information required—hardly a sound basis upon which to form the right, most equitable judgment relating to the mounting imports situation.

To say, as Tariff sources told this column, that the wage imbalance question was not discussed in the report because such foreign data was not readily available, is amazing in light of figures unearthed by the footwear industry.

For instance, during the October 1968 Tariff proceedings, domestic shoemen laid before the Commissioners such "not readily available" foreign footwear information as Italy's basic hourly wage of 50 cents, plus all fringe benefits coming to about another 50 cents;

Spanish footwear plants being reliably reported to be paying their workers approximately a total of 40 cents per hour; Japanese hourly wages amounting to around 35 cents which, including fringe benefits, total less than one quarter of U.S. wage and fringe considerations.

Also, in Hong Kong, a female footwear employee is doing good to earn $50. a month for a 10-hour day, 60-hour week; in Taiwan, a footwear girl worker may earn from a low of $13. to $14. monthly to a high of 11 cents per hour for a 60-hour week; and, in France, with the hikes made a short time before the October Tariff hearing, wages and fringes were placed at less than half those in this country.

The government agency's footwear probe covered more than an eight month span—beginning April 29, 1968—yet time limitations, it maintained, prevented the gathering of the overseas wage data. Further, sources pointed out, even if wage figures from abroad had been assembled in time, they would not have produced a valid comparative picture. In order to achieve this it was explained, other required—but equally unobtainable—information such as productivity, etc., was needed.

The wage disparity factor is what the growing imports peril is said to be all about. Being at the root of the U.S. imports flood, it certainly provided one of the more basic reasons for the Tariff shoe investigation. Because it was not even touched upon in the final Commission report, the study can be seen to be lacking in vital content critical to comprehensive review, evaluation and comment by the just-installed Administration.

[From the Leather and Shoes magazine, Feb. 1, 1969]

SHOE IMPORTS WILL TOP U.S. OUTPUT, TARIFF SAYS

(By Lloyd M. Hampton)

WASHINGTON.—As seen by the U.S. Tariff Commission, domestic consumption of nonrubber footwear will probably continue to expand at a pace somewhat higher than the Nation's population growth rate; both U.S. production and imports are likely to continue to increase, with imports outstripping this country's output on an annual basis.

These and other projections were included in the Commission's recently-completed report covering its investigation of the economic condition of U.S. nonrubber shoe producers and what effect imports have on the domestic industry, including the competitive relationship between foreign footwear deliveries received here and their products.

PROBE STARTED IN APRIL 1968

Over eight months in the making, the 110-page report was sent to the President Jan. 17.

Basically a fact-finding study, it offers no recommendations. If any move is made to alleviate the imports crush, it will have to come from the White House and Congress after both sectors have had a chance to review the report.

Ordered by President Johnson last April 29, the report covers a broad spectrum of information on U.S. producers of nonrubber shoes, including their financial experience and participation in foreign trade; U.S. consumption, production, sales, imports, exports and prices of the articles; U.S. Tariff treatment; channels and methods of distribution; the impact of imports on the domestic footwear industry.

NO CUT IN PROFITS AHEAD

As viewed by Tariff, increasing imports held no added threat to the U.S. shoe producer's profits.

According to the Commission's report, technological developments and ingenuity of design and style are seen as "substantially" advancing the competitive position of U.S. manufacturers, this in the face of a likelihood that imports will "somewhat" outdistance domestic yearly production.

Taking this into consideration along with the prospect that both U.S. production and imports are likely to go on climbing, Tariff was moved to comment: "Under these circumstances, the anticipated rise in imports might have no greater effect on the profitability of domestic producers' operations—in the overall—than at present."

Referring to smaller footwear operations, the Commission felt that some of these producers "probably would continue" to function "at low levels of profit." However, many of them, the report stated, "would likely be significantly affected by competition not only from imports of nonrubber footwear, but also from sales of nonrubber footwear by their larger domestic competitors and from sales of other types of both imported and domestic footwear" such as canvas-rubber.

SHOE IMPORTS UP "MARKEDLY"

Other remarks contained in the Tariff report included the following:

U.S. consumption: Since 1955 the annual U.S. consumption of nonrubber footgear has grown at an average annual rate slightly greater than that of the U.S. population—about two percent compared with 1.5 percent. Since the mid-1950's, consumption of the shoes in this country has increased less rapidly than other types.

U.S. production: The annual growth rate of nonrubber footwear since the mid-1950's has averaged around 0.8 percent. Thus, the average annual output of such footwear was about a tenth greater in 1965–67 than in 1954–56. The output in 1966—a record year—was about seven percent larger than that in 1963. Output dropped in 1967 to about the 1963 level, but recovered in the first eight months of 1968 to an annual rate slightly greater than the record level of 1966. In recent years, footwear for women and misses has accounted for nearly 50 percent of the annual output of the nonrubber articles. About half of the domestic nonrubber footwear sold in the U.S. in 1967 was marketed at wholesale at less than $4 per pair.

U.S. exports: The volume of U.S. shipments abroad of nonrubber shoes has gone down almost annually since the mid-1950's. Yearly exports of such footwear, which have been equal to less than one percent of domestic production for some years, declined from 4.6 million pairs in 1955 to 2.2 million pairs in 1967. Overseas shipments in 1968 were probably at about the same level as those in 1967. Footwear with leather uppers have made up most of the U.S. exports of nonrubber shoes.

U.S. imports: Annual imports to the U.S. of nonrubber footwear "have increased markedly" in recent years, and have supplied an increasing share of domestic consumption of such goods. Deliveries here in 1967 were double those in 1963 and many times those in the mid-1950's; moreover, imports in 1968 probably were nearly 40 percent greater than those in 1967. Imports accounted for 12 percent of the nonrubber footwear sold in the U.S. in 1964, 18 percent in 1967, and probably 22 percent last year. Imports generally supply a larger share of the women's and misses' nonrubber shoes marketed here than they do of either men's, youths' and boys' or children's and infants'—23 percent compared to 11 percent and 10 percent, respectively, in 1967. Vinyl footwear, marketed mainly through retail outlets, offer very inexpensive shoes to the consumer; these outlets include the discount chains, dime-store chains, drug stores, and other stores featuring low-priced merchandise.

MERGER ROLE CITED

Additional observations by Tariff indicated there has been a decrease since the mid-1950's in the number of U.S. firms and individual plants making nonrubber footwear. These developments, however, started long before nonrubber footwear was imported in appreciable volume, the Commission said, further noting that they resulted, in part, from a substantial number of mergers.

Most of the establishments stopping production of nonrubber shoes were small plants that employed less than 250 workers the government agency said, adding: "Consequently, the share of U.S. output concentrated in firms producing more than two million pairs each is moderately larger currently than a decade ago."

RETAILERS EYE IMPORTS

On price trends, the report emphasized that since the mid-1950's the wholesale prices of leather footwear have upped more sharply than those of nondurable manufactures and of wearing apparel. "Rising wholesale prices have stimulated retailers' interest in imports," Tariff pointed out, continuing that "retailers, like producers, are reluctant to alter their price lines."

Where employment and wages are concerned, the report mentioned among other things that (1) U.S. nonrubber footwear producers employed about the same number of production workers in 1968 as in 1963 but about six percent fewer than in 1954–56; (2) the average number of weekly hours per worker, however, was slightly higher, and the wages earned were materially higher, in 1968 than in 1963; (3) the rise in weekly hours per worker probably reflected in part a short labor supply; (4) to the extent labor shortages limited U.S. output or delayed deliveries such shortages probably stimulated imports here of nonrubber footwear.

In the area of profit-and-loss experience of U.S. manufacturers, Tariff held that "The profitability of the domestic producers of nonrubber footwear has improved materially since 1963."

Total annual net profits of all producers were estimated to have doubled between 1963 and 1967. Large firms turning out nonrubber shoes reported generally that earnings were higher in the first half of 1968 than in the corresponding 1967 period, the Commission said.

SOMALIA—FOREIGN AID AFFLUENCY

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. RARICK. Mr. Speaker, in the remote African country of Somalia, its citizens are subjected to competitive foreign aid.

So far, the U.N., Soviet Russia, Communist China, the United States, Italy, and 16 other countries are all contributing financial assistance to gain preferential influence.

And not unlike other foreign aid projects, where political considerations take precedence over economic aid, no one is benefiting.

I insert a report from Berbera, Somalia, by C. C. Miniclier, as follows:

SOMALIA IS TOP RECIPIENT OF FOREIGN ECONOMIC AID—COUNTRY IS GEOGRAPHICALLY STRATEGIC SPOT

(By C. C. Miniclier)

BERBERA, SOMALIA.—Two Soviet destroyers tied up at the new, Soviet-built port here, and took on water as their crews watched Soviet films ashore and visited with countrymen running the port.

Berbera, opposite the former British strategic port of Aden, is the best natural harbor in Somalia and the Soviets have built excellent dockside facilities to handle machinery repair, administration and storage.

A fenced, air-conditioned Soviet compound of modern apartment buildings is nearby and three radio transmitters, including one said by experts to be powerful enough to communicate easily with Moscow or Vladivostok, are in working order.

All this is of strategic convenience to Soviet naval, fishing and oceanographic vessels. It is also one of the few major aid projects in Somalia which is a success.

HIGHEST AID

The United Nations, Soviet Russia, Communist China, the United States, Italy and some 16 other countries have poured more than $400 million in aid into Somalia since it gained independence in 1960. A U.N. official estimates this is the highest aid, per person or per square mile, than any country has received in its first nine years.

But casual visitors, and Somali citizens, are hard put to show where it went.

On the sand-strewn streets of Mogadiscio, the capital, and in Hargeisa, the country's second largest city, water is still sold by the gallon from small wagons drawn by donkeys.

In march, before some rain fell, water in Hargeisa was down to a five-day supply and was selling for the equivalent of $1.42 for 16 gallons.

This is a country where the average income is $60.

There are no railroads; only 10 communities are connected by telephone; only 17 of the 86 doctors in the country are Somalis and there are only about 31,000 students in all the country's schools. The population is about three million.

AID GRAVEYARD

"Somalia is the absolute graveyard of aid schemes," a Western diplomat told a reporter.

It also offers a study of what too much aid too quickly can do to a country's balance of payments.

Rice, petroleum, cement and gray sheeting, a particular type of cloth used in most Somali clothing, can be imported only from specified aid-giving countries to meet Somalia's debt to them.

Although Somalis prefer the texture and price of rice from Thailand, only Egyptian and U.S. rice may be imported—to meet credit demands.

American and British service stations in Somalia distribute Soviet petroleum because of Somalia's debt to Russia. Only Egyptian and Soviet cement and Soviet gray sheeting are imported for the same reason, say government sources.

Several aid projects stand as monuments to poor planning.

The United States financed a major fish processing plant at Alula, on the Gulf of Aden, after a fisheries man noted large numbers of tuna in the area.

But someone forgot to tell him that tuna move about. They'd left by the time the plant was finished. It is now idle among drifts of sand. A quick trip down the beach to two smaller Italian fish plants would have shown that smaller, seasonal plants work best with the fish in the Gulf of Aden.

MAJOR EXPORTS

Meat and bananas are Somalia's major exports.

The Soviets have completed what visitors report is the ultimate word in a clean, efficient meat-packing plant at Kismayu. But someone forgot to tell the Soviets that Somalia's customers don't buy tinned or sausage meat, such as the plant produces. The customers are largely Islamic and meat exports of camels, goats and sheep are live, on the hoof.

Agriculture research projects, educational efforts and medical assistance by several foreign countries have had varying success.

Why so much aid to an arid, undeveloped country of largely nomadic peoples?

It is a strategic spot geographically, controlling southern approaches to the Red Sea, and everyone would appear to be afraid of being outdone.

The Soviets followed the Americans and built a fish plant; the Americans built a port, too, at Kismayu near the Soviet meat plant. Americans and Communist Chinese have rice growing schemes. Communist China plans to improve Hargeisa's water supply as the Americans improve the water supply at Mogadiscio.

The final draft of the Somali Republic's Planning Commission program for 1968–70 took a hard look at Somalia's wealth of aid and less than rich results:

"More often than not political considerations had to take precedence over economic and, in the process of decision making, inadequate attention was given to the requirements of plan implementation."

ILL CONCEIVED

Noting that a number of aid projects "turned out to be ill-conceived" due to a lack of feasibility studies, the report adds: "Perhaps the single most important factor responsible for the disappointing performance of the five-year plan was the deficiency of the administrative machinery of government."

ABE LEVINSON

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to call to the attention of the U.S. Congress and the American people the article on Abe Levinson, one of the three founding brothers of the Levinson Steel Co., as an outstanding industrialist and a fine member of his good community. We are glad to include this article by Aaron P. Levinson, a nephew and president of the Levinson Steel Co., as a fitting tribute to this fine American:

When I heard Rabbi Goldblum's eloquent eulogy of Abe Levinson, I was touched. There was so much about Abe that was captured so beautifully—the comparison to the sabra, tough on the outside and soft and sweet on the inside; his description of Abe's distinctive trait of making great demands on himself before he made demands on others; his love of family and friends. But as I listened, I knew that Abe's greatness could never be really captured in a short eulogy. Abe was not a simple man. Even though a flowery treatise on Abe's life would not befit the man, one cannot be too brief even if only to touch on the highlights of his character, his temperament and his personality.

To accept Abe you had to accept the whole man. Some of his principles and convictions and the things on which he placed emphasis might have been different than yours, but his total impact on those who really knew him and on his family and his company was great. He was not a man who needed blue ribbons or fancy titles. He went about the business of helping to make Levinson Steel a great company in his own way—in the final analysis, a very effective way. His direct and sometimes seemingly blunt style was sometimes not fully understood by those who did not know him too well. But no one could know Abe Levinson for a long time without loving him. He truly passed the test of time with those who knew him best.

In the early days of the company's history, Abe and his brothers in the business were a great team. They complemented each other. Brother Sam had a great business mind and was the out-front member of the team. Jack was the buyer and the man with great merchandising ability. Monnie learned the administrative skills and ran the office, and Abe achieved excellence in production. He understood his men and knew how to get the shop team working together. It is true that Abe never asked a man to do a job he couldn't do himself. In the early part of his career, he welded and operated a burning torch and bucked up rivets and ran a crane. He knew every skill required to fabricate a finished steel structure. Without any formal engineering education, he could often spot an error in layout or fitting. He knew the details of every contract on the company's books, and he knew every man in his shop. He knew their families and he knew their problems. Those in the shop who have been around long enough to know Abe, really loved him. Abe Levinson never went for fancy management terms, but he didn't have to. All he really had to do was talk the language of his people and at that he was an expert. An expression on his face or a little gesture with his hands could sometimes say more to his men than the fanciest of fancy speeches.

I will never forget the time some of the men gathered around Abe on one of his birthdays. Freddy Pfeffer, one of the men in Abe's layout crew, sheepishly handed Abe a package crudely wrapped and covered with greasy finger marks. As he shoved it into Abe's arms, he said simply, "This is from the boys." There was a long moment of silence as Abe fingered the package, then tore off the paper to discover a beautiful Browning shotgun. They knew Abe enjoyed fishing and hunting. Abe looked at the gun and then looked up at the men gathered around him and said, "you clowns," as everyone grinned from ear to ear.

Abe knew his men—he worked with them, fought with them, hunted and fished with them and visited them in their homes. The overflow crowd which poured into the Schugar Funeral Home the morning of the service was a great tribute to Abe and to the esteem which the community felt toward him. Not only were there personal friends and business friends and family, but scores of the men who work in the Levinson shop came to pay their last respects—even some men long retired like Luther Powell and Louis Tallerico. Eddie Wright, chief shop steward, when he heard about Abe's death bowed his head and said to Harry Stein, "Whatever success I have had in my life, I owe a large part of it to Abe Levinson." As Charlie Reed walked by the casket, he said to me, "Abe was the best friend I ever had."

But Abe Levinson wasn't just a shop man. He knew the psychology of people in every walk of life. My Dad, when he was President of the company, often asked Abe to accompany him on business trips. His straightforward style and Sam's great personality complemented each other. Abe was often a great help in winning customers for Levinson Steel. His knowledge and understanding of production instilled confidence in prospective buyers.

Abe, for many years, was a seven day a week guy. He often said, "That shop is my life." Every once in a while he stayed in the shop all night when something wasn't just right. He attended his shop and his shop problems much as a mother would watch over a sick child. Abe's special kind of spirit and dedication caught on with every person on his team. I remember so vividly the words of wisdom which came out of his mouth. When I was just learning something about the Levinson plant and about supervision, he said, "Our men really are pretty smart if you just give them a chance. If a new man isn't doing his job right, it's usually your fault, not his. New men are sometimes ashamed to tell you if they don't understand." Then he proceeded to tell me how

to be sure they did understand. Even in the early thirties, Levinson had night crews and Abe knew so well the fundamentals of correlating the work of the first and second shifts. I would always watch with amazement as he and his right hand man, Yossell Goldstein would instruct second shift men, never missing a detail—and then painstakingly have it all played back to be sure he was understood. He knew the basic elements of industrial psychology and training and motivation. He just called them by other names and his methods worked. Everyone was anxious to prove himself to Abe and this added up to a loyal, hard working team.

Even though he often said, "That shop is my life," there really was another part of Abe's life equally important—his family. Nothing and no one was more important than Bess and the kids and the grandchildren. Even though Abe was strong willed and when he made up his mind, he was hard to deter, there was always one person he listened to, the one person who really watched over him and made sure that he didn't neglect his health—Bess. I think I knew a little about that relationship because you see, Abe was my Dad's brother and Bess is my mother's sister. Besides that, Abe and Bessie were my godfather and godmother. If there was ever a woman of strength, quietly behind the scenes, giving a man a feeling of self-confidence, it was Bess Levinson with Abe. A historian could have written a book about the Abe-Bess Levinson team.

And Abe was so pleased and proud of his son, Joel, and his sons-in-law, Morry Podolsky and Harry Stein. The partnership he had with his boys in Levinson's production team added richness and joy to his life. Abe had outstanding children and he knew it. Like his brother, Sam, it was not always easy for Abe to express praise and admiration, but privately to me, he talked much about the accomplishments and the sense of responsibility of Joel, the understanding and common touch of Harry, and the pragmatism, persistence and diligence of Morry. His daughters and daughter-in-law, Natalie Podolsky, Judy Stein and Toba Levinson, were exactly the kind of women he loved and admired—sweet and loving, devoted to their husbands and children—and very important people in their own rights. Every grandchild had a special place in Abe's heart: Morry and Natalie's Sharon, Barbara, and Gary, Sharon's husband, Stephen Freedman, and great granddaughter, Randi Sue; Judy and Harry's Steven, Robin and Mitchell; and Joel and Toba's Jeffrey, Eric, Andrew and Mark. This was Abe's family. He left them a rich heritage and great memories.

But the thing that is closest to my heart about Abe is the personal relationship I developed with him. There were times in his life when I thought Abe was from the old school and was holding us back. I realized later that often when he held us back, we needed to be held back. But despite brief periods of orneriness and stubbornness, when the chips were down, when major decisions had to be made, when others were pushing the panic button, all of us could always count on Abe to bring reason into focus. In the 36 years I worked with Abe, he never once let me down. During the past eight or ten years, since my father became ill and died, Abe was of invaluable help to me. I needed Abe's advice. I needed his words of encouragement. I needed his kind of wisdom. Even though when he reached his 70th birthday, there was an automatic retirement written into many of the corporation's legal documents, I knew that we all needed Abe's presence on the scene as long as he had the physical capability to be there. We changed the legal documents and I went to Abe's home right before his birthday and asked him not to retire. Abe stayed on. He showed up at the office and at the plant daytime and nighttime, sometimes when the pain in his leg was almost unendurable. And then quickly and quietly, he died, but he died the way he wanted to, with his boots on.

There was greatness in Abe Levinson—the greatness that is made of humility, love of fellow man, love of family, simple tastes, diligence and hard work. His memory will always be an inspiration to those of us who were privileged to know him.

A. P. LEVINSON.

HON. WILLIAM ORVILLE DOUGLAS

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. EDWARDS of California. Mr. Speaker, the following article from the New York Times of May 26, 1969, is an excellent short biography of the distinguished Associate Justice of the U.S. Supreme Court, William Orville Douglas:

AT 70, THE "YOUNGEST" JUSTICE OF ALL: WILLIAM ORVILLE DOUGLAS

(By Sidney E. Zion)

WASHINGTON, May 25.—During a recess at the trial of Dr. Benjamin Spock in Boston last year, word filtered out that the Supreme Court had upheld the Federal statute making it a crime to burn draft cards. "What was the vote?" a dejected radical lawyer asked. "Seven to Douglas," an observer answered. Everyone chuckled but nobody was surprised. In his 30 years on the Supreme Court, William Orville Douglas has often stood alone in defense of civil liberties that other justices could not or would not recognize.

And now he stands alone again, under fire for receiving outside income as an officer of the Albert Parvin Foundation. The Justice, who resigned from the organization Friday, has replied to critics by charging that a Federal tax investigation of the foundation was "manufactured" to force him off the bench.

Seventy years old, of middle height, ruddy complexion, and Spencer Tracy style, Justice Douglas, his heartbeat aided by a pacemaker, is seen by his admirers as "the youngest man on the Court."

"Bill is the only one of them that has consistently kept faith with the kids," a lawyer friend says. "He's an existentialist figure, really, always his own man, fearful of neither people, forces nor establishments. Who else would have tried to stop the Army from sending boys to Vietnam, just as he once tried to keep the Government from executing the Rosenbergs? When the heat is on—and it's on now—the only guy on that Court I'd bet on to stand up is Bill Douglas."

His enemies, political and racial conservatives ranging from distinguished Harvard law graduates to rural Southern segregationists, would not disagree with that estimate. Indeed, for many of them his penchant for "standing up" is enough reason to impeach him, an effort that was made in 1953 in the House of Representatives after he issued a stay of execution to Julius and Ethel Rosenberg, the convicted atom spies.

FOURTH MARRIAGE

A less serious but perhaps just as heartfelt attempt to impeach him came in the summer of 1966 when Justice Douglas married his fourth wife, the then 23-year-old Cathleen Heffernan, less than a month after his third wife, 26-year-old Joan Martin, had divorced him and remarried.

The Justice was first married in 1923 to Mildred Riddle. The marriage produced two children, William Jr. and Mildred Riddle Douglas (now Mrs. Frank Welles Jr.). The couple were divorced in 1953 and the next year Justice Douglas married Mercedes Hester Davidson. After their divorce, in 1963, he married Miss Martin, and three years later Miss Heffernan.

But despite some sniping in the House at his "moral character," Justice Douglas has remained as unconcerned, apparently, as he has always been over criticism from all quarters.

His professional critics are mostly lawyers and professors who continue to follow the philosophy of the late Justice Felix Frankfurter, roughly defined as "judicial restraint," or as President Nixon likes to call it, "strict constructionism."

They have long accused Justice Douglas of being "result-oriented." By this they mean that he assertedly ignores established precedents in order to reach results that he favors.

He dismisses this criticism as frivolous, stating that his rulings are based on his interpretation of the Constitution, which he believes is firmly planted in history.

"The American Government," he once wrote, "is premised on the theory that if the mind of man is to be free, his ideas, his beliefs, his ideology, his philosophy must be placed beyond the reach of government."

In the early 1950's this view, held also by Justice Hugo Black, came into sharp conflict with that of a majority of the court. Led intellectually by Justice Frankfurter, the Supreme Court upheld one after another governmental incursion on free speech and association, aimed at what was widely termed the "menace" of domestic Communism.

Arguing that the First Amendment was intended to protect all speech, including the Communists', who he once described as "miserable merchants of unwanted ideas," Justice Douglas spent most of these "McCarthy years" in dissent.

The phrase "Black and Douglas dissenting" became a commonplace, and at the same time a banner to which a generation of law students rallied, much as an earlier generation had marched to the music of "Holmes and Brandeis dissenting."

BORN IN MINNESOTA

William O. Douglas was born in Maine, Minn., on Oct. 16, 1898, the son of a circuit-riding Presbyterian minister who died when his son was 6. The family moved to Yakima, Wash. in 1904.

A childhood victim of polio, Mr. Douglas strengthened his legs by mountain climbing, a diversion that has occupied him ever since and that led him into a lifetime devotion to conservation.

Young Douglas was the valedictorian at Yakima High School, then president of the student body and a member of Phi Beta Kappa at Whitman College in Walla Walla. His education was financed by a scholarship and odd jobs including window washing.

He arrived in New York in the early twenties with six cents in his pocket and an admissions slip to Columbia Law School. In 1925 he graduated second in his class, worked for a while with a Wall Street law firm and then joined the faculty at Yale.

From there he was recruited in 1934 by Joseph P. Kennedy, the late President's father, to work on the Securities and Exchange Commission, of which he became chairman in 1936, and in 1939, at the age of 40, he was named to the Supreme Court by President Roosevelt.

In 1944, Mr. Douglas came close to being nominated for the Vice Presidency of the United States. President Roosevelt, agreeing to drop Henry A. Wallace, said he would take either Justice Douglas or Harry S. Truman. The nod, of course, went to Mr. Truman, who became president in April of 1945.

In an interview two years ago in Parade magazine, Justice Douglas said that had he become President instead of Mr. Truman, "there would have been no Hiroshima" and the Cold War with China as well as the Korean and Vietnam wars might have been avoided.

On the other hand, the Supreme Court

would have been without its most liberal member, its quickest and many feel most brilliant mind, its fastest writer and surely its most colorful and controversial character.

It is authoritatively reported that William O. Douglas, having written a dissent in a case and being impatient to leave town on one of his many world tours, dropped in to see the Justice who was supposed to be writing the majority opinion.

"I just can't seem to write the damn thing, Bill," the jurist said.

Whereupon, Justice Douglas offered to write the majority opinion. And he did, thus becoming the first Justice to write a ruling to his own dissent.

If the story is apochryphal, the fact is that they don't tell stories like that about anybody else but Bill Douglas.

L. R. LINDGREN RETIRES

HON. J. IRVING WHALLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. WHALLEY. Mr. Speaker, when L. R. Lindgren joined the staff of the Pittsburgh Press in 1945, he was told by his editor: "Write it the way you see it."

For the past 24 years as a columnist and correspondent covering the Pennsylvania State Legislature in Harrisburg for the Press, and for 26 years before that as a reporter for other newspapers, Mr. Lindgren has written it as he saw it. This week, he retired from the newspaper business, wrote "30" to his column writing, and has embarked on a well-earned and well-deserved retirement.

Mr. Speaker, I first met Mr. Lindgren when I was a member of the State Legislature in Harrisburg. He was one of the most respected and most admired of the newsmen covering the capital liegislature. His column, called "State Commentary," was widely read, his facts were accurate, and he was respected not only by the men and women about whom he wrote, but by his colleagues in the news business as well.

We are all sorry that he will no longer be reporting for the Press but we wish him well in his retirement and assure him that the doors of our offices and homes as well as our hearts will always be open to him.

Mr. Speaker, the newspaper profession will miss one of its great journalists.

Under unanimous consent I submit his final column, "Reporter's Adieu," for inclusion in the CONGRESSIONAL RECORD, as follows:

STATE COMMENTARY: REPORTER'S ADIEU

(By L. R. Lindgren)

HARRISBURG.—This is my last column for The Pittsburgh Press—the last of more than 1200 I have written from beneath the dome of the Capitol.

After more than 50 years as a reporter, at age 65, I am retiring effective today and turning over my beat-up typewriter to Patrick Boyle, a young (33) and aggressive (wow!) writer who, I predict, will ring a lot of bells in the years to come.

I am leaving the staff of one of the great newspapers of the world, published in one of the great cities of the world.

The people of Pittsburgh have every right to be proud of The Press—just as The Press is proud to help them forge a better community in which to work and play and live the good life.

The Press is great because it has a great staff and I'll miss everybody on it, with the possible exception of that unknown figure who, like an automaton, has kept an eye on my extremely modest expense accounts through the years.

I am grateful to The Press for giving me a free hand in reflecting Capitol goings-on for our readers. When I joined the staff in 1945, I asked if there was any particular policy I should know about.

"Write it the way you see it," I was told.

And that's the way it has been ever since.

I am grateful, too, to the people who have read me and especially to those who have taken the time and trouble to comment on my pieces.

I have been praised to the skies and laid low in spades. The plaudits have nurtured the ego bruised by the blasts.

As I come to the end of the road—"30" we call it in the newspaper world—somehow I can see again in my mind's eye a framed motto which hung above my father's desk:

"Most of my troubles never happened."

Most of mine didn't either. And those that did were my own fault.

"30."

TREASURY SECRETARY DAVID M. KENNEDY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. DERWINSKI. Mr. Speaker, Secretary of the Treasury, David M. Kennedy, is one of the Illinois contributions to the administration team and he is held in high regard in my home State by all who have had the opportunity to associate with him.

Therefore, I deem it of special interest to the Members to insert into the RECORD a resolution adopted by the Illinois Bankers Association commending Secretary Kennedy:

RESOLUTION—TREASURY SECRETARY KENNEDY

Whereas, one of the great strengths of our nation is the ability to attract highly qualified, knowledgeable individuals of excellent character and bearing to serve the high offices of government; and

Whereas, the people of the State of Illinois are justifiably proud of their tradition and heritage in sending to our Federal government in Washington extremely capable people, one of the outstanding of which, we sincerely and firmly believe, is David Matthew Kennedy, Secretary of the Treasury; and

Whereas, Secretary Kennedy is eminently qualified through years of service in numerous capacities both in private industry and in prior government positions; and

Whereas, his qualifications have been previously reviewed in accordance with Constitutional procedures and have been adjudged unblemished and of the highest calibre;

Now, therefore, be it resolved, we the Illinois Bankers Association in annual meeting assembled this 27th day of May 1969, does hereby commend the Secretary not only for his willingness to make the sacrifice necessary to serve his country and for his conduct of the Treasury Department, but also for his forbearance. We call to the attention of the elected representatives of our Federal Government the fact that the continual abuse heaped upon him does damage to our system of government by tending to make public office unattractive to those people best qualified who unselfishly contribute their time, devotion, and talent to their country's service.

NUCLEAR ACCIDENTS AND THE ABM

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. BROWN of California. Mr. Speaker, proponents of President Nixon's Safeguard ABM always seem to have another reason favoring their position whenever a previous argument seems to be doubtful.

If ABM is not effective against the Russians, then, of course, it can always be aimed against Chinese threat. And, if there is not any Chinese danger which might be relevant, then there is the chance that somebody might accidentally set off a stray missile which would have to be stopped—and only ABM could do it.

The logic may be simple. So then, also, is it ridiculous. It does not take much figuring to realize that as you increase the number of nuclear weapons available, the probability of "nuclear accident" also rises. And there is no safety in numbers when one is dealing with nuclear warheads.

Last week's Saturday Review contains a valuable analysis of the problem of nuclear accidents and the ABM as written by Dr. Joel Larus of New York University. Under unanimous consent I submit the article, for inclusion in the CONGRESSIONAL RECORD, as follows.

[From the Saturday Review, May 31, 1969]

NUCLEAR ACCIDENTS AND THE ABM

(By Joel Larus, professor of politics at New York University and the author of *Nuclear Weapons Safety and the Common Defense* (1967))

The current debate about the utility of deploying an anti-missile system to protect this country's deterrent capability has again raised a number of basic questions about the possibility and consequences of an American-caused nuclear weapons accident. Because the safety of our atomic and hydrogen arsenal relates so closely to top-secret command and control procedures, reliable information about U.S. anti-accident techniques and experiences is most difficult to obtain and even more ticklish to evaluate sagaciously. Yet the public fears the possibility of such incidents, and their anxiety is not assuaged by the events of recent years. Last fall, for example, when Washington announced that the Sentinel system was going to be located in Chicago, Detroit, Seattle, Boston, and New York, local residents determinedly challenged the wisdom of installing missiles close to urban centers when an inadvertent detonation of a nuclear warhead could not be discounted. One Congressman reports that this fear dominated all other considerations in the hundreds of letters he received from constituents protesting the Pentagon's decision.

The more recent announcement of the Nixon Administration that it planned to deploy a limited ABM system, Safeguard, in the remote areas around the Minuteman silos, primarily in Montana and North Dakota, has lessened the general public's concern about nuclear weapons safety, but there is no reason for indifference or complacency. Even though the Safeguard system may be located in thinly populated states and not near lead-

ing industrialized centers, it does no necessarily follow that a mishap at such a site could not affect the lives and well-being of Americans residing in cities far from Montana and North Dakota. If an ABM accident should take place, the site of greatest probability is the area near the Safeguard system, but a computer running amuck or an unfavorable wind pattern could mean plutonium poisoning for many people hundreds of miles from the missile location.

One way to estimate the chance for an ABM failure and also to have some background information about the safety features of this country's nuclear arsenal, is to review our successes and failures in twenty-four years of watching over atomic and nuclear bombs (in military parlance, "safing the nukes"). When America's record of nuclear mishaps—"Broken Arrows"—is examined, one conclusion is inescapable: the human mind has been unable to construct a safety system for nuclear weapons that is accident-free, no matter how much time, money, and technological genius are assigned to the project. (According to military terminology, a Broken Arrow is any unplanned occurrence involving the loss of, destruction of, or major damage to a nuclear weapon or its components that results in an actual or potential hazard to life or property.) It is well to remember that mechanical and human failures are as much a part of the age of nuclear technology as mushroom clouds and fireballs.

There are two types of nuclear mishaps that could bring about accidental radioactivity. Most serious is the unauthorized, unintentional, or inadvertent nuclear explosion that results in a full-scale chain reaction. This type of detonation might be the result of a mechanical error, a human failure, or a combination of both, but no matter what the source of the accident there would be a Hiroshima-type explosion replete with the multifold problems of toxic radiation.

It is generally agreed that an American-sponsored accidental chain reaction detonation has a very low probability. In the years since the first atomic bomb was dropped, this country has produced thousands of nuclear weapons of all shapes, sizes, and yields. They have been transported about the entire world, and in the process they have been assembled, disassembled, inspected, loaded onto delivery vehicles, unloaded, checked and rechecked to maintain their efficiency. Squadrons of Americans of various temperaments and emotional characteristics have been trained to detonate both strategic and tactical systems under a variety of conditions and circumstances, many of which have not been especially conducive to the good mental health of the personnel involved. In spite of the innumerable opportunities for an accidental Hiroshima to have taken place, America's safety record insofar as this first category of possible failures is concerned has been perfect. The technicians who designed our safety controls (essentially a complex interacting arrangement of locks and switches that must be triggered in sequence) have established a safety record unequaled in the history of military technology.

Were it not for two Broken Arrow incidents that took place in 1960 and 1961 it would be possible to be even more sanguine about our future record of no-yield incidents. These accidents dramatically illustrate why there is always a possibility that as a result of extraordinarily bizarre circumstances there could be an accidental chain reaction.

In the Goldsboro, North Carolina, failure, which took place in January 1961, a SAC B–52 bomber on a training mission was carrying two 24-megaton bombs. The pilot, realizing that his plane was going to crash, had sufficient time to jettison one bomb. It was parachuted and landed in a field completely intact. There was no explosion of any type. A terse and uninformative Air Force press release stated that one of the unarmed nuclear devices the plane carried had been dropped safely by parachute and had been recovered undamaged. The second bomb was found in the plane's wreckage.

For the last eight years physicist Dr. Ralph Lapp has maintained that the Pentagon's investigation of the Goldsboro incident had revealed a frightening situation. He alleged that in falling to the earth five of the six interlocks built into the bomb had been set off and that only a single switch prevented the 24-metagon weapon from producing a yield detonation. Washington adamantly refused to offer any more particulars concerning the post-accident condition of the safety system. Recently the Air Force was forced to come clean and reveal just how unpredictable mechanical safeguards on nuclear weapons can be, even those designed with infinite care and tested meticulously. Goaded by Congressman Sydney R. Yates of Illinois, who was determined to prevent the installation of the Sentinel system near Chicago, the House Appropriations Committee recently asked for an authoritative answer to the Goldsboro bomb mystery. In reply, the Air Force admitted that their inspecting teams in 1961 had found that four of the six safety mechanisms during the accident had moved to the "go" position. In other words, only two safety systems remained in a locked position, and the remaining group of four had acted in a completely unscheduled and potentially dangerous fashion. Pentagon and AEC officials prefer to call attention to the two devices that remained uncompromised, but a more relevant issue is to determine why there were so many failures and whether it can happen again.

An earlier Broken Arrow incident took place at McGuire Air Force Base (New Jersey) in June 1960. This accident is especially noteworthy in view of the extended debate about the reliability of the computer-programed Safeguard system and its hair-trigger reaction time. If information available from nongovernmental sources concerning the McGuire mishap is authentic—and in my opinion the source of the account is highly reliable—the incident highlights the problem of protecting an incredibly complex weapons system from being triggered by totally unexpected sources.

Some of the facts about McGuire are not in dispute. At 2:51 p.m. smoke and fire began to emerge from one of fifty-six Bomarc missile shelters. Two minutes later local fire crews arrived, and by 3:05 the entire missile complex was evacuated. For the next several hours, officers and enlisted personnel, reinforced by firemen from adjacent communities, fought heavy flames and smoke. According to *The New York Time's* account, the missile's propellant fuel ignited, its atomic warhead fell into the molten pool of fire, split open, and released radioactive material into the environment. The Air Force admits that radioactivity was present during the incident, but maintains that the fire started when a high-pressure bottle of helium exploded from unknown causes.

The uncorroborated version of the origin of the fire is considerably more alarming. This source alleges that while the Bomarc's crewmen were at dinner, they noticed that their unattended missile was preparing itself for an unauthorized launch. Rushing frantically to their station the men succeeded in aborting the erection. The account continues:

"Even after detailed investigation there is no real understanding what series of factors caused the electronic brain controlling Bomarc firing . . . to issue the fire order to that nuclear weapon. The hypothesis is that a combination of the radio signals from passing police cars plus the tunes being played by a local disc jockey happened, in one of those occurrences of statistical probability, to combine into a signal that fed itself into the electronic brain as a fire order."

To date, the Defense Department declines to comment on this version of the McGuire accident.

As mentioned earlier, there is a second category of nuclear mishaps that can cause accidental radioactivity. In my opinion it has a much higher probability factor than the full-scale yield detonation accidents and consequently is the greater menace. It involves the nuclear bomb or missile that becomes ruptured when unusual energy inputs or physical stresses react unfavorably with the TNT component of the weapon. The heat or shock causes the TNT girdle enclosing the plutonium to explode, and the entire weapon blows apart. As soon as the integrity of the outer metal casing is destroyed, fissionable (not fissioned) material is strewn about the situs of the accident. Radioactive plutonium dust contaminates everything it contacts, and all human and animal life is endangered in this "hot" area.

Since 1945 the United States has caused an indeterminate number of this type of accidents. If the Pentagon's figure of thirteen nuclear weapons accidents is complete and accurate, this country has been responsible for one Broken Arrow incident every two years on the average since Hiroshima. If the tally is closer to twenty or twenty-two mishaps, as some non-governmental sources believe, this country has had approximately one potentially catastrophic emergency every year since the end of World War II. Whatever the exact number, there is no disputing the fact that American bombs or missiles that have been accidentally blown apart (but not detonated), have jeopardized the lives of residents of at least three countries, injured an unknown number of homes and factories, and contaminated the natural resources of at least three parts of the globe. No one has died or experienced lasting injury as a result of these Broken Arrows (at least not according to the unclassified information), but each failure exemplifies the radioactivity crisis that arises when a nuclear weapon scatters undetonated plutonium.

In January 1966, for example, four hydrogen bombs fell on Palomares, Spain, an isolated farming hamlet on the Mediterranean coast. Before this incident was over, the Defense Department and the Atomic Energy Commission, assisted by a small army of civilian experts, had staged the most expensive, intensive, harrowing, and feverish land and sea search for a man-made object in world history.

The accident took place when a B–52 on a training mission and a KC–135 tanker collided about 30,000 feet above the Mediterranean. Either a fire broke out in the tanker during the refueling mission and spread to the bomber, or the planes failed to rendezvous properly. In any event, both planes plummeted to earth, scattering wings, fuselages, engine sections, wheel assemblies, and jet fuel over a wide area.

The four hydrogen bombs are believed to have been either the 20- or 25-megaton variety, and all were being transported in the customary unarmed condition. Each bomb landed in a different impact area in or about Palomares. One embedded itself in a dry river bed east of the village. It was found within hours after the crash and was undamaged except for some severe dents. It caused no radiation contamination problems. The second and third bombs slammed to the earth with such impact that the TNT exploded. Within seconds millions of particles of plutonium dust blanketed wide areas of Palomares.

Because plutonium is one of the most toxic substances known to man, American and Spanish authorities lost no time in beginning emergency clean-up operations. Plutonium has a half-life of 24,000 years, and the maximum permissible burden that the human system can tolerate is a speck-like amount described as two-billionths of a gram. Persons who inhale or ingest as little as 2/10,000ths of an ounce of plutonium dust can become deathly ill. As an added complication, alpha radiation from the plutonium is considerably more difficult to detect than

any other type of radiation. An Air Force publication advised search teams to hold detection instruments within one-eighth inch of the surface to be tested in order to obtain a reliable Geiger counter reading. The booklet adds that it is nearly impossible to secure an accurate count when surfaces such as plowed earth, wheat stubble, and gravel roads have to be checked for radiation exposure.

For the next three months the 234 families of Palomares became internationally famous as the soldiers, airmen, and civilians scoured the countryside for evidence of radiation contamination. The economy of the village all but collapsed because hundreds of pounds of tomatoes, which normally would have been sold throughout Spain, were thrown away or left rotting on the plants because the Geiger crews could not work quickly enough. Local farmers within a 640-acre zone were barred from entering their fields. Teams of medical specialists examined each man, woman, and child, testing in a variety of ways for traces of plutonium poisoning. Only a few of the local peasants could understand the situation; for the rest it was simply *el desastre*.

Before the land was returned to the owners, the United States had packed 1,750 tons of radioactive Palomares soil and vegetation into 5,000 sealed metal drums. The contaminated pieces of the two planes were similarly encased. This debris—the dung of the nuclear age—ultimately was brought back to the United States and buried in a nuclear graveyard in South Carolina.

The fourth hydrogen bomb that fell at Palomares caused even greater complications. This weapon came to rest about five miles offshore on a ledge 2,500 feet below the surface of the Mediterranean. A force of sixteen ships was assembled and included several midget submarines, scuba teams, underwater specialists, sonar experts, and oceanic photographers. For about eighty days the 3,000 men carried out this aspect of the recovery assignment. It was imperative that the fourth weapon be returned to American custody not only because of security considerations, but also because we needed to know if the bomb had ruptured and plutonium had contaminated the sea and its marine life. When brought to the surface on April 7, the bomb's outer casing was deeply dented but, miraculously, without a rupture. It is alleged that the underwater operation alone cost this country $6 million.

The Palomares incident does not end with the recovery of all the bombs. In the succeeding three years press reports occasionally have told how the accident has changed life in the area. A battery of four Geiger counters still runs continuously to monitor the region for signs of plutonium radiation. Each villager continues to receive $66 per month if he permits Spain's Nuclear Energy Committee to check his body daily for evidence of overexposure to radiation. Up to now the farmers have received $700,000 on various claims they presented to the United States, and eleven cases are still pending. What cannot be altered with American bounty is the attitude that the Spanish people now have about the village and its farm products. All that grows in Palomares is suspected of being radioactive, and so there is no market for its fruits and vegetables. Fifty per cent of the people are reported to have been forced to migrate to more attractive farm areas. According to one resident, life has gone from the town and within a few years it will be quite empty.

The most recent Broken Arrow to be reported took place in January 1968 near a runway at the Thule Air Force Base in northern Greenland. A B-52 crashed and exploded while attempting to make an emergency landing. The plane admittedly was carrying four 1.1-megaton hydrogen bombs. On impact all broke into fragments and scattered plutonium over the frozen surface of North Star Bay. Winds up to 27 miles per hour, temperatures in the 20-30 degree-below-zero range, daylight for only three or four hours at a spell, and continual swirling snows and Arctic storms added to the general emergency situation. In fact, this recovery operation was carried out on the most inhospitable site yet encountered by a Broken Arrow task force. The impact area was about a mile long and half-a-mile wide. Within this region were found thousands of pieces of the plane, all highly radioactive and dangerous to the body.

Immediately following news of the crash there was considerable concern that plutonium might have entered the ice and waters of the bay. The Danish government placed a prohibition on all fishing in the seas near the accident site, and this restriction lasted for three months. In addition, it banned local fox hunters from any trapping whatsoever in the Thule area, and this order remained in force for nine months. Available sources do not mention what steps were taken to protect the Eskimos from eating the meat of seals, walruses, and polar bears, but presumably such procedures were necessary because these animals might have been contaminated from eating radioactive marine life.

As in all Broken Arrow mishaps, the most complex and costly problem is cleaning the ground area so that it is no longer "hot." At Thule, tons of radioactive snow and ice were an immediate hazard and had to be removed and secured. Teams of men were assigned the task of gathering the snow, ice, and the remains of the B-52 for shipment to the United States.

The main reasons why Congress should not authorize the Safeguard system have been explained at length elsewhere and need only be reviewed here. They are (1) that the ABM deployment could escalate the arms race at a time when there may be a real opportunity to achieve a nuclear détente with the Russians; (2) that the sytem is predicated on invalid assumptions concerning the strategic options open to the Chinese and Russians in the coming decade; and (3) that the estimated $6-to-$7-billion cost of the system ought to be used to help remedy our domestic problems. A fourth reason against the ABMs has been offered here: Nuclear weapons have a propensity to become involved in human and mechanical error situations, and when these Broken Arrow mishaps take place, the impact area and its environs are contaminated with toxic plutonium. The deployment of more nuclear weapons than is uncontrovertibly necessary to maintain America's deterrent posture is unwise because it invites future accidents.

ITALIAN NATIONAL DAY—JUNE 2, 1969

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. MINISH. Mr. Speaker, on June 2, 1946, the people of Italy endorsed the democracy of the Italian Republic and ushered in a new era in Italian history. By building upon the lessons of defeat, they hoped to reconstruct an Italy of peace and prosperity. The obstacles to the achievement of this goal were great. The end of the Second World War left Italy ravished and demoralized. One-quarter of the railroad tracks were gone, one-third of the bridges destroyed, one-half of all powerplants had been bombed, and almost two-thirds of the nation's road network no longer existed.

Today, just 23 years later, we are able to witness the products of Italian industriousness and creativity. Italy is once again surging ahead. She has rebuilt her economy with such great success that she now ranks eighth among the world's industrial nations. She is also one of the world's top trading nations. Unemployment has virtually disappeared. Italian goods and services are internationally applauded. Some of Italy's most important and well-known products include motor vehicles, tires, typewriters, textiles, and leather goods.

Italian creativity has also excelled during the postwar period. In 1946, with the return of democratic institutions, came the return of artistic freedom. The result has been an impressive list of Italian accomplishments in literature and art, in music and dance, in film and fashion: Names like Giacometti and Balla in art; Quasimodo and Silone in literature; Fellini, Antonioni, and Ponti in films; and Pucci and de la Renta in fashion.

The wonderful versatility of Italian creativity and the industry of the Italian people are characteristics which the Italian immigrants brought with them to our own country. From Christopher Columbus, through colonial times and the industrial revolution, to our modern society, Italian-Americans have given color, richness, and vitality to the United States.

Thus, on the anniversary of the Italian Republic, I am proud to honor the creativity and charm, the beauty and intelligence of Italian culture which has made a lasting contribution, not only to our own history, but to all the world.

ITALIAN NATIONAL DAY

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. WOLFF. Mr. Speaker, on June 2, 1946, a national election brought the promise of democracy to wartorn disillusioned Italy. Twenty-three years later, that nation stands beside other great democracies of the world as awesome proof that the courage, culture, and convictions of a people can overcome unbelievable odds and rise to the heights of prosperity and accomplishments. For the Italian Republic, whose anniversary we celebrate today, holds the esteem of all persons who know the virtues of democracy or look with envy at the gift of freedom that they themselves may never possess.

The success of Italy as a Republic, it should be noted, was not merely a result of fortuitious events. On the contrary, Italy and her people, as they have done since the time of the Roman Empire, contributed the totality of abilities, manpower, and idealism to shape her into a model of economic, cultural, scientific, educational, and commercial success. The results clearly speak for themselves.

Today Italy ranks eighth among the world's industrial nations. The Government, however, has not chosen to rest on this plateau, I would like to point out. She is currently involved in a second phase of a policy to improve the economy of predominately agricultural southern Italy where poverty persists. She is determined that the entire nation will have the fruits of economic prosperity.

It is not only in this area that the Republic has flourished and shown leadership skills. Virtually every area of life has been touched with Italian genius. Music, art, science, banking, and fashion are just a few of the endeavors in which she has shown like a brilliant jewel. And like a precious gem she has enhanced all who have come in contact with her. We of course have grown into a prouder more capable nation because of her contributions and the contributions made by Americans of Italian ancestry.

Indeed, few other nations can boast of having offered so much to so many areas of civilization. From the time of the Roman Empire and the Renaissance until the nuclear age, she has continued to weave her unique abilities into a distinct design in the fabric of civilization.

Certainly not all of her history exemplifies continual triumphs and discoveries. She has know the anguish of world wars, the brutality of political tyranny, and the shattering disillusionment of abject poverty and occupation. Unlike some other nations, however, she has chosen to enfold these trials as a learning experience and use them to attain latter successes.

This day is particularly meaningful, I feel, inasmuch as the United States has played an integral role in many events which have led to Italy's present estimable position. For in exchange for the rich infusion of talent and energy brought to the shores of the United States, we have helped to break the chains of Fascist tyranny which once bound her, and subsequently nurtured her attempts to achieve maturity.

I am proud that our Government has shown friendship, sympathy, and generosity throughout these 23 years. Moreover, I am pleased that we as a nation have had the opportunity to benefit from the vast contributions of our Americans of Italian ancestry.

And on her anniversary, I would like to send our respects and best wishes to her and her people, who arduously have attained maturity, and will ultimately continue to show the rest of the world how capable, cultured, and courageous a republic can be.

POSTAL REFORM A MUST

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. DULSKI. Mr. Speaker, our Committee on Post Office and Civil Service has been holding hearings since April 22 on the need for a vast overhaul of the postal service. It is essential that the Congress act promptly to remove the shackles from postal management so it will have the authority to do the job which it has been assigned.

Responsibility without authority is shallow, indeed.

There is really relatively little dispute as to where the weaknesses lie in the present postal organization. The essential disagreement is whether the corrections can be made within our present Post Office Department, or whether it will be necessary to convert the Department into a nonprofit corporation.

Postmaster General Blount, after 4 months in office, now has the backing of the President in his decision that the answer lies in converting the Department into a corporation.

The Postmaster General comes before our committee on Tuesday for the first of what we expect to be three or four sessions to explain his views to our committee in open session.

My own view was made clear on the opening day of the 91st Congress when I introduced H.R. 4 to accomplish all of the improvements recommended by the Kappel Commission, yet keeping the postal service within the framework of the present Government Department.

Mr. Blount is entitled to his views and we will hear them, also those of Frederick Kappel, the Chairman of the Presidential Commission which made the study during the Johnson administration.

Perhaps the most important development so far in these discussions of postal reform is that there has surfaced such widespread agreement that the Department does need surgery—it does need reform.

The question becomes really whether we are going to do it with a scalpel or with a meatax. My preference is the scalpel.

Mr. Speaker, my hometown newspapers in Buffalo, N.Y., are adding their views to the picture, and although I do not agree with their conclusions as to the necessity for going to a corporation, I believe it only fair that their views be aired as follows:

[From the Buffalo (N.Y.) Courier-Express, May 25, 1969]

CORPORATION MIGHT IMPROVE POSTAL SERVICE

President Nixon has given his tentative approval to the creation of a public corporation to operate the United States mail. All details of the plan have not yet been revealed but all we can say is that if it will improve mail service, we're all for it. For more than a decade we have been paying more and more money for less and less postal service. A reversal of that trend would indeed be welcome.

Postmaster General Winton M. Blount has recommended the plan and has scheduled meetings for next week with members of Congress to explain the operation. We don't know how much of this time schedule is due to the work of Rep. Thaddeus J. Dulski, Buffalo Democrat who heads the House Post Office and Civil Service Committee.

But we should note that when Rep. Dulski called for a hearing on postal reform, Mr. Blount urged a delay on grounds that the department couldn't get ready for a hearing then. He asked for immedaite consideration of a boost in postal rates but no talk about reform. Rep. Dulski refused to delay the hearing and now the postmaster general—less than a month after he said the department couldn't get ready for a hearing—is proposing reform which goes far beyond the scope of Rep. Dulski's suggestions.

The Blount plan is similar in many respects to the recommendations submitted last year by a commission on postal organization headed by Frederick R. Kappel. One of its principal objectives is to insulate postal operations from political influence.

Politics undoubtedly contributes its share to the problem, but eliminating political influence is not going to cure the situation by itself. Most postal employes are, for the most part, outside the political sphere now, protected as they are by the Civil Service law and by the grievance procedure of a strong union, but the level of service varies greatly from station to station. In some offices the employes are courteous, hard-working and efficient; in others they are just the opposite.

However, if a corporation could—as Mr. Blount suggests—keep postal service from deteriorating and keep postal charges from skyrocketing, we certainly are all for it.

[From the Buffalo (N.Y.) Evening News, May 29, 1969]

PUSH POSTAL REFORM

The Nixon Administration proposals for sweeping postal reforms now prove beyond any doubt that the troubles crippling our present postal system—as seen from the presidential level and regardless of political party—require drastic institutional change.

The Nixon recommendations agree in substance with those first advocated by Lawrence F. O'Brien, former postmaster general, and backed both by President Johnson and by a presidential commission he appointed.

What all these Republican and Democratic figures in the executive branch agree upon is that a TVA-like corporation should replace the existing Cabinet-level postal department.

The suggested corporation, administered by a nine-member board, would be self-supporting, where the present system gobbles up $1 billion a year in taxpayer subsidies, and would be authorized to borrow money for capital improvements, to handle employe relations and pay free of now-dominant political considerations, and to fix postal rates, subject only to congressional veto.

A key figure in the impending debate in Congress, by virtue of his chairmanship of the House Post Office Committee, is Rep. Dulski of Buffalo.

He has his own recommendations about postal reform, many of them excellent, but he is as yet unconvinced of the merits of the Nixon-LBJ-O'Brien idea of a postal corporation. Rep. Dulski sees lawmakers probably unwilling to surrender control over postal rates and wages. Moreover the postal unions and the third-class mail lobbies oppose the presidential reforms.

But we believe reasonable objections to the corporation idea can be overcome. It would free Congress from intense and sometimes unhealthy lobbying pressures on raises. Since lawmakers would retain a veto, they would be surrendering no significant control over rates. The soaring volume of mail mitigates against any cutback in the 720,000 postal employes. And the Nixon plan pledges that all employes would be transferred into the new corporation with essential rights intact and with fair grievance procedures.

What must not be allowed to happen is that some generalized and blind fear of change, either by entrenched postal unions or by the lobbies for subsidized junk-mailers, should determine the character of a revitalized postal service. The present system verges too close on collapse for that.

Mr. Speaker, Jack Wilson in his Potomac Fever column in the Washington, D.C., Post, has had several pungent comments on postal reform, including:

Ford recalls 382,000 cars—GM says its truck wheel collapse—Lockheed's helicopter goes sour. Mr. Nixon, are you sure you should turn the Post Office into a corporation?

Of course, there's one thing about a corporation—you can't get a job through politics unless you're related to the boss.

There'll be some advantages if Nixon turns the Post Office into a corporation—every big stockholder can be sure of getting a low ZIP code.

A WORD FOR ADMIRAL SHARP

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. RARICK. Mr. Speaker, another indignant American has come to the defense of Admiral Sharp.

I insert an article from the Honolulu Advertiser, written by George D. Synon, rear admiral, U.S. Coast Guard, retired, as follows:

IN DEFENSE OF ADMIRAL SHARP

(By George D. Synon)

Your May 8 reprint of the Washington Post editorial, slyly titled "Admiral Sharp's Knife," casts an unearned slur on a brilliant and dedicated officer. It is doubly unmerited since the views expressed in Sharp's Reader's Digest article are widely held by countless military experts.

The Post editorial, however, is consistent with the record of that newspaper for denigrating the military profession at every opportunity. No newspaper, with the possible exception of the New York Times, has done more to undermine the confidence of the public in the conduct of the Vietnam war by the military than has the Washington Post.

As you well know, the strategy and to a great extent the tactics of the Vietnam effort were more significantly influenced by the coterie of liberal-intellectuals which surrounded President Johnson than by the Joint Chiefs of Staff and the principal field commanders.

This group was a legacy from President Kennedy. It included not only such people as Secretary McNamara, the Bundy brothers, Walt Rostow, Dean Rusk and the rest, but the liberal press, as well. It was they who thought we could fight a limited war, employing limited means and with limited objectives, against an enemy for whom the war was unlimited. They believed that by whittling away at the enemy's forces in South Vietnam and pacifying the countryside, but restricting our airpower mainly to interdicting enemy movement from north to south the enemy would finally become discouraged and quit.

By this strategy, we would avoid giving unnecessary offense to either Russia or China. Instead, it is we who have become discouraged and are now about to emerge from the Vietnam conflict with few, if any, of our original objectives accomplished and at the cost of a bloody and humiliating loss of life and treasure.

Now that Sharp comes forward and pins the blame for this "no-win" strategy exactly where it belongs, he is accused by the Post of "rewriting history" and has his "competence and his intelligence" impugned as well. The use of language of this sort is in keeping with that of the racial leftist press and is unseemly of even so left-leaning a journal as the Washington Post.

It is useful to take a look at the situation as it existed at the time of President Kennedy's assassination to see what basic errors were made by the Johnson Administration that led to the later strategy of graduated response which has proved so abortive and ineffectual.

Kennedy, following Eisenhower, had made a limited but increasing commitment in South Vietnam having as its main objective support of the Diem regime, which despite its many faults had considerable genuine support among the South Vietnamese people. No decision had then been reached to augment our so-called advisers in Vietnam—who at the most numbered not more than 15,000 officers and men—by significant larger numbers having a direct combat mission.

If he realized the folly of committing U.S. troops to a land war in Asia, as did Eisenhower, it is likely that Kennedy would have drawn back, rather than become more heavily engaged, despite the pressures of the Gulf of Tonkin incident and others.

Not so, President Johnson. When Johnson came to power he sought diligently to capture the popularity that had been enjoyed by JFK. He made it plain that none of the former president's policies was to be disturbed. But he also knew that the then-existing commitment in Vietnam was fraught with unfavorable political repercussions if handled improperly. Rather than take a chance and see South Vietnam go down the drain, Johnson made the fateful decision to go in, in force.

It was at this point that the possible consequences of that decision must have been carefully evaluated, at least by the Joint Chiefs of Staff. If we were unwilling to risk a confrontation with China or the Soviet Union, or both, as a result of sending in combat forces the proposed action should have been rejected. Instead, we either misguessed or underrated the determination of the enemy and the degree to which his allies would support him.

Let it be granted, however, that the Joint Chiefs concurred in the basic decision to commit combat forces in Vietnam, once it became apparent that Russia and China intended to provide North Vietnam with weapons and important logistic support, surely it must have been obvious, not only to the Joint Chiefs, but also to others having a voice in the direction of the war that North Vietnam should be brought to her knees in a hurry, before her outside support could become a telling factor in the war. This is just what Admiral Sharp sought to do.

Aside from Sharp's Reader's Digest article, the best evidence indicates that the Joint Chiefs were in accord with him that the only way of reaching an early military decision was to employ airpower to knock out the logistical and military installations, including roads, harbors, bridges, in addition to the not-yet-ready missile sites, from which the North Vietnam war effort was supported.

Instead, we laid off targets whose destruction was likely to disrupt the North Vietnamese civilian economy or cause excessive loss of civilian life. We studiously avoided the destruction of targets that might give offense to China or Russia. Our strategy degenerated into one of graduated response, stepping up our own war effort only as the enemy increased his. We gave him control of the timetable; he has not relinquished it yet.

The source of this Fabian strategy can be ascribed only to the civilian overlay between the president and the Armed Forces, with Robert McNamara its leading exponent. The president, of course, made all the final decisions but it cannot be doubted that he was swayed by the people closest to him.

During this time, true to his oath of office and to our tradition of civilian control of the military, Sharp kept his silence and did his best to implement a strategy with which he did not agree. Now that he is retired Sharp is speaking out, as is his right, "to warn the American people against the folly of conducting a major war on a piecemeal basis."

The Washington Post and the liberal-intellectual overlay of which it is a part know that they have much to answer for as a result of the tragic disaster that has overtaken us in Vietnam. The Post rightly predicts that others will come after Sharp with a similar purpose "to re-write history." For the Post to seek to silence them by invective and vituperation is unworthy of the American press. It makes one wonder just who wields the knife.

PRESIDENT NIXON'S POSTAL REFORM MESSAGE

HON. JOHN N. ERLENBORN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. ERLENBORN. Mr. Speaker, the official seal of the Post Office Department shows a galloping pony in full stride, a reminder of the great days when the mail was delivered on horseback by courageous men who defied danger in order to do their job. The spirit which that symbol represents still characterizes our postal employees. It is reflected, too, in what has become a kind of unofficial motto for the postal workers. I am thinking, of course, of those famous words adapted from those of the Greek historian, Herodotus, which appear on the front of the general post office in New York City:

Neither snow nor rain nor heat nor gloom of night stays these couriers from the swift completion of their appointed rounds.

Like the galloping pony, those words represent the dedication of our postal employees.

Unfortunately, however, the way in which our Post Office is organized does not do justice to the spirit of those who work for it. It saddles them with inefficient techniques, with impossible financing arrangements, with machinery long out of date, and with a promotion system that often fails to reward ability. It is a system left over from the days of the pony express, and it cannot do an adequate job in modern society. What snow and rain and heat and gloom of night cannot do, the organizational structure of the modern Post Office has brought about. As a result, there are many occasions when the appointed rounds of our postal couriers are not swiftly completed, their spirit and sense of responsibility notwithstanding.

What can we do about it? Men have asked that question for some time. And those who have asked it most frequently and most intelligently, have generally come to the same answer: make the Post Office into a public corporation with new arrangements for finance, for employee bargaining, and for general direction. These recommendations are expressed clearly and persuasively in the recent message on postal reform which the President has sent to the Congress. I trust that all Members of this body will read that message carefully and ponder both the problems it discusses and the answers it suggests. Let us be sure that the galloping pony which symbolizes our postal system does so because it sums up the morale and courage of our postal workers and not because it represents our failure to introduce modern techniques and a modern organizational structure.

CORPORATE CRIME

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. ROSENTHAL. Mr. Speaker, Ralph Nader provides an excellent example of how much good can come from one man's efforts. The American marketplace has been much improved because of his work in behalf of consumer justice.

Mr. Nader has recently made some statements that deserve the attention and thoughtful consideration of the Congress and the public. The statements follow:

[From Business Today, Summer 1969]

CORPORATE CRIME

(By Ralph Nader)

On September 10, 1968, the General Accounting Office presented the Congress with a report on enforcement of the Federal Insecticide, Fungicide, and Rodenticide Act. The conclusion was startling: the Agricultural Research Service of the U.S. Department of Agriculture, which is the enforcing arm for the Act, had never requested the Justice Department to prosecute a single case in 13 years. "This was true," the GAO stated, "even in instances where repeated major violations of the law were cited by the Agricultural Research Service." The Report showed that of 2,751 samples of products tested and reviewed during fiscal 1966, 750 were found to be in violation of the law. Of these, 70 percent or 520 were in "major" violation of the law.

The GAO report on pesticide non-enforcement did not provoke outrageous editorials or concerned commentary from Congress. No cries for law and order were heard for these corporate violators. For anyone who has observed the decline of moderate statutory penalties and their decreasing imposition, this double standard—one for individuals and the other for corporations or officials acting behind corporate frameworks—is not surprising. But it is exceedingly unjust and can lead to even more serious public harm than already has been the case.

For corporations, increasing in size to rival many nation states, impact the society in far more profound ways than a few decades ago. They can rapidly destroy the biosphere with their pollution of air, water and soil. Their products are sped to market in great numbers before adequate tests are conducted for direct and side effects on consumers. Ford Motor Co. jars a region's ecology by dumping 20% of all industrial wastes into Lake Erie whose deterioration may be irreversible. Drug companies can affect the lives, health and genetic inheritance of thousands of people before detection if rigorous standards and deterrents are not operating.

A few examples will illustrate this double standard and the absence of effective sanctions for deterrence of corporate irresponsibility. A few months ago, an elderly man was caught stealing $6 from a telephone booth in Maryland. He was sentenced to three years in jail. Horse thieves in Colorado—especially if they are Indians or other minority group members, have been sentenced to 15 years in jail. Two men robbed a sailor, without physical violence, of $1 late last year and were given 10 years in jail by a Virginia judge.

These instances of individual crime represented primarily the theft of something of economic value and were not characterized by violence, though the potential could have materialized in two of the three cases.

Consider, by comparison, the following examples of corporate crime. In the Spring of 1967, a Lake Central Airlines plane, a Convair 580, crashed in Ohio, killing 38 people. The subsequent investigation by the Federal Aviation Administration proved beyond any doubt that the crash was caused by a "soft piston" defect leading to the separation of the propellor and penetration of the fuselage. Allison Division of General Motors built this component and, although knowing of this serious defect *before* the crash, did not advise the airlines with the 18 defective Convairs to ground the planes and disassemble them for inspection. Thirty eight people died. The FAA fined Allison $8,000. That was the only penalty even though Allison had been cited many times by the FAA in the past for irregularities in propellor production quality and safety. This was the taking of something of economic value and deprivation of life by such corporate negligence and knowing failure of warning after the company discovered the defect.

Greyhound Corporation—a highly profitable company in diversified activities—has had a practice of repeatedly regrooving rear tires in a pattern that gives little traction to these rear-heavy, high speed buses. Crashes have occurred with loss of life owing in whole or part to such slippery tires. There have been no enforcement actions urged by the federal government until a Greyhound crash occurred with worn tires in May 1967 in New Jersey with one fatality and many injuries. The case still has not come to trial but the maximum fine under the law is $500.

The trend against even the provision of adequate penalties in the law—quite apart from their use on corporate crime or criminal negligence—has been alarming. What every corporate lawyer in Washington now aims at in any new consumer protection law is to delete any provision imposing criminal penalties on companies even when they knowingly and willfully violate the law in such a manner as to take human life. Thus, the auto safety, radiation control, gas pipeline safety and other recently enacted statutes have been stripped of criminal penalties even for knowing and willful violations.

Companies that refuse to call back dangerous products—whether in the auto, food or drug area—or take inordinate time to do so, are not subjected to criminal penalties in the auto cases and trivial criminal fines in the food or drug area.

The struggle for the rule of a just law against street crime and avoidably dangerous products and lethal pollution of our environment is a struggle against violence. Violence comes in many styles from corporations producing their products. It is incumbent for citizens to react with concern and indignation as they do now for street crime. When gas pipelines explode owing to knowingly dangerous maintenance, when tires fail because companies do not recall them for defects, when toys burn or maim children because of the most dangerous design and materials, when meats are doused with illegal chemicals to make them palatable and presentable, when people breath air filled with toxic elements and gasses, a civilized society must see such acts as acts of violence and apply sanctions on companies and their officials. Sanctions go beyond traditional penalties and deter by meticulous adaptation to the particular corporate act. Thus, sanctions can include recall orders, suspension of company officials or of a particular plant, or a temporary public trusteeship of part of a company's operation deemed seriously contrary to public health, safety or interest—to name only a few.

It is clear that as this double standard becomes more and more unjust, those at the bottom of the economic ladder will take their cue increasingly from the lawless privileged at the top of the ladder. The moral and law-abiding tone of a society takes its depth from the top of the economic hierarchy. If violence and property theft is conceived only in terms of street crime, the law will never bring under its rule major sources of violence proceeding from the workings of an industrial society.

WHAT WE ARE MADE OF?—TIME FOR A DEEP LOOK AND A STEADY RESOLVE

(Remarks by Ralph Nader before the 1969 convention of the American Society of Newspaper Editors, April 17, 1969, Washington, D.C.)

It is with some dismay that I find myself addressing this distinguished gathering just before lunch. For my topic is that most basic of consumer products—food—and my theme is that it needs a most basic cleaning up. If what I have to say upsets you in a gritty sort of way, let me state at the outset that you have every right to be upset. For food becomes *us* in a very short while and our relationship to this consumer product could scarcely be more intimate.

The $100 billion food industry is in need of thorough public scrutiny and reform. The only difficulty is that it does not know this as it continues to increase its prices, its profits and its myths. This is an unfortunate delusion for this industry to be harboring.

In the short time available, I would like to describe aspects of the deepening malaise, deception and indifference to the responsible exercise of very considerable power by the performance of the food industry and its subgroups.

The decisive motivations that drive the food processors and the maximization of their sales, profits (which includes progressive reduction of costs) and the avoidance of undesirable regulatory and consumer feedback. This all seems innocent enough until one observes more closely just how spacious an arena for maneuvering against the public interest has been staked out by the industry. This has been accomplished incrementally over the years by the rapid development of technologies, chemicals, merchandising and packaging techniques to deny the consumer the information for critical feedback, to divert his attention to wholly extraneous, emotional appeals having nothing to do with the quality or price of the product, and to mask the true condition of the foodstuffs from the consumer's natural detection facilities. Thus, the dimension of most peoples' reaction to the food they eat is narrowed to an appreciation of just those responses that the processors can manipulate so easily. These deal with palatability, tenderness and appearance cum acceptable or not repugnant odor. If the particular food product can satisfy the narrow evaluations, it is home free, quite apart from any serious lack of nutrition, wholesomeness and purity. Home free, that is, as far as the consumer is concerned. Try this test on yourself next time someone asks you how a particular meal was and see if your reaction is restricted to one or more of these three responses. Such induced and meekly accepted conditioned response by most of us makes a mockery of consumer sovereignty and the disciplining force for quality of the marketplace implicity in an opportunity for intelligent choice or rejection.

What is the consumer consuming? Let a few representative illustrations do for the many that time does not permit to be discussed at length:

1. The little consumer—infants—are being exposed to nitrate residues from the heavy use of nitrogen fertilizer in various farm acreage. Professor Barry Commoner of Washington University in St. Louis reported last year on the increasing incidence of nitrate poisoning discovered by European public health officials among infants that was traced to the consumption of unrefrigerated American-processed baby food. The more precise extent of this toxic hazard to infants is not fully known in this country because no one is trying to find out in any systematic way. The food industry is not in-

terested in being burdened with this knowledge.

2. The rapid rise in antibiotic utilization for artificial growth stimulation and health promotion in poultry and red meat animals is raising the risk of residual transfer to the human organism, particularly if antibiotics are applied a few days prior to slaughter. Even the placid National Acadamy of Sciences and the FDA are worried about this one. What are the direct and synergistic effects on humans of such ingestion and how effective will these drugs be when they are needed for medical purposes? Existing regulations are too weak and poorly enforced. But these antibiotics sure make for a growth industry.

3. Fat content in meat is an acknowledged major contributor to heart disease. Fat content in many processed meats has been going up in recent years, according to the U.S. Department of Agriculture. Why? Because fat is cheaper than meat and since they are mixed together, the consumer rarely can tell the difference. How bad is the situation? Well, the USDA issued a few months ago (December) a proposal to set a maximum fat content of 30% for the class of finished sausage products that includes frankfurter, wiener, vienna, bologna, garlic bologna, knockwurst and similar products. The meat industry, led by the American Meat Institute, is strongly opposing this requirement. Fat as a cost reduction technique is terribly congenial to the industry's tastes. Look how well it works with the most expensive breakfast meat product called bacon. Some people, it may be, may want to pay hard dollars for fat in their bologna, but they have a right to know how much fat they're buying and other more fastidious consumers should not have to buy meat with a high, latent material that isn't meat at all.

4. Consumers Union went out shopping for fresh pork sausage recently. CU subjected the sausage samples to laboratory tests. Thirty percent of the federally inspected sausage and forty percent of the infrequent Illinois inspection failed CU's tests for absence of filth or acceptably low bacteria counts. (Last month 60 persons came down with trichinosis in Missouri). CU also found that one-eighth of the federally inspected sausage and more than one-fifth of the other sausage contained insect fragments, insect larvae, rodent hairs and other kinds of filth. The sausage samples tested included most major brand names.

5. USDA reports in 1962 and 1967-68 covering non-federally inspected plants (a category accounting for 25% of the nation's meat supply) showed evidence of selling 4D animals (dead, dying, diseased and disabled animals) for human consumption, repulsively unsanitary conditions in the plants (rodents, vermin, etc. have access to the meat preparation and storage areas for example) and the use of illegal additives or untested additives to color, season and preserve the putrid meat so as to render it palatable. Other USDA reports on poultry preparation revealed substantial prevalence of diseased poultry being sold to unsuspecting buyers throughout the country. Much of this substandard meat and poultry is routinely funnelled into city slums. USDA inspected plants are not without their problems. The meat industry likes to throw away only bones; all meat, no matter what its condition is a tempting subject for "reconditioning" or "doctoring". Not even the better companies, such as Hormel, are above doctoring such once-rejected meat by the first retail buyer for subsequent resale to supermarkets in the slums and some in the suburbs. Millions of pounds of meat are destroyed by federal order every month but many more get to market. Bad meat is still good business.

6. The fish inspection bill is once again before Congress. The fish industry, backed by such law firms as Covington and Burling, is confident that the bill will go nowhere this year. The confidence is based on the industry's power to lobby, not on conditions in its plants. Two years ago, FDA's Deputy Commissioner Rankin offered data, since re-confirmed, on conditions in the smoked fish industry: an examination of 15 plants disclosed that 13 were operated under conditions judged to be potentially dangerous and six of these were judged to be imminently hazardous to consumers of the finished product. The FDA, severely limited in resources for inspection, still manages to seize numerous shipments every month involving decomposed fish and fish products, the presence of coagulase, positive staphylococci, and parasitic oopepods. Frozen breaded shrimps containing bacterial filth, leaking canned fish, frozen whitefish with parasitic cysts, caviar containing borates, imported dried fish containing maggots are some other illustrations.

Consumers Union has conducted several tests over the past decade and will conduct more shortly. Here is part of CU's tally: Ninety-eight of one hundred twenty samples of frozen raw breaded shrimp tested contained coagulase positive staphylococci (1961); 55 of 120 samples of cod, haddock, and ocean perch fillets judged substandard quality (1963); 85 percent of 646 cans of salmon (51 brands) showed a tendency toward mushiness or discoloration (1966); 17 samples of 18 frozen salmon steaks (three brands) were so rancid that no cooking method could disguise the bad flavor (1966). Like so many foods that are unwholesome they are bad bargains in an economic sense.

7. Water pollution—sewage and industrial waste—in bays and off-shore areas, where shell fish are harvested, is a mounting peril. The FDA just recently seized 21,000 pounds of frozen fish out of the Great Lakes because of dangerous pesticide levels in the salmon. Environmental pollution finds its way in other food products as well. Is the food industry pushing for pollution controls? No. Is the food industry adopting and developing techniques for detection of such pollution? Only very slowly, at best.

8. Every week, FDA puts out its little known "Weekly Recall Report." It is little known because FDA does little to publicize it. Some food recalls of late include Cookies (rodent filth) Egg Yolk Solids (contamination, Salmonella—a fast spreading foodborne menace generally). Imitation Pistachio, lemon, mint etc. Flavors) contained decertified color FD & C green #1). Candy (high acidity), a Sugarless, pre-sweetened Drink (mislabeled, contains 24 to 30% dextrose), assorted frozen pastries (for contamination, petroleum hydrocarbons), Chocolate flavored drink (contamination, mold & insect fragments), Plain Chocolate Candies (M&M's, Contamination, Salmonella), Peanut candy (contamination, Aflotoxin), Kidney Beans (Insect infested), Evaporated Milk (rusty, leaking and exploding cans).

9. Cyclamate, an artifficial sweetener in diet soft drinks is beginning to cause the FDA worry after years of assurances that it was safe. Tests have shown that it leads to chromosome breakage in rats; humans are just being tested now. Other less serious afflictions are known to result from not overly generous consumption of these artificially sweetened drinks. Like many other additives to food and drink, the FDA has permitted a sell now, test later posture by the companies. FDA has admitted that it has heavily relied on summary assurances by food companies about additives and has not checked in detail the raw test data. FDA now recommends that a child drink no more than two 10-ounce diet drinks a day containing cyclamates.

10. More and more additives are pouring into our foods. The growth of chemical additive use in foods is being stimulated by the fast rise of convenience foods—so-called. Joseph G. Jarrell of Hercules, a producer of additives, declared that convenience foods are more likely to require "special flavorings, flavor enhancers, color and other additives to make up for the partial loss of flavor, color, texture and other properties caused by processing." The food industry is moving rapidly into developing food substitutes—simulated meats, simulated orange juice, simulated coffee all of which will require a wide variety of food additives. The industry's attitude toward the consumer is epitomized by the following advertisement which apepared in the magazine Food Technology:

"With Western Dairy Products' new *tasteless* (their emphasis) sodium caseinate called Savortone, you can now successfully use sodium caseinate as an emulsifier and binder for sausages, salad dressings, oil emulsions and egg substitutes . . . You can use it wherever you like, and never wonder for a minute what the consumers will think. They'll never know."

The industry's attitude toward its own responsibilities in testing the various effects, short and longer range, of their additives is reflected in the tragically low research and testing budget, most of which goes to developing new convenience foods using more additives and not on the effects of these additives on the human organism. The level of technical competence in the food laboratories is low, as judged by the producers of food additives who sell to these companies. (See Chemical and Engineering News, Oct. 10, 1968.)

One of this century's greatest geneticists, Dr. Hermann J. Muller put this kind of problem in proper focus:

"What we are concerned with . . . is the possibility of (food additives, drugs, narcotics, antibiotics, pesticides, air pollutants and water pollutants) being mutagenetic, that is, producing mutations in the genetic material, and being thereby damaging not only to the directly exposed individuals but even to their descendants.

"It is now important to know what substances have such effects, how they may be recognized and dealt with, and in what ways the effects will be expressed in the exposed and subsequent generations."

Over the past several years, leading geneticists and biologists meeting at scientific symposia have expressed alarm at the lack of national policy and commitment to learning what the somatic and genetic impacts on people are from the thousands of chemicals including food additives; that are confronting us. When scientists such as Dr. Rene Dubos, Dr. Richard A. Kimball (Oak Ridge Laboratory), Dr. Marvin Legator (FDA) and Dr. Matthew Meselsen of Harvard show deep worry, it is time we all became concerned about the need for safety guidelines and monitoring procedures.

What permits the food industry to manipulate its products for sales-maximization (including preservation over time for nationwide distribution) and cost reduction in ways that place the risk of harm on the consumer is the absence of comprehensive, operating standards of evaluation. It is also the difficulty of tracing the cause and effect of this silent type of violence to tissue and cell structure over long periods of time or even in cases of food poisoning outbreaks, the search for the responsible agent is difficult because of the many variables or inputs. This very difficulty requires a strategy of prevention at the source, not a wait and see attitude resulting in disastrous consequences of the type foreshadowed in the thalidomide tragedy.

There is still a widespread impression that government is watching out for the consumer ever since the pure food law was passed early in the century. The fact is that FDA neither has the resources, nor the regulatory dedication nor adequate authority to keep up with the proliferating abuses in the food industry. To conduct research, inspection, review test results and enforce the law, FDA was provided with $23,056,000 for 1969—less than a fourth of the cost of one atomic

submarine. According to Dr. S. S. Epstein of the Children's Cancer Research Foundation, (Boston), there are only three laboratories in this country specifically evaluating the potential health hazards of chemical mutagens—all small efforts. A 1967 Health, Education and Welfare report, "A Strategy for a Liveable Environment," bewailed the fact that unlike most government regulatory agencies, the FDA "does not have subpoena authority either to summon witnesses or to require firms to divulge pertinent records." Hundreds of firms, which the FDA is supposed to monitor routinely refuse every year to allow the FDA to conduct to conduct inspections or furnish quality or quantity formulas or to review safety or health control records. In 1965, 216 firms refused to give the FDA permission to review shipping records. This prevents FDA from getting at hazardous situations early in the time of their development. FDA has itself been unduly meek, failing to publicize its drastic needs for the protection of the consumer and reflecting a passive enforcement policy. Its educational function has lagged greatly, even with reports by the National Academy of Sciences and the AMA Council on Foods and Nutrition warning about the loss of essential nutrients in foods, and the Report of the National Commission on Community Health Services warning about existing food hazards and inadequate public health controls that "have created the potential for massive nationwide outbreaks of food-borne illnesses."

The time has indeed come for the public to expect the food industry to shoulder its burden of proof of health and safety in its products, to end its secrecy, to extend its inspection, testing and research and to emphasize wholesomeness, purity and nutrition above gimmickry and packaging appeals. The issue of food safety and quality will be a large one in 1969!

STATEMENT OF RALPH NADER BEFORE THE EXECUTIVE REORGANIZATION SUBCOMMITTEE OF THE SENATE COMMITTEE ON GOVERNMENT OPERATIONS, MARCH 20, 1969, ON S. 860—TO ESTABLISH A DEPARTMENT OF CONSUMER AFFAIRS

Mr Chairman, distinguished Members of the Senate Subcommittee on Executive Reorganization, thank you for the opportunity to express my views on S. 860 and the needs out of which this proposal emerges.

It is clear that this subcommittee intends to establish a record during these hearings that will not only document the necessity of a major organizational proposal for consumer protection but also help sharpen the shape which any such organization should take to fulfill such a mission. My statement will strive to keep this objective in focus.

Consumer abuses come in two basic forms—(a) they reduce real incomes and misallocate resources by way of frauds, snoddy merchandise and other deceptions or bilking schemes and (b) they inflict violence on consumers by way of hazardous products, unprovided services or environmental pollutants. The spectrum of consumer abuses in the health and safety areas must cover the involuntary consumption of toxic or otherwise dangerous man-inflicted materials in air, water and soil.

Any discussion of consumer abuses must also include the critical issue of corporate irresponsibility. The economy of this country is a corporate economy. The corporate institution is by far the major manufacturer, processor and vendor of goods and services. What external and internal incentives and restraints obtain for the corporate entity and the people who work in a corporate framework are fundamentally related to the protection and fairness or lack thereof that are accorded consumers. Likewise, what privileges, immunities and defenses prevent the public accountability of corporate behaviour and divert it toward antisocial practices are pertinent to fairness and safety for consumers.

It is useful at the outset to itemize a number of abuses, practices and phenomena—in no way exhaustive of the corporate predations but in a small way reflective of conditions that merit the profound concern that has convened this subcommittee. Subsequent to the completion of this list, a few lessons will be drawn on a more general plane.

1. During the winter of 1967–1968, Montgomery Ward mailed notices to its charge account customers in some 32 states telling them about "Charg-all Insurance Protection." "I think you'll call it great," said Ward's President, Edward S. Donnell in the cover letter. The customer was told that he soon would receive a certificate evidencing the insurance of his indebtedness to Ward for amounts between $30 and $3,000. The coverage provided for payment of the indebtedness in the event of death or disability of the customer. Ward would be the beneficiary.

The insurance plan was a means of protecting Ward's claim against the customer while avoiding costly collection expenditures against the estate of a deceased customer or directly against a disabled customer. The premium was to be .10 per month per $100 or fraction thereof owed to Ward. Contrary to the usual contractual doctrines, the failure of the customer to make an affirmative refusal of the coverage obligated him to pay the insurance premium. In order to avoid the coverage, the customer was told he must (a) deduct the premium from his bill or (b) call Ward or (c) fill in an enclosed card. If one of these courses of action was not taken, the customer was covered. Only the first bill listed the insurance premium separately. Customers complained of nearly discarding the announcements because they were sent out on bulk mail rates and appeared like junk mail. They also complained that the mailings did not include postage paid envelopes to facilitate refusals. Insurance Commissioner Hunt of Minnesota said that:

"It is unreasonable to believe that all of Ward's charge customers will read the letter from Ward's President, E. Donnell and will understand that they are going to be charged for the credit life insurance unless they take affirmative action to reject it. It is outrageous for people to be coerced into paying for something they don't want." Maryland Insurance Commissioner Newton Steers called the plan "high-handed."

A burst of criticism followed and a number of insurance departments investigated the matter along with the Senate Antitrust Subcommittee. But despite all this activity, the operation of the plan was virtually unaffected, with the possible exception of its operation in Minnesota. Company representatives agreed to print boxes on the bill so that the customer can refuse the insurance by checking the appropriate box. However, the customer still must take affirmative action to refuse coverage. The bill form required in Minnesota is slightly different. It requires a more explicit bold face type explanation of the charges. However, the customer must still decline the insurance coverage. And the explicit explanation is only on the first bill.

A class suit against Montgomery Ward's "revised" plan is now pending in Illinois and demands recovery of the premiums. The suit alleges that the plan is virtually identical to the original one and that the customer is still not given an adequate explanation of what the coverage is (e.g. age limits, pre-existing conditions void the coverage for disability, etc.). Worse, if the customer neglects to check either the box indicating refusal or acceptance, he is assumed to have accepted. In any event, the choice of boxes is only on the bill for the first month of coverage. The abuse remains.

2. Last year the Federal Trade Commission released a report on lumber grading, inspection and marketing (lumber prices have skyrocketed to a 50% increase in the past year in many lines). The report stated:

"The masquerading of low grade lumber for high grade lumber has bilked consumers of millions of dollars, has lowered the margin of structural safety in innumerable dwellings, and, in the affected market areas, has impaired competitive mores among surviving wholesalers, retailers and contractors."

The abuse remains.

3. Last April, during the week of disturbances which took 37 lives throughout the nation, a negligently maintained leaky pipeline blew up in Richmond, Indiana, taking 41 lives and seriously burning over 100 other persons. No federal or state law applied to this disaster. The Indiana Public Service Commission didn't believe it even had authority to investigate formally this explosion. No law and no order was applied to the gas company and its induced violence.

4. Antitrust officials at the Justice Department know that price fixing is rampant throughout the economy but simply do not have the manpower to deal with this criminal corporate violation. Price fixing keeps prices higher for consumers than they would be if competition prevailed. The electric price fixing conspiracy involving General Electric, Westinghouse, Allis Chalmers and other companies was prosecuted in 1960–61 by the Justice Department. It cost consumers over a billion dollars. It cost G.E. Westinghouse et al about $500 million in punitive damage settlements and this sum was promptly written off as "ordinary and necessary" business expenses. Corporations who pay out such damages after criminally violating the antitrust laws can share their pain with the general taxpayer under present Treasury rulings.

5. Oil import quotas, by keeping high the domestic price of oil and blocking the importation of cheap and less polluting foreign petroleum, are costing the U.S. consumer at least $3–$5 billion a year according to Executive Branch estimates. These and other quotas are consumer issues.

6. Automobile bumpers—those chrome, ornamental, eyebrows—are designed to maximize repair costs and knowingly so. Fender sections and other captive parts sell well with bumpers that cannot protect the vehicle in collisions exceeding 2 mph and some bumpers fail that standard. Recently, Edward Daniels, an Automobile Club of Michigan insurance executive, released a study that indicated an annual loss to motorists of $1 billion due to ornamental bumpers. A functional bumper—designed to protect against impacts up to a modest 10 mph—would save the motorist that much money, he said. Do the auto executives know this? Of course they do. But they go on looting the public by design. A billion dollars is diverted from other purchases such as food, furniture, medicine, clothes. This is an illustration of the misallocation of resources as a result of corporate venality.

7. Over a year ago, Dr. James Goddard, Commissioner of the Food and Drug Administration, predicted that the federal government would force withdrawal from public use about 300 drugs—some of them "family favorites"—found to be ineffective for the treatment of the medical conditions for which they had been prescribed. Both prescription drugs and patent medicines—under 1,600 brand names—were to be involved. Hope is still springing eternal.

8. The U.S. Department of Agriculture is proposing a rule limiting fat content to 30% in various processed meats. The meat industry is opposed. Hams with 30% water content abound in parts of the country such as California. What is the dollar buying here? Does the consumer know? Here is an advertisement from the magazine Food Technology which reflects the prevailing spirit:

"With Western Dairy Products' new tasteless (their emphasis) sodium caseinate called Savortone, you can now successfully use sodium caseinate as an emulsifier and binder for sausages, salad dressings, oil emulsions, and egg substitutes . . . You can use it wherever you like, and never wonder for a minute what the consumers will think. They'll never know."

What's on the labels is not all that is in the meat product. Last year, *Consumer Reports* tested fresh pork sausages—including leading brands and found some distressing things. One-eighth of the Federally inspected sausage and more than one-fifth of the other sausage contained insect fragments, insect larvae, rodent hairs and other kinds of filth. In typical samples, CR found that 30% of the federally inspected sausage and 40% of the sausage subject only to infrequent Illinois inspection failed the tests for absence of filth or acceptable low bacteria counts. CR stated that such findings suggest "unclean packinghouses, unsanitary ingredients and inadequate inspection." These tests even jarred the U.S. Department of Agriculture—not an inconsiderable accomplishment.

9. William B. Keiser of Allison Park, Pa., was driving his new Pontiac on October 25, 1968, when his left front wheel bearing failed. The repairs did not come under the warranty, according to his dealer. Mr. Keiser objected and wrote to Pontiac's home office. He wrote again. He still has not received any answer even though his original letter stated that he had purchased a mere 13 Pontiacs since 1953 for his family use.

10. In 1962, the Surgeon General submitted a list of 150 physicians and scientists who were candidates for the Advisory Committee on Smoking and Health to the Surgeon General, to the Tobacco Institute. The Tobacco Institute was given the right to veto anyone on the list without any reason given. Although the final committee came out with a report that was critical of cigarette smoking, this unique access of an industry trade group appears at least inappropriate.

11. Congressman John Dingell obtained information during his recent inquiries into the effectiveness of private industry standards that the formula observed by the American Hotel and Motel Association does not produce hygienic linen. Under these standards the bacteria count in laundry is only slightly reduced after being washed in one of the more highly advertised home laundry preparations. Rep. Dingell stated that the evidence showed "pathogens such as staphylococcus to be only slightly deterred by the very laundering process that we rely upon to remove them completely. Our European brothers are rather more advanced than we are in that their home laundry equipment contains a booster unit to increase the temperature of the water. This increases the bacterial kill rate considerably. However, as indicated in a letter from the DuPont Company, this higher water temperature has a softening effect on plastic pipe which quite probably would damage a plastic plumbing system.

12. The flammable fabrics act, the truth-in-packaging act, the oil pipeline safety act, the regulation by the ICC of household moving van practices, the pesticide act, and drug advertising enforcement have been serious or colossal failures. Consumer legislation is highly vulnerable to deceptive packaging. It is also often starved for funds. This deprivation, of course, is not new. The combined budgets of the Federal Trade Commission and the Antitrust Division of the Justice Department have always been trivial as compared with the task they are given to accomplish and the size of the economy. The record budget for the two agencies combined was about $22 million last year—less than 10 hours gross receipts of General Motors. As discussed earlier this week, the FTC does not even use its funds to full effect.

13. For several decades, interstate motor carriers like Greyhound have had their accident reports kept secret by the Federal Government. Until late last year, the Government accident reports on carrier crashes were secret. This secrecy has shielded both carriers and the ICC (now in the Department of Transportation's Bureau of Motor Carrier Safety) from public evaluation and contribution. It has also kept the facts from the victims of these crashes, thus protecting the carriers from legal accountability. It is not surprising, therefore, that defective conditions and hazardous practices (such as Greyhound's use of repeatedly and poorly regrooved rear tires) have persisted.

There are a number of lessons to be drawn from such situations as briefly noted above.

The idea that consumer abuses stem overwhelmingly from fringe or marginal firms is utterly untenable, notwithstanding FTC Chairman Paul Rand Dixon's self-serving declarations to the contrary. Whether it is drugs, automobiles, lending, packaging, cigarettes, pesticides, flammable fabrics, pipelines, air and water pollution—big business is intensely implicated in the abuses and industrial violence directly and consciously.

Present Federal authority leaves out many areas of consumer protection from any form of attention or action. The National Commission on Product Safety—established last year for a two year period—has illustrated this well in its short existence. The Commission has found startling hazards in many toys—of an electrical, mechanical or thermal nature. It has found child deaths through refrigeration entrapment and nibbling leaded paint peeling off slum walls continuing without remedy. It has found that many sources of existing information—such as that held by insurance companies on product hazards—have not been tapped by any level of Government. It found that the Federal Housing Administration was not requiring safety glass in all F.H.A. approved homes—a simple step that could save many lives and thousands of injuries every year. It found that there were no adequate standards to prevent serious burns, particularly on children, from gas-fired floor furnaces. The Commission has documented durable failures in private standards groups and certifying groups such as Underwriters' Laboratories. No standards by Government exist for power lawn mowers, washing machines, stoves and other appliances which literally cause hundreds of thousands of injuries every year.

The level of non-enforcement of laws against corporate transgressions is most disturbing for those who believe that law and order should apply to the rich as well as to the poor. The U.S. Department of Agriculture sits on serious violations of the pesticide laws for years and does not refer them to the Justice Department for prosecution. General Motors waits for as long as three years, shunning its own inspector's reports, before recalling 2.5 million Chevrolets. No Government official calls for law enforcement here for such delay in recalling vehicles with exhaust leakage into the passenger compartment. The elitist mores are such that, instead, G.M. received praise for *not* delaying further and waiting for more deaths to be documented as carbon monoxide victims.

The attached supplement dealing with the Hormel Co. plant in Southern California discloses hitherto unrevealed information of gross abuses relating to the sales of rotten meat, even though Federal inspectors are at the plant presumably enforcing Federal laws.

The articulated sanctions in laws dealing with corporate crime are deplorably weak. Wilfull and knowing violations, for example, of the auto safety law, the gas pipeline law, the radiation control law—to name a few—do not carry with them criminal penalties. Lawyer-lobbyists had them deleted. The penalties for violations of the air and water pollution laws are encumbered with incredible delays which when endured then leave the Government with only the crudest and thereby difficult to apply sanctions.

The Federal Trade Commission, for most of its enforcement work, can only order cease and desist decrees which lets the violator keep his ill gotten gains and frees him to try and design around the decree. Corporate violations affect far greater numbers of people than the conventional street crime in fact and in potential. Pollution of the air with deadly contaminants is a continuing assault in the streets—to name but one hazard outside the plants. Yet while the penalties for individual crime (three years in prison were awarded two youths last year in Maryland who stole 300 lbs. of tobacco and admitted their guilt when apprehended, returning the tobacco as well) outside the corporate framework far exceed the feather swishes that go for corporate penalties—even those not deductible or passed on to the hapless consumer.

A great tool of government for consumer protection has been rarely used—that is, prototype research and development for safety and health purposes. Non-polluting engines (external combustion for instance) have not been developed by the auto companies for other than technical reasons. The government could have done so for a fraction of the amount soaring away in the ill-advised Super-Sonic transport program. The same exemplary and motivating function could have been performed for safer cars, a less noiseless environment, fire preventive techniques and retardants. The sums expended would have been returned manyfold in lives saved and diminished waste. The federal government has still not developed a policy toward individual inventors, both without or within companies. Thus the nation is losing much of its citizen inventiveness to the stifling environment of corporate collectivism. Yet, the data are impressive in still showing that major innovations still come from individuals, often working alone, and not committees within corporations.

Particularly in the era of the computer, the government's consumer information function is very weak. It is weak in not utilizing and disseminating existing data in its possession but also gathering additional data. The situation reaches almost ludicrous levels when the inspection and procurement (school lunch) branches of the Department of Agriculture do not communicate over contaminated food coming to the attention of one or the other. The tremendous, deceptive waste of advertising that is selling not distinctive qualities but brand name identification could be reduced sharply with objective, point of sale consumer information from a central computer bank. Similarly, many such displays of waste and misallocation of resources could be diminished by such information programs.

Corporate executives are not called upon to answer for these consumer frauds or asked to testify before the Congress, I am referring to the top two corporate executives, not subordinates. Such executives insulate themselves from these and many other dialogs. They should not be allowed to do so. It is striking what a difference there is in having them present. It is also striking how few committees of Congress demand their presence. Your subcommittee showed this clearly when it demanded that the heads of General Motors, not the subordinates, show up if that company were to testify. The impression made on these gentlemen—Messrs. Donner and Roche—at the hearings led to their ordering the energy absorbing steering column into production. They received an education in vehicle safety design in Washington, not in Detroit or New York behind cloistered offices. Top corporate have preferred access to government—advisory committees, social occasions at which key business is discussed, top appointments, quick

response to their inquiries for appointments or information. It is time that citizens, through Congress, had comparable access to corporate executives in public.

As presently organized, the Federal Government has not engendered the creative ideas for consumer protection that are so badly needed. Problems begging for detailed remedies include the handling of complaints, but their bucking over from one agency to another; the decentralization of enforcement, the development of local and State consumer protection bodies, the process by which problems can be anticipated at their earliest stages through early targeting that could come from a freer flow of information; the lack of due process and freedom of dissent in the corporate structure which leads to incalculable damage; the best way to resolve conflicts between buyer and seller that simply are excluded from the judicial arena owing to time, expense and other factors.

There is a high priority in investigating the so-called lobbying infra-structure that undermines and could continue to undermine any consumer activity in Government. Included are trade associations—such as the Automobile Manufacturers Association and the American Iron and Steel Institute and the National Coal Policy Conference—and corporate law firms such as Covington and Burling and Hogan and Hartson and Arnold and Porter. The gentlemen who run these operations are eminent specialists in cutting down consumer programs in their incipiency or undermining them if they mature. They are the masters of the ex parte contact, the private deals and trade-offs, the greasing of the corporate wheels and the softening of the bureaucrats' will. They could tell this Committee a great deal about the obstacles and tactics which consumer drives and administration must deal with. Without such knowledge, the administrative structure cannot be devised and implemented effectively. I am sure that such citizens as Lloyd Cutler and Thomas Austern and Edwin Rockefeller—all of whom deal with the consumer in their distinctive ways as corporate attorneys—would be pleased to come before this Subcommittee and provide its members with their views and experience.

The stresses to which consumer interests have been subjected to in the marketplace, in the environment and in policymaking arenas have brought about in recent months a number of proposals to defend his interests. Senator Metcalf has introduced legislation to create an agency that would represent consumers at rate-making hearings for utilities. Senator Hart has proposed an independent consumers information foundation. Congressman Ottinger has proposed a Federal "environmental ombudsman" to protect natural resources from damage and destruction resulting from Federal agency actions. S 860 envisages a more comprehensive institution, assuming that its concept of consumer interests is sufficiently broad.

There is much in this bill with which I agree. There is a definite need for a distinct arm of the Federal Government to promote and represent the consumer interest by performing the following functions—*investigation, research* and *testing, information dissemination, handling complaints* and *advocacy before agencies and courts* and presentations before Congress. I do not find persuasive, however, the depositing of various regulatory functions including the transfer of several consumer laws from other departments and agencies to the proposed Department. Giving the Department of Consumer Affairs such a regulatory role would (a) simply refocus the entire lobbying environment on the Department; (b) weaken the Department's strong advocate role because it would have to referee between competing interests in its administrative hearings and rule-making roles; (c) further lighten any public interest burdens from other Departments and regulatory agencies and (d) generate *needless* opposition to any Department by established agencies apprehensive of losing their programs. To be effective, a consumer agency must not have anything to give to industry or commerce, as it most assuredly would if it had a regulatory role. Having something to give would attract the same forces that undermined or controlled other agencies. The thrust of a consumer agency, in my judgment, is to assist in the reform of other agencies to perform in the public interest, not to progressively relieve them of that horizon in their deliberations.

The prospects for any form of consumer agency or Department receiving the support of the present Administration are readily dim. There is nothing in the campaign literature and the interregnum to assure the public that the Administration's leaders understand consumer problems much less expect to do something about them. In fact, on more than one occasion just the contrary was the case.

Since taking office, the Administration has confirmed its pre-inaugural stance. The debacle in trying to fill the President's special assistant for consumer's affairs office continues in low key by the absence of any candidate for the post. It is now clear that the Attorney General is going to abolish the Office of the Consumer Counsel in his Department. This Counsel was to have a key role inside and outside the Justice Department as an advisor, advocate and idea-generator for consumer protection in areas ranging from policy-making to development of a Consumer's Bulletin that has been also called a Consumers' Federal Register. There is no one holding the post now as it has been kept vacant since the Johnson appointee resigned.

In other Departments and agencies, consumer protection proponents are running for cover or being eased out from top to surprisingly lower staff levels. In the Department of Transportation, the Federal Highway Administrator, Francis Turner, is having a field day, with the permissive support of the Secretary, in rooting out all people who questioned in the slightest the advisability of paving over America with highways, balancing the nation's transport system, reducing the voracious appetite of the highway lobby, staying the irrational misuse of land in cities and country and striving to make vehicles safer. Mr. Turner's relentless drive is now placing the National Highway Safety Bureau, with whom he battled as Director of the Bureau of Public Roads, under the grip of his concrete-asphalt minded administration. The Food and Drug Administration has suddenly mellowed rapidly in its enforcement and rule-making activities. Appointments of a high caliber in the Department of Health, Education and Welfare are being held up by retrograde medical merchants with strong lines into the new Administration.

About the only contribution to the protection of the consumer by the new Administration was the inadvertant public exposure given to the transparent nullity that is the Good Housekeeping Seal. An Administration composed of leading Presidential advisors from advertising agencies, ex-lobbyists for industry and multi-millionaire construction and manufacturing magnates can be forgiven a short period of transition from one role to another. But the forces building up in this country for clean air, water and soil, for product safety and justice in the marketplace will not long wait upon an Administration which continues such a blend of indifference and callousness. Your hearings will afford a needed forum for conveying the word down Pennsylvania Avenue—if indeed anyone down there is listening.

Thank you.

SUPPLEMENT

The George A. Hormel Co. plant of La Mirada, California is almost new; in fact less than two years old. It is considered a showplace of modern meat preparation. And indeed the stainless steel atmosphere would appear to be an ideal setting for the preparation of such appetizing items as Buffet Ham Loaf, Sunday Bacon, Smoked Polish Sausage, Sirloin Steaks and Prosciutto. The Hormel Company (based in Austin, Minnesota) is a leader in the industry averaging about ½ billion in sales each year. A good example from Hormel sets a standard for the industry. Unfortunately, however, the escorted guests in this Hormel plant at La Mirada do not get to see all. What they miss would be more enlightening than what they are shown. If the guests were permitted to see all, they would see Hormel scalers repacking old meat in new packages with recent code dates in order to disguise the true age of the product. These visitors might also see, if they were permitted to, the storage area which holds the Hormel meats obscurely referred to as #2 meat. This innocent-sounding name is actually the plant euphemism for rotting and adulterated meat which will be sold to some Southern California supermarkets, with their knowledge, and to some school districts without their knowledge. And if our visitors were permitted to stay long enough they would witness a host of other deeply upsetting practices.

Some regular buyers of Hormel products seek to protect the persons they serve by requiring all meat to be code dated upon arrival. This is obviously a prudent measure on the part of buyers of a perishable commodity and this requirement no doubt gives them a sense of security. One such buyer is Certified Grocers of California. The sham quality of the dating becomes clear whenever the shipping instructions say: "Do not short smoked hams to Certified Groc. If lots are too old, rebox and put new code date on each box." And a more general instruction regarding demanding buyers: "As a reminder—try to enter Code Dates on recap (the repackaging) for Certified, Safeway, Market Basket and accounts who require a close call date."

Another tough customer for the Hormel plant is nearby Vandenberg Air Force Base. This is a lucrative and active account so that a special procedure was set up to service it and at the same time avoid the inconvenience of Vandenberg's dating requirement: "On all Smoked Meats, Sliced Bacon, Wieners and Packaged Lunch Meats, there must be a current code date not past seven (7) days. This is according to the rules and regulations of the Air Force Base. The Pork Loins and Spare Ribs should be left uncoded until time of shipment. Each Friday (x employee) will notify (y employee) the amount of fresh pork products that will be delivered to Vandenberg on the following Thursday. On this basis we should do the coding two days prior to shipment."

These buyers, despite their efforts, are getting stale meat and there is reasonable probability that it cannot or at least should not be eaten. Many other buyers, however, are *certain* to be getting meat which is not edible. This is Hormel's #2 meat. Officially #2 meat does not exist. The price list contains no designation or prices for anything list #2 meat. The pricing policy with regard to #2 meat was best explained by a Hormel salesman, who sells a great deal of meat to San Diego schools. This salesman responded to a memo from his superior which complained that he had not been getting enough for the #2 meat. The salesman retorted: "I sell all the *junk* (emp. in original) I can for as much as I can get for it. I can't do more."

The accepted practice for disposing of spoiled meat is destruction or sale to rendering plants. Sales by the La Mirada plant to

rendering plants consist almost wholly of bones. Decayed meats need not be wasted in this way. They can be sold directly to supermarkets, many of them in Los Angeles ghetto areas but some in Orange County (map referred to not printed in RECORD [1]), to processors who "doctor" the product and in turn sell to ghetto supermarkets and even to unsuspecting school districts. One supermarket, not far from the Watts riot area, is among the plant's best customers. It buys virtually nothing except #2 meats. Number 2 Kolbase bought at $.30/lb. is sold at $.90/lb. to the area's poor residents. Here again, the poor pay more for less—much less.

Recently hundreds of pounds of inferior #2 meats—specifically wieners—had to be returned by a half dozen schools at least. They were black and full of fat. Not even doctoring at the La Mirada plant could save this shipment.

Specifically what is #2 meat? The words of the original buyers who rejected the meat speak for themselves:

1. Moldy liver loaf.
2. Sour party hams.
3. Leaking bologna.
4. Discolored bacon.
5. Off condition (euphemism for rotting) hams.
6. Slick and slimy spare ribs.

These are the actual reasons given by customers for rejecting meats. In each case credit was given the customer and each company credit memorandum contains the notation "transfer to #2." In one case the customer's shipment arrived in such a bad state that slimy and rotten spare ribs had to be dumped on the spot. A few from this batch were actually returned to the plant. They also were transferred to #2. In two other cases customers returned ribs for "sliminess, discoloration, stickiness." They received special treatment. They were marked "transfer to cure and smoke." This resurrected meat will emerge as "Windsor Loins", which actually sell for more than fresh pork chops.

On January 22, 1969, Von's grocery rejected a shipment of hams, saying that they were "discolored—excessive moisture." The meat was resold the same day to a supermarket which regularly buys number 2 meats. The plant lost only $4.47 on an original sale of $23.18. Better Foods on that same day rejected 4 pieces of ham because of "discoloration, internal fat, and cavities." A cash sale of the meat as #2 for $11.00 meant that the plant lost only $5.98 on a $17.79 sale. In one case a store returned meat saying it was "black—extremely discolored." It was cured and smoked and sold at only $1.82 under the original price of $22.80. Occasionally, things get even too bad for regular #2 buyers. One of them recently returned boneless party hams because they were sour. They were sent back to #2 for another resale attempt.

There are a number of other buyers who regularly purchase meat which is not quite #2 but yet is not quite meat. The Hormel plant, obviously operating without compunctions, obligingly supplies these quasi-meat products. One very large restaurant located on the site of a famous Los Angeles tourist attraction regularly orders frankfurters with almost no meat. There is a special recipe and denomination for these franks, which are even inferior to the standard franks with large quantities of cereal. This same outfit's regular orders, for one of its other sufficient dishes, something called "ham trim" which insiders say is floor sweepings. Another interesting item supplied in large quantities to processors and supermarkets specializing in ghetto trade is pork melts. Pork melts sell for about 10 cents per lb. and have no obvious culinary value. Yet one processor recently purchased 3,000 lbs. of pork melts. This had nothing to do with food fads. Pork melts are a staple item for processors. When mixed with fat ground meat, pork melts "melt" and give the whole mixture a red appearance.

School children, the poor and, with surprising regularity, rich suburbanites in the Los Angeles area are eating these sub-meat products. And even the Federal Government is not immune. At mentioned earlier, the La Mirada plant supplies Vandenberg AFB on a regular basis. The evidence is that authorities at the base are careful to see that the men are receiving meat of adequate quality. The date coding system, as we have seen, offers no protection of quality. But the deception goes further. For instance, on January 23, 1969, the appropriate officer at Vandenberg rejected a large shipment of beef patties. The reason for the rejection was simple. The order had stated that the patties were to be delivered frozen. The meat was shipped back to the La Mirada Plant, refrozen and shipped back to Vandenberg the next week. The inspecting officer, knowing nothing of the deception, accepted the meat as a different shipment.

[1] Map does not show markets outside the Los Angeles area (San Bernardino, Riverside) and does not show processors who specialize in selling to markets in low income areas.

TWO MARYLANDERS DIE IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. LONG of Maryland. Mr. Speaker, Sgt. Ernest J. Hughes and Sp4c. William L. McGowan, two fine young men from Maryland, were killed recently in Vietnam. I would like to commend their bravery and honor their memory by including the following article in the RECORD:

TWO FROM STATE DIE IN VIETNAM—SILVER SPRING INFANTRYMAN, ESSEX SERGEANT KILLED

An Army career sergeant from Essex and an 18-year-old infantryman from Silver Spring are the latest Maryland casualties in Vietnam, the Department of Defense announced yesterday.

They are:

Sgt. Ernest J. Hughes, 28, the husband of Mrs. Shirley Hughes, of Middletown, Ky.

Spec. 4 William L. McGowan, son of Oscar D. McGowan, of 12508 Atherton drive, Silver Spring, and Mrs. Evelyn Hammond, of Hagerstown.

Sergeant Hughes, a member of the 21st Infantry was killed May 12 during an attack on his base between Da Nang and Chu Lai.

A 10-year veteran of the Army, Sergeant Hughes had been in Vietnam since last October. He had previously served in Korea and Germany, among other places.

He was born in Essex and was graduated from Stemmers Run Junior High School.

SIX SURVIVORS

In addition to his wife, his survivors include a 5-year-old son, Joseph; his parents, Mr. and Mrs. Edward Hughes, of Deep Point, Md.; and two brothers, Edward Hughes and James Hughes, of Essex.

Services will be held at 9 A.M. tomorrow at the Connelly funeral establishment, 300 Mace avenue.

Specialist McGowan was killed May 14 in Phu Bai, his stepmother, Mrs. Oscar McGowan said yesterday. She said no details were given.

He joined the Army in July, 1967, after dropping out of Hancook High School near Hagerstown. He was born in Hagerstown.

Specialist McGowan received his basic training at Fort Bragg, N.C. He spent nine months in Germany before being sent to Vietnam in September, 1968.

In addition to his parents, his survivors include a brother, Seaman David McGowan in the Navy at Pensacola, Fla.

NORTHERN VIRGINIA CITIZENS GROUP SLATES ABM DEBATE

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. BROWN of California. Mr. Speaker, it is imperative that all citizens—throughout the country—realize all the implications behind the struggle now occurring both in Congress and across the Nation concerning deployment of President Nixon's proposed ABM system.

Washington, D.C., ended up as one of the lucky areas to receive protection from Safeguard, but so far, public debate here has been minimal. Hopefully, though, that situation is changing.

Tomorrow night, Tuesday, June 3, the Northern Virginia Coalition of Citizens Concerned About the ABM will hold a town meeting to discuss the President's proposals on ABM. The recently formed coalition consists of nine citizens groups—seven opposing ABM and two which have taken no stand but wish to have public airing on the question.

I view the town meeting concept as a powerful means of presenting the many aspects of the ABM debate, and I urge those persons here in the Washington area who feel they need to know more about ABM to attend the meeting.

Mr. Speaker, I include the following press release describing the town meeting be in the RECORD at this point:

FORMATION OF NEW COALITION OF NINE NORTHERN VIRGINIA GROUPS TO SEEK INCREASED PUBLIC DISCUSSION OF ABM

In mid-March, President Nixon announced his plans for the Safeguard anti-ballistic missile system. Although 15 cities had formerly been chosen for ABM sites (including Boston, Chicago, Dallas, Detroit, Los Angeles, New York, San Francisco and Seattle) the sites were removed from population centers due to citizen concern and public education.

Among the remaining missile sites are the countrysides of Montana and North Dakota and one city, Washington, D.C.

The governors of Montana and North Dakota have expressed their opposition to the Safeguard in their backyard and the citizens in these states have oragnized in protest.

In the absence of initiatives by local governing bodies, The Northern Virginia Coalition of Citizens Concerned About the A.B.M. have requested the Arlington, Alexandria, Fairfax and Falls Church city councils to hold hearings on the ABM.

Since there has been no response from the Council fathers we are now, publicly, asking for open hearings.

Concern is mounting so rapidly, however, that we have planned a Northern Virginia Town Meeting for Tuesday, June 3rd at T. C. Williams High School to debate the ABM.

The members of the debate team supporting the ABM are:

Charles Lerch, Institute of Defense Analysis.

Richard Fryklund, Special Advisor to the Deputy Secretary of Defense.

Members of the opposing view are:

Dr. George Rathjens, Professor of Political Science, M.I.T.

Dr. Jeremy Stone, author, member of Council, Federation of American Scientists.

Robert Goralski of NBC News will be the moderator of this debate.

We deeply regret the silence of our elected and appointed Virginia leaders. Although the ABM vote is scheduled for mid-June, we sincerely hope that the Town Meeting will be the beginning of an 11th hour intense round of discussions and hearings on this most controversial and critical of issues.

Sponsoring Groups: Langley Hills Friends Meetings, New Democratic Coalition of No. Va., Northern Virginia Action Committee, Northern Virginia Clergy and Laymen Concerned About Vietnam;

Parkfairfax Citizens Association;

Support Christian Action House Church of the Little Falls Presbyterian Church;

Spectrum, George Mason College;

Virginia United Methodist Board of Christian Social Concerns, and Washington Area SANE.

HOUSE OF REPRESENTATIVES—*Tuesday, June 3, 1969*

The House met at 12 o'clock noon.

Rabbi Louis Kaplan, Congregation Ohev Shalom, Nether Providence, Pa., offered the following prayer:

Lord:
In commencing this session of the House of Representatives,
Begin we must by expressing gratitude for being alive.
Even as we have risen from sleep,
Rouse us, too, we pray from our shackles of yesterday—
The fetters of ignorance, resistance to worthwhile change,
Yielding complacency, inertia, and other shortcomings.

Aid us to attain a healthy discontent
Now concerning what we have done, as well as a
Determined and renewed enthusiasm for what we can do.

Joining high resolve with noble goals,
Understanding with genuine compassion,
Spur these leaders, especially to translate
The Biblical challenge "to do righteousness and justice"
Into legislation enabling more
Children and adults, in this Nation and elsewhere, to
Enjoy their "unalienable rights" in the human family.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Leonard, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment bills of the House of the following titles:

H.R. 684. An act to amend title 38 of the United States Code in order to make certain technical corrections therein, and for other purposes;

H.R. 2718. An act to extend for an additional temporary period the existing suspension of duties on certain classifications of yarn of silk;

H.R. 2940. An act for the relief of Henry E. Dooley;

H.R. 10015. An act to extend through December 31, 1970, the suspension of duty on electrodes for use in producing aluminum; and

H.R. 10016. An act to continue until the close of June 30, 1971, the existing suspension of duties for metal scrap.

The message also announced that the Senate had passed bills and a joint resolution of the following titles, in which the concurrence of the House is requested.

S. 83. An act for the relief of certain civilian employees and former civilian employees of the Bureau of Reclamation;

S. 275. An act for the relief of the village of Orleans, Vt.;

S. 499. An act for the relief of Ludger J. Cossette;

S. 728. An act for the relief of Capt. Richard L. Schumaker, U.S. Army;

S. 901. An act for the relief of William D. Pender;

S. 1010. An act for the relief of Mrs. Aili Kallio;

S. 1193. An act to authorize the Secretary of the Interior to prevent terminations of oil and gas leases in cases where there is a nominal deficiency in the rental payment, and to authorize him to reinstate under some conditions oil and gas leases terminated by operation of law for failure to pay rental timely;

S. 1236. An act for the relief of Homer T. Williamson, Sr.; and

S.J. Res. 112. Joint resolution to amend section 19(e) of the Securities Exchange Act of 1934.

ELECTION TO COMMITTEE

Mr. GERALD R. FORD. Mr. Speaker, I offer a privileged resolution (H. Res. 431) and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 431

Resolved, That Barry M. Goldwater, Jr., of California, be and he is hereby elected a member of the standing committee of the House of Representatives on Science and Astronautics.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PERMISSION FOR SUBCOMMITTEE ON URBAN GROWTH, COMMITTEE ON BANKING AND CURRENCY, TO SIT TODAY DURING GENERAL DEBATE

Mr. ASHLEY. Mr. Speaker, I ask unanimous consent that the Subcommittee on Urban Growth of the Committee on Banking and Currency may have permission to sit during the session this afternoon during general debate.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

TRIBUTE TO THE LATE TRUMAN WARD, MAJORITY CLERK

(Mr. MONTGOMERY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MONTGOMERY. Mr. Speaker, I join with other Members of Congress and congressional employees in mourning the passing of the majority clerk of the House of Representatives, Mr. Truman Ward. Mr. Ward passed away this past Sunday. This fine gentleman was born and raised in Clarke County, Miss., the district which I represent. He served the Members of Congress with great devotion and loyalty. He held the position of either majority or minority clerk for some 48 years. Mr. Truman Ward assumed his duties in 1921 at the age of 29. In talking of his work on Capitol Hill, Mr. Ward recently pointed out there were no longer any Members of Congress still serving that were here when he first came to work. We will all certainly miss his warmness to people, his professional ability, and the outstanding service he rendered to his country.

I am sure all Members of Congress join with me in sending our sincere condolances to Mr. Ward's wife, daughter, three sons, and 12 grandchildren. Members of Congress may pay their respects to Mr. Truman Ward's family at the Joseph Gawler's Sons Funeral Home from 2 this afternoon until 9 tonight. The funeral will be held at 11 tomorrow morning in the sanctuary of the Capitol Hill Metropolitan Baptist Church.

Mr. ABERNETHY. Mr. Speaker, will the gentleman yield?

Mr. MONTGOMERY. I yield to my colleague from Mississippi.

Mr. ABERNETHY. Mr. Speaker, we were all saddened on learning that our good friend and valuable employee, Truman Ward, had passed away.

I had not been a Member of this body but for a day or so when I first became acquainted with Truman. In fact, he went to the trouble of making a personal visit to my office that we might get acquainted. Then and there he made suggestions and gave me the benefit of counsel which I as a new Member found most helpful. This was typical of Truman Ward. He was unselfish. He was tender and kind. He was never too busy to advise with me or other Members about the printing needs of our offices. He did a good job for all of us.

Truman was good to the employees, too. Scores of them found their way to and secured employment on Capitol Hill through his personal efforts. For all who

called on him he gladly and happily rendered favors and services to the full extent of his capacity.

We will miss Truman. Yes, we will miss him greatly. And as time moves by we shall never forget him or the service he rendered as a faithful employee on Capitol Hill.

His family has our sympathy.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. MONTGOMERY. I yield to the majority leader, the gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker, I am sure all of my colleagues were saddened as I was, to learn of the death on Sunday of Mr. Truman Ward, clerk of the majority room in the House of Representatives. A familiar figure among Members and employees of the House of Representatives, Truman Ward joined the House staff in 1921, shortly after coming to Washington. As clerk of the majority room, he performed countless services for Members and staffs. As many know, not only did he serve the printing needs of Democratic Members but he also functioned as an unofficial placement officer for Capitol Hill employees.

All of his friends on Capitol Hill and in the House of Representatives will miss Truman. Mrs. Albert joins me in extending to Mrs. Ward and his family our deepest sympathy.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. MONTGOMERY. I yield to the minority leader, the gentleman from Michigan.

Mr. GERALD R. FORD. I share the expression of the gentleman from Mississippi and others concerning Truman Ward. Although I did not know Mr. Ward intimately, I am very familiar with his loyalty, his ability, and his total devotion to the legislative branch and, more particularly, the House of Representatives. I join with others in expressing to his family our deepest sympathy in this hour of sadness.

Mr. BOGGS. Mr. Speaker, will the gentleman yield?

Mr. MONTGOMERY. I yield to the majority whip, the gentleman from Louisiana.

Mr. BOGGS. Mr. Speaker, I would like to associate myself with the remarks that have been made about Mr. Ward. I can think of no one who has served the Members of the House who could be better described as almost irreplaceable. Truman Ward, in his quiet, efficient way, was tremendously helpful to all of us in the operation of our offices, the preparation of printed material, the securing of office help, guiding new employees, and in many other ways, too numerous to recount. I join with all the others in expressing condolences to his family, and I trust that we will be fortunate enough somewhere within that family to find a successor.

Mr. MONTGOMERY. I thank the gentleman from Louisiana, and all others who have spoken, for their remarks.

Mr. McCORMACK. Mr. Speaker, I am sure that the fact of the tragic passing of Truman Ward has already come to the attention of his legion of friends among the Members of this House. He died on Sunday, June 1, after a lifetime spent in the service of the House of Representatives. Last rites are to be held tomorrow, Wednesday, at the Capitol Hill Metropolitan Baptist Church, Sixth and A Streets NE., at 11 a.m., and interment will take place at National Memorial Park.

He was born 76 years ago in Enterprise, Miss., and, after spending his early years and young manhood there, he came to Washington to serve the House of Representatives in 1921. What a record of dedicated, devoted, and enthusiastic service he set during his lengthy career as a faithful steward of the interests of the Members of this Chamber.

Equal to his dedication to the House, however, was his devotion to his religion. He joined the Capitol Hill Metropolitan Baptist Church in 1922 and was a member of its board of deacons from 1943 until his death. His fellow church members, like his fellow employees of the House, and like the Members of the House, lament his loss for myriad reasons. They will miss his friendly presence among them. They will have lost his desire to be helpful which was combined with the practical ability needed to be very helpful indeed. They will have been deprived of his unfailing cheerfulness, his abundant energy, his understanding of his fellow man, his scrupulous integrity, and his profound religious belief.

Those of us who have, over the years, sought his assistance, can testify to these qualities which made him universally popular. He had an intuitive understanding of the needs of Members in the production of their newsletters and other printed communications with the constituents of their districts. To that intuitive understanding was coupled the distilled wisdom of almost a half century of experience in the legislative process at the national level.

There was very little about the Congress of the United States that Truman Ward did not know, and it speaks well for this institution to which we are all devoted that this knowledge induced in him an incontestably high regard for the House of Representatives and for its Members and employees.

Truman Ward was truly a man whom we shall greatly miss in our daily tasks, both as a friend and as an utterly competent and thoroughly obliging employee of the House. To his widow, Gladys, and to his three sons, we offer the assurance, in these hours of grief, that we are well aware that this House will not be served by his like again. We say to him, from the very depths of our hearts, "Well done, thou good and faithful servant."

Mr. PICKLE. Mr. Speaker, regardless of which side of the isle we occupy, all of us have lost a friend. Truman Ward, clerk of the majority room, died Sunday.

For nearly 48 years, Mr. Ward served the Hill. Somehow, the press room will continue—but it will not be the same. All of us can remember the times that Truman Ward pulled out a print job under impossible deadlines.

Most of us owe him a great deal. I cannot recall how many of my assistants that Truman Ward has "trained." I wonder how many people on the Hill owe their jobs to this white-haired gentleman who greeted everyone with "Good morning, Judge."

More than a printer, Truman Ward was a person who cared about his fellow man. He was one of our living traditions. For the 76 years of his life, Truman Ward was an example to all of us. We shall miss him.

Mr. CHARLES H. WILSON. Mr. Speaker, I am deeply saddened to learn of the recent passing of our good friend and invaluable aide, Truman Ward. Over the years he smoothed the road in many ways by helping Members to effectively communicate thoughts, ideas, and activities to millions of constituents across the country. At a time when lack of communication is being blamed for all sorts of problems, Truman's friendly and helpful office certainly did a great deal to assure that we could effectively communicate with voters on vital issues.

For 48 years, as clerk of the majority room, Truman Ward's good humor and generous assistance made him an extremely popular Capitol Hill figure. We shall miss him. A native of Enterprise, Miss., he began his remarkable Washington career in 1921 and served continually the needs of Congress until his death. In addition to his work as majority printer, Truman was an able and willing helper to dozens of staff members, newcomers, and friends seeking jobs and guidance in Washington. He was always a welcome and needed port in a storm during the political turmoil that is so much a part of life in Washington; above all, he was a good friend. To Gladys Ward and the other members of his family, I extend my sympathies at the loss of this fine and well respected man, Truman Ward.

GENERAL LEAVE TO EXTEND

Mr. MONTGOMERY. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the life, character, and public service of the late Truman Ward.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

PERSONAL EXPLANATION

Mr. FISH. Mr. Speaker, on June 2, 1969, while I was unavoidably detained at an important meeting in my district the House took two rollcall votes on H.R. 763 to provide for a study of State laws concerning the governing operations of youth camps, and on H.R. 693 to provide that veterans 72 years of age shall be deemed unable to defray hospital expenses.

I request that it be made a matter of record that had I been present, I would have voted in the affirmative on both bills.

PERMISSION FOR SUBCOMMITTEE ON HOME FINANCING, COMMITTEE ON BANKING AND CURRENCY, TO SIT DURING GENERAL DEBATE TODAY

Mr. ALBERT. Mr. Speaker, on behalf of the gentlewoman from Missouri (Mrs.

SULLIVAN), I ask unanimous consent that the Subcommittee on Home Financing of the Committee on Banking and Currency may sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

Mr. HALL. Mr. Speaker, reserving the right to object, may I ask the distinguished majority leader, in view of this request, if we are going to proceed to the Hill-Burton bill and discussion and debate thereof today, or is that to follow on another day?

Mr. ALBERT. That is to come probably tomorrow.

Mr. HALL. Mr. Speaker, I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

FIRST ANNUAL REPORT OF THE RADIATION CONTROL FOR HEALTH AND SAFETY ACT OF 1968—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 91-126)

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Interstate and Foreign Commerce and ordered to be printed:

To the Congress of the United States:

In accordance with Section 360D of the Radiation Control for Health and Safety Act of 1968 (Public Law 90-602), I am herewith transmitting to you the first annual report on the administration of this Act. This report, prepared by the Department of Health, Education and Welfare, describes activities undertaken to carry out the purposes of this Act during the 1968 calendar year as well as plans for further implementation of the Act during the current year.

RICHARD NIXON.

THE WHITE HOUSE, *June 2, 1969.*

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

FRANK KLEINERMAN

The Clerk called the bill (H.R. 3377) for the relief of Frank Kleinerman.

Mr. HALL. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

PEDRO IRIZARRY GUIDO

The Clerk called the bill (H.R. 5000) for the relief of Pedro Irizarry Guido.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

JOHN VINCENT AMIRAULT

The Clerk called the bill (H.R. 2552) for the relief of John Vincent Amirault.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

PROVIDING FOR REFERRAL OF CLAIM OF JESUS J. RODRIGUEZ

The Clerk called House Resolution 86, providing for referring the bill (H.R. 1691) to the Chief Commissioner of the Court of Claims.

Mr. HALL. Mr. Speaker, I ask unanimous consent that the resolution be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

CAPT. JOHN W. BOOTH III

The Clerk called the bill (H.R. 1808) for the relief of Capt. John W. Booth III.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

MRS. BEATRICE JAFFE

The Clerk called the bill (H.R. 1865) for the relief of Mrs. Beatrice Jaffe.

Mr. HALL. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

MRS. AILI KALLIO

The Clerk called the bill (H.R. 1999) for the relief of Mrs. Aili Kallio.

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

MRS. EZRA L. CROSS

The Clerk called the bill (H.R. 4744) for the relief of Mrs. Ezra L. Cross.

There being no objection, the Clerk read the bill, as follows:

H.R. 4744

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 8119 to 8122, inclusive, of chapter 81 of title 5, United States Code, relating to "Compensation for Work Injuries," are hereby waived in favor of Mrs. Ezra L. Cross of Flint, Michigan, and her claim for compensation for the death of her husband, Ezra L. Cross, a former employee of the Agency for International Development, who died on September 30, 1961, shall be acted upon under the remaining provisions of such chapter in the same manner as if such claim had been timely filed, if she files such claim with the Department of Labor (Bureau of Employees' Compensation) within six months after the date of the enactment of this Act.

Benefits shall accrue by reason of the enactment of this Act from a period beginning not more than five years from the date of death of Ezra L. Cross, such period to be determined by the Bureau of Employees' Compensation; except that hospital, medical, funeral, and burial expenses which are deemed reimbursable shall not be reduced by operation of this limitation.

With the following committee amendment:

On page 2, lines 4 through 10, strike the language contained therein and insert:

"No benefits shall accrue by reason of the enactment of this Act for any period prior to the date of enactment; except that hospital, medical, funeral, and burial expenses which are deemed reimbursable shall not be reduced by operation of this limitation."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

COMDR. EDWIN J. SABEC, U.S. NAVY

The Clerk called the bill (H.R. 5419) to provide relief for Comdr. Edwin J. Sabec, U.S. Navy.

Mr. HALL. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

ALFRED LORMAN

The Clerk called the bill (H.R. 3006) to fix date of citizenship of Alfred Lorman for purposes of War Claims Act of 1948.

There being no objection, the Clerk read the bill, as follows:

H.R. 3006

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purpose of the War Claims Act of 1948, Alfred Lorman, a former citizen of Austria, shall be deemed to have become a citizen of the United States on June 22, 1944, the date that he became eligible to take the oath of allegiance to the United States, and the Foreign Claims Settlement Commission shall receive and determine such claim in accordance with all other provisions of War Claims Act of 1948, as amended, and the award, if any, made by the Commission shall be paid by the Secretary of the Treasury from the War Claims Fund.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMALIA P. MONTERO

The Clerk called the bill (H.R. 6375) for the relief of Amalia P. Montero.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

LT. COL. EARL SPOFFORD BROWN

The Clerk called the bill (H.R. 6377) for the relief of Lt. Col. Earl Spofford Brown, U.S. Army Reserve, retired.

There being no objection, the Clerk read the bill, as follows:

H.R. 6377

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Earl Spofford Brown, lieutenant colonel, United States Army Reserve (retired), O-1080178, is relieved of all liability for repayment to the United States of the sum of $3,522.81 representing the amount of overpayments in longevity pay received by him for the period from June 1, 1942, through May 31, 1961, while he was serving as a member of the United States Army, resulting from administrative error on the part of Army personnel.

SEC. 2. The Comptroller General of the United States or his designee shall relieve disbursing agents of the Army, Navy, and Air Force from accountability or responsibility for any payments described in section 1 of this Act, and shall allow credits in the settlements of the accounts of those officers or agents for payments which are found to be free from fraud or collusion.

SEC. 3. The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury, not otherwise appropriated, to the said Earl Spofford Brown, the sum of any amounts received or withheld from him on account of the overpayments referred to in section 1 of this Act. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person, violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

On page 2, lines 12 and 13, strike "in excess of 10 per centum thereof".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MAJ. CLYDE NICHOLS

The Clerk called the bill (H.R. 6850) for the relief of Maj. Clyde Nichols, retired.

There being no objection, the Clerk read the bill, as follows:

H.R. 6850

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Major Clyde Nichols (United States Air Force, retired) of Chattanooga, Tennessee, is relieved of liability to the United States in the amount of $3,836.09, representing overpayments of base pay received by him for the period beginning April 1, 1953 and ending December 31, 1962, as a result of inclusion by the Air Force, through administrative error, for pay purposes of three years and nine months of service by the said Clyde Nichols as a midshipman in the United States Naval Reserve. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for amounts for which liability is relieved by this section.

SEC. 2. (a) The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Clyde Nichols an amount equal to the aggregate of the amounts paid by him, or withheld from sums otherwise due him, with respect to the indebtedness to the United States specified in the first section of this Act.

(b) No part of the amount appropriated in subsection (a) of this section in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this subsection shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

On page 1, line 6, after "base pay" insert "and flight pay".

On page 1, line 7, strike "April 1, 1953" and insert "December 18, 1954".

On page 2, line 13, strike "in excess of 10 per centum thereof".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. VITA CUSUMANO

The Clerk called the bill (H.R. 1462) for the relief of Mrs. Vita Cusumano.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

MISS JALILEH FARAH SALAMETH EL AHWAL

The Clerk called the bill (H.R. 1707) for the relief of Miss Jalileh Farah Salameth El Ahwal.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

JAMES HIDEAKI BUCK

The Clerk called the bill (H.R. 2208) for the relief of James Hideaki Buck.

There being no objection, the Clerk read the bill as follows:

H.R. 2208

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, James Hideaki Buck may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by Howard J. Buck, a citizen of the United States, pursuant to section 204 of the Act.

With the following committee amendment:

On page 1, line 8, strike out the word "Act." and insert in lieu thereof the following: "Act: *Provided,* That the natural brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FRANKLIN JACINTO ANTONIO

The Clerk called the bill (H.R. 2224) for the relief of Franklin Jacinto Antonio.

There being no objection, the Clerk read the bill, as follows:

H.R. 2224

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Franklin Jacinto Antonio may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by Mr. and Mrs. Cal Carinio Jacinto, citizens of the United States, pursuant to section 204 of the Act.

With the following committee amendment:

On page 1, line 8, strike out the word "Act." and insert in lieu thereof the following: "Act: *Provided,* That the natural brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FRANCESCA ADRIANA FATTA (MILLONZI)

The Clerk called the bill (H.R. 2536) for the relief of Francesca Adriana Fatta (Millonzi).

There being no objection, the Clerk read the bill, as follows:

H.R. 2536

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Francesca Adriana Fatta (Millonzi) may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Mr. and Mrs. Santo Millonzi, citizens of the United States, pursuant to section 204 of the Act.

With the following committee amendments:

On page 1, line 4, strike out the name "Francesca Adriana Fatta (Millonzi)" and insert in lieu thereof the following: "Francesca Adriana Millonzi".

On page 1, line 8, strike out the word "Act." and insert in lieu thereof the following: "Act: *Provided,* That the natural brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Francesca Adriana Millonzi".

A motion to reconsider was laid on the table.

RUEBEN ROSEN

The Clerk called the bill (H.R. 2890) for the relief of Rueben Rosen.

There being no objection, the Clerk read the bill, as follows:

H.R. 2890

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Rueben Rosen shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARTIN H. LOEFFLER

The Clerk called the bill (H.R. 3165) for the relief of Martin H. Loeffler.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

ALEKSANDAR ZAMBELI

The Clerk called the bill (H.R. 3166) for the relief of Aleksandar Zambeli.

There being no objection, the Clerk read the bill, as follows:

H.R. 3166

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Aleksandar Zambeli, who was lawfully admitted to the United States for permanent residence on July 8, 1962, shall be held and considered not to be within the classes of persons whose naturalization is prohibited by the provisions of section 313 of the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

RYSZARD STANISLAW OBACZ

The Clerk called the bill (H.R. 3167) for the relief of Ryszard Stanislaw Obacz.

There being no objection, the Clerk read the bill, as follows:

H.R. 3167

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Ryszard Stanislaw Obacz, who was lawfully admitted to the United States for permanent residence on January 29, 1964, shall be held and considered not to be within the classes of persons whose naturalization is prohibited by the provisions of section 313 of the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

YOLANDA FULGENCIO HUNTER

The Clerk called the bill (H.R. 3172) for the relief of Yolanda Fulgencio Hunter.

There being no objection, the Clerk read the bill, as follows:

H.R. 3172

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Yolanda Fulgencio Hunter may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Mr. and Mrs. William Foster Hunter, citizens of the United States, pursuant to section 204 of the Act.

With the following committee amendment:

On page 1, line 7, after the names "Mr. and Mrs. William Foster Hunter," strike the remainder of the bill and insert in lieu thereof the following: "a citizen of the United States and a lawfully resident alien, respectively, pursuant to section 204 of the Act: *Provided,* That the natural brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CHO JOHNNY

The Clerk called the bill (H.R. 3188) for the relief of Cho Johnny.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. FEIGHAN. Mr. Speaker, I ask unanimous consent that Calendar No. 84, H.R. 3188, be recommitted to the Committee on the Judiciary.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

MARIA DA CONCEICAO EVARISTO

The Clerk called the bill (H.R. 3376) for the relief of Maria da Conceicao Evaristo.

There being no objection, the Clerk read the bill, as follows:

H.R. 3376

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(25) of the Immigration and Nationality Act, Maria da Conceicao Evaristo may be issued a visa and admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of such Act: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the Immigration and Nationality Act: *Provided* further, That this exemption shall apply only to a ground for exclusion of what the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

HARRY BUSH

The Clerk called the bill (H.R. 3560) for the relief of Harry Bush.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

MISS MARIA MOSIO

The Clerk called the bill (H.R. 5107) for the relief of Miss Maria Mosio.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

VISITACION ENRIQUEZ MAYPA

The Clerk called the bill (H.R. 6389) for the relief of Visitacion Enriquez Maypa.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

CHOI SUNG JOO

The Clerk called the bill (H.R. 9979) for the relief of Choi Sung Joo.

There being no objection, the Clerk read the bill, as follows:

H.R. 9979

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Choi Sung Joo may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by Mr. and Mrs. Gerard J. Byrne, citizens of the United States, pursuant to section 204 of the Act. Section 204(c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case.

With the following committee amendment:

On page 1, line 8, strike out the word "Act." and insert in lieu thereof the following: "Act: *Provided,* That the natural brothers or sisters of the beneficiary shall not, by

virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NORIKO SUSAN DUKE (NAKANO)

The Clerk call the bill (S. 537) for the relief of Noriko Susan Duke (Nakano).

There being no objection, the Clerk read the bill, as follows:

S. 537

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Noriko Susan Duke (Nakano) shall be held and considered to be within the purview of section 323(c) of such act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ERNESTO ALUNDAY

The Clerk called the bill (S. 648) for the relief of Ernesto Alunday.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

RODRIC STEWART PENCE (JOO, JAMES)

The Clerk called the bill (H.R. 3044) for the relief of Rodric Stewart Pence (Joo, James).

There being no objection, the Clerk read the bill, as follows:

H.R. 3044

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Rodric Stewart Pence (Joo, James) may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by Rodric H. and Barbara Ann Colline Pence, citizens of the United States, pursuant to section 204 of the Act. Section 204(c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case.

With the following committee amendment:

On page 1, line 8, strike out the word "Act", and insert in lieu thereof the following: "Act: *Provided,* That the natural brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JAMES F. WEGENER

The Clerk called the bill (H.R. 1828) to confer U.S. citizenship posthumously upon James F. Wegener.

There being no objection, the Clerk read the bill, as follows:

H.R. 1828

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That James F. Wegener, a native of Canada, who was scheduled to become a ctiizen of the United States through naturalization on May 27, 1968, shall be held and considered to have been a citizen of the United States at the time of his death on May 10, 1968.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GIUSEPPE DELINA

The Clerk called the bill (H.R. 3373) for the relief of Giuseppe Delina.

Mr. DUNCAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

The SPEAKER. This concludes the call of the Private Calendar.

PROMOTION OF HEALTH AND SAFETY IN THE BUILDING TRADES AND CONSTRUCTION INDUSTRY

Mr. MADDEN. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 427 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 427

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 10946) to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Education and Labor, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. MADDEN. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois (Mr. ANDERSON) and, pending that, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 427 provides an open rule with 1 hour of general debate for consideration of H.R. 10946 to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects.

It is the purpose of H.R. 10946 to promote health and safety standards in the construction industry, to rectify the serious oversight in existing Federal statutes which presently provide safety standards to protect workers in supply and service industries under Federal contract, and to correct these problems by authorizing the Secretary of Labor to set standards which contractors and subcontractors would be required to meet on Federal, federally financed, or federally assisted construction.

Suppliers, service contractors, construction contractors—these three categories constitute the great bulk of Government contractors. In all three cases, it is public policy that their employees must be paid the prevailing wage in the area in which they are employed. In two of the three cases safe and healthful working conditions must be provided for the employees. Only construction has no Federal safety or health standards or protection for workers performing Federal contracts.

H.R. 10946 would amend the Contract Work Hours Standards Act by requiring the contractor or subcontractor contracting for any part of the work to assure that any laborer or mechanic or other employee shall not be required in the performance of a contract to work in any place or under any working conditions which are unsanitary, hazardous, or dangerous to his health and safety. It further requires the Secretary to develop and promulgate as a part of the legislation minimum safety and health standards with appropriate consultation with an advisory committee.

The Contract Work Hours Standards Act applies to any contract involving the employment of laborers or mechanics:

First, on a public work of the United States; of any territory; or District of Columbia;

Second, to which the Federal Government—including any Federal agency or instrumentality—any territory, or District of Columbia, is a party, or which is made for or on behalf thereof; or

Third, which is financed in whole or in part by loans or grants from the Federal Government and to which Federal laws providing wage standards for such work apply.

The Secretary or his representative is authorized, for purposes of programing and enforcement, to inspect places and practices of employment, issue such orders and make such findings of fact as are necessary to carry out the intent of the legislation, and gain compliance with the safety and health regulations adopted as a part of this section. To carry out these provisions and to permit court review, the Secretary and the U.S. district court shall have the authority and jurisdiction provided by the Walsh-Healey Act.

In violation cases the Secretary would be authorized to use certain administrative procedures and, where necessary, to seek injunctions.

An employer charged with noncompliance would be given full opportunity to be heard, and the contractor would be

afforded due process of the courts including the right of judicial appeal.

In the event the Secretary determines noncompliance, the governmental agency for which the contract work is done shall have the right, upon notification by the Secretary, to cancel the contract, and to enter into other contracts for the completion of the contract work, charging any additional costs to the original contractor.

The Comptroller General is directed to distribute to all Government agencies the name of each violator transmitted to him by the Secretary and, unless the Secretary recommends otherwise, the violator is prohibited the awarding of a contract for a 3-year period.

A big portion of the estimated $3 billion which accidents cost the construction industry every year could be saved to the industry and its customers by the investment in an effective Federal construction safety program.

The legislation concerns only Federal construction contracts or federally financed contracts; therefore, the Federal Government has the responsibility for protection of the lives of workers employed on its projects.

Enactment of the legislation can be expected to—

First, reduce the number of serious accidents;

Second, provide minimum national uniformity in safe work practices;

Third, reduce contractor liability by meeting accepted safety standards;

Fourth, reduce contract costs through improved operational efficiency;

Fifth, improve competitive status of companies through reduced costs;

Sixth, improve the safety skills throughout the construction industry by training workers on Federal projects who then move on to private construction projects;

Seventh, assist States to upgrade their safety posture through improved national programing; and

Eighth, save the Government millions of dollars in construction costs.

In 1968, 2,800 construction workers were killed on the job, which is the highest annual death rate for any one industry in the United States.

During the last 10 years, in each year there has never been less than 2,300 construction workers killed per year.

In the last 10 years there has never been less than 209,000 construction workers disabled per year. The construction industry includes 4 million workers and another 20 million workers who are dependent on this industry.

The annual economic dollar value of this industry to the gross national product is over $90 billion.

Mr. Speaker, I urge the adoption of House Resolution 427 in order that H.R. 10946 may be considered and enacted by an overwhelming vote.

The SPEAKER. The Chair recognizes the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this bill which is commonly referred to as the construction safety bill became embroiled in some controversy last year, I believe it was in August or perhaps in September, when an effort was made to bring up a somewhat similar bill, although I wish to point out I think this bill is substantially different in many respects when the effort was made to bring up the construction safety bill under suspension of the rules.

At that time some of us, including myself, took to the well of the House and objected to the consideration of this legislation under a procedure which would bar the offering of any amendments. We did so, not because we disagreed with the very important principle of trying to implement better working conditions and assure safety for construction workers, but because we felt the language of the bill was somewhat loosely drawn and particularly with respect to the manner in which these standards would be drawn up by the Secretary of Labor was veiled in some doubt.

There was some doubt in our minds as to whether or not the provisions in the bill last year, as they dealt with the subjects of administrative review and judicial review, were adequate to assure due process for those who might become involved with the procedures or with the provisions of this law.

When you talk about the cancellation of a contract or when you talk about the possible blacklisting of a contractor for 3 years, you are talking about a very substantial right. I do not think anyone in this Chamber would deny or take issue with the fact that it is up to the Congress to draw legislation in such a way as to assure due process to anyone who may be subject to the terms of this act.

Mr. Speaker, I want to compliment the Committee on Education and Labor on the bill they are presenting for our consideration today, or which will be in order upon the adoption of this rule. I think they have answered the objections that we had to the legislation last year. I think in redrawing or redrafting the legislation and providing for an advisory committee which will be tripartite in nature with one-third of the representatives of the contractors, one-third from representation of organized labor and the building trades; and one-third representing the general public, these would include individuals from the States who are particularly qualified and have the expertise in this area of safety.

They have given us a mechanism, I think, whereby the Secretary of Labor can frame and proceed to promulgate standards for safety in the construction industry that will be realistic and will not impose an impossible burden of hardship.

They will reflect I think the concern that we all have for the safety of construction workers in our country and, yet, they will be the kind of standards which will not hamper and impede what is perhaps the most important basic industry in our country.

Mr. PERKINS. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I am happy to yield to the distinguished chairman of the Committee on Education and Labor.

Mr. PERKINS. Mr. Speaker, I wish to compliment the distinguished gentleman from Illinois (Mr. ANDERSON) for the part that he has played in perfecting this bill, making it one which I feel everybody in this Chamber can support.

He has been very careful to see that due process of law has been afforded to every affected group, and no Member in the Chamber has been more interested in trying to work out a bill that would be equitable all the way around than the gentleman from Illinois. The gentleman from Illinois has offered several amendments that he has discussed with the subcommittee, particularly the gentleman from New Jersey (Mr. DANIELS). Those amendments are acceptable because we feel they make a better bill.

Mr. ANDERSON of Illinois. I thank the chairman. At this point I would like to indicate what those amendments are:

On page 2, line 23, after the word "section," we would insert the following words: "after an opportunity for an adjudicatory hearing by the Secretary."

Again, this language will carry out what I feel sure is the intent of the bills authors, that there should be a hearing for anyone affected by the provisions of this bill.

On page 3, line 4, an amendment that I shall offer would strike the words "a violation" and insert in lieu thereof the word "noncompliance," this is simply a change in language, a drafting change which I think is self-explanatory.

Again, on page 3, line 5, after the word "Secretary," I would insert the following: "after an opportunity for an adjudicatory hearing by the Secretary."

On page 4, line 23, we would strike "paragraph (1)" and insert the following: "subsections (b) or (d)."

This is to assure that the provisions of the bill which relate to administrative review and judicial review. They relate to both the possible blacklisting of a contractor and to the cancellation of the contract.

The last amendment which I will offer has been discussed with the chairman, the gentleman from Kentucky (Mr. PERKINS), and the gentleman from New Jersey (Mr. DANIELS), and to which they have both agreed:

On page 5, line 6, we would strike the following language:

> The Court shall have jurisdiction to affirm the action of the Secretary or to set it aside.

And insert in lieu thereof the following language:

> The Court shall have power to make and enter a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part, the order of the Secretary or the appropriate government agency.

I think these amendments serve to carry out, as I have said, the intent of the drafters and to insure the rights of administrative and judicial review.

I do wish to raise one other point while I have the floor, and that is on page 6 of the report the committee makes the statement that some governmental agencies, such as the Corps of Engineers and the Bureau of Reclamation, have good safety programs. This is true, and I have with me some statistics on the Corps of Engineers that indicate very clearly that

for fiscal 1968, for example, the Corps of Engineers had a record, a frequency rate of 4.61, and what that means, that is the number of lost-time accidents per million man-hours of work, or the number of days charged. They had during fiscal 1968 a frequency rate of only 4.61, and the average for the entire construction industry, I am informed, was 13.21. So it is true that the Corps of Engineers does have—and these figures make it very clear—a very excellent program at the present time, and I do want to take this time to express the hope, and indeed to try to have this as a part of the legislative record surrounding the passage of this bill, which I support, that in promulgating standards, the Advisory Committee will certainly take into consideration the very fine record of safety that the Corps of Engineers, the Bureau of Reclamation, and some of these other Government agencies have already established, and that they will do nothing, either by inadvertence or design to interfere with or to compromise the existing standards of safety which we feel are very good and very high.

Mr. PERKINS. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I am glad to yield to the chairman of the committee.

Mr. PERKINS. I think the Members of this body recognize the great safety record of the Corps of Engineers.

The Department of Labor certainly would be derelict if it failed to consider and benefit from the experience of the Corps of Engineers and the standards developed by the Corps that have worked out so well.

I agree with the gentleman from Illinois that it is the intent of the committee that those safety standards be seriously considered. Most contractors are already familiar with the standards and there need be no radical changes involved.

Mr. ANDERSON of Illinois. Mr. Speaker, I am very pleased that the distinguished chairman of the committee agrees with me in that regard and that we have this as a definite part of the record we are making on this legislation.

Because of the changes which have been made, many of the people who talked to me last year were deeply concerned that there were not adequate safeguards in the legislation for administrative and judicial review.

I think people like the Association of Plumbing and Heating and Cooling Contractors and some others have said to me they are in favor of this bill, in favor of this legislation. I think it important to note that at this time as well.

I have one other point I want to make, and then I will be pleased to yield to the gentleman.

I note on page 4 of the report, I believe in the fourth paragraph down from the top of the page, the committee has stated:

> A provision of the Walsh-Healey Act provides for the use of such State and local officers and employees as the Secretary of Labor find possible to assist in the administration of this act. The committee deems it wise for the Secretary to utilize such assistance where he finds competent, trained, and qualified State personnel to exist.

I am very pleased the committee undertook to put that language in the report, because again one of the concerns some of us had was that in dealing with a $91 billion industry—which is what it is said the construction industry represents, with fully one-third of the labor force of this country either directly in construction or dependent upon the construction industry—we are talking about a very significant segment in the economy. We certainly do not want to create any great, gigantic, ever-burgeoning bureaucracy in Washington to oversee the whole construction industry. We do not want hundreds of people on the payroll if we can avoid it. Therefore, I was pleased to note the committee's concern with this problem and the suggestion that the Secretary in carrying out the standards, in implementing the provisions of this act, will utilize the services of State and local personnel that are qualified to police safety standards. It pleases me, because I think it will help avoid setting up, as I have said, what otherwise would be a very top-heavy bureaucracy in Washington trying to oversee the entire construction industry.

So, Mr. Speaker, I support the adoption of the rule that would make consideration of H.R. 10946 in order, and with the acceptance of the amendments which I have detailed here for the House, and which the chairman has indicated he accepts, and likewise the chairman of the subcommittee has indicated he accepts, I feel this is a good bill and one which I can and will support.

Mr. PERKINS. Mr. Speaker, will the gentleman yield further?

Mr. ANDERSON of Illinois. I yield to the distinguished chairman of the committee.

Mr. PERKINS. Mr. Speaker, I think I have made it clear that, as far as my committee is concerned, we do accept the amendments mentioned by the gentleman from Illinois.

There is one further amendment I would like to ask the gentleman from Illinois about. On page 3 of the bill, there is a minor technical amendment in line 7. After the word "financial", we see a comma. That comma should be deleted. The words "financial guarantee" should not be separated by a comma.

I think the gentleman will agree to that deletion.

Mr. ANDERSON of Illinois. The gentleman from Kentucky has previously discussed that technical amendment. I would certainly agree that the amendment should be accepted.

Mr. MADDEN. Mr. Speaker, I yield 2 minutes to the gentleman from New York (Mr. DULSKI).

(By unanimous consent, Mr. DULSKI was allowed to speak out of order.)

CONGRESS MUST SET GUIDELINES FOR FUTURE REDISTRICTING

Mr. DULSKI. Mr. Speaker, a bipartisan group of New York Members of the House are joining me today in sponsoring legislation to establish guidelines for future congressional redistricting.

No guidelines exist in law now and it has become essential that Congress act in the light of the many harassing court challenges which have resulted from the original one-man, one-vote ruling of the Supreme Court of the United States.

Our proposal is to set a leeway for each district of 2½ percent in population above or below the mean average for the districts in a State. In New York State, for example, the mean average for the 41 districts under the 1960 decennial census was 409,324.

As the court decisions stand today, new congressional districts must have zero variance from the mean average. This is ridiculous and completely unrealistic—yet this is the way the court decisions have left the situation in the absence of legislative directive.

If the States are to avoid endless harassment after the redistricting upon the basis of the 1970 decennial census, it is mandatory that Congress enact legislation to install reasonable guidelines in law.

It is not the job of the court to set the guidelines, it is the job of Congress. The endless court challenges which have faced New York and other States in the past several years make indelibly clear the necessity for putting specific guidelines into law.

It should be noted that the courts seem to be attributing greater validity to census data than is the Census Bureau itself.

The Census Bureau itself acknowledges that its population headcount in 1950 and 1960 was only 97 percent accurate.

What is more, today's extremely mobile population makes census figures outdated before they are compiled officially. Thus the Court's zero-target—or as the Court says: "absolute equality"—is actually unattainable across the board.

Setting a 2½-percent variation allowance is within the range of census data accuracy and will permit the States to have slight leeway that can avoid much disruption to normal geographic lines.

The Supreme Court's ruling in April this year forced the State to begin preparations for another million dollar congressional reapportionment of the State for the 1970 election.

The Court ruled that the State's 1968 redistricting did not meet the Court's zero-variance interpretation, although the redistricting plan was approved at the time by a lower Federal court.

Our bill also includes a section aimed at avoiding the necessity for another redistricting in New York in advance of the 1970 decennial census.

It provides that any State whose present districts in Congress are within 10 percent of the average shall be considered the district for the November 1970 election. New York meets this criteria, with a variance of about 6 percent each way based on the 1960 census—the only basis for statewide redistricting.

I recognize that for New York to avoid the new redistricting for the 1970 election, even under the provision of this bill, New York would have to ask the Supreme Court to set aside its earlier ruling in the light of the legislation.

Whether the Court would agree remains to be seen, but I believe the effort should be made since the special redistricting will cost the State about a million dollars and will be done on the

ridiculous basis of census data that is nearly 10 years old.

New York State will need to redistrict again on the basis of the 1970 census because the State is expected to lose one or more districts under national reapportionment.

The most important job for Congress—and the sooner the better—is to put specific guidelines in law so that New York and other States will know exactly in their 1971 redistricting what is the maximum variance from the State average.

Cosponsors of the bill with me—all New York Members—include: Mr. ADDABBO, Mr. BIAGGI, Mr. BINGHAM, Mr. BUTTON, Mr. FARBSTEIN, Mr. HALPERN, Mr. HASTINGS, Mr. HORTON, Mr. KING, Mr. MCEWEN, Mr. OTTINGER, Mr. PIKE, Mr. POWELL, Mr. STRATTON, and Mr. WOLFF.

Mr. MADDEN. Mr. Speaker, I move that previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. PERKINS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 10946) to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects.

The SPEAKER. The question is on the motion offered by the gentleman from Kentucky.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 10946, with Mr. HANLEY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Kentucky (Mr. PERKINS) will be recognized for 30 minutes, and the gentleman from Illinois (Mr. ERLENBORN) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, I yield myself 8 minutes.

Mr. Chairman, the bill, H.R. 10946, to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects, is a bill most worthy of your support.

Some people have been laboring under the impression that construction safety legislation is not necessary since they allege construction workers are already protected under the Walsh-Healey Act or the Service Contracts Act. I want to set the record straight right now, before saying anything further in support of the legislation: Our committee has found that construction workers presently are not protected by any Federal safety or health laws. The result of this lack of protection is that thousands of men are being needlessly killed or disabled each year.

The Walsh-Healey Act was enacted in 1936. It provided that employees of supply contractors doing contract work for the Federal Government would be provided safe and healthful working conditions. In 1966 we enacted the McNamara-O'Hara Service Contracts Act to provide similar protection to employees of service contractors doing Federal contract work. But in the case of construction workers the law is silent on the question of the safety of their working conditions while doing similar work under Federal or federally assisted contracts. This is a serious oversight, and the time has come to correct it.

The matter of construction safety is not new to the Congress. Hearings were held by our committee during the 90th Congress on legislation similar to that before us today, and a construction safety bill was reported out late in the 90th Congress. Unfortunately, it was reported too late in the second session to be granted a rule, and it was brought up on the suspension calendar. Because of certain technicalities and questions which were raised during the House debate, the bill failed to get the required two-thirds vote to pass under suspension of the rules. But the bill did receive a solid majority vote.

The Select Subcommittee on Labor of our committee, however, did not base its action this year on the hearings during the 90th Congress. Under the leadership of my able friend and colleague, the gentleman from New Jersey (Mr. DANIELS), the subcommittee again explored the need for this legislation and it held 3 days of hearings on the original construction safety bill, H.R. 3290, which was introduced at the beginning of this Congress. All interested parties were given an opportunity to testify or submit statements. Testimony was also taken from the Secretary of Labor, Mr. Shultz, and the Under Secretary of Labor, James Hodgson.

The legislation received the support of the Department of Labor and the unanimous bipartisan support of the Select Labor Subcommittee and the full House Education and Labor Committee. The clean bill, H.R. 10946, which was reported by the committee, was cosponsored by 31 committee members, including myself.

Our committee carefully studied the questions which were raised during the debate last year on this same issue of construction safety, and we feel the grounds for criticism of the legislation have been eliminated in H.R. 10946.

I believe we have a good bill here. It provides the construction worker with the protection he needs and deserves while providing at the same time, substantial protection to construction contractors from possible arbitrary action by the Secretary of Labor in enforcing the safety and health standards required by the legislation.

Thirty-six years have passed since the Walsh-Healey Act was enacted. The Congress recognized at that time the need to act to protect certain workers. Three years ago we enacted the Service Contracts Act to protect another group of workers. In each case the Congress acted to aid workers it had a special responsibility and obligation to protect since they were doing work under Federal or federally assisted contracts. We have a similar obligation to construction workers. When I think of the thousands of men who have been killed or disabled on Federal jobs because we did not act 36 years ago to protect them, I become all the more determined to act now to do what we should have done long ago.

I want to emphasize that this legislation is only related to the protection of construction workers on Federal or federally assisted projects. The bill is not a comprehensive bill for the entire construction industry, but only that segment of the industry engaged in contract work for, or assisted by, the Federal Government.

There has been concern in some quarters over how the Secretary will go about setting up the safety and health standards required by H.R. 10946. As my colleagues are aware, Mr. Speaker, the Secretary of Labor already has similar authority under the Walsh-Healey Act and other safety laws. This legislation provides however that he will be required to consult with an advisory committee made up of representatives of the construction industry, representatives of workers primarily engaged in the construction industry, and the public. This advisory committee will advise the Secretary in his formulation of the safety and health standards. The bill also provides that the Secretary can appoint special advisory and technical experts or consultants to aid him in carrying out the functions of the committee.

In writing this construction safety legislation, our committee endeavored to be fair to all parties concerned. We did our best to give everyone the opportunity to be heard on the matter, and we carefully considered each suggestion from industry, labor, and committee members, as to exactly how the problem should be approached and what language should be used.

My colleagues on the committee on both sides of the aisle have agreed with me on the need for immediate action by the Congress in this area. I urge the Members of the House to join us in supporting and passing H.R. 10946.

Mr. Chairman, we have a bill here today that everyone in this Chamber should support. It will save thousands and thousands of lives and should be enacted.

Therefore, Mr. Chairman, I urge the members of this committee to enthusiastically support this legislation.

Mr. ERLENBORN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, as you are all aware, the mood of this Nation and its people is fast moving toward seeking those values that have basic fundamental meaning. The mood seems to be saying we will consider nothing except those things that are for individual human good. In other words, everything we plan, create or do should be solely aimed at human values, not material values but human values.

We are considering today legislation that reaches toward the thinking and demands of this Nation's people. H.R.

10946 is legislation dealing in human values. It establishes procedures which will go a long way toward protecting people from death and injury while they are engaged in earning a living and raising a family.

In this, the most technically advanced Nation in the world, we are still in the comparative dark ages when it comes to protecting workers on the job. The workforce of any nation and particularly the United States is its greatest asset. Its skills are America's strength and greatness and the skilled construction worker among the most prized.

Yet last year at least 2,800 skilled construction workers were killed and at least a quarter of a million disabled. I use the term "at least" because we do not even have a system to accurately record the deaths and disabling injuries in the construction industry.

I do not intend to discuss costs of this tragic happening, for as I said earlier, this is legislation dealing with human, not materialistic values.

Construction workers employed by contractors performing work on Federal projects are the only workers who are not protected from accidental death and injury by Federal law. All other workers employed under Federal contract at least have some statutory safety and health protection, inadequate as we know some of it to be.

H.R. 10946 represents legislation which I believe to be in a form that President Nixon meant when he said in October 1968:

> I believe better occupational safety and health are needed on both Federal and State levels. A good place to begin would be with proper uniform safety standards on all Federal Construction.

It is my view that when protective legislation is normally drawn up there is a tendency to draft language that is punitive in nature rather than corrective. In the case of safety and health, the trend is normally toward punishing the employer rather than attempting to assist the employer in approaching the problem of accident prevention in a constructive fashion.

H.R. 10946 is not formed in a punitive sense. Rather, it directs the Secretary of Labor toward administering the law from an accident prevention programing posture rather than a punitive enforcement approach. To be more specific it directs the Secretary to:

Educate and train in accident prevention techniques;

Establish Federal safety and health standards after full consultation with those involved with the industry;

Establish an Advisory Board to consult with and assist the Secretary in administering the construction safety and health program;

Collect, analyze, and publish accident data for program guidance and industry use;

Requires the use of the Administrative Procedures Act and public hearings in the development of standards of safety and health; and

Provides in those instances where formal compliance action is found necessary, full administrative and judicial review to the contractor involved.

I believe that H.R. 10946 stands as a model piece of safety and health legislation which will serve to answer our concern of preventing the tremendously high loss of life and injuries to the construction workers.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I am happy to yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I would ask the gentleman if there are any financial costs in connection with this proposed legislation, either now or anticipated in the future?

Mr. ERLENBORN. I am not certain what the gentleman from Iowa means by "financial costs." Does the gentleman mean the cost of enforcement, of fines against the industry?

Mr. GROSS. That is right. The cost for this legislation.

Mr. ERLENBORN. There is no authorization for an appropriation. I suppose obviously that any place where we have the administration of an act, and where we have people who are on the payroll involved in its administration that there are some costs, but they are not identified in this instance by any separate authorization or appropriation.

Mr. GROSS. There is no indication that I could find as to the number of man-hours necessary to administer this proposed legislation.

The gentleman has no estimate of that either, is that correct?

Mr. ERLENBORN. I have no estimate.

Mr. DANIELS of New Jersey. Mr. Chairman, if the gentleman will yield I will be glad to respond to the questions posed by the gentleman from Iowa.

Mr. ERLENBORN. I will be glad to yield to the gentleman from New Jersey.

Mr. DANIELS of New Jersey. Mr. Chairman, I thank the gentleman for yielding.

As the chairman of the Select Subcommittee on Labor which conducted the hearings, I would like to respond to the inquiry of the gentleman from Iowa by stating that I have been advised that approximately 25 percent of the 4 million construction workers are employed on Federal projects, so that would represent approximately 1 million such workers. The cost of administering the safety and health aspects of this bill are estimated to be approximately $2 per person, so that this would come to a total of approximately $2 million per year.

Mr. GROSS. Mr. Chairman, will the gentleman yield further?

Mr. ERLENBORN. I yield to the gentleman from Iowa.

Mr. GROSS. The gentleman from New Jersey stated that it will cost approximately $2 million per year from the Federal Treasury for the administration of this law. Am I correct that that is what the gentleman states; that it will cost $2 million from the Federal Treasury for the administration of this law?

Mr. DANIELS of New Jersey. The gentleman is correct, it will cost the Federal Government $2 million to properly administer the law.

Mr. GROSS. I thank the gentleman for yielding.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Iowa.

Mr. GROSS. Is there $2 million budgeted?

Mr. ERLENBORN. I would have to answer the gentleman from Iowa and say, in my opinion, it is not budgeted since the bill has not been passed and it has not been considered in the budget for the Department for this year.

If the gentleman from New Jersey has any other information, I will be happy to yield to the gentleman.

Mr. DANIELS of New Jersey. The gentleman's understanding is absolutely correct.

Mr. ERLENBORN. Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. The gentleman from Illinois has consumed 7 minutes.

Mr. SCHERLE. Mr. Chairman, last year when the construction safety bill came before the House under suspension of the rules, I voted against it, because, in my judgment, it was not satisfactory. I felt that it was full of loopholes, that there were question as to just what it covered and whether there were administrative safeguards and protection for all parties.

Today, however, I am a cosponsor of the construction safety legislation under consideration. The bill before us is a good bill, a workable bill, and a fair one.

I support this legislation because there are provided definite guidelines in the standards and safeguards for the prime contractors as well as workers. Such safeguards were lacking in the bill defeated by the 90th Congress. I support its passage particularly with the inclusion of my amendments which include judicial review. This legislation is not punitive in design. It makes a positive approach to the problem while providing the mechanism for the effective enforcement of the legislation.

Although I did not participate directly in the hearings held during the 90th Congress, since I was on another subcommittee at that time, it disturbed me to learn that since those hearings, deaths and injuries have increased. Last year alone, more than 2,800 construction workers died on the job and some 230,000 were disabled. Hopefully a good safety program can be established and those statistics will decrease in the future.

This legislation limits the Federal Government's major area of responsibility to its own contract work. It does not provide for an overall construction safety program. Instead, it relates only to Federal, federally assisted, or federally financed construction projects, and the States are still free to run their own safety programs without any interference from the Federal Government.

The Nixon administration realizes the value of the construction industry to this country, and it is aware of thousands of injuries and deaths each year in this industry which might be avoided with a safety program. Secretary of Labor Shultz and Under Secretary Hodson appeared before our subcommittee, and they endorsed construction safety legislation.

I hope the House will act favorably on H.R. 10946.

Mr. PERKINS. Mr. Chairman, I yield 15 minutes to the gentleman from New Jersey (Mr. DANIELS).

Mr. FEIGHAN. Mr. Chairman, will the gentleman yield?

Mr. DANIELS of New Jersey. I am happy to yield to the gentleman from Ohio.

Mr. FEIGHAN. Mr. Chairman, I am pleased to join my distinguished colleague, the chairman of the Education and Labor Committee, Mr. PERKINS, and members of the committee in support of the committee's bill, H.R. 10946, legislation to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects.

During the past 50 years Congress has enacted a number of laws dealing with occupational safety, but these are generally limited in scope and effectiveness; the same can be said of State statutes that deal with this subject. At present there are federally established safety standards for certain employee groups such as longshoremen and railway workers, while the construction and building trades industry has no Federal safety or health standards or protection for workers performing Federal contracts.

The startling statistics of death rates and injuries revealed by the Building Trades and Construction Department of the AFL-CIO are proof of the urgent need to provide effective health and safety regulations for those persons working on Government contracts. With 2,800 construction workers killed in 1968, the construction industry represents the highest death rate for any industry in the United States. Over the past 10 years, we have witnessed an annual average of 209,000 injuries in this industry. These figures are approximately twice the average rate for all of industry and show a comparable lack of improvement.

With such appalling facts confronting us, the need is apparent for the legislation we are considering here today. H.R. 10946 assures that provisions will be made to grant the necessary health and safety protection to construction workers on Federal projects by authorizing the Secretary of Labor to set standards which contractors and subcontractors would be required to meet on federally financed construction. This bill would insure that no employee would be required to work under any conditions which were unsanitary, hazardous or dangerous to his health and safety.

Under the provisions of H.R. 10946, the Secretary of Labor, after consulting with a nine-member advisory committee, which includes members representing contractors, construction workers, and the general public, would be required to set minimum safety and health standards for Federal or federally aided construction work. The Secretary is also authorized to inspect places and practices of construction employment and to seek compliance with the safety standards through the U.S. district courts if necessary.

In the event of noncompliance with the safety standards, the Federal agency for which the work was being done, is authorized to cancel the contract of any contractor of subcontractor, and to enter into other contracts while charging any additional cost to the original contractor.

The bill prohibits the awarding of contracts, for a 3-year period, to any contractor found guilty of noncompliance. A contractor may be blacklisted only after a formal agency hearing, and he maintains the right to petition the U.S. Court of Appeals for a review of the ruling. If the ruling is sustained, the contractor may, after complying with the safety requirements, petition the Secretary of Labor before the end of the 3-year period to be removed from the blacklist.

To assure a well-rounded safety and health program the bill authorizes the Secretary of Labor to set up programs for the education and training of employers and employees in the construction industry. The Secretary is also authorized to require reporting of construction injuries and their causes and costs.

Improving occupational health and safety has been a subject of increasing concern to me. During the last Congress and again this year, I joined several of my colleagues in sponsoring broad occupational health and safety legislation in the belief that maximum on-the-job protection should be guaranteed to every worker. The legislation we are considering today covers only those workers on federally assisted projects but it is an encouraging step in what I hope will be a genuine Federal commitment to safe and sanitary working conditions throughout industry.

In the near future, the Education and Labor Committee will begin hearings on the Occupational Health and Safety Act of 1969. It is my hope that these hearings will result in the enactment of an effective and far-reaching measure which would extend protective coverage to all our industrial workers. In the interim, however, we have the opportunity to demonstrate our support for an excellent bill in H.R. 10946, and our endorsement of improved safety and health standards in the federally financed construction industry.

Mr. DANIELS of New Jersey. Mr Chairman, I rise in support of H.R. 10946, the construction safety bill. As chairman of the Select Subcommittee on Labor, I had the privilege of conducting the hearings on this legislation, and I strongly urge the enactment of H.R. 10946.

In 1936 Congress acknowledged its responsibility to protect the health and safety of workers employed on Federal contracts in the supply industry by passing the Walsh-Healey Act.

Then in 1965, with the passage of the Service Contracts Act, Congress further delineated its responsibility for insuring safe working conditions for laborers engaged in the service industry on Federal or federally financed projects.

To date, the third major contractor with the Federal Government—the construction industry—has never been required by Federal statute to insure that laborers employed on Federal construction contracts have safe and healthful working conditions. This bill recognizes that the Federal Government does have a special obligation to protect this one remaining class of workers when working on Federal contracts.

In testifying before the select subcommittee, Secretary of Labor Shultz stated:

> I favor enactment of legislation along the general lines of H.R. 3290, which recognizes the Federal Government has a special obligation to those who work on Government contracts and extends safety and health protections to the one remaining class of workers who do not now have the benefit of those protections.

The death and disability statistics illustrate the urgent need for this bill. Since 1959, deaths in the construction industry have never been below 2,300. The 1968 death total of 2,800 represents the highest in any industry in the United States. Since 1959 there has never been less that 209,000 construction workers disabled per year.

The preponderance of the testimony before the subcommittee supported the principle of the Federal Government—as opposed to State government—enforcing safety standards under provisions of this bill because these Federal standards would apply only to Federal or Federally financed construction contracts.

This bill carefully enumerates procedures for promulgating and enforcing Federal safety standards under the provisions of the Administrative Procedures Act. An aggrieved party may seek relief in the U.S. district courts. The Select Subcommittee on Labor considers that these measures will provide the contractor and subcontractor with adequate safeguards against arbitrary or discriminatory action by the Secretary of Labor while simultaneously encouraging the development of uniform safety standards on Federal construction projects.

I would like to briefly review the major aspects of this bill. Every contractor or subcontractor on Federal or federally assisted construction projects would be required, as a condition of his contract to assure that no laborer or contractor employed in the performance of the contract would have to work under unhealthy, hazardous, or dangerous working conditions.

In setting minimum health and safety standards, the Secretary of Labor will consult with a nine-member Advisory Committee. The Committee will include three representatives of the construction industry, three representatives of employees primarily engaged in the construction industry, and three public representatives who will be selected by the Secretary on the basis of their professional and technical competence and experience in the field of construction safety and health. The purpose of the Advisory Committee will be to advise the Secretary in the formulation of construction safety and health standards and other regulations.

Before promulgating any standards, the Secretary must also hold a formal public hearing under the provisions of the Administrative Procedure Act.

The bill authorizes the Secretary of Labor to make inspections, hold hearings, issue orders, and make decisions to

gain compliance through the U.S. district courts if necessary.

If the Secretary of Labor determines that a contractor or subcontractor is in noncompliance, the agency for which the work is being done would have the discretion under the legislation to cancel the contract and enter into other contracts, charging the additional cost to the original contractor. Where the contract is financed in whole or in part by loans or grants made, guaranteed or insured by the Federal Government, the agency responsible would have similar discretion to withhold the assistance.

The legislation also provides for a blacklisting procedure by which the awarding of Federal contracts could be prohibited for up to 3 years to any contractor blacklisted for willful or grossly negligent failure to comply with the safety standards. But such blacklisting could only occur after a formal agency hearing, and the blacklisting could be terminated by the Secretary before the end of the 3-year period upon a finding that the blacklisted party will comply responsibly with the standards. In any case, the blacklisted contractor could appeal to the U.S. court of appeals under H.R. 10946 for relief from the blacklisting penalty.

I want to emphasize that we feel this legislation provides for full administrative and judicial safeguards.

During the committee hearings there was widespread agreement that to assure a well-rounded safety and health program a training and education program was vital. H.R. 10946 directs the Secretary of Labor to establish programs for the education and training of employers and employees in the avoidance of unsafe and unhealthful working conditions covered by the provisions of the legislation.

The bill also authorizes the Secretary to require reporting of construction accidents and injuries on projects covered by the provisions of the legislation. With more complete data on accidents and injuries and their causes and costs, a more effective safety program, as well as a more effective education and training program, can be administered.

I want my colleagues of the House to understand that this legislation does not interfere with State safety and health programs for construction work. We are dealing only with Federal or federally assisted projects, and the States are free to require their safety and health standards on projects within their jurisdiction. What we have found, however, is that most States do not have adequate safety laws to protect construction workers, and the States that have fairly good laws lack effective enforcement.

Not only will this legislation save thousands of lives and prevent many more disabling injuries, but it will also save the Federal Government and the Nation millions of dollars—possibly even billions of dollars—each year in reduced accident costs, work delays, and improved operational efficiency.

Mr. DENNEY. Mr. Chairman, will the gentleman yield?

Mr. DANIELS of New Jersey. I am happy to yield to the gentleman from Nebraska.

Mr. DENNEY. The thrust of this legislation is correct in that we want to establish safety for the million workers that are on federally assisted projects.

It seems to me a year ago we had quite a controversy on the floor concerning a bill similar to this one. Would the gentleman outline the differences between the bill his committee had under consideration and the bill we had here?

Mr. DANIELS of New Jersey. I will be happy to do so. The gentleman's colleague, sitting immediately behind him, enumerated the differences earlier today when he spoke on the rule.

Last year when this bill came to the floor under a suspension of rules, it did receive a majority vote, but it failed to obtain the necessary two-thirds vote. The principal objections as I understood them to be, were to the fact that it failed to provide adequate review under the Administrative Procedures Act or through judicial processes. In this bill today, the contractor, should he receive a stop notice or a cancellation of his contract from the Secretary of Labor, may ask for an adjudication either under the Administrative Procedures Act or by applying to the court.

In fact, before such a harsh and dreadful step as to cancel a contract is taken, the Secretary of Labor himself may also apply to the U.S. district court for an order.

Mr. DENNEY. In the select committee hearings was there any representative of the contractors' association that favored this bill?

Mr. DANIELS of New Jersey. The Contractors' Association did appear, but my recollection, if it is correct, is that it did not support it. The bill we have under consideration today, however, is a clean bill, different from the original bill. I can give the gentleman the number of the original bill.

Mr. DENNEY. The contractor would be required, if he received a cease-and-desist order, to have the expense of going to court?

Mr. DANIELS of New Jersey. Naturally, he would have to hire his own lawyers, but there are adequate protective measures in this bill not only with reference to cancellation of a contract but also with reference to blacklisting.

Mr. DENNEY. Under the Administrative Procedures Act is what the gentleman is referring to there? Is that correct?

Mr. DANIELS of New Jersey. That is correct.

The CHAIRMAN. The chair recognizes the gentleman from Illinois (Mr. ERLENBORN).

Mr. ERLENBORN. Mr. Chairman, I yield 2 minutes to the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Chairman, because of some remarks I made earlier today when we were discussing the rule, I did want to add one bit of information to what I was discussing at that time; namely, the safety record of the Corps of Engineers.

The chairman of the committee at that time agreed with me they had a fine record, and in the promulgation of the new safety standards we hope that the advisory committee will do nothing to interfere with work already being done. In that respect, I would like to insert in the RECORD a copy of a news release of the Department of the Army, Office of the Corps of Engineers, as follows:

NATIONAL SAFETY COUNCIL AWARDS PRESENTED TO CHIEF OF ENGINEERS

Howard Pyle, President of the National Safety Council and former Governor of Arizona, today presented two Safety Council Awards of Merit to Lieutenant General William F. Cassidy, Chief of Army Corps of Engineers, for the safety records established in 1968 for Corps of Engineers contractor operations as well as work performed by its own civilian personnel.

In accepting the awards from Governor Pyle, General Cassidy said: "Safety and accident prevention always receive full attention at every echelon within the Corps of Engineers. This sustained interest is the real reason the Corps has earned these awards. I accept them on behalf of all of those whose work has helped make these awards possible.

"It is not only important that we design each project properly from the engineering standpoint, but we must build it with care to eliminate accidents during construction and assure safe operations during the life of the facility," General Cassidy added.

The Corps of Engineers own operations last year had an average accident frequency rate 60 percent better than the frequency of federal agencies reporting to the National Safety Council. The Corps severity rate was 35 percent better than that of all the government agencies.

During the same period, contractors working on Army Corps of Engineers projects registered an accident frequency rate 50 percent better than the construction industry's average, while their severity was 10 percent better, according to records maintained by the National Safety Council.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Kentucky, the chairman of the committee.

Mr. PERKINS. Mr. Chairman, I have visited numerous projects in the congressional district I represent on which the Corps of Engineers were supervising construction. They had their own engineer on the job even where the contract had been let to private contractors. A Member of Congress cannot even go on that job unless he has a helmet on his head and uses other equipment necessary for his safety.

I think it would be useful not only to the advisory committee, but also to the Department of Labor to consider the standards that have been set up by the Corps of Engineers. It would be unfortunate if the Department or the advisory committee failed to consider the safety standards of the Corps of Engineers considering their great safety record. We are all proud of that record.

Mr. ANDERSON of Illinois. Mr. Chairman, I am delighted the chairman shares my feelings in that regard.

Mr. DANIELS of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from New Jersey.

Mr. DANIELS of New Jersey. I likewise wish to concur in the remarks of Chairman PERKINS with reference to the Corps of Engineers and the Bureau of Reclamation. According to the testimony, they have established wonderful safety standards, and it is hoped that this com-

mittee which will advise the Secretary of Labor will take into consideration the high standards they have already established. We hope they will do so, and we know they will do so, for they are directed by this bill to consult prior to the promulgation of any rules or standards.

I should like to take this opportunity to report that the bill was reported favorably by all the members of the subcommittee, and it was cosponsored by 31 of the 35 members of the full committee, and it was reported favorably with no objection whatsoever by the full committee.

Mr. ANDERSON of Illinois. Mr. Chairman, if I may I should like to conclude by saying that in taking favorable action, as I hope we will, on this measure, we should not in any way imply thereby that the industry has not been interested in the question of safety up to now or that somehow it has been completely derelict in this regard. Quite to the contrary, the Associated General Contractors have had a longstanding interest in safety and have pioneered safety in construction. The AGC "Manual of Accident Prevention in Construction" has been recognized for several decades as the guide for safety in the construction industry and has been reprinted in several foreign languages.

Five foreign nations have translated the AGC "Manual of Accident Prevention in Construction" for application by contractors in their efforts to reduce construction accidents. They are: Japan, Spain, Norway, Israel, Afrikaans—Netherlands—plus those nations comprising the Inter-American Construction Association where the translation has been prepared for the Inter-American Federation of the construction industry by the Inter-American Safety Council.

For years this document has been recognized by the American Standards Association as the standard for the industry.

I think it well, while we consider this subject, we do pause to give some recognition and to pay some tribute to the fact that the industry has not been derelict in its responsibility and has on its own initiative been trying to develop the standards that will promote safety within the construction industry.

Mr. PERKINS. Mr. Chairman, I yield 2 minutes to the gentleman from Pennsylvania (Mr. GAYDOS).

Mr. GAYDOS. Mr. Chairman, I wish to add my voice in support of H.R. 10946, a bill to promote safe working conditions on federally financed construction projects.

Within the next 40 years statisticians tell us that America must put in place as much construction as was put in place during the first 180 years of our existence as a nation. Already we are told that there is a critical shortage of skilled construction workers. That is why the Nation can no longer tolerate the frightening toll of accidents which cost the construction industry millions of lost mandays of work each year.

For every day of work lost through a strike, 8 days are lost through construction accidents. The loss in dollars and cents through these accidents, staggering as it is, can be estimated with some degree of accuracy, but who can measure the suffering and the anguish of a family bereft of its wage earner?

Like mining, construction work is inherently dangerous. The work environment is conducive to accidents. Consequently, like mining, construction work needs special safety attention.

Accidents in the contruction industry can never be eliminated completely, but we owe it to the men working in the construction industry, to their families, and to the Nation as a whole, to make every effort to eliminate those hazards which are preventable.

H.R. 10946 is a step in this direction. It is time that the Federal Government promulgated a set of reasonable and effective safety standards for the work it finances.

It seems inconceivable to me that there should be any argument on this score. Two thousand construction men are being killed each year and thousands of others are being permanently maimed and rendered unfit to follow the trade they know best.

This is a toll the Nation can ill afford, and that is why I am strongly in favor of passage of H.R. 10946. The welfare of the Nation dictates passage of this measure, my conscience dictates passage of this measure, and I urge its adoption promptly.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. GAYDOS. I yield to the gentleman from Kentucky.

Mr. PERKINS. I wish to take this opportunity to compliment the distinguished gentleman from Pennsylvania (Mr. GAYDOS). As it happens, we have two distinguished members on our committee from the great State of Pennsylvania, Mr. DENT and Mr. GAYDOS. Mr. GAYDOS succeeded another outstanding Member, our former colleague, Congressman Holland.

During the brief period of time he has been on this committee, no member on the committee has worked harder than the gentleman from Pennsylvania (Mr. GAYDOS). He has been untiring in his efforts in behalf of safety, education, and other matters coming before the committee. He deserves much credit for his contribution to the legislation we are now considering.

Mr. GAYDOS. I thank the gentleman from Kentucky, the distinguished chairman of our committee, for his kind remarks. I want the gentleman to know that it has been my pleasure not only to be a member of this committee but of this subcommittee.

Mr. PERKINS. Mr. Chairman, I yield 2 minutes to the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Chairman, I rise in support of this bill. I am proud to be one of the cosponsors of this legislation, and I congratulate the gentleman from New Jersey (Mr. DANIELS) and the chairman of the full committee (Mr. PERKINS) for moving it through his committee.

It is perfectly proper that the Federal Government set the highest standards of safety on federally financed projects in the construction industry. The building trades constitute one-third of the American labor force either directly or indirectly affected by construction. Certainly the standards set on federally sponsored projects in safety will sooner or later have an effect on the entire industry There is no question but that this industry is one of the pillars of our whole economy. We are now reaching for a trillion-dollar economy in our country, and we all know that the building industry has played a key role in the growth of that economy. So I am pleased that we are today passing legislation which will improve safety standards particularly as we recall the statement made by the gentleman from New Jersey that last year there were more than 2,000 construction workers who suffered serious injuries engaged on federally sponsored projects.

So, Mr. Chairman, I am pleased to vote for this legislation. This is landmark legislation which will have wide results as we move along in raising the entire safety standards for the building trades and construction industry.

Mr. PERKINS. Mr. Chairman, I yield such time as he may require to the distinguished gentleman from New York (Mr. BIAGGI).

Mr. BIAGGI. Mr. Chairman, the fundamental and rather simple purpose of H.R. 10946, the construction safety bill, is to provide safe workplaces for construction workers on Federal construction projects and on federally assisted projects. As a matter of public policy, manufacturing workers on Federal supply contracts have long been given this basic protection by the Walsh-Healey Act. More recently the McNamara-O'Hara Service Contracts Act provided Federal safety standards for workers providing services to the Federal Government. Since construction is much more dangerous than manufacturing, this legislation is a long overdue step in the direction of reducing the toll of unnecessary accidents to the workers of this industry.

Although this bill is essentially conservative in applying only to Federal and federally assisted projects, its passage and effective enforcement would make a big impact on construction deaths and injuries as well as carry out our undoubted obligation to protect the lives of workers on Federal jobs. Federal construction is a significant part of the industry's output. Good Federal safety standards would save many lives on Federal jobs; they would also have a multiplying effect which would save lives throughout the entire industry.

I and my colleagues have been impressed by testimony which has demonstrated beyond any doubt the urgent need to do something about preventing accidents in this industry. A current annual rate of 2,800 deaths and a quarter of a million injuries speaks for itself. And the trend is upward. If effective action is not taken, the record is going to get worse, not better.

The primary cost of these accidents of course is counted in lives lost, in severe injuries—in human suffering of all kinds. But there is also vast economic waste to the industry and to its customers, of which the Federal Government is a major one. Preventable accidents cost

this industry billions of dollars every year. A small investment in good Federal standards and good enforcement would pay big economic dividends to the industry and to our national economy. More important, it would save thousands of valuable lives and prevent untold human suffering.

Mr. PERKINS. Mr. Chairman, I yield 2 minutes to the gentleman from Pennsylvania (Mr. DENT).

Mr. DENT. Mr. Chairman, I rise to support this legislation and to pay my respects and compliments to the chairman of the full committee and the chairman of the subcommittee and the ranking member on the minority side for their efforts to get this bill before us at this early date.

This bill has been controversial over a period of many years. However, like everything else, as time goes on we get a little more mellow and recognize the justice of something which a few years ago looked like an impossibility. We believe that this will help the industry and the building trades themselves. The building trades have deteriorated over a period of years simply because we have paid too little attention to them and to give them an opportunity to upgrade themselves and their trades. Without question the building trades are the backbone of our entire Nation's economy. Without the building trades all of us, with all of our colleges and universities at our disposal, would have very little to do, because it is the man who has to use his head and his hands and his heart who creates our basic prosperity in a democracy like ours which has an industrial economy.

I am sorry, Mr. Chairman, that I will not be here tomorrow to vote for this legislation, because I committed myself, after seeing the whip notice, to a meeting of a convention of the glass bottle workers and will be too far away to get back in time for a vote tomorrow at around 1 o'clock. However, I thought that the bill would come up for a vote today inasmuch as it only had an hour debate with little or no controversy. But due to a primary as I understand it in New Jersey and out of respect to the New Jersey Members, there will not be a vote on this measure today. I am hoping that there will be a unanimous vote on it, however, tomorrow.

Mr. Chairman, it is my opinion that the building trades ought to feel that they have the confidence of the Members of Congress in the kind of vote we can give to them tomorrow and hope that you certainly do that.

Again, let me say that this legislation is long overdue and I am happy to raise my voice in its defense and in support thereof.

Mr. PERKINS. Mr. Chairman, I yield such time as he may consume to the distinguished gentleman from Michigan (Mr. O'HARA), who has done an awful lot of work on this legislation.

Mr. O'HARA. Mr. Chairman, I rise in support of this legislation.

First, I want to congratulate the chairman of the subcommittee, the gentleman from New Jersey (Mr. DANIELS), and the chairman of the full committee, the gentleman from Kentucky (Mr. PERKINS), for the outstanding work they have done on this bill.

Mr. Chairman, 9 months ago, the House considered, under suspension of the rules, a construction safety bill generally similar to the one under consideration today.

A clear majority of the Members present, and very nearly a clear majority of the membership of the House voted for that bill, and it only failed of passage because it was being considered under suspension of the rules.

The details of the bill we are considering today are somewhat different than those of last year's proposal.

I am given to understand that some of the objections which were advanced last year by the contracting industry have been met, and that this bill should be acceptable to all parties concerned. But the basic concept of this legislation has not changed, and I can say again what I said last year about that bill. To understand the context of this legislation is to understand the argument for it.

For three decades, Mr. Chairman, Government contracts for the supplying of goods to the United States have contained a clause requiring the contractor to provide his employees with safe and healthful working conditions, and to pay them not less than the prevailing minimum wage.

Contractors providing services to the United States have been under a similar obligation, and their contracts have contained a similar provision for nearly 5 years now.

Contractors who undertake to build or repair buildings for the U.S. Government have long operated under a similar requirement with respect to the prevailing wage but they have been, alone among Government contractors, free from any obligation to provide their employees with safe working conditions. And this has been true, Mr. Chairman, in spite of the fact that construction is, outside of mining, the most dangerous industry in the Nation.

This bill, like last year's bill, seeks nothing more than to place construction contractors on the same footing with other types of contractors in their dealings with their employees. This bill should pass, and I am convinced that it will pass. But I do want to add one thing to that statement.

I want to say most emphatically that this bill of and by itself, is not sufficient to meet the serious and growing problems of occupational safety and health in America.

There are pending before the Education and Labor Committee not less than four bills dealing with the broader question of general occupational health and safety. One of those bills is identical to one which was recommended over a year ago by President Johnson. Another is identical to the bill reported to this House by the Education and Labor Committee last summer, but never considered on the House floor. Two others are new bills, introduced by myself and the gentleman from New Jersey (Mr. THOMPSON) bearing a generic resemblance to last year's proposals.

We have not yet heard directly from the administration, but in the hearings, the Under Secretary of Labor said that he hoped the House would pass a construction safety bill, but not in lieu of a broader bill. His exact words were:

> In the view of the Department, it would thus appear that some sort of comprehensive approach toward improving the working conditions and practices of all industries, including, of course, the building and construction industry as a whole would be desirable.
>
> However, legislation along the lines of H.R. 3290, which is confined to providing safe and healthful working conditions for the one group of employees working under Government contracting authorities who are not presently protected by Federal law, would be a step forward. The Federal Government would thus round out its safety coverage of those who work under its contracting authorities.

I rise to second that hope today. This bill is a good one, and in and of itself, it will make the life and health of the construction worker, performing his trade on a Government contract, considerably safer. But unless we enact a broader bill, covering all employees, that vast majority of American working men who are subject now to serious hazards to their safety and health, will continue to be so exposed.

I want, then, Mr. Chairman, to take this opportunity to urge upon the gentleman from New Jersey (Mr. DANIELS) and upon all my colleagues, the importance of finishing the job so well begun, by enacting a comprehensive occupational safety and health act before another year passes and another 14,000 American workers are killed in on-the-job accidents.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. Yes.

Mr. GROSS. What is this I have been hearing about putting over a vote on this bill until tomorrow?

Mr. PERKINS. I am sure that the gentleman can get that information from the distinguished Speaker. I understand, that he had made a commitment. We are ready, but the Speaker made a commitment and we must honor that commitment.

Mr. GROSS. Mr. Chairman, if the gentleman will yield further, I thought it worked very well last year when the leadership of the House insisted that business be carried on normally and as usual on all days. I thought that the past performance of the House in declaring certain days out of bounds as far as votes are concerned had been eliminated. I am surprised to hear that a vote today has been put over. I am wondering if this is to be the accepted practice from here on out, that votes will be put over from day to day without any notification to the Members of the House.

Mr. PERKINS. I am sure the gentleman from Iowa knows that I cannot answer that question. It has been the practice in the past to postpone votes—complete general debate and postpone votes when certain States were having primaries.

Mr. GROSS. Mr. Chairman, will the gentleman yield further?

Mr. PERKINS. I yield further to the gentleman from Iowa.

Mr. GROSS. The gentleman has been here for the last year or two, I have seen the gentleman here quite consistently, and that has not been the practice in the last year or two.

Mr. PERKINS. I would respectfully say to the gentleman that it has been the practice for over 20 years.

Mr. GROSS. Does the gentleman know whether the old situation is going to be revived with this vote being put over, and whether there will be votes being put over when there is a primary for Illinois, or an Iowa primary?

Mr. PERKINS. Let me say to my distinguished friend that we had a primary last week, and no vote was put over for any Members from the Kentucky delegation. I presume that certain Members of the New Jersey delegation asked the Speaker to postpone the vote.

Mr. GROSS. Does the gentleman from Kentucky feel discriminated against?

Mr. PERKINS. No; I do not feel discriminated against.

The CHAIRMAN. The time of the gentleman has expired.

Does the gentleman from Illinois (Mr. ERLENBORN) have any further requests for time?

Mr. ERLENBORN. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

H.R. 10946

A bill to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Contract Work Hours Standards Act is amended by adding at the end thereof the following:

"SEC. 107. (a) It shall be a condition of each contract which is entered into under legislation subject to Reorganization Plan Numbered 14 of 1950 (64 Stat. 1267), and is for construction, alteration, and/or repair, including painting and decorating, that no contractor or subcontractor contracting for any part of the contract work shall require any laborer or contractor employed in the performance of the contract to work in surroundings or under working conditions which are unsanitary, hazardous, or dangerous to his health or safety, as determined under construction safety and health standards promulgated by the Secretary by regulation based on the record after an opportunity for an agency hearing. In formulating such standards, the Secretary shall consult with the Advisory Committee created by subsection (e).

"(b) The Secretary is authorized to make such inspections, hold such hearings, issue such orders, and make such decisions based on findings of fact, as are deemed necessary to gain compliance with this section and any health and safety standard promulgated by the Secretary under subsection (a), and for such purposes the Secretary and the United States district courts shall have the authority and jurisdiction provided by sections 4 and 5 of the Act of June 30, 1936 (41 U.S.C. 39). In the event that the Secretary of Labor determines noncompliance under the provisions of this section of any condition of a contract of a type described in clause (1) or (2) of section 103(a) of this Act, the governmental agency for which the contract work is done shall have the right to cancel the contract and to enter into other contracts for the completion of the contract work, charging any additional cost to the original contractor. In the event of a violation, as determined by the Secretary, of any condition of a contract of a type described in clause (3) of section 103(a), the governmental agency by which financial, guarantee, assistance, or insurance for the contract work is provided shall have the right to withhold any such assistance attributable to the performance of the contract. Section 104 of this Act shall not apply to the enforcement of this section.

"(c) The United States district courts shall have jurisdiction for cause shown, in any actions brought by the Secretary, to enforce compliance with the construction safety and health standard promulgated by the Secretary under subsection (a).

"(d)(1) If the Secretary determines on the record after an opportunity for an agency hearing that, by repeated willful or grossly negligent violations of this Act, a contractor or subcontractor has demonstrated that the provisions of subsection (b) and (c) are not effective to protect the safety and health of his employees, the Secretary shall make a finding to that effect and shall, not sooner than thirty days after giving notice of the findings to all interested persons, transmit the name of such contractor or subcontractor to the Comptroller General.

"(2) The Comptroller General shall distribute each name so transmitted to him to all agencies of the Government. Unless the Secretary otherwise recommends, no contract subject to this section shall be awarded to such contractor or subcontractor or to any person in which such contractor or subcontractor has a substantial interest until three years have elapsed from the date the name is transmitted to the Comptroller General. If, before the end of such three-year period, the Secretary, after affording interested persons due notice and opportunity for hearing, is satisfied that a contractor or subcontractor whose name he has transmitted to the Comptroller General will thereafter comply responsibly with the requirements of this section, he shall terminate the application of the preceding sentence to such contractor or subcontractor (and to any person in which the contractor or subcontractor has a substantial interest); and when the Comptroller General is informed of the Secretary's action he shall inform all agencies of the Government thereof.

"(3) Any person aggrieved by the Secretary's action under paragraph (1) may, within sixty days after receiving notice thereof, file with the appropriate United States court of appeals a petition for review of such action. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Secretary, who shall thereupon file in the court the record upon which he based his action, as provided in section 2112 of title 28, United States Code. The findings of fact by the Secretary, if supported by substantial evidence, shall be final. The court shall have jurisdiction to affirm the action of the Secretary or to set it aside. The judgment of the court shall be subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

"(e)(1) The Secretary shall establish in the Department of Labor an Advisory Committee on Construction Safety and Health (hereinafter referred to as the 'Advisory Committee') consisting of nine members appointed, without regard to the civil service laws, by the Secretary. The Secretary shall appoint one such member as Chairman. Three members of the Advisory Committee shall be persons representative of contractors to whom this section applies, three members shall be persons representative of employees primarily in the building trades and construction industry engaged in carrying out contracts to which this section applies, and three public representatives who shall be selected on the basis of their professional and technical competence and experience in the construction health and safety field.

"(2) The Advisory Committee shall advise the Secretary in the formulation of construction safety and health standards and other regulations, and with respect to policy matters arising in the administration of this section. The Secretary may appoint such special advisory and technical experts or consultants as may be necessary to carry out the functions of the Advisory Committee.

"(3) Members of the Advisory Committee shall, while serving on the business of the Advisory Committee, be entitled to receive compensation at rates fixed by the Secretary, but not exceeding $100 per day, including travel-time; and while so serving away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5 of the United States Code for persons in the Government service employed intermittently.

"(f) The Secretary shall provide for the establishment and supervision of programs for the education and training of employers and employees in the recognition, avoidance, and prevention of unsafe working conditions in employments covered by the Act, and to collect such reports and data and to consult with and advise employers as to the best means of preventing injuries."

SEC. 2. The first section and section 2 of the Act of August 13, 1962, are each amended by inserting "and Safety" after "Hours" each time it appears.

Mr. PERKINS (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. PERKINS. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. HANLEY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 10946) to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects, had come to no resolution thereon.

ROGERS INTRODUCES BILL TO AMEND SOLID WASTE DISPOSAL ACT

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS of Florida. Mr. Speaker, I am today introducing legislation to amend and strengthen the Solid Waste Disposal Act of 1965.

This bill, the "Resource Recovery Act of 1969," would extend the existing law for 3 years and add two new sections to the existing law.

First, the Secretary of Health, Education, and Welfare would conduct studies and investigations on economical means of recovering useful materials from solid wastes, recommended uses of such materials for national and inter-

national welfare, and the market of such recovery.

In addition, the Secretary would study appropriate incentive programs—including tax incentives—to assist in solving the problems of solid waste disposal as well as practicable changes in current production and packaging practices which would reduce the amount of solid waste.

Second, the Secretary would be authorized to make grants to any State, municipality, or interstate or intermunicipal agency for the construction of solid waste disposal facilities, with incentives for new and improved methods for dealing with solid wastes.

This second point is important to those States and communities that desire more modern facilities to handle their solid waste problems, but are financially unable to meet the cost of such facilities on their own.

Indeed, some of these States and municipalities participated in planning programs for solid waste management under the existing law, but the existing law does not provide for carrying this planning into actual construction of facilities.

Mr. Speaker, we are a nation of users, not consumers. We buy, we use, and we throw away.

It is estimated that within a few years, Americans will discard each year more than 30 million tons of paper, 4 million tons of plastics, 48 billion cans, and 26 billion bottles; more than 3.5 billion tons of solid wastes are being thrown away in this country every year and the annual cost of handling and disposing of these wastes amounts to $4.5 billion.

During the past 30 years, solid wastes have been deposited by mining, milling, and processing to the extent that some 7,000 square miles of land have been covered or damaged, an area six times the size of Rhode Island.

If future generations of American are to inherit adequate, economical supplies of our natural resources, we must move now to find new ways of reusing solid wastes.

WASTE OF WOMANPOWER

(Mr. PICKLE asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. PICKLE. Mr. Speaker, there is in this country a great waste of manpower, or more correctly, womanpower. Too often, the fine talents and acumen of the American woman is lost—even though they have completed their college education.

Among the women who choose to work, statistics indicate more than ever before are employed. However, these figures are misleading. The number is high partially because it is a reflection of our population growth. But the sad fact remains that women are not continuing their education and, consequently, are granted only second-rate jobs. There are dramatic exceptions, but they are few.

At the University of Texas recently, Mrs. Walt Rostow addressed a colloquim on the need for continuing education for women. Mrs. Rostow says that education is now at a "moment of lost purpose."

Women today, as well as other groups, are not utilizing education as effectively as in the past, Mrs. Rostow said.

More women are candidates for doctoral degrees, she noted, but the percentage is down. More women are employed, but "ask yourself what jobs they are doing," she said.

In an overview of education's role in American history, Mrs. Rostow credited it as one of three major "social escalators," and said that education helped to move the country from an underdeveloped to a mature economy.

However, now that the development goal has been reached, education seems to have "lost sight of its role," she said.

Viewing education from an optimist's position, Mrs. Rostow said that its influence is not ended. It is time for all groups involved, with emphasis on women, to "retool" for the new end, or purpose, education will serve in a mature society, she added.

The colloquium served as a planning phase for a proposed program of academic opportunity for mature women students. During small group discussions, the participants submitted suggestions and questions which will shape the program.

Dr. Alice Whatley, program director and assistant professor of home economics, said:

At this time the program is concerned with services. Many of these are already in existence on the campus, but often are unknown to the women.

She added:

We are concerned with preparing such a smooth pathway for the return to school that no woman can resist the temptation.

Dr. Bryce Jordan, UT Austin vice president for student affairs, extended an official welcome to the men and women invited to participate in the colloquium.

WHY SHOULD TAXPAYER SUBSIDIZE RACIST CALL TO ARMS OF INSURRECTIONISTS?

(Mr. MINSHALL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MINSHALL. Mr. Speaker, since when is the American taxpayer expected to subsidize the racist call to arms of such insurrectionists as Stokely Carmichael, FBI fugitive Eldridge Cleaver, and other militants as part of a Government-sponsored "adult remedial reading course"?

This is precisely what is recommended by the Urban Reports Corp. of Cleveland, Ohio, under contract with the Economic Development Administration.

The 188-page report, "A Survey of Remedial Educational Materials for Job Training Centers," currently is being circulated by Assistant Secretary for Economic Development Robert A. Podesta as a guideline for job training centers.

It is outrageous, and I am today writing to both the Secretary of Commerce and Mr. Podesta asking that the recommended booklist be withdrawn from circulation immediately and revised.

This is not a matter of book banning. The course in remedial reading ostensibly is to teach these people how to read, how to improve their literacy so that they can advance themselves economically. I do not buy the argument, given on page 174 of the document, that each book was "examined for its presentation, its relevance to young adults, its appeal to readers who are not 'hooked on books,' and who read on a seventh-grade level. Although some of the selections may seem more difficult, we believe that interest in the book will be a compelling force for comprehension."

By what authority does the Urban Reports Corp. and the Department of Commerce assume that an adult student, struggling to improve his reading skills, will "relate" better to the anti-American militancy of Cleaver's "Soul on Ice," Carmichael's "Black Power," or Lython's "The Goddam White Man"?

Why would he not relate equally well to George Schuyler's books, not one of which is listed? Schuyler is one of the most articulate, successful, and tough-minded Americans writing today, black or white. His life is a legend, brilliantly told in his autobiography "Black and Conservative." He has written extensively, including novels, on African culture and current African politics, areas in which American Negroes are voicing loud interest these days.

George Schuyler has devoted his entire life to helping build this Nation, not destroy it. Do not the job trainers feel their remedial reading students might relate to a Negro who grew up in America when Jim Crow laws were real and terrible and who helped beat down racial barriers through reason, hard work, and an unshakable love for our Nation, whatever its faults, and a determination to work within the framework of the Constitution to make it a better country for all people.

Whatever our remedial reading students want to read on their own time is their business. I repeat this is not a matter of book banning. "Soul on Ice" is a best seller, Leroi Jones, Carmichael, Malcolm X—their works are available on loan from public libraries everywhere.

My point is this: taxpayers everywhere, myself included, are fed up to the teeth with those who would destroy our country, who are trying to turn it inside out with violence and manufactured hatred, and we are particularly fed up with weakminded governmental agencies funding programs which encourage that sort of activity.

For the benefit of my colleagues I am including in the RECORD the complete list of books selected for adult remedial reading courses in job training centers. Many of them are of outstanding merit. Others are so obviously, appallingly militant that it passes understanding why they were included.

I am convinced that the Government can do better than encourage its adult students to cut their literary teeth on what often comes close to treason. The list follows:

Adamson, Joy. *Born Free.* (Bantam pap. ed.).

Archer, Elsie. *Let's Face It.* Lippincott.

Ashe, Arthur, Jr. *Advantage Ashe.* Coward-McCann.

Baldwin, James. *Blues for Mister Charlie.* Dial. (Dell pap. ed.).

Baldwin, James. *Going to Meet the Man.* Dial.

A NATIONAL POLICY ON THE ARTS

(Mr. WIDNALL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WIDNALL. Mr. Speaker, soon the House will be considering amendments to legislation and appropriations concerning Federal participation in the arts. Coming before us once again will be the issues of the John F. Kennedy Center for the Performing Arts and the National Endowment for the Arts. In the past there have usually been severe limitations on debate and a lamentable absence of probative information when arts proposals are brought before us. It is opportune for us to start to gather some of the newly developing facts right now.

A highly qualified private citizen whose views on the arts deserve our thoughtful attention is M. Robert Rogers, the managing director of the Washington National Symphony Orchestra. Mr. Rogers was an adviser on the arts to President Eisenhower, who expressed his high regard in writing on several occasions. In recent years he has guided the privately organized National Symphony into becoming the best attended in the United States at its subscription concerts. If I may be permitted a prideful aside, I note that he is bringing his fine orchestra to my home State of New Jersey this summer, for three performances at the Garden State Center and one at the new Waterloo Village Festival of Music.

Our distinguished colleague across the Capitol, Senator DIRKSEN, called attention last Monday—page 13601 of the RECORD for May 26, 1969—to a provocative and cogent article by Mr. Rogers, "The Congress and the Arts," published in the Washington Post of May 25. I would like to commend to Congress a commentary broadcast by Mr. Rogers yesterday, June 2, over radio station WGMS AM–FM, Washington, D.C.:

A FORTHRIGHT NATIONAL POLICY ON THE ARTS

(By M. Robert Rogers)

Yesterday there was a commentary broadcast by Radio Station WGMS on the subject of Government subsidy of the arts. By implication, if not directly, the commentator called for the United States to spend $300-million a year on the arts so that our nation might keep pace with Canada in cultural development. This ambitious financial figure is attributed to Nancy Hanks, the president of the Associated Arts Councils which recently held its annual convention in Canada. She was quoted from The New York Times as saying, when it somes to Government involvement in the arts, "Canada is light years ahead of the United States."

These comments come on the eve of Congressional consideration of appropriations for the Kennedy Cultural Center and the National Endowment for the Arts. Thus, they appear to be directed at Congress. Since it is possible to be a champion of the arts and yet have opinions different from those heard yesterday, I have been invited to make some relevant remarks.

First, let us see how the figure of $300-million for the arts was derived. It is a simple projection, in ratio to population, of the $25-million that the Canadian government is said to allot annually for culture. The complaint is then made that our Congress last year authorized only $6-million for the arts. This happens to be the 1969 budget of the National Endowment for the Arts.

However, there is a lot more Federal funding of culture than is to be found in the Arts Endowment. Offhand I can think of at least ten executive departments or agencies which maintain arts activities. For example, the largest employer of musicians in Washington is not the privately supported National Symphony Orchestra. It is the Department of Defense, which pays for and operates the splendid bands and orchestras of the Army, the Navy, the Air Force, and the United States Marines.

The Departments of State, Interior, and HEW all have cultural budgets adding up into the millions. The Smithsonian Institution has plenty going in the arts, including a new Division of the Performing Arts. Under the Smithsonian banner is the virtually autonomous National Gallery of Art, and coming along is the Hirshhorn Gallery of Modern Art. Also vaguely under the Smithsonian is the increasingly expensive John F. Kennedy Center for the Performing Arts, which now has a price tag of more than $66-million and last week revealed that it is $20-million short of completion money.

In the TV-radio field, the USIA and the newly authorized Public Broadcasting Corporation produce cultural programs. Even the proverbially penurious District of Columbia has a modest budget for artistic activities. And, believe it or not, Congress itself has for some time been firmly in the performing arts by way of the celebrated concerts produced by the Music Division of the Library of Congress.

I suspect that it all adds up to considerably more than Canada's $25-million. However, I cite the facts—as opposed to the slogans of some promoters of the arts—not to suggest that the United States should stand still in the matter of Federal attention to the arts. Rather, I think it is important that Congressmen, as the elected representatives of the people, should have before them the most reliable information available when they consider proposals for extensions of the Federal role in support of the arts.

Hard facts in this field are not easy to come by, as the National Endowment officials recently admitted in testimony before Congress on March 27. They said, in part: "Research should be given the highest priority due to an appalling lack of concrete information in and about the arts."

It follows that the immediate priority for the Arts Endowment should be methodical and objective research that will lead to the basic information Congress needs in order to legislate intelligently. While the facts are being developed, it might be advisable for artists and arts executives with axes to grind for themselves and their organizations to keep their cool. Especially they should forbear from contributing further to the "explosion of words" that the Ford Foundation says is the only demonstration of a so-called cultural explosion in our land.

Presidents Eisenhower, Kennedy and Johnson have all agreed that the appropriate role in the arts for the Federal Government is to help create a national atmosphere in which the arts may become more accessible to all Americans.

One fact that needs no research is the high quality that major American arts organizations have achieved mainly through private means. In passing, it is pertinent to mention the high level of music programs originated day-in and day-out by WGMS, which is privately owned and operated by an American corporation, RKO-General. No publicly-operated Canadian radio station can touch it in its self-chosen, specialized field.

If Canada is indeed "light years ahead" of the United States in the matter of government subsidy, our northern neighbors are light years behind us when it comes to organized artistic endeavors like our established museums, symphony orchestras, and opera and ballet companies. With due respects, they have not yet produced a Winslow Homer, nor a George Gershwin, nor a Eugene O'Neill. Nor, either, a Van Cliburn, a Leontyne Price, a Duke Ellington. Neither Canada nor the United States, nor any other nation, can legislate genius into existence.

For us, a fitting national objective at this time is to air not so much for more artistic activity, but for the preservation and wider distribution of what we have. This requires a forthright, uncomplicated national policy on the arts—something we do not have. Perhaps the Nixon Administration will apply its talents to bringing sense and order into this highly variegated field.

LET US CARE FOR HIM WHO SHALL HAVE BORNE THE BATTLE

(Mr. DENNIS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DENNIS. Mr. Speaker, yesterday I voted against H.R. 693, a bill to amend title 38 of the United States Code to

provide that veterans 72 years of age or older shall be deemed to be unable to defray the expenses of necessary hospital and medical care, and for other purposes.

I wish to state my reasons for that vote; and in doing so I shall lay down certain general principles which guided my thinking in this matter and shall then apply those principles to the provisions of this particular bill.

Abraham Lincoln said in his second inaugural address:

> Let us . . . care for him who shall have borne the battle and for his widow and his orphan.

I certainly subscribe to that doctrine. On the other hand I am not convinced that every one of us who ever served in the Armed Forces is thereby forever after entitled to liberal public assistance in respect to his non-service-connected disabilities.

At the same time we are now in a severe governmental fiscal and budgetary crisis, coupled with spiraling inflation, ever-higher taxes, and most recent congressional action designed to keep and hold a $193 billion budgetary ceiling. This effort must obviously fail if we continue to increase expenditures even beyond those favored and requested by the executive departments.

I now apply these general principles to H.R. 693, and note the following:

First. Under H.R. 693 the previous requirement of inability to pay in order to obtain free Veterans' Administration hospital and domiciliary care for a non-service-connected disability is removed in the case of persons 72 years of age or older, by means of a conclusive legal presumption that all such persons are unable to pay.

In other words a millionaire veteran 72 years of age or older is now to be entitled to hospital care for a non-service-connected disability, at public expense.

He may thereby deny a bed to a younger veteran who is in fact unable to pay.

The objection to this is very well put in the letter to the chairman of the House Committee on Veterans' Affairs written by the Administrator of the Veterans' Administration and reproduced on page 5 of the committee report, as follows:

> This proposal presents a basic issue as to whether a veteran's advanced age alone should be considered a sufficient basis for an exception to the longstanding requirement that care at Government expense for *conditions wholly unrelated to his military service* may be furnished only to a veteran who is financially unable to provide necessary care for himself. If a veteran is well able to pay, there would seem to be no reason for distinguishing his case on the ground that he is older than some other veteran.
>
> Enactment of the bill would give the aged veteran who is able to defray medical costs access to a Veterans' Administration bed when otherwise he would not qualify and in some instances would deprive a younger veteran of prompt admission for needed care who is clearly unable to defray the cost. To this extent the bill is discriminatory. It would inspire unfavorable comparisons at the community level and subject the entire veterans hospital program to criticism. We are unable to recommend favorable consideration of this proposed amendment.

The Veterans' Administrator estimates a first year cost, as a result of this provision, of $1,825,000, and $3,650,000 per year by the third year, and thereafter.

I see no justification for this provision. As the Administrator says:

> If a veteran is well able to pay, there would seem to be no reason for distinguishing his case on the ground that he is older than some other veteran.

Second. Section 2 provides unlimited outpatient treatment for a group of about 144,000 veterans, at an estimated expense of $9,503,000 to $12,490,000 per year, which the Veterans' Administrator criticizes, in his same letter to the chairman of the committee, in the following language:

> The majority of this group are receiving increased monetary benefits because of *non-service-connected disabilities*. The proposed legislation would authorize unlimited outpatient treatment for this group but would not provide a similar benefit to *seriously disabled service-connected veterans* who are not entitled to the increased monetary benefit. Such preferential treatment of the non-service-connected veteran would represent an anomalistic departure from the traditional priority accorded service-connected veterans in matters of medical care. The Veterans' Administration does not favor this change in emphasis.

Third. Section 3 provides for increased outpatient furnishing of drugs and medicines at an estimated additional cost through fiscal year 1974 of $19,000,000, and is likewise opposed by the Administrator of the Veterans' Administration because it "poses a question as to how far the Government is prepared to go in granting medical services on a permanent basis for those whose disabilities originated in civilian life."

In view of the foregoing it is my judgment that H.R. 693 fails to meet or to satisfy the general principles I expressed at the beginning of these remarks, and I therefore voted "no."

THE NEED FOR AN OPEN MIND ON CONGLOMERATES

The SPEAKER pro tempore. Under previous order of the House, the gentleman from California (Mr. TUNNEY) is recognized for 10 minutes.

(Mr. TUNNEY asked and was given permission to revise and extend his remarks.)

Mr. TUNNEY. Mr. Speaker, in recent months a great deal of attention of the business world and of the legislative and executive branches of the Government has been focused on the growth of so-called conglomerate companies.

Such companies do not in themselves represent a new development, for nearly all of our large industrial concerns are to some extent diversified enterprises engaged in more than one type of business. What is new is that in recent years, through use of tender offers and other forms of mergers, the size and number of these companies has greatly increased. For example, in 1968 there were 4,462 reported mergers—50 percent more than in 1967. In 1968 there were 188 large companies having assets of $12.4 billion which were acquired by others. A significant portion of these mergers and acquisitions do involve the so-called conglomerate companies.

As a result, Congress plans to investigate the growth of these companies to explore whether legislation is needed to limit such growth while the Antitrust Division of the Justice Department has brought suit to test whether existing law covers such acquisitions.

Conglomerates have been criticized on the grounds that they concentrate too much economic power in a single economic enterprise. It is also stated that the individual components of these companies, supported as they are by the capital of the entire enterprise, gain an advantage over those of their competitors who are not parts of larger corporate entities. Further, it is said that when a company is taken over by a conglomerate its management and control is moved from the local community to a large financial center such as New York as a result of which local needs and interests come to be overlooked.

However, the conglomerates themselves make quite the opposite argument. They say that size alone does not make them bad, and that frequently large size makes for greater efficiency which through loss savings and lower consumer prices benefits the economy as a whole. Prof. Donald Turner, of Harvard, a former head of the Antitrust Division, has himself taken the view that size alone is not grounds to condemn an industrial company even if it has grown by merger. They further say that the companies they acquire tend to be those in need of modern management and financing—which is why the acquired companys' stockholders are willing to accept the conglomerate's offer—and that in providing such needed services they are actually made better able to compete. Thus competition is actually enhanced rather than restricted. They further contend that rather than harming the local communities in which acquired companies are located, ownership by a conglomerate actually helps them since the local business is strengthened by infusions of new capital and more efficient management. Indeed, many of the more successful conglomerates appear to have retained local management wherever they demonstrate competence to do the job.

I feel that the entire issue should be explored and I am glad that Congress in this session will give the matter its close attention. What I feel is most important is that we do not prejudge the case, but that we should wait till the evidence is all in. The criticisms of conglomerate companies have received wide publicity. It is time to make sure that the conglomerates themselves have an opportunity fully to present their side of the case. Then we can see whether or not they have made a useful contribution to the American economy. If, as I suspect it will, it develops that in some cases conglomerates are desirable while in others they are not, then we must take care to see that in prohibiting the bad we do not eliminate the good. We do not wish to have legislation become a shield for inefficient companies behind which they can continue to operate in a manner free from challenge by vigorous growing businesses. What we want is legislation de-

signed to maintain a free enterprise system, so ordered that competition and efficiency can grow and flourish, and so that small companies may have the opportunity to continue their participation in the economy.

CALIFORNIA WATER PROBLEMS—PERSPECTIVES AND PROSPECTS

The SPEAKER pro tempore (Mr. ALBERT). Under previous order of the House, the gentleman from California (Mr. SISK) is recognized for 30 minutes.

Mr. SISK. Mr. Speaker, on the 28th of February, before the Commonwealth Club of California in San Francisco, an excellent presentation on the California water plan was made by William R. Gianelli, the director of the California State Department of Water Resources.

Although I do not wish to convey the impression that I am personally in agreement with every statement made by Mr. Gianelli, I find that the speech gives us an outstanding overview of the basic concept of the California water plan and of the underlying philosophy behind it.

In view of the fact that all of the Members of Congress occasionally find themselves involved in California's water problems, I believe Mr. Gianelli's remarks would be helpful to all of the Members.

The full text of Mr. Gianelli's speech is as follows:

CALIFORNIA WATER PROBLEMS—PERSPECTIVES AND PROSPECTS

(By William R. Gianelli)

Mr. Chairman, I appreciate your kind words of introduction. I realize that my appearance this noon has received a considerable share of what the advertising experts call "advance billing". In fact, so vivid an image seems to have been built up that when your reception committee met me at the door they asked me where I had left my red costume and horns.

Since I have no desire to contribute to a masquerade, I came as I am. I intend to speak frankly and fully. I do so in the sure knowledge that the Commonwealth Club is interested in facts rather than fear, in firm accomplishment rather than fancy, and in reality rather than emotion.

As one of your members for many years, I have learned that your interest in public problems extends beyond personal preference, beyond narrow partisanship, sectionalism, or ideology. Therefore, I appreciate your invitation to be the speaker at the Friday luncheon. While it is an honor I share with all of the people in our Department of Water Resources, the role I play is somewhat different than theirs. This is because the definition of a "Director"—whether of a public agency or a symphony orchestra—is the fellow who stands up and faces the music.

I find, however, these days that the music is not being played as it was written. The notes are not ringing true. It is time we return to the original score and, as Al Smith used to say, take a good "look at the record".

A little over a month ago I stood on one of the levees on Sherman Island located in the Sacramento-San Joaquin River stream and watched floodwaters cover that island of the Sacramento-San Joaquin River stream system. It was one of those sights which left me with a most depressed feeling: to watch 10,000 acres of some of the finest agricultural land in the United States be flooded by 10 to 20 feet of water.

At the same time, I recalled some 35 years back when, as a teenage Sea Scout living in Stockton, I used to sail around the Delta channels in the summertime along with a number of friends whose parents farmed in the Delta area. In those years, these farmers were constantly worrying about the intrusion of ocean salt water in the Delta area in the summer and fall months due to lack of natural flows within the Sacramento-San Joaquin River stream system to repulse the ocean.

Then it occurred to me that these two observations, basically, were examples of California's water problems; namely, too much water in the wrong place at the wrong time; and, on the other hand, not enough water in the right place at the right time.

A few days after watching the flooding of Sherman Island last month, I had occasion to fly up and down the Sacramento and San Joaquin Valleys. I couldn't help being impressed that our own Oroville Dam, during the peak floodflow in January, was able to hold back some 143,000 cfs while discharging only 20,000 cfs. The flow past Oroville during the height of the high water was reduced to one-seventh of what it would have been if the Dam had not been there. The citizens of Yuba City and Marysville, many of whom were flooded out in 1955, had been protected from possible catastrophe this year.

Farther south. I flew over the site of New Melones Dam which has been authorized for construction by the U.S. Army Corps of Engineers, but upon which construction has not been started. I also flew over the site of New Don Pedro Dam on the Tuolumne River, which has just begun its preliminary construction phases under a joint agreement between the City and County of San Francisco and the Turlock and Modesto Irrigation Districts. If New Melones and New Don Pedro had been completed, the flood problems on the lower San Joaquin River would have been alleviated. We would not have had a levee failure at the junction of the Stanislaus and San Joaquin Rivers which resulted in the flooding of many hundreds of acres.

You may not realize that the big reservoirs which provide much needed flood control in the Sacramento and San Joaquin Valleys are multi-purpose reservoirs. They would not be in existence unless distant water users guaranteed the repayment of the water supply features. This is true on the Mokelumne River where Comanche Dam, built by the East Bay Municipal Water District, stopped the flood-waters of the Mokelumne River in the vicinity of Lodi this year. Comanche Dam exists because people in the East Bay Municipal Water District guaranteed and are paying for the water supply features of both the dam and reservoir.

In the vicinity of Modesto, downstream areas will be provided with flood control protection when New Don Pedro is completed, again primarily because the people of San Francisco are guaranteeing to defray the cost of the water supply features of New Don Pedro.

And so it is with the State Water Project's Oroville Dam. The people in the vicinity of Marysville and Yuba City are afforded flood control primarily because the State Water Project users in the north San Francisco Bay, the south San Francisco Bay, the San Joaquin Valley, and Southern California have guaranteed to pay the major share of the cost of Oroville Dam and Reservoir.

It is upon these concepts that the California Water Plan and the State Water Project have been conceived. Our job is to solve the imbalance in supply and, at the same time, to help meet flood control needs in the North and provide fishery enhancement and recreation generally as part of water projects.

The first beneficiaries of the State Water Project were Northern Californians, a fact which is often forgotten. Since 1962, water has been delivered to local contracting agencies in Alameda and Plumas Counties and, since 1965, to Santa Clara County. Recreational and economic benefits for the North come from the first three completed reservoirs of the five authorized by the Burns-Porter Act in the Upper Feather River Basin: Frenchman, Antelope, and Lake Davis. These projects are primarily for recreational and fish and wildlife enhancement.

In addition to the Northern California counties I mentioned as recipients of water through 1965, last year we delivered water to local districts in Napa, Stanislaus, Kings, and Kern Counties. Also under the $130 million fund set aside in the Davis-Grunsky Act, local agencies are receiving state loans or grants for local projects relating to domestic water supply and to fish and wildlife enhancement and recreation. Since 1959, 50 Davis-Grunsky projects have been approved. Thirty-nine of these are north of Fresno.

This is the way the original score was written and the way it was intended to be played when enacted by the Legislature in 1959 and ratified by the people in 1960. Many years of debate in the Legislature resulted in the design of a project which will benefit all Californians and which will deprive no area of the State to benefit another. Though the composition is clear, some critics have been introducing false notes. Propaganda has been widely disseminated in some areas of the State, including the San Francisco Bay area, that the State Water Project is a gigantic scheme to steal the water of Northern California for the benefit of Southern California and to leave the area north of the Tehachapi mountains a barren desert.

This untruth has been resurrected, dusted off, propped up, and masqueraded as if it were part of today's picture. Times have changed; no longer can we afford to look into a rear-view mirror. No longer can anyone stand before an intelligent audience and say that Northern California currently lacks surplus water. No longer can flood protection be denied. But, in the present realm of economics we must join water supply features with flood control features. We have arranged for federal funds to pay for the flood control features, and we have arranged for the water users to pay for the water supply. We have taken a statewide perspective because we are not divided by geography or commerce, or communication, and certainly not by problems.

The health, safety, and welfare of all Californians is our concern—from the Klamath Basin to the Imperial Valley. It should be a matter of pride that California leads the nation in making a statewide attack upon the problems of water resources and their developments. In the State of New York, four major departments and seven different divisions within departments have responsibilities for water supply. In New Jersey, the responsibility is spread over four departments and six divisions. In the region of which New York is a part, 13 federal agencies have planning responsibilities.

In the West, the trend is in the California direction, toward responsibility on a statewide basis and in a single department. It only confuses the picture to call for a return to the fractured pattern of the past. The clarity and simplicity of the California arrangement is being copied by Texas and Arizona, among other states.

In addition to our Department with major responsibilities in statewide planning and development of the State Water Project, the 1967 Legislature created the State Water Resources Control Board, combining the quasi-judicial functions of water rights and water quality. This Board is completely independent of our Department, its five members serving staggered four-year terms under appointments by the Governor. Last week your speaker made reference to these Board members particularly those from Northern California, stating that two of them were former members of our Department. This is

not true. The Chairman was a successful businesman and Mayor of St. Helena before he joined the Board; the Engineer is from Porterville having practiced as a successful consulting engineer in the San Joaquin Valley for over 25 years, and the third is a successful attorney from Placerville—none of these three has been associated with my Department as employees. Along with the other two members from Southern California, these three are most capable of protecting the State's interests in water quality and water rights in a completely objective manner. It is interesting to note the attacks on these people by those who have received or anticipated decisions not to their liking.

The Department's constituency embraces *all* Californians. Full "area of origin" safeguards are expressed in the California Water Code. This Code also includes the Burns-Porter Act. Under these safeguards, priority for its own water requirements is granted to an area of origin before supplies or exchanges can be made with regard to another area.

Similar safeguards for Delta water are also part of the law of this State. With respect to the Delta, the Legislature determined that a water supply sufficient to maintain and expand agriculture, industry, urban, and recreational development in the Delta was necessary. This determination controls policy for releases into the Delta and for export from the Delta.

The important point is that many Californians, including those from San Franicsco and the East Bay as well as Southern California, have exported water away from areas of origin. With nearly everyone dipping into the sources of water and exporting it, a statewide policy had to be nailed down in the law, and it was. Some critics cry that they lack legal protection, but this protection is clearly expressed in the law. Their real objection appears to be that we are carrying out a law which they do not like.

Those who criticize plans for the Peripheral Canal fail to discuss the whole story. There are many references to "taking *our* water" or "tapping the Sacramento's fresh water" at Hood and bringing it around the outside of the Delta. But, I fail to hear an honest discussion on how the Canal will actually be operated. It should be clearly pointed out that the Canal will be engineered to release fresh water directly into Delta streams and channels at eight different points on a regulated basis. We must recognize that merely increasing the flow of the Sacramento at the Delta's northern edge would fail to solve the *whole* problem of the Delta. To freshen water in the Delta's interior channels and streams, a westerly outflow is needed. Direct releases from the Peripheral Canal would provide this.

Peripheral Canal planning goes back many years. It was even part of the California Water Plan of 1957. Between 1961 and 1965, four plans were considered by an Interagency Delta Committee which included the Department, the Bureau of Reclamation, and the Corps of Engineers. Each plan was judged, not for how much water it would bring to the pumping plants on the southern edge of the Delta, but from those benefits which the Water Code says *must* be considered: water quality and supply in the Delta, flood control and drainage, the maintenance of fish and wildlife, and recreation.

The only plan which met all the objectives was the one providing for a Peripheral Canal skirting the Delta's eastern edge, but containing—as critics ignore—eight release gates for fresh water to be poured directly into the Delta's streams and channels.

At a public hearing before the California Water Commission, the Peripheral Canal was enthusiastically supported by commercial fishing and sportsmen's groups, by the Department of Fish and Game, and the Department of Parks and Recreation.

So, in evaluating the words of the fright peddlers, one cannot be too cautious. Sincerity can always be admired, but a narrow perspective is deplorable. Progress only exists in a rational atmosphere. Criticism that merely muddies the waters and makes a big splash, only exposes how wet the critics are behind the ears.

Now, let's take a look at facts about water quality in the Delta.

A preliminary water quality agreement has been reached by those most concerned: The Department, the Bureau of Reclamation, the Sacramento River and Delta Water Association, the San Joaquin Water Rights Committee, and the Delta Water Users Association. Their standards provide for water quality conditions throughout the Delta area which constitute a vast improvement over historic natural salinity conditions. The standards have been agreed to by groups that represent 90 percent of the agricultural interests in the Delta.

In addition, the Department has signed agreements with the City of Antioch and with the Contra Costa County Water District concerning the purchase of substitute supplies. The County interests represent over one-half of the assessed valuation within the County. Just last year, the Legislature created a Delta Water Agency with authority to negotiate with the U.S. and the State of California in order to assure an adequate water supply and suitable water quality and to implement the preliminary agreements reached.

I might add that, before I became Director of the Department, I was directly involved, as a private consulting engineer on behalf of Delta interests, in negotiations that led to the preliminary agreement on these water quality standards. These criteria, I firmly believe, are fair and equitable to all concerned. They give protection to the Delta water supply and guarantee adequate salinity control. I supported the proposal then, while on the other side of the fence, and I support it fully now as Director of Water Resources.

We feel that the Delta problem can most intelligently be dealt with from the standpoint of hydraulics rather than politics. Hydraulics involves theories of liquid motion. Politics involves the practice of perpetual emotion.

Our perspectives are statewide and our prospects are bright. We look beyond the flood control, the recreational, and the Delta environmental problems to future sources of water supply. Planning for future development of our North Coastal resources is a cooperative effort involving local, state, and federal efforts.

As part of our perspective, investigations of future water resources extend beyond conventional dam and reservoir. We are studying the possibilities of obtaining new water supplies through desalting sea water, waste water reclamation, improved watershed management, weather modification, and regional developments in the 11 western states.

Attention to local needs and cooperation with local and state agencies and the Federal Government are characteristic of our moves in these areas.

The Department's activity is carried on by a staff which consists of more than 1,000 graduate engineers, 1,000 technicians, and almost half as many administrative professionals. We have more than 400 construction inspectors and supervisors, an equal number of trades and maintenance craftsmen, and more than 770 office personnel.

Only myself and my 3 deputies are appointed by the Governor. We 4 are engineers and have had public service experience in state or federal water resource agencies totaling approximately 100 man-years. The Department's employees are all career public servants; they come from many areas of the State; they represent thousands of man-years of experience; and, they are problem-oriented in the best technical sense. They are professionals of broad perspectives.

The prospects facing California are strongly linked to the breadth of perspective we adopt. This is not a time for anyone or any group to become an emotional dropout from California's promising future. California has been described by one promising writer as "America tomorrow", "the direction in which America is heading", and a "prototype for the rest of the Nation". As a State, California contains 1 out of every 11 Americans. Californians enjoy the highest incomes and the most leisure, drive the most automobiles, and have the most color television sets, color telephones, swimming pools, backyard patios, and pleasure boats.

But we are also first in the serious things: our agriculture leads the nation; our economy is larger than any foreign country except Russia, West Germany, Great Britain, and France. California has 21 Nobel Prize winners in the sciences, a third of all living American Nobel Laureates in the Arts and Peace Prizes, and a quarter of the membership in the National Academy of Sciences. We have done more for ourselves in the field of water development than any other state and we're doing it in a way in which I believe our citizens can be proud.

We rejoice in these superlatives but, at the same time, we recognize the heavy responsibility that is implied. One of these responsibilities is that of carrying on intelligent discussions of public problems and issues including water at a high level and with full regard for the facts.

The problems of nature are the same everywhere, whether they involve battling disease, irrigating farmland or desert, exploring outer space or the inside of the atom. We expect differences. We know that what seems impossible—especially in controlling nature for man's benefit—is impossible only until somebody does it. Because California is a "somebody" state, and because we believe the direction of our efforts is uphill, we strive to be problem-oriented in our approaches. We will continue to do this—to seek healthful, constructive, and thoughtful public participation.

We appeal most of all for a broad perspective on the part of all Californians.

The statewide view must continue to guide us in California water development. We cannot afford to let narrow self-interest upset the plans made for all of the people.

We must move ahead under the concept that is pioneered in California law—a state water project which will benefit all Californians and which will deprive no area or interest to benefit another.

Viewed in the broad perspective that is proper, our prospects are bright for continuing water developments for water conservation and distribution, flood control, recreation and enjoyment of fish and wildlife.

WOUNDS INFLICTED BY LAW ENFORCEMENT IN BERKELEY

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, on Friday, Memorial Day 1969, an estimated 25,000 persons marched peacefully in Berkeley without serious incident. The peaceful march, I believe, was a return to sanity in that troubled city.

However, the wounds of Berkeley, wounds which have national implications, are deep. There has been a further division among the American public.

As illustrations of these divisions, I will include three recent newspaper ar-

ticles in this RECORD at the close of my remarks. The first is by Bob Gillette, science writer for the San Francisco Examiner. In an article published May 29, he discusses the wounds inflicted by law enforcement on May 15 in Berkeley. The second is by Nicholas von Hoffman and in the June 2 Washington Post he discusses the wounds and bitterness inflicted on a generation by the events in Berkeley. Mr. von Hoffman outlines the wise compassionate views of Fred Dutton, a member of the University of California Board of Regents and the former distinguished Assistant Secretary of State under President John F. Kennedy. In addition I would like to include in the RECORD an account of the gassing at Berkeley written by A. V. Krebs and published in the National Catholic Reporter on May 28, 1969. Finally, a young constituent of mine, a young man I know personally, wrote me an account of the actions of the police and National Guard in Berkeley. His remarks are significant as he had been called to active duty there. I am not revealing his name for obvious reasons, but the full letter is on file in my office and I am acquainted with him. I include his letter, changed only to protect him, in this RECORD.

It is my belief that it is time for us to seek new solutions to the campus crisis. It is time to realize we cannot govern our colleges by force. We cannot allow war to be declared between the generations.

There are answers, instead of violence. Let us address ourselves to those answers, instead of to recriminations.

The above-mentioned articles follow:

[From the San Francisco (Calif.) Examiner, May 29, 1969]

DOCTORS PROTEST BERKELEY SHOTGUNS

(By Bob Gillette)

Doctors who worked long hours tending the wounded in Berkeley after a bloody clash with police on May 15 are expressing anger and dismay at the use of shotguns to quell civil disorder.

The doctors believe the public does not fully appreciate the maiming power of fine birdshot and marble-sized buckshot.

And they fear that the debacle of two weeks ago may be repeated—tragically and unnecessarily—in response to a mass march planned in Berkeley tomorrow.

So far, the doctors say, the shotgun toll includes:

One death, three punctured lungs, two eyes blinded and a third damaged, a shatter-fracture of the lower leg and a ruptured bowel complicated by a massive internal infection.

INSANITY

Dr. Henry Brean, the chief radiologist at Herrick Hospital in Berkeley, and at Cowell Hospital on the university campus, said he is "one of many" physicians anguished by the human damage they have witnessed.

"I've got no brief for violence the kids committed," he said in an interview.

"But the indiscriminate use of shotguns is sheer insanity."

He asked rhetorically, "Hasn't anyone ever heard of firehoses?"

Another doctor, three surgeons who tried—and ultimately failed—to save the life of 25 year old James Rector, told The Examiner:

"Anyone here who has any sense of humanity has been horrified by what happened. As a resident of Berkeley and as a physician, I never expected to see these kinds of injuries in civilian life."

SOLD TO KILL

Another X-Ray specialist at Herrick Hospital, Dr. Klaus Dehlinger, observed that "Buckshot is sold to kill deer. That fact speaks for itself."

Brean and Dehlinger, who helped diagnose nearly all of the 40 to 50 wounded persons at Herrick and Cowell hospitals, emphasize that doctors are "not the organizing kind, not the protesting kind."

Nonetheless, half a dozen of the angry doctors have volunteered an eloquent protest: an inventory of major wounds.

The victims include five persons struck with double-? gauge buckshot pellets, a third of an inch in diameter. Only one victim of buckshot, James Rector, has been previously reported.

(Birdshot, a sixteenth of an inch in diameter, was the only ammunition authorized for use by Alameda County Sheriff Frank Madigan.

THE DAMAGE

Of the five buckshot victims:

One young man suffered a commutated, or shattering, fracture of the main bone in his left leg below the knee.

Four persons suffered wounds of the soft tissues. Among them was James Rector and a young man who sustained a ruptured bowel.

Ten persons admitted to Herrick Hospital had been wounded in the legs, arms, trunk and face with birdshot. One victim carried 125 pellets in his body, "and there may have been more," Dr. Dehlinger said, "That was all we could see in the X-rays."

Birdshot accounted for severe damage to the eyes of two persons. Some 130 persons were reported injured by gunfire, rocks, bottles. One policeman sustained a minor stab wound.

AN ACCOUNT

A surgeon at Herrick hospital, who asked not to be identified, gave this account of his view of the violence:

"I had just finished in surgery when it all happened, when the wounded began coming in.

"It was Thursday, and we were supposed to have an earthquake disaster drill Saturday. But a girl said on the public address system that the drill would go into effect immediately—and that this was not an exercise."

One of the arrivals was James Rector, shot at close range on Telegraph Avenue.

"This young boy had picked up three slugs—the sort of thing you'd expect from a machine gun.

"But it wasn't. It was buckshot from 30 feet. His belly was ripped apart."

WAYWARD SLUG

His spleen, part of his pancreas, and his left kidney were removed. He died four days later from a hemorrhage of the aorta, the main artery leading from the heart. Doctors later found that a wayward slug had nicked and weakened the great vessel.

The most seriously wounded survivor is now Alan Blanchard, a carpenter at the Telegraph Repertory Cinema in Berkeley.

Blanchard, the father of a five week old child, is under care at the University of California Medical Center.

Both his eyesockets were heavily damaged by birdshot, fired as he watched the melee from an apartment house sundeck.

George Pauley, his employer and co-owner of the cinema, said Blanchard is not an activist and has never been associated with street protests.

BENEFIT

To help defray Blanchard's medical expenses, Pauley plans to give him the box-office receipts from four shows a week—Friday and Saturday at midnight, and Saturday and Sunday matinees.

To augment the theater money, contributions to a trust fund for Blanchard and his family are also being sought.

It will be 10 days or more before doctors know the extent of Blanchard's blindness. Physicians at Herrick Hospital are fairly certain that it will be total.

[From The Washington (D.C.) Post, June 2, 1969]

BREEDING COP HATERS

(By Nicholas von Hoffman)

"A society that hates its young people has no future," says Fred Dutton, the only member of the University of California's Board of Regents to be with the students, the street people and the park. As such, he has a hard time on a board made up mostly by Ronald Reagan and a lot of multi-millionaires who, he says, "live in another world like the outer Patagonians."

"I'm basically a 'cop-out,' a conformist who wants to make the system work but I see the kids coming to us on the board and they can't get through to us. They get silence so I've been getting an education myself—the popular word is radicalization—because I see the older society beating up kids for no reason at all," says Dutton, a 45-year-old lawyer and straight politician who was appointed to the Board by former California Gov. Pat Brown.

When Fred Dutton says he's seen the older society beating up its kids, he's not using a figure of speech. He was at the Chicago Democratic Convention last summer and physically intervened to save some of them. Likewise a few weeks ago it was Dutton who raised a rumpus at a Regents' meeting, when he saw a policeman walk over to a white student who was talking to a black girl on a Berkeley lawn and clubbed him over the head. Neither the sergeant, nor the captain commanding the police detachment could give Dutton the name of the officer who did it.

Dutton is rare because he is an older person who has taken time to see how younger people are frequently treated. Few people have seen the photograph in the Black Panther Party newspaper of a California lawman drawing a bead with a shotgun on a single, fleeing, white, bearded youth. The student who took the picture is quoted as saying, "I was looking out the window Thursday afternoon and I saw some 50 people standing on the corner. Then they all started to run. The pigs came around the corner and one stood there like he was going to shoot. I never dreamed he would. The pig took his time aiming. The guy fell down in the street howling. The pig took off, and someone dragged the guy into the house. His right buttock and hip were bloodied from birdshot wounds."

The letters, pamphlets, pleas, cries and strangled gurgles coming in here from infuriated, impotent, "occupied Berkeley," are incredible and sad. Here's one from a young math instructor who was arrested after he told the National Guardsman to go love-off somewhere because they were bothering his girl while the two were walking to work: ". . . I soon discovered in conversation with fellow criminals that what I had done was far more serious than their crimes: two undergraduates had been arrested for giving the finger to a helicopter—one of them was riding on a bicycle while he was committing this criminal act, and his bicycle was arrested with him. It was in the paddy-wagon on the way to jail, too. Another undergraduate had picked up a used tear gas cannister for a souvenir. He was seen carrying it by a cop and was arrested. Another fellow was arrested for watching the arrest."

There's nothing especially unique about Berkeley except the use of guns by the police who heretofore have saved firearms for blacks. The hassling and hazing of kids, especially the more flamboyant middle and upper class kids, goes on all over the nation with the results that we're breeding 5 million cop haters. Pig is no longer a three letter

word for a four-footed animal and "oink" is becoming the real slogan of the Pepsi generation.

Many of us who're older are suffering from a King Lear complex. We're becoming obsessed with the notion that our sons and daughters are plotting to strip us of our gerontologically derived power and position and throw us out into the streets. So Fred Dutton remarks, "Joe Alsop says people like me are traitors to our own age group, but I think there's a whole bunch of people in their later 30's and early 40's who're being radicalized—people who were obedient and went off to Korea without asking themselves any questions."

There are some like that who're perking up and coming to life but there appears to be a stronger tendency in older people to inflict on the young what was once inflicted on them. Instead of remembering the miserable high schools, the sadness of their own conscription, the social arrangements that thwarted their own youthful sexuality, older people often say, "Well, I went through it, so why can't they?" What that statement really means is "I can't tolerate the idea of these young ones not suffering what I suffered. Make them go through it too."

The "it" they went through was a social processing that produced Richard Nixon and his silent majority, that docile, uncreative, tight-fisted mass who assent to anything any short-haired man in a business suit tells them to do. This is the ungenerous life of mildly paranoid home-ownership, and it is what the sons and daughters of the rich and near rich are objecting to, with the people's parks and their clothes and their sexiness. Fellows like the Attorney General pick this fact up and that's what makes him carp about permissiveness, but what's the point of having an affluent society if you can't loosen up and enjoy and enjoy some more. Puritanical social discipline is for times of scarcity and national emergency.

The kids in effect are saying, "Hey, there's plenty of money so let's pass the wealth around to everybody (blacks, Mexicans, old people) and have a good time. Man, don't give us this jive about national security, we know Ho Chi Minh isn't going to paddle over here in a rowboat. Relax, hang loose and dig your head and your body."

Fred Dutton knows this and that's why he says, "The park is cultural escalation. It's the kids telling us to keep our hands off their private lives, their shacking-up arrangements, their games. Harvard will have a park in eight months. This will be as important as the Free Speech Movement was. The park is symbolically very important."

But Fred Dutton can't get the message across to the Patagonian millionaires on the board of regents so there will be more fighting between the kids and the blue meanies.

[From the National Catholic Reporter, May 28, 1969]

WHY TEARS AND BLOOD OVER BERKELEY'S PEOPLE'S PARK?

(By A. V. Krebs)

BERKELEY, CALIF.—About 3,000 persons—most of them University of California students—had just finished a silent vigil for a young man who died after being shot by police in a Berkeley street battle.

The mourners decided to march the four blocks from where they were—Sproul plaza, the site of Berkeley campus protests—to a disputed piece of land called "People's Park," located in the university's south campus area.

But Berkeley police and California national guardsmen drove the students back onto the campus with volleys of tear gas, just as they had on the previous four days when the students tried to make the same march.

As the students returned to Sproul plaza, more lawmen formed a tight circle around its perimeter, and campus police took positions on the balcony of the nearby student union building.

Suddenly, a national guard helicopter swooped in over the tops of buildings and past the Campanile, the huge campus tower, and started billowing tear gas which was quickly blown to the ground by the 'copter's overhead rotor blades.

The campus police on the student union building joined in the tear gas attack, throwing large grenades of it at the students, who started fleeing.

Girls fell on the grass. Some screamed. Some threw up. Other students were chased into a nearby building and lawmen lobbed tear gas grenades in after them.

The tear gas drifted beyond the plaza. At the campus hospital, some patients had to be removed from their rooms, and one was placed in an iron lung after having some difficulty breathing. And, a group of small children in a university building received a strong enough dose to make them sick.

By the time the May 20 incident ended, 85 persons had been arrested.

The controversy and bloodshed at Berkeley are over a piece of land, about 150 yards long and 90 yards wide, located in a largely residential area. On one side are university dormitories and the school's long-range plans are to build student housing on it.

The university bought the land more than a year ago, paying just over a million dollars for it. At the time, it had a few old buildings on it, and some of Berkeley's hippy-type "street people" lived in them until the university tore them down. The lot was an eyesore.

Then about six weeks ago some students and some of the city's street people began cleaning the lot up, and clearing off the foundations left from the old buildings, and making it into a park.

They went out and panhandled about $700 from business places to buy things. They put down some sod, built play apparatus for children, put up a platform that can be used as a stage, and planted flowers, vegetables, and even a small corn field.

Some people, including Gov. Ronald Reagan, have charged the project was politically motivated, and that some of the students and street people undertook it to bring on a confrontation with the university.

But the students and street people say they really wanted a park. After completing some of the work, most of which they did on week ends, they held a dedication service, and named it People's Park.

"This is the first meaningful work experience of our lives," one of the park builders said.

But about a week after the clean-up campaign began, the university warned that it would soon be using the land for its intramural sports program. On May 14, it put up "No Trespassing" signs, and the morning of May 15 it installed an eight-foot-high chain link fence around the property.

Later, on May 15, the students and street people held a protest rally at Sproul plaza, and started a march on the park. This led to the violent clash with lawmen during which the young man, James B. Rector, was fatally wounded. More than 100 other persons were hurt.

Rector, who was from San Jose, had come to Berkeley to visit some friends. He was standing on top of a building watching the battle when he was hit.

Before he died, he told the doctor who treated him that he looked down from the rooftop and saw a policeman aiming a shotgun at him. He said he turned to run, and then was shot in the left side.

An autopsy revealed that Rector died from "shock and hemorrhage due to multiple gunshot wounds which perforated the aorta"—the main artery carrying blood from the heart.

The battle raged for much of the afternoon. Police said bottles, bricks and pieces of concrete reinforcing rods were thrown at them. They responded, first with tear gas and then shotguns. There also were claims they used .30-caliber rifles in a few instances.

By nightfall, more than 400 outside police officers were in the city, including San Francisco's tactical squad, which lent the law enforcement during the violence at San Francisco State. That evening Governor Reagan ordered the national guard in, and a curfew was imposed.

The Berkeley city council, meeting while national guardsmen stood guard in a circle around the city hall, called for a grand jury investigation of the controversy and the violence.

Ron Dellums, a black councilman, drew applause as he condemned "violence and brute force" and that "because of inabilities to solve problems a young man is dead." He said the city should "tell Governor Reagan that we are tired of Sacramento controlling us."

The governor, meanwhile, was telling newsmen in Sacramento that "the issues (in Berkeley) have become clouded and some may be misinformed or misled into belief in a so-called 'cause' which in reality is nothing more than a deliberate and planned attempt at confrontation."

The governor's office declined to say how many national guardsmen were called to Berkeley. One spokesman said revealing the number "might be advantageous to the enemy." Other estimates placed the total at about 2,000, and many of them were staying in People's Park.

The state's board of regents, who were meeting in Los Angeles during the Thursday gun battle, later affirmed that "we have full confidence in the Berkeley administration and the law enforcement agencies."

One regent, Fred Dutton, however, said he felt that "if the students developed the land with their own resources, then they should have their park."

During the helicopter tear gas raid, Father James Conway, a Paulist at the university Newman center, was standing in front of the center watching the fleeing students.

"I prayed a blessing two weeks ago in the People's Park that it would be a source of peace and brotherhood, not of bloodshed and violence," the priest said.

"Seeing now how the university administration and the city has reacted to the students and street people's simple desire for their own park, I should instead have asked for the surrounding community to be a source of peace and brotherhood."

DEAR DON: I was activated to serve in Berkeley California as a member of the National Guard. The situation that exists there can only be described as intolerable for the people of Berkeley. Upon returning to the Ninth District I became aware of your efforts to investigate the situation. I hope that what I observed may be of some help in your investigation or in obtaining one.

It became evident from the first day of arrival that the perpetrators of violence were the police and especially the Alameda Sheriff's department. They seemed to display a degree of vengeance and reprisal against the youth while performing their duty. The first day I was on guard duty on the street corner of a main intersection a long haired youth was passing. One of the Alameda Sheriffs tripped him then hit him across the back with his club. The youth did nothing wrong (other than walking down the sidewalk) to bring about the attack and the sheriff just laughed and walked away. When questioned the cop could give no rational explanation; he wore no badge number.

The next day I witnessed the Alameda sheriffs handcuff a youth (his hands to his ankles) rolled up the windows of a car, threw

him inside and then tossed in a tear gas grenade, and slammed the door. They kept him in there for ten minutes. The overreaction of the police was sickening to watch, on at least two occasions I observed gangs of officers beat a demonstrator or bystander. At one point an officer drew his shotgun and pointed it at a crowd of students by a building because one student had thrown a rock, he intended to shoot everyone in the crowd. Fortunately he was restrained by the Berkeley Police who seemed to be more restrained. On Monday night I was in the Berkeley Police Department Headquarters and overheard the following. The captain of police, "Tomorrow the quota is one hundred arrests you are to drive up in your squad car jump out and grab the nearest individual, and place him under arrest for failing to disperse. The arrest forms are already made out—just fill in the names." This plan was carried out by the police on Tuesday one of my friends was arrested while coming home from school two blocks from his residence. On Thursday the plan was repeated. We were told by our commanding officers to let straight individuals through our lines but to herd everyone with long hair into the Bank America parking lot. I feel that both these are adequate examples of violation of civil rights, by the police. We were also told by our company commander that the police were justified in their indiscriminate beatings and gassings because of the obtrusive language they had been subjected to. But our commander felt they were guilty of over reaction. I hope that you are enabled to get a federal investigation and it is able to come up with some findings that will put a cease to the violence perpetuated by the police. I am not alone many of my fellow guardsmen hold the same feelings of disgust. Any effort you make will be thoroughly appreciated. If you wish more detailed statements of what I observed please contact me.

Respectfully yours,

_____.

[From the San Francisco (Calif.) Examiner, May 29, 1969]

CoED'S VIEW OF UC RIOTING

(NOTE.—The following letter was written to V. M. Hanks, a San Francisco professional photographer, by his daughter, Penny, a sophomore at UC, Berkeley, expressing her views and opinions of problems in Berkeley. Penny's dormitory is near Sproul Plaza.)

MAY 25, 1969.

DEAR DADDY: It was so good talking to you the other night—sometimes wish we could talk more often, especially now with so much going on around me over here.

I wish also that you could actually be here to see the kind of things that are happening all around me. The whole thing is so confusing and so terrifying.

I feel that my own thoughts on the situation are the same basically as those of the majority of students at Berkeley. I'm young and idealistic I guess, as are most people here.

On the one hand I feel like my idealism (and that of most of my peers) is being exploited and twisted by radical student groups such as the SDS, and it makes me so angry. It seems you can't believe in a legitimate cause without someone using it as an excuse to try and rip down the structure of our society.

But what I've seen around here lately shows me there are changes which must be made—and soon.

This People's Park issue is not as I see it, the major concern of the majority now. Yes, I know that land belongs to the University and that people don't have a right to claim property which just isn't theirs.

Perhaps I would rather see a park there than a playingfield or whatever, but all I can do is voice my preference and hope to be heard. I understand fully that the property is not mine to "take over," and here again I know I speak for the majority.

MAIN CONCERN

What is the main concern now is the way the situation is being handled by our so-called "keeper of the peace."

I for one cannot attend the University that I love feeling like I'm part of "the enemy" in an occupied city. I have lived for the past while in fear, not of the student dissidents and demonstrators, but of our officers of the law.

For awhile now I've been afraid to go on campus, because I know that at any time I could be choked in a cloud of gas or pelted by gunshot, just on the way to or from school.

I'm not speaking from what I have heard, but rather from what I myself have experienced. I've seen some of the injuries done to people who've just happened to be in the right places at the wrong times.

A LIE

And I can tell you now that Alameda County Police Chief Madigan was lying when he said that only birdshot the size of BBs was used. I have helped dress the wounds of people who've been hurt, and I know. I haven't been outside in the middle of anything, but when someone comes to your "inside" gushing blood you just can't ignore it.

Daddy, I've breathed so much tear-gas I'm becoming immune to it. As casually as one would say "shut the window, please, it's cold," we say "shut the window, please, the gas is coming in."

TRAPPED

I've seen "crowds" of two people gassed inside of the quad of our dorm unit by police on the other side of the fence by the parking lot. I've also seen gas thrown and shots fired at people who are running away—in other words, already dispersed.

I've also seen police march and drive people up the street one way only to be met by another battalion of police at the other end and the people, who now can't possibly disperse, are gassed and-or-arrested en masse.

I have a friend who was shopping on Shattuck Avenue the other day (this boy is no more likely to be out provoking police than I am) and when he saw trouble ahead he asked an officer which way he should go to avoid it. The officer pointed him in the direction of a parking lot and when he neared it he was arrested along with hundreds of others.

HER FEAR

This kind of thing just can't go on. You've always taught us respect for law and order, but I feel that what's going on with the police here now is unlawful and certainly disorderly.

This is not to say I don't feel that there are certain violent demonstrators who should be arrested, but when someone like me who's been brought up as I have has to be afraid, not of student demonstrators, but of the police—then somewhere there's something wrong.

I only hope that people outside wake up in time to do something about it, before it's too late.

Love and confusion,

PENNY.

TITLE VI ENFORCEMENT

(Mr. EDWARDS of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, several weeks ago, I was dismayed to discover that the Department of Defense had awarded a contract to the Ingalls Shipbuilding Co., of Pascagoula, Miss., in violation of the Department's own regulations with respect to enforcement of title VI of the Civil Rights Act of 1964. The Department of the Navy awarded the contract even though equal employment opportunity deficiencies had been documented and no affirmative action plan existed which would correct the situation. On May 19, in telegrams to Secretary of Defense Laird and Secretary of Labor Shultz, who has responsibility for the Office of Federal Contract Compliance, I protested the award of the contract and urged that no further contracts be let until title VI regulations were complied with.

As a result of congressional protests, Department of Defense and Department of Labor representatives met with the Ingalls Co. on May 22 and Ingalls filed an affirmative action plan as required by law.

I consider this series of events very serious. It indicates that Federal agencies are not meeting their responsibilities to administer title VI evenhandedly and effectively. The Members of this Congress cannot assume responsibility for policing each contract awarded by the Department of Defense or any other Department to assure that there was compliance with Federal civil rights regulations. Surely, we have a right to expect that an agency of the Federal Government can and will enforce Federal laws against discrimination and its own implementing regulations fully and effectively.

Mr. Speaker, I insert at this point in the RECORD copies of my telegrams to Secretaries Laird and Shultz and the responses of their Departments which indicate that the original contract was let with total disregard for the law of the land:

Hon. MELVIN R. LAIRD,
Secretary of Defense,
The Pentagon,
Washington, D.C.:

I have been informed that the Department of Defense recently awarded contracts totalling $128 million to the Ingalls Shipbuilding Company of Pascagoula, Mississippi. Further, I understand that the contracts are expected to be part of a series of negotiated contracts with the Ingalls Company. I am extremely concerned about this report because of the extremely poor record of this company in the area of compliance with Federal laws banning discrimination in employment. This record would ordinarily make Ingalls ineligible for Federal contracts by reason of Executive Order 11246. I therefore ask that you inform me whether the Ingalls Shipbuilding Company filed a written affirmative action plan spelling out in specific terms the steps it would take to comply with Federal laws regarding nondiscrimination by Federal contractors. If such a plan was filed, I would appreciate you forwarding it to me. In addition, please keep me informed as to whether the Department of Defense intends to award further contracts to this company and as to the safeguards that will be required.

DON EDWARDS,
Member of Congress.

Hon. GEORGE P. SCHULTZ,
Secretary of Labor,
Department of Labor,
Washington, D.C.:

I have been informed that the Department of Defense has recently awarded contracts

totalling $128 million to the Ingalls Shipbuilding Company of Pascagoula, Mississippi and that this company is in violation of Federal laws banning discrimination in employment by Federal contractors. I also understand that further contract awards for the Ingalls Company are expected. Please advise me as to whether the letting of the original contracts was cleared by the Office of Federal Contract Compliance. If such a review was not undertaken, please advise me as to what action you now intend to take with respect to the contracts already awarded. In addition, please advise me as to what action you intend to take with respect to the additional contracts for Ingalls which are now in the pipeline.

DON EDWARDS,
Member of Congress.

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., May 27, 1969.

Hon. DON EDWARDS,
House of Representatives,
Washington, D.C.

DEAR MR. EDWARDS: Secretary Laird has asked that I respond to your telegram of May 19, 1969 regarding a recent contract award by the Department of the Navy by the Ingalls Shipbuilding Corp. of Pascagoula, Mississippi. As indicated in your telegram, this contract was awarded by the Navy without completing our required pre-award compliance check on equal employment opportunity matters. Our inquiry into this matter has revealed that the award was made on May 1, 1969 and our new requirement for completing pre-award checks for negotiated contracts became effective on January 31, 1969. Prior to that time we required such checks only on formally advertised contracts in accordance with Department of Labor regulations. This company was selected as a source for negotiation of the contract in question in May, 1968 and negotiations on the final form of agreement had been in progress for almost one year. During final stages of these negotiations the Navy Department neglected to apply our new pre-award regulations to this contract.

At the time of this award, the company had submitted an extensive written affirmative action plan to the Contracts Compliance Office of the Federal Maritime Administration and discussions were in progress to develop a supplement to this plan. We are pleased to report that on May 22, 1969 representatives of Ingalls Shipbuilding Corp., The Maritime Administration, the Department of Labor and the Department of Defense met and completed an acceptable written supplement to the original copy of the company's affirmative action plan. Accordingly, the Ingalls Shipbuilding Corp. has now been formally determined eligible for this award.

This Department cooperated closely with other agencies in communicating to the company the urgent necessity for immediate resolution of this problem. We believe that this action is consistent with our obligation to fully carry out the equal employment opportunity program provided in Executive Order 11246 and related Department of Labor regulations.

Please accept our assurance that steps have been taken within the Department of Defense to reiterate and emphasize to all procurement contracting officers their obligation to complete pre-award checks on all contracts in excess of one million dollars in value.

A similar response has been transmitted on May 24, 1969 to Senator Edward M. Kennedy. We hope that this is fully responsive to your inquiry and are pleased to report on the resolution of this matter.

Sincerely,

L. HOWARD BENNETT,
Acting Deputy Assistant Secretary, Civil Rights and Industrial Relations.

U.S. DEPARTMENT OF LABOR,
Washington, D.C., May 23, 1969.

Hon. DON EDWARDS,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN EDWARDS: This is in response to your telegram regarding the Ingalls Shipbuilding Company contract.

It is our understanding that the Navy as the contracting agency in this case, erred in not following the established procedure of consulting with the Maritime Administration before issuing the contract in question. The Maritime Agency is the Government's compliance agency for the shipbuilding industry. Had the Navy done this, it would have learned that the Ingalls Company did not at the time of contract issuance have an approved Equal Employment Opportunity affirmative action program to correct deficiencies on record. Such a program had earlier been submitted by the Ingalls Company to the Maritime Administration but it was still under review and discussion at the time the contract was let.

On learning of this circumstance, the Company was advised that its contract was subject to cancellation and action was immediately taken to reach a compliance understanding. Following a series of conferences between Government and Ingalls Company officials an affirmative action program meeting Government standards and requirements has now been approved and agreed to. Maritime Administration, DOD and OFCC officials participated in these meetings.

Inasmuch as the Ingalls Company now has an approved affirmative action program to correct deficiencies, no further action at this time is necessary with respect to additional contracts for which the Ingalls Company may be considered. However, the compliance agency will be conducting periodic checks of the Ingalls Company to see to it that it remains in a compliance posture.

Sincerely,

J. D. HODGSON,
Under Secretary of Labor.

"WEDDING" OF UNION PACIFIC AND CENTRAL PACIFIC RAILROADS—ROLE OF REV. DR. JOHN TODD

(Mr. CONTE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CONTE. Mr. Speaker, last month marked the 100th anniversary of the "wedding" of the Union Pacific and the Central Pacific Railroads at Promontory Point, Utah, which signified the completion of the transcontinental railroad.

One of the more interesting highlights of this unique event in American history is the role which Rev. Dr. John Todd, of Pittsfield, Mass., played on this momentous occasion.

The Berkshire Eagle, in a special report on May 10, detailed this fascinating story. Under permission to extend my remarks, I would like to insert the following excerpts from that story into the RECORD:

REV. DR. TODD'S 315TH WEDDING

(NOTE.—Just 100 years ago today the pastor of the First Church put the brakes on a brawl.)

(By Morgan Bulkeley)

One hundred years ago today the picturesque wedding of the Union Pacific and the Central Pacific railroads was performed on a bleak, sage-brush plateau at Promontory Point, Utah, with the Rev. Dr. John Todd of Pittsfield officiating. In a real sense, a divided nation became one.

Best man for the Union Pacific was its vice president, Thomas Clark Durant, a native of Lee; and representing the Central Pacific along with its president, Leland Stanford, was its vice president, Mark Hopkins of California, whose wife later retired to the ancestral home in Great Barrington as "America's richest widow and mistress of 50 millions."

The Great Day of May 10, 1869, . . . saw the fruition of an almost impossible dream: the joining of the Atlantic and the Pacific by railway. The obstacles had seemed insurmountable. They include the quite probable risk of failure, post-Civil War uncertainties, currency inflation leading to exorbitant prices for labor and material which has to be transported to remote frontiers, Indian perils, the Rocky Mountains, legal and congressional battles and investigations, company dissentions and astronomical financing problems.

For the Rev. Dr. John Todd, it was the 315th wedding he had performed since he came to Pittsfield Jan. 1, 1842, as minister to the First Congregational Church. He had come his own hard way since borrowing a pair of shoes at age 6 to attend his father's funeral. He graduated from Yale in 1818 and, after Andover Theological Seminary, served as pastor in Groton, Northampton and Philadelphia.

One news dispatch from Promontory Point bemoaned his long prayer over the golden spike and described him as "a distinguished but unspectacular country parson from the East." The reporter did not know Dr. Todd's long story and must not have heard his short prayer.

His biographer says: "The county of Berkshire was to him the most beautiful region in the world. In all this region he was recognized as a kind of bishop, taking the lead from sheer weight and energy of character." Shortly after his pastorate of 31 years began, he confessed: "I actually had my toes touched with frost in the pulpit." But later the Lord evened things up by burning the Bulfinch Church, and his house to boot. He found his Pittsfield neighbors "a great, rich, proud, enlightened, powerful people. They move slowly but tread like the elephant . . . are a very critical audience . . . have 10 times more intellect than all my other places."

Dr. Todd was the noted author of the best-selling "Student's Manual" of his day and of other books including "Serpents in the Dove's Nest." He was a fanatical temperance leader who vowed he would never again lecture in the old Union Church after a theatrical company played "The Reformed Drunkard" there. Yet, cryptically, he is purported to have thanked a friend for a jar of brandied peaches: "I don't care much for the fruit but enjoyed the spirit in which it was given."

At the time of the great railroad completion, the 69-year-old Dr. Todd was retired, and his many friends and parishioners had sent him "with quite a party from Pittsfield" on a trip to the West Coast where he was received "as a kind of holy fossil to be handled with care." It was entirely happenstance that he made the first transcontinental train trip and discovered the section from Omaha to San Francisco surprisingly shortened from three months by way of wagon to one week.

It was lucky circumstance for all those present at Promontory Point on May 10, 1869, that the Pittsfield pastor happened along. For virtually alone he gave dignity to an occasion that might otherwise have been a champagne fiasco in the national eye.

The date had been set for Saturday, May 8, but two days before that, 400 disgruntled workers had shunted the luxurious car of Dr. Durant onto a Piedmont siding where they threatened his life if he wired for soldiers rather than for their $80,000 in back

pay. The money arrived next day, and he was released, but the ceremony had to be postponed until Monday. This gave more time for celebration and carousal.

About 20 tents and some wooden shacks comprised the ephemeral little junction that mushroomed from grass and sagebrush. There was no water nearer than eight miles, but no one cared. In the night the muddy street at 5,000 feet above sea level had turned to ice. The cold kept visitors shuttling between the town's five saloons and the potbellied stoves in their railroad cars. The "Hell-on-Wheels town" began to roll with its confusion of law and lawlessness, officials and ruffians, millionaires and penniless coolies, wives and camp followers. A lynching was narrowly averted.

Monday dawned clear and sunny. The many conflicting accounts seem to agree on little else but that on the abiding presence of the Wasatch Mountains. Old glass-plate photos show two railroad grades with tracks, sidings and switches, a telegraph line, and an anachronistic 20-star flag flying from a telegraph pole. (There were 37 states at the time.) More than 20 newspapers had one or more reporters present, and these variously concluded that between 500 and 3,000 attended the shotgun wedding. The only foresight was shown by Dr. Todd, who left a copy of his two-minute prayer at Ogden for telegraph to President Grant and the nation.

Finally Dr. Durant's shining Pullman chugged in, and the velvet-frocked VP stepped into the mud to shake hands with Stanford and Hopkins leading the Central Pacific's delegation. Several unexpected companies of the 21st Infantry Regiment en route to California also disentrained just in time to partly control the pressing crowd, and their band struck up a lively tune. The white-haired Dr. Todd was seen descending with a delegation of Mormon saints just as the coolies from the West and the paddies from the East laid the last ceremonial laurel tie, predrilled to receive the four commemorative gold and silver spikes. Wires were so connected that each blow of the sledge would be reported in most of the larger cities coast to coast.

The crowd pushed in so that very few could actually see and hear what happened. Two Wells Fargo stages on their last run arrived just in time to mark the passing of one era and the beginning of another. At 12:25 p.m., the majestic Dr. Todd intoned his two-minute invocation: "Now on this beautiful day, in the presence of these lonely hills and golden summits, we render thanks that Thou hast by this means brought together the East and the West, and bound them together by this strong band of union. . . . Bless the waters that wash the shores of our land, the Atlantic of thy strength and the Pacific of thy love . . ." The telegraph tapped out: "At last we have done praying; the spike is about to be presented."

HOW RELIABLE IS OUR NEWS?

(Mr. WHITEHURST asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WHITEHURST. Mr. Speaker, all too often in recent years the reporting by members of the news media has been filled with inaccuracies which have been either embarrassing or positive harm has occurred. A particularly poignant article was recently published in the American Legion magazine entitled "How Reliable Is Our News." The authors, Roscoe and Goeffrey Drummond, themselves respected members of the press, have exposed several cases of false reporting or distorted news writing. Mr. Speaker, I think the article ought to be reprinted in the RECORD and wish to insert it at this time:

HOW RELIABLE IS OUR NEWS?

(By Roscoe and Geoffrey Drummond)

(NOTE.—A famous columnist and his son wrestle with false images of America and distortions of issues put before the people by the press, TV and political and intellectual leaders—and wonder where it will take us.)

The peaceful processes of democratic government are in serious jeopardy in the United States today. We'd better look long and carefully at what's happening—and do something about it—before it's too late.

It was about a year ago that Life magazine put this caption on a somber and foreboding editorial: "Wherever We Look, Something's Wrong."

That's fair comment. There's much that's wrong and much that needs to be corrected.

But what is most wrong and most needs to be corrected is a false image of America which is being imposed upon the American people by much of its mass media—the image that wherever you look, nothing's right.

This distorted image is a perilous disservice to the nation.

Have no doubt about it, such a continuously projected image leads to national impotence.

It tends to produce such a sense of helplessness and hopelessness that public support for what needs to be done weakens and wanes.

If we are to succeed in freeing the aggrieved, the frustrated and the impatient from the temptation to yield to violence, they must be able to see that the democratic process in America has worked, is working and can be made to work even better.

But much of the media is undermining confidence in democratic institutions by making government almost always look as bad as it sometimes is.

We are not appealing for a Pollyanna to guide television or radio or the press. We are not appealing for counter distortion. We are not advocating government censorship. We are not proposing to break the mirror of a free press because so much of the image it is presently reflecting is out of focus.

We are appealing for perspective and balance and for a wider awareness by the media that they have a responsibility to do more than sell bad news because it is more exciting. They have a responsibility to use that precious guarantee of the Bill of Rights—freedom of the press—to help democracy work better at a time when it must be near its best to survive. Without it there will be no freedom of the press for anybody.

Ponder these bleak words from John W. Gardner, former Secretary of Health, Education and Welfare and one of the most thoughtful commentators on the state of the nation:

"Our honored tradition of dissent has undergone an unprecedented debasement. Protest has become a disorderly game for 12-year-olds. Reasoned debate has given way to bullhorn obscenities. The loudmouth and the hothead reign unchallenged.

"Among the dissenters today we hear a few with a special message. They say, 'we don't need reform, we need revolution. The whole system is rotten and should be destroyed.' "

They are a minority, a minute minority, and some of them don't really believe what they say. But don't let this be reassuring. There is a deadly peril imbedded in it. The peril is that if any large number of Americans are induced to accept the false image of their nation—the image that wherever you look, virtually nothing is right—then we will be standing at the brink of national impotence, political lethargy and the pervasive conviction that nothing can be put right because so much is wrong.

This is why it is so vital to see how this false image is being spread.

It is being spread by many commentators willing to distort and slyly conceal in order to manipulate our opinions.

It is being spread by much of the mass media which make trouble their favored client. They have so long accepted the premise that bad news produces readers and viewers and good news produces only boredom that they have neglected to examine whether this premise isn't out of date and whether it is adequate to enable today's democracy to function as it must function to survive.

And, finally, these false images in which, wherever you look, nearly everything is wrong—because what is right is too widely ignored—are promoted by a range of purposeful destructionists who think that the Bill of Rights is for burning for everybody but themselves and whose goal is to tear the nation apart without offering any idea of how they want to put it together again—if it could be put together again.

In watching for distortions in the press, it is a fair question to ask why relevant material was omitted in two recent book reviews of the late Robert F. Kennedy's recently published "Thirteen Days," dealing with the Cuban missile crisis. In each case the same omission permitted conclusions which the full facts could not support.

One review was by David Schoenbrun in the New York Times Book Review. The other was by Prof. John Kenneth Galbraith in Book World. In the first case the late Adlai Stevenson is made to appear to be a martyred dove, wrongly abused in the highest councils of President Kennedy's Adminstration. In the second case a similar conclusion is implicit, though not so clearly stated.

Read normally, by the normally informed reader, these reviews would seem pretty innocent and persuasive. But when read closely by one whose work brought him in contact by most of the facts, then their tactic emerges.

Here is the subtle paragraph from Mr. Schoenbrun, former CBS radio and TV correspondent in Paris and Washington and now a free-lance newspaper ad magazine writer:

"Stevenson . . . alone suggested we accept Khrushchev's offer of a trade-withdrawal, our missiles in Turkey against their missiles in Cuba, for which he was soundly chastised . . . Why are the doves always considered less patriotic, less courageous than the hawks?"

Who would say that is not a reasonable question—at least from the facts as Schoenbrun stated them?

To the same point, here is the way Harvard Professor Galbriath, economist and National Chairman of Americans for Democratic Action, wrote it in his Washington Post Book World review:

"In contrast, the man who calls for caution, a close assesment of consequences . . . must have great courage. He is a real hero and rare. . . . In particular, it was Adlai Stevenson who was willing to trade some obsolete nuclear weapons in Turkey . . . for similar action by the Russians in Cuba."

But the facts are not as stated and the facts Schoenbrun and Galbraith should have stated, to be honest with their readers, were explicitly set out in the Kennedy book they were reviewing.

Here they are verbatim, and the italicized words show what was omitted by the two reviewers:

"(Stevenson) at the Saturday meeting strongly advocated . . . that we make it clear to the Soviet Union that if it withdrew its missiles from Cuba, we would be willing to withdraw our missiles from Turkey *and Italy and give up our naval base at Guantanamo Bay.*"

Obviously there is a considerable difference

between proposing that "we trade some obsolete nuclear weapons in Turkey" and the actual proposal Stevenson advanced, that we also abandon nuclear weapons in Italy and give up the base at Guantanamo Bay.

President Kennedy rejected this proposal, not with any implication that Stevenson was considered "less patriotic," as Schoenbrun wrote, but on the ground that the United States "could not abandon Guantanamo Bay under threat from the Russians."

Stewart Alsop of Newsweek was the first to spot the revealing omissions in these two reviews and he offered this warning to future unwary readers:

"The reasonably sharp-eyed reader will note how in both reviews the suppression of a vitally important fact makes it possible to suggest a false conclusion. This is symptomatic of a larger phenomenon—the tendency of liberal-intellectuals to transform into nonfacts all facts that do not fit neatly into the current fashionable liberal-intellectual dogma . . . Adlai Stevenson, in the Pavlovian world of the liberal-intellectual, was a certified Good Guy. Therefore it is not necessary to examine what he actually proposed—it must have been good.

"The Pavlovian tendencies of the liberal-intellectuals constitute a serious political phenomenon. They are politically influential, especially in New York where most American opinion is manufactured. . . . It could turn out to be a very serious matter for President Nixon who is, in the Pavlovian liberal world, a certified Bad Guy."

Take another example of the art of switching facts. Early in his campaign for the 1968 Democratic Presidential nomination, Sen. Eugene McCarthy advocated that the best way to end the Vietnam War was for the United States to pressure the elected South Vietnamese government to accept, without any elections, members of the Viet Cong into a coalition as a pre-condition to peace.

Vice President Hubert Humphrey retorted sharply. He said that's like "putting a fox in the chicken coop"—putting unelected Communists into a coalition government so they could later stand for election as part of the government.

Now, a year later, Senator McCarthy is musing in a conversation with Look Senior Editor Joseph Roddy, and Roddy records it as follows: ". . . (Senator McCarthy) knew he had had some effect on the stand the U.S. took now in Paris. 'I didn't ever ask them to do what I *said* they should do,' he insisted. 'I only asked them to do what they would *have* to do.' He knew the National Liberation Front would have to be represented in peace talks, and he had said so a year back. 'Now, we've agreed to put Humphrey's fox in the chicken coop. But a year ago, we all knew that would have to be done. Why did they wait the year?' "

Sounds pretty farseeing, doesn't it? McCarthy showing how right he was all along and now proved so by events—with Humphrey's phrase thrown back at him with apparently telling effect.

But is it true? Is there something missing, a misplaced fact, which makes McCarthy's words seem devastatingly conclusive because of a crucial omission?

There is a distortion; there is an omission. Probably you have already noticed it. Humphrey did not say that having the National Liberation Front (political arm of the Viet Cong) represented in the Paris peace talks would be like putting a fox in the chicken coop. Humphrey, as did President Johnson, always said the Viet Cong could be represented at the conference table, but what Humphrey opposed was putting unelected VC into the government of South Vietnam as a condition for settling the war.

But, as reported in Look, McCarthy took Humphrey's opposition to an enforced, unelected Communist coalition and applied it to the peace talks and thus sought to show that Johnson (together with Nixon) had wasted a year by not "putting Humphrey's fox in the chicken coop" much earlier.

No reader of Look, a year later, should be required to spot the switch.

Here's another example. At a Congressional hearing before the Joint Economic Committee, a well-known professor of economics was testifying on the annual report of the President's Council of Economic Advisers. He tore it apart. He could find nothing good to say about any of it. He would summarize statements he attributed to the Council and then proceed to show how utterly untenable they were.

When the President's chief economic adviser read this testimony later, he scratched his head in disbelief. He couldn't recall any of the views which this very quotable professor so easily tore apart as ever having been put into the report in the first place. So he wrote the witness a letter asking him if he would cite the passages from which he had so vigorously dissented. He got his answer right back. It said in effect: "My Dear Friend . . . Surely you've been around Washington long enough not to be naive. You know I can't cite the reference which you request. I was only having a little fun."

It may have been fun for the professor. It may not have hurt the standing of the Chairman of the Council of Economic Advisers. But do you think many of the nation's lawmakers knew that their witness was tossing imaginary balls in the air to see how they would bounce? How many TV viewers and newspaper readers, when they got a headline like, "Professor Deprecates Economic Report," realized that he was making things up in order to tear them down—and that it was just fun and games?

It is not amusing. It is evil. One antidote is: Readers, be aware.

The mass media are beginning to examine themselves with more than ordinary critical detatchment. Usually the press goes after everything and everybody but itself. There is a new mood, at least a beginning mood, of self-examination and self-questioning. That's good.

Alan L. Otten, one of the knowledgeable and perceptive writers for the Wall Street Journal, put some facts forthrightly in an article on the pervasive public dissatisfaction with much reporting.

"Almost everyone these days," he wrote, "has his favorite story about inaccurate or distorted reporting in newspapers and magazines, on TV and radio."

Then he listed a wide range of complaints. He told of a neighbor who taxed him with the fact that so many reporters showed surprise that President Nixon was handling his job so well. "Why should they be surprised," he asked, "except that they have been wrong about him for years?" Wallace supporters felt most of the press wholly unfair. Humphrey often found his campaign speeches buried at the bottom of the accounts of militant protesters who were heckling him. The critics went on and on.

"Skepticism about news stories is, of course, nothing new," Otten continued. "For decades, the far left decried the Capitalist press, and more recently, the far right weighed in with attacks on major newspapers and magazines and broadcasters as corrupt cohorts of 'the Eastern liberal Establishment.'

"Now, however, more and more ordinary middle-of-the-roaders seem to be joining the extremists in proclaiming 'you can't believe a word of it.' "

This is a serious credibility gap, a widening credibility gap between the media and the public. It should give the media concern. This lack of credibility grievously impaired the effectiveness of President Johnson. Since a credible, fair-minded, responsible, fair-reporting press in all its forms is essential to democratic government, any wide and continuing credibility gap between press and public cannot fail to impair the functioning of our free society.

This is why it is vital to look at what's happening.

Something dangerous is happening and no one has put his finger on it more earnestly than W. Willard Wirtz, former Secretary of Labor, who during his years in public life became deeply concerned by the gap between what he saw as reality in American life and the image of American mirrored in the media.

The Overseas Press Club of America, made up mostly of U.S. correspondents who have served abroad, asked Mr. Wirtz to lay it on the line—and he did. Here is the way he sees it:

"First, if the idea of democracy should ever be invalidated, it would be because it came about that more and more people knew less and less that was true about more and more that was important.

"Second, this is the direction of things today.

"Third, the responsibility for this lies significantly, though not by any means entirely, with the mentors of the mass media."

This kind of indictment has been made before and neither the press nor the nation has fallen apart.

Is it any different today than before?

It is. It is so different that the survival of a free press and the survival of democratic government in America is at stake.

Why? Why are the stakes so great today?

Because in the past most of the criticism of the media came from extremist minorities or from those who had a grudge or a special bias of their own. But today, as the Wall Street Journal article pointed out, "more and more ordinary middle-of-the-roaders seem to be joining with the extremists in proclaiming 'you can't believe a word of it.' " What Otten is saying here is that there is developing a mass distrust of the mass media on the part of rank-and-file viewers, readers and listeners. This is why the media must stop, look and listen.

The situation is different today because we are confronted with such very acute and lacerating national problems—racial tension, rising crime, poverty in the midst of plenty, unlivable and almost ungovernable cities—that unless the media reflect a true and balanced picture of the nation, democratic government will falter and we will have neither the unity nor the spirit to do what is needed. When "more and more middle-of-the-roaders proclaim that 'you can't believe a word of it,' " then a confused and distrustful public opinion is the easiest prey to the extremists and the distructionists.

What's wrong? We wonder if too much of the media isn't continuing to practice an outdated and, in today's world, a dangerous and self-defeating journalistic theory—the theory that bad news gets readers and viewers and good news turns them off, that conflict sells and news of things going rather well bores?

At any rate, the mirror which much of the media holds up to the nation has so many built-in distortions that the reflection is almost constantly out of focus, a false image of America in which, wherever you look, nearly everything is wrong.

This isn't telling it like it is; it is telling it like it isn't. The worst is magnified; the best comes into view like what you see through the wrong end of a telescope.

Isn't this what is causing many to wonder if the media aren't greatly overplaying the draft-card burners, the drug addicts and the lovers of four-letter words, and underplaying the generation of students now harder at work than ever before and demonstrating it by manning the Peace Corps to the brim?

Isn't this what is causing many to ask why the media give such alert attention to every

incident of isolated indecency and immorality at a Job Corps camp. And did it without putting it in the context of tens of thousands of inherently decent but previously dead-end kids—many of whom are being pulled back at these camps from what would otherwise have been lifetime commitments to indecency and immorality?

Isn't this part of what is causing two dangerous trends in the United States—more and more middle-of-the-roaders proclaiming they can't believe a word they read and many others tending to accept as true what is substantially distorted.

These effects, ominous unless checked soon, imperil the media themselves and impair the functioning of democratic government.

Whose side is the press on in the cause of racial justice, Willard Wirtz asked the reporters, and his answer was:

"Any self-righteous answer about neutrality on the side of truth leaves the question of what ethic there is—except selling more papers—for giving daily front-page advertising to any white supremist or nonwhite racist who coins an ugly phrase—while there is only occasional notice on the inside page of the rest of a nation's throwing off the shackles of centuries' bondage of bigotry.

"This overstates it. But not much.

"Nobody wants the press to play Pollyanna. But why shouldn't the causes of riots, be covered as fully as their consequences?"

A Duke University student wrote his parents that he had pleaded with a national TV network to cover a significant, campus-wide student protest which turned out to be highly successful. The network said no. It looked to be too peaceful. It was—and hardly anybody knows about it.

It seems evident that the character of oral and printed journalism is changing and the talent is not equal to the change. The trend is away from old-style, straight reporting and toward much more interpretive and analytical reporting. This can be valuable if there is no other purpose than to bring out the meaning of the news, but it needs great skill and maturity on the part of the reporter and a degree of objectivity which many of today's ideologically oriented reporters disdain.

During the past year it was frequent that a major speech by the Secretary of State or the Secretary of Defense or some other public official, dealing with the complex problems of peace and security, was dominated by an account of a few student militants with pictures of the pickets in an adjoining front-page column and the speaker's main point buried in the "continued" part of the story.

This is coverage which distorts and hurtfully fails to inform.

Recently several hundred editors and correspondents were guests of the Department of State at a wide-ranging, two-day background briefing at which the new top officials of the Department spoke. Toward the end of the first day two or three of the guests, well-known for their opposition to much of U.S. foreign policy, got up during the question period and attacked the speakers as "banal" and "untruthful." This was a minor incident in the proceedings but it dominated news stories the next day.

Following is a shocking case of inaccurate, in absentia, unverified reporting and editorial writing which explains why "more and more middle-of-the-roaders proclaim that 'you can't believe a word of it.'"

Mr. Fred L. Hartley, president of the Union Oil Co., whose firm's drilling produced the oil leak off the Santa Barbara coast, was testifying before a Senate subcommittee.

He was quoted the next day in The New York Times, which reported he had said: "I'm amazed at the publicity for the loss of a few birds." This made Mr. Hartley seem complete calloused.

He didn't say it—either to the Committee or to anyone else. It doesn't appear in the transcript of the testimony. The New York Times wasn't even present during the period of Hartley's testimony when he was supposed to have said it. Another reporter filled him in—on what wasn't said.

The Times reporter didn't check.

The same misquotation—or imagined quotation—appeared later in the Wall Street Journal. It wasn't checked.

It appeared in Time magazine. It wasn't checked.

David Brinkley picked it up—without checking it.

Finally, the Washington Post wrote an editorial using the non-quote as a real quote with a title which read: "The Loss of a Few Birds." [It said, in part, "for sheer insensitivity, blind and arrogant, this seemed unbeatable."]

Hartley wrote quite a few letters to the editors protesting being "maligned by a grossly inaccurate quotation." In the end, Union Oil bought ad space in about 100 papers to tell the truth. Let it be said that the Post, the N.Y. Times, The Wall Street Journal and Mr. Brinkley all publicly apologized after Mr. Hartley and his company started their war of protest.

It certainly seems to many that too much of the media give more than due attention to the militant and violent destructionists, particularly those non-student leaders who go under the deceptive title of "Students for a Democratic Society" who want to demolish our democratic society to see if something else wouldn't be nice to have.

But all responsibility for the out-of-focus image of America does not belong to the media.

There are other causes and they, too, bear upon whether democratic government is going to survive in the United States or be stifled by national confusion and impotence.

Too few people are drawing the necessary line between civil rights and civil wrongs and too few leaders either among the political liberals or the academic community are speaking out against those who want to use freedom of assembly for themselves only and deny it to others.

The Christian Science Monitor said in an editorial more than a year ago:

"To date the forewarners of possible McCarthyism (Joe McCarthyism) have been shown to be largely wrong. Free speech, free disagreement, free protest are strong and open in the United States. This is no small victory in times of such tension and disagreement. Let nothing come along to spoil it."

But something has come along to spoil it. We refer to the mounting instances in which the most extreme anti-Vietnam, anti-draft, anti-university, anti-almost-everything protesters resort to harassment and violence to prevent others from peacefully using the rights of free speech and assembly.

The Bill of Rights is a single garment. It can't be divided. Unless the right of the majority to expound its views and to assemble freely is protected from those who resort to force and disorder to suffocate public debate, we are undermining everybody's right to free speech and assembly—minority and majority alike.

It's happening.

Last year the Vice President of the United States, the Chairman of the Joint Chiefs of Staff, the Secretary of State, the Secretary of Defense, the U.S. Ambassador to the U.N. and the Secretary of Agriculture were all targets of violent, anti-free-speech demonstrators who either attempted to rough them up, overturn their automobiles, prevent them from entering an auditorium or stir up such jeering that they could hardly be heard.

The worst thing is that the nation has seen so much harassment and disdain for peaceful assembly that we have gotten used to it. Those who understand the Bill of Rights are neglecting to speak out. They even condone its callous violation.

Example: At the University of Wisconsin, two members of the Johnson Cabinet were hooted and heckled so raucously and so violently that the civil right of free assembly was turned into a civil wrong of a free-for-all and they couldn't finish their speeches to students who wanted to listen.

And what was the odd and disheartening response of such a supposedly civil libertarian as Senator McCarthy? Did he condemn this civil wrong? Did he say that now is the time for every man to come to the aid of the Bill of Rights? What he said was that spokesmen for the President of the United States ought to be able to find places other than college campuses to expound their views!

What better place for the exposition of controversial opinion than the college campus? What more appropriate place to practice free speech than the home of free inquiry?

On another occasion, an undergraduate at Columbia University maneuvered his way to a middle-row, front seat in the college hall where the Selective Service Director of New York State was—at the request of the students—to discuss the draft and its application to them. After the introduction and opening remarks, this young man rose to his feet, reared back and hurled a big, fat, mushy pie into the face of the speaker.

Some may have been disposed to laugh. We weep—and we hope others will join in crying, at least when we pause to realize that this act did not just smear the face of one individual; it stained the face of the Bill of Rights.

The heart of the matter is that in a free society, with free speech, peaceful assembly and the secret ballot, anyone who tries to hinder others from using these rights is undermining everyone's freedom, including his own.

If we are going to continue to turn peaceful assembly into a free-for-all, there will be more than pies thrown and the end of that road will be the assassination of the Bill of Rights itself.

Liberal columnist Max Lerner, who gives no comfort to the destructionists, wisely notes:

"The same college instructors who are shocked by the ax-handling minorities blocking Federal marshals from entering school buildings in Georgia and Alabama, will find themselves on the side of the bat-wielding minorities trying to close down a university building in San Francisco."

Now, if the central theme of this article is to be fully proved, it must be demonstrated with evidence that the image of America, which flashes so constantly before the minds of Americans, is, in fact, distorted—the image that wherever you look, hardly anything is right—and that what's right with America usually comes out muted and murky.

Has the democratic process in America been working and can it be made to work even better if we don't lose sight of what's right with it?

It can, but only if we get a truer image so that what's right can be seen in perspective.

The evidence of what's right with America is impressive and heartening. Here are salient samples; many more could be cited.

Racial Justice: More wrongs have been righted and more things which are just have been achieved in the past decade and a half than were accomplished over the 90 years from the end of the Civil War to the milestone decision of the Supreme Court in 1954, which laid the legal basis for complete racial justice and equality of opportunity.

Except for hard pockets of delay, public places are open on an equal basis, the right to vote is assured and black and white voter

are joining to elect Negroes to posts of high governing authority.

Human Welfare: In the last four years the federal government has invested twice as much in education as it invested in the previous century. It is now investing three times as much in health programs as it invested five years ago. Government and private enterprise jointly accept the proposition that "poverty has become intolerable in this country because it is unnecessary" (from a report by the National Association of Manufacturers), and are beginning to do more about it. Not enough? Of course not, but enough to provide the evidence of things to come.

American Youth: We should reject the idea that most young people and students have lost their way smelling flowers, smoking marijuana and storming around the campus. Alienated over politics? It only seems so. College students used the political process by springing to the aid of Senators Kennedy and McCarthy. Gravely aliented over the Vietnam war? Nobody likes war. Nobody wants to be drafted. But the desertion rate of GIs in South Vietnam is lower than it was in Korea and 50% lower than in WW2. We have, for the most part, a committed and compassionate younger generation. More than 300,000 college students are voluntarily helping the disadvantaged.

State of the Economy: The United States, including the government, has been managing in economic affairs with increasing wisdom. Not one of the bleak predictions that large-scale unemployment would follow the end of WW2 and that another depression would be upon us in the 1940's, in the 1950's, in the 1960's has come true; all have been proven wrong. Today, the U.S. economy is the most productive in the world. Khrushchev's boast that "we'll bury you" is ashes. Nixon is taking the hard decisions necessary to reduce inflation and there is evidence he will stay with them to the benefit of everybody.

Foreign Policy: There is a tendency among many to believe that the United States bungles just about every enterprise to which it puts its hand in foreign policy. False. All is not well in this turbulent world but everything has not gone wrong for this democracy of ours by any means; and we ought not to forget how much has gone right during all the postwar years when we've been acting to protect our own freedom by helping other nations protect theirs. There is no reason for defeatism or apology in a record like this:

(1) saved Greece and Turkey from being dragged behind the Iron Curtain; (2) rescued Western Europe by means of the Marshall Plan from the overhanging threat of Communist take-over; (3) saved West Berlin from the Soviet attempt to starve its two and a half million people into submission; (4) turned back the armed Communist aggression against South Korea; (5) acted to protect the independence of Lebanon and Taiwan, (6) struck from the hands of Nikita Khrushchev the instrument of nuclear blackmail in Cuba.

Every country whose safety from oppression we have helped secure—because our own safety was at stake—is a free and independent nation today. When we ponder these achievements in the cause of human freedom, we have every reason to shed the myth of helplessness and frustration.

All this and much more show that the American system of government by peaceful consent of the governed has been animate, vital and productive. One of the first requirements of making it more productive, more vital, more animate is to proclaim the story of what has been done, not hide the light under a bushel.

The purpose is not to promote smugness, not to slow needed reform with self-satisfaction, but to accelerate it by giving those who are understandably frustrated the evidence of things to come and a determination to use democratic institutions, not erode them through despair.

Consider these words from Washington Star writer Crosby S. Noyes:

"Where is that old fighting spirit that Americans were supposed to ingest with their breakfast cereal? As things are now going, we are well on our way to becoming a race of Pavlovian pessimists in which anyone who tries to sound the faintest note of encouragement is booted out of the hall.

"Somewhere in this large land, there are surely plenty of holdouts who still believe that we are capable of facing up to our problems and who are willing to come up with the resources, the talent and—yes—even the optimism to try."

There surely are—and let's make way for them.

TAXATION OF INTEREST ON MUNICIPAL BONDS

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, the financial press on Tuesday, May 20, reported that Monday's markets had been a "shambles," bringing renewed price reductions on recent municipal bonds. That is almost "run of the mill news" now. A nearby county of considerable wealth, and experiencing continuing boom rates of development, has recently paid interest rates on new tax exempt bond issues that are higher than the rates paid 3 years ago on 10-percent-down home mortgages in that county. The neighboring metropolis, Baltimore, has bumped against a legal rate ceiling in issuing bonds for an essential addition to its water supply. The instances of high rates and thwarted community development could be multiplied by the hundreds, in a time period that goes back almost disastrously far. If the instances of high interest rates and thwarted development are not quickly made matters of history only—if they are allowed to continue into the future—then they will become disastrous indeed. New shopping centers, new apartment houses, new manufacturing plants will be built in many areas of the Nation. But the communities with inadequate water, sewers, roads, schools, libraries, hospitals, playgrounds, and other public buildings, will find life very unsatisfactory, and, of course, the commercial and industrial facilities will lose their value because they will not get the quality of employees they need, nor the transportation, nor the necessary public utilities.

The financial problems of the municipal governments demand resolution. Their resolution requires that the Federal Government shall not be so single minded about drawing off the maximum possible amount of the community's financial resources for Federal programs. The Federal Government must reduce the draft for its own account which it makes on the Nation's finances; and must assist the municipalties directly, as well as through reduction of competition, to obtain less expensive and more adequate financing of their own needs. In designing such actions, the Federal Government must not overlook the too long unmet demand for equitable sharing of tax burdens; the Congress must meet that demand in all of its restructuring of finances.

I have proposed a method of lowering the cost of municipal facilities, while making the Federal tax structure more equitable. My bill, H.R. 10035, would guarantee the payment of interest and principal on new bonds issued by municipal governments, to assure that they will be issued at the most favorable possible interest rates for such sizes and maturities of bonds. Then my bill H.R. 10035, would finance that guarantee, plus an interest subsidy to the municipality from tax revenues; Federal tax revenues would be increased, equitably, by taxing the interest received on new issues of municipal securities.

Most investors in new local bond issues are obtaining a higher net yield than could be obtained from taxable bonds of any sort. Municipal bonds always have subsidized the bank, the wealthy individual, or the corporation, which sought the highest net return with minimum risk from a long-term investment.

When new municipal bond issues become taxable, at the same time that the guarantee fund in my bill makes them even more safe than they have been in recent decades, the bonds will continue to attract investors among corporations and in the upper tax brackets among individuals. The taxes on interest income from municipal securities may well be close to 50 percent of that income. Taxpaying investors, of course, will demand higher gross yields—higher interest rates—from municipal bonds. But if the rates paid by the local government should increase by 2 or 2½ percentage points, bringing them above Federal bond levels and into the range of corporate bonds, the additional Federal revenues obtained from taxing that interest—revenues equal to 3 or 4 percentage points on the interest paid by the city—would provide an adequate fund for paying the local government more than the increase in interest charges.

My bill, in short, proposes to make the Federal tax system more equitable, and to apply the revenues obtained from a more equitable tax system, to lowering the net cost of essential improvements in community facilities.

ANOTHER "PRO" FOR SAFEGUARD

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker, the enthusiasm and alacrity with which opponents of President Nixon's Safeguard missile defense system have attacked the deployment of antiballistic missiles have made the opposition appear more formidable than it is. This is particularly true with regard to the opposition of various scientists to ABM deployment. The Detroit News in an editorial in its May 27, 1969, edition notes that scientists are sharply divided on the ABM issue and that many of the most prominent nuclear physicists in the country are in favor of Safeguard. The editorial I have cited specifically takes

note of support given the Safeguard proposal by Dr. Albert Wohlstetter of the University of Chicago. Mr. Speaker, I place the Detroit News editorial in the RECORD at this point. The editorial follows:

ANOTHER "PRO" FOR SAFEGUARD

Foes of the proposed Safeguard missile defense system make sweeping claims of overwhelming scientific and scholarly opposition to that system. The truth is that scientists and scholars are sharply divided on the issue. Proponents of Safeguard are both numerous and distinguished.

The most recent scientific voice raised in behalf of Safeguard and in criticism of Safeguard's foes is that of Dr. Albert Wohlstetter, of the University of Chicago, long acknowledged to be one of the nation's leading nuclear strategists.

Dr. Wohlstetter not only finds Safeguard necessary to American security, but also finds the opponents mistaken and in some cases "plainly absurd." He puts his scientific reputation on the line by naming names and offering precise criticism of the opposition's arguments.

He charges that Dr. Ralph Lapp, former official of the Atomic Energy Commission, performed calculations containing "blatant errors" which were picked up and repeated by other scientists. He criticizes Dr. George Rathjens, a former disarmament official, for erroneous computations leading to a mistaken conclusion as to the effect of a surprise attack by Soviet missiles on American Minuteman missiles.

So the scientific debate is not one-sided. The fact is, you can find reputable men to quote on both sides of the great antiballistic missile argument.

What the matter boils down to, then, is a question of how much faith should be placed in the ability of the administration to reach sound decisions on the basis of the best information available to it.

Since Mr. Nixon probably has more complete information than the ABM foes possess, and since he is an intelligent man who usually deals realistically with the facts before him, we trust his decision.

Obviously, it would have been easier for Mr. Nixon to have avoided the ABM squabble. But he clearly believes the security of the nation is at stake and chooses to endure the criticism rather than gamble with American lives. This choice on his part constitutes the strongest argument of all for going ahead with Safeguard.

HEARINGS ON NATIONAL CREDIT UNION ADMINISTRATION

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, on June 17 the Banking and Currency Committee will begin hearings on H.R. 2 and its companion bill, H.R. 8445, which would create a National Credit Union Administration for the supervision and regulation of Federal credit unions.

This legislation has been introduced on a bipartisan basis by 23 members of the Banking and Currency Committee.

Witnesses for the first day of the hearings will be Secretary of Health, Education, and Welfare, Robert H. Finch, Commissioner of the Social Security Administration, Robert M. Ball, and J. Deane Gannon, Director of the Bureau of Federal Credit Unions. On June 18, representatives of credit union associations will testify. The committee will mark up the bill on June 18 and 19.

LOSS OF MR. LEON HERMAN, SENIOR SPECIALIST AT LIBRARY OF CONGRESS

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, I was grieved to learn yesterday of the death of one of the outstanding employees of the legislative branch, Mr. Leon Herman, senior specialist at the Library of Congress, who passed away on Saturday, May 31, following a sudden heart attack.

Mr. Herman was an eminent and wise specialist on Soviet Communist economic affairs and he has been invaluable to the Joint Economic Committee in the staff assistance that he has rendered us on numerous occasions.

As a consultant to the Joint Economic Committee, he was responsible for planning and carrying out the numerous studies on the Soviet economy which the Joint Economic Committee conducted. These have had a major impact in promoting public knowledge and insights into the enigmatic Russian regime. He has been an adviser to our staff in connection with all of the hearings that we have held on the Soviet Union. Moreover, it was he who did the major work in planning and preparing the definitive two-volume study of the Joint Economic Committee entitled, "The Economy of Mainland China." At the present time, he was engaged in an up-dating of this pioneering study, as well as up-dating of our Soviet Union studies. A third examination in preparation, under his supervision, dealt with the economies of the Iron Curtain countries.

Leon Herman possessed a rare combination of talents which the committee came to admire and depend on. He had a vast knowledge of the Soviet Government, economy, and culture. He knew the language well and could familiarize himself with firsthand information. He was a first-rate economist and was, therefore, always able to make realistic appraisals of economic phenomenon. The committee and staff knew they could always rely on his wisdom and sound judgment. We shall miss him sorely.

He also served many other Congressmen and committees. In addition to the Joint Economic Committee, he aided the Senate Foreign Relations Committee and the Senate Judiciary Committee, as well as the Senate Aeronautical and Space Sciences Committee. His chapters in books, articles, and reviews in professional journals are too numerous to list. His most recent is a forthcoming article on COMECON to appear in Columbia University's World Business Review.

Mr. Herman served as adjunct professor at the American University's School of International Service. He has lectured widely and regularly, especially at the national, industrial, Army, Navy, and Air Force War Colleges. As in the past, Mr. Herman has been associated with the Council on Foreign Relations, the American Management Association, and the Committee for Economic Development.

Travel to the Soviet Union and in Eastern Europe was a frequent pattern of Mr. Herman's schedule. Notable were his trips with the Committee for Economic Development Exchange and with Senator JACOB J. JAVITS, of New York.

In a very real sense, the many committee studies that he helped us on will serve as monuments and reminders of his great capacity, skill, and humanity.

SECRETARY KENNEDY'S BANK TIES PREVENT A FIGHT AGAINST HIGH INTEREST RATES

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, late last evening I received a letter from the Secretary of the Treasury, David M. Kennedy, purporting to set out the Nixon administration's program to combat high interest rates.

Mr. Speaker, this is one of the most tepid answers I have ever received from a public official. It is as weak as dishwater and if it represents the extent of the administration's monetary policy then the American people are, indeed, in trouble.

Mr. Speaker, the Secretary of the Treasury—who has just come to Washington from the chairmanship of the board of the Continental Illinois National Bank of Chicago—says he "hopes and expects" his fellow bankers "will act responsibly within the context of the present situation of the credit markets."

This apparently is as far as the Secretary is willing to go in using the great powers of his office to head off another round of interest rate increases—increases in the prime lending rate charged by the big banks.

This is no more than a light tap on the wrist with a velvet hammer.

A Secretary of the Treasury is supposed to do more than sit around "hoping" that the banking industry will act "responsibly." He is charged with the responsibility of using the powers of his office to see that the banks do, indeed, act responsibly and in the public interest. "Hoping and expecting" are not enough from such a high official of the Federal Government.

David Kennedy does not have the courage to stand up and tell his banker friends that they have gone far enough in raising the prime rate. He does not have the courage to face his former colleagues in the banking industry and tell them in unmistakable terms that this administration will fight any attempt to raise interest rates, prime or otherwise. He does not have the courage to tell his friends "this is far enough—there will be no more gouging of the public by the big banks."

Past administrations, less banker-oriented, have forced the banks to stop interest rate increases. Members of this House, I am sure, recall that in December of 1964, President Johnson issued a stiff blast at the big banks and forced them to rescind an increase in the prime interest rate.

But this is too much to ask of David Kennedy, the banker.

Mr. Speaker, David M. Kennedy is a pitiful sight trying to carry out a public office while he is totally tied to the bank-

ing community through both personal financial arrangements and a lifelong set of associations and attitudes.

Once again, the public is seeing the danger of having a fox guard the henhouse in the White House.

David Kennedy cannot do his duty to the American public and at the same time earn financial rewards from the Continental Illinois National Bank. Continental Illinois National Bank is the Nation's eighth largest commercial bank and it is paying the Secretary more benefits each month than the Secretary is receiving in salary from the Federal Government.

And when he considers a question of demanding that the banks stop raising interest rates, he must balance this with the great financial rewards he is receiving from this same bank.

Can he really, in good conscience, say "no" to a bank that faithfully mails him a pension of $4,800 each month?

Can he say "no" to a bank that pays his health insurance and his life insurance each month?

Can he say "no" to a bank that has promised him $200,000 when he retires as Secretary of the Treasury?

Can he say "no" to a bank that has granted him a stock option worth $1.3 million to $1.5 million and which he has exercised while serving as Secretary of the Treasury?

Can he say "no" to a bank in which he continues to hold stock?

Can he say "no" to a bank in which he has participated in a $645,000 profit-sharing plan.

The Secretary of the Treasury is a kept man—kept by the banking industry which he has never left.

With this background, it is not surprising that he answers my request for action on interest rates with a weak watery letter that leaves the banks free to raid the public again.

In his letter, Mr. Kennedy discusses inflation and indicates that high interest rates are not the fault of the banks but says they are the result of "serious inflation and the expectation of rising prices in the future."

So in one fell swoop the Secretary absolves the banks of any blame for jacking up the cost of money. It is all the fault of that age-old bugaboo of the Federal Reserve and of Republican administrations—inflation.

It could not be, in the world in which David Kennedy lives, that the banks might be profiting from these high interest rates. In the world in which David Kennedy lives, the banks are benevolent institutions which raises prices only to save the country and to prevent inflation.

When the grocer raises his prices, he is contributing to inflation. But, in the never, never land of David Kennedy, the banker is fighting inflation when he raises prices.

This "Alice in Wonderland" view is traditional for the banks and their allies. The truth is that high interest rates add to the cost of every consumer item on the shelves. And the problem is intensified by the fact that many low- and moderate-income families must borrow to survive.

To fight inflation with high interest rates is just like using gasoline to fight a fire. High interest rates are themselves inflationary. Their cost is hidden in every item of the consumer price index.

Mr. Speaker, I hope the Secretary of the Treasury will take time to look at a recent speech of Leon Keyserling, former Chairman of the Council of Economic Advisers, in which he said:

> The rising interest rates, because people have to borrow, are just as much an element in the cost of living as the rising price of meat, or the rising price of bread, or the rising price of medical care, or the rising price of housing, of which the interest rate is a part.

Mr. Speaker, so long as the Nation's eighth largest bank has an insider in the Treasury Department, the chances of getting lower interest rates are slim. The Secretary's tepid letter makes it obvious that he will not turn his back on his friends and benefactors in the banking industry.

The Secretary says that he hopes the banks will act "responsibly."

Is it too much to hope the same of the Secretary of the Treasury?

ANTITRUST, FREE COMPETITION, AND MERGERS OF CORPORATIONS

(Mr. BURTON of Utah asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BURTON of Utah. Mr. Speaker, Alice in Wonderland was moved to exclaim, "curiouser and curiouser" when she saw the topsy-turvy conditions existing in her make-believe land.

Or maybe she had a vision of what would happen in Washington last week when the press reported on a strange flurry of secret and not so secret activities about economic reports and Government policy.

First there was a report, prepared many months ago by an eminent panel of economic authorities, at the request of the then President Johnson, and dealing with matters of antitrust, free competition and mergers of corporations.

Now this report was gotten up for President Johnson by a task force, as it is called, but never released by him. Who was it then, of all people, but an appointee of President Nixon, Mr. McLaren, the Assistant Attorney General, who last week made the report public. And, even more confusing, the report proposes the exact opposite of many actions taken by Mr. McLaren, in his dealings with the business community.

So much for that. But there is more.

Now it unfolds, according to a story in the Washington Star, as also reported by the Associated Press and Washington Post, among others, that a second task force, also made up of eminent economists and business executives, has prepared another report—this one at the request of President Nixon, and dealing with the question of economic competition, antitrust, and the like.

This report also discusses conglomerate mergers, and urges caution and care in moving against mergers, at least until more is known about their impact upon economic life in America.

And what has happened to this report? Well, it has not been made public. It is still a secret, although the Justice Department has confirmed the enterprise of the press and agreed that such a report, as prepared by a President Nixon task force, does exist.

What are we to make of it all?

What we have is a Republican-appointed official publicizing a Democratic-prompted report, and refusing to divulge a Republican-sponsored one, while at the same time, absolutely ignoring many of the basic findings of both reports.

This entire question of conglomerates is complex and thorny. Many in Government could stand at least a basic education about the matter—particularly when the sources are admittedly authoritative. And maybe an explanation from Mr. McLaren about what he is after, what his plans are, and how he justifies his actions.

I enter into the RECORD the following press comments about these economic reports:

[From the Washington (D.C.) Evening Star, May 22, 1969]

HAND OFF CONGLOMERATES, SECRET NIXON STUDY URGED

(By Stephen M. Aug)

A secret study made for President Nixon on antitrust policy strongly urged the Justice Department not to undertake action against conglomerate mergers, it was learned today.

"Vigorous action on the basis of our present knowledge is not defensible," said the study, made by a nine-member task force appointed by Nixon before his inauguration.

The recommendations by the group—made up of seven professors and two industry executives—appear to conflict sharply with the direction taken by the Nixon administration.

Richard W. McLaren, assistant attorney general in charge of the Justice Departments Antitrust Division, has filed three major cases so far to break up conglomerate mergers. He has said he is willing to risk losing some cases to find out how far present laws "will take us in halting the current accelerated trend toward concentration by merger."

The third suit was filed yesterday in Chicago to prevent the takeover of B. F. Goodrich Co., the nation's 82nd largest corporation, by Northwest Industries Inc., the 63rd largest. The government contended the merger, which has been vigorously resisted by Goodrich, would be anticompetitive and encourage the trend toward economic concentration.

The task force study also rapped the Federal Trade Commission and other regulatory agencies.

It said the FTC's undertakings in the antitrust area have done little to maintain and strengthen competition, its efforts to protect small businessmen have been inadequate, and it's "over-zealous enforcement of consumer-protection" laws has not helped consumers, but rather businesses "whose interest lies in protecting their market."

It urged Nixon to issue a general policy statement that would encourage agencies to permit greater competition in the industries they regulate.

Asked for comment on the report, McLaren said, "it's a different group and they came out with some different answers." He added, however, that he agreed with the task force on the need for greater competition in regulated industries and another proposal, an increase in price-fixing penalties, which it termed "largely nominal at present."

The task force "go-slow" approach is sim-

ilar in some ways to the attitude of Johnson administration antitrust lawyers, who declined to prosecute conglomerates—widely diversified corporations—on the grounds present laws would not support such challenge.

The Justice Department yesterday made public an antitrust policy study completed last summer at the request of former President Lyndon B. Johnson.

LEGISLATIVE PREREQUISITE

It recommends that if conglomerate mergers—those between companies in unrelated businesses—are to be fought successfully, further legislation is necessary.

Under existing law, it said, the detection of possible anticompetitive effects of conglomerate mergers "rests, in general, on factual and theoretical judgments that are more speculative" than those in merger cases involving firms in competing businesses.

It found also that the present merger movement—despite the already large and increasing activity—does not mean that concentration of economic activity into a few giant firms is imminent.

The report recommends legislation to channel merger activity into fields in which it would increase competition.

SOCIAL MATTERS INCLUDED

The Nixon task force urged the Justice Department "to resist the natural temptation to utilize the antitrust laws to combat social problems not related to the competitive functioning of markets."

"We seriously doubt that the Antitrust Division should embark upon an active program of challenging conglomerate enterprises on the basis of nebulous fears about size and economic power," it said.

The report said also that the Antitrust Division should not be burdened with such tasks as "combatting of organized crime or the achievement of general political goals." Atty. Gen. John N. Mitchell has suggested use of antitrust laws to combat organized crime.

In its criticism of regulatory agencies, the task force said there is generally "excessive rigidity, expensive review of economically trivial details, and frequent failure to achieve any important results."

CUBS ON ENTRANCE

While the commissioners should encourage entry of new firms into business, it said, "the practice is universally the opposite: to prohibit or ration with utmost severity the entrance of new firms."

It also urged more freedom in price competition—and assailed the agencies' common practice of approving minimum rates, saying they should instead concentrate on setting maximum rates.

Although it did not name the Interstate Commerce Commission, it singles out the trucking industry as one in which "there is no respectable case for economic regulation."

Among other key points, the Nixon task force:

Refused to endorse new legislation or use of existing law to deconcentrate highly concentrated industries—such as auto makers—by dissolving their leading firms.

GUIDE LINE SHIFT URGED

Called for revision of the Justice Department's merger guidelines, announced last year, which it termed "extraordinarily stringent, and in some respects indefensible."

The task force was directed by George J. Stigler, a professor of law at the University of Chicago. Other members were Ward S. Bowman, Jr., Yale law and economics professor; Roland H. Coase, University of Chicago economist; Roger S. Cramton, public regulations professor at the University of Michigan; Kenneth W. Dam, University of Chicago law professor; Raymon H. Mulford, president of Owens Illinois Glass Co.; Richard A. Posner, Stanford University professor; Peter O. Steiner, University of Michigan economist and Alexander L. Stott, vice president and controller at American Telephone & Telegraph Co.

[From the New York Times, May 22, 1969]

TRUST-LAW SHIFT URGED

(By Eileen Shanahan)

WASHINGTON, May 21.—Radical changes in the anti-trust laws that would permit the Government to break up large companies that dominate an industry have been recommended by a group of noted lawyers and economists. They were appointed by President Johnson to study the antitrust laws.

The report of the Johnson task force, which was made public today by the Justice Department also recommends legislation spelling out just what kinds of acquisitions may and may not be permitted by the large, widely diversified companies known as conglomerates.

Briefly, this portion of the report proposes that an acquisition by a conglomerate of a company that is among the top four in its industry would be prohibited but that an acquisition of a nondominant company would not be.

If the standards covering conglomerate mergers, as set forth in the task force's report, were enacted into law, some mergers that have recently been attacked by the Justice Department would be legal.

Other recommendations of the task force include a considerable relaxation of the prohibitions against price discrimination contained in the Robinson-Patman Act and considerable tightening of the rules concerning patent licensing.

The task force also proposed a number of other changes in the antitrust laws, including establishment of a 10-year limit on the ability of the Government to undo old mergers.

The task force, which was headed by Prof. Phil C. Neal of the University of Chicago Law School, was appointed by President Johnson in December, 1967, and made its report to him in July, 1968.

For reasons that have never been explained, Mr. Johnson refused to let the report be made public. It was made public today by the Justice Department with the specific concurrence of President Nixon. Richard W. McLaren, head of the Justice Department's anti-trust division, said that publication of the report "is not in any sense an official endorsement of it in whole or in part but is simply designed to make the report available for study and comment."

DIVERSE VIEWPOINTS

Despite Mr. McLaren's disclaimer, it seems likely that the report will have considerable influence, largely because of prestige of the task force members, who appeared to have been carefully chosen to represent all viewpoints.

Among the 12 members of the task force, there was only one who dissented from virtually all the major recommendations of the report. That was Prof. Robert H. Bork of Yale, who has long been known as an advocate of almost complete freedom to merge.

More limited dissents were registered by Paul W. MacAvoy, a professor of economics at Stanford and Richard E. Sherwood, who is in private law practice in Los Angeles.

The leading companies in the automobile, steel, computer and many other industries would have to be split up if the proposals of the task force to break up oligopolies were adopted.

The task force defines an oligopolistic industry (one dominated by a few companies) as one in which four companies have at least 70 per cent of the market.

VOLUNTARY STEPS

If such concentration is found to exist, after investigation by the Justice Department and the Federal Trade Commission, the oligopoly companies would be given a year to take voluntary steps—such as selling off assets—to reduce their degree of economic power, under the task forces' proposal.

If adequate voluntary action is not taken, the Government could then order steps, to be completed within four years, to reduce the market share of the oligopoly companies to a maximum of 12 per cent each.

Divestiture would not be the only permissible means of reducing market shares, although the task force indicated it would probably be the most common one.

But if an adequate reduction of concentration could be achieved through liberalized licensing arrangements or changes in contracts (pressumably including Government contracts) then this would be permitted.

As has been the case under present antitrust laws, the standards the task force would set up for disapproval of new mergers would be stricter than those for breaking up old companies.

There would be several different tests for the legality of new mergers—which would actually cover acquisitions by any large company and not just by conglomerates.

First of all, the acquiring company would have to have sales of $500-million or assets of more than $250-million for its acquisition of a "leading company" in an industry to be prohibited.

A "leading company" is defined as one of the top four in an industry in which the top four companies have at least 50 per cent of the market. To meet the definition of "leading company" the concern in question would also have to have more than 10 per cent of the market and the market itself would have to involve sales of more than $100-million.

Under these tests, the Justice Department would not have been able to bring two of the three cases against conglomerate mergers that have been brought since the Nixon Administration came into power.

The acquisition of the Jones & Laughlin Steel Corporation by Ling-Temco-Vought, Inc., would be legal under the task force proposals, because J. & L. ranks only sixth in the steel industry.

The acquisition of the Canteen Corporation by the International Telephone and Telegraph Corporation also would probably be legal under the task force proposals because the top four companies in the food-vending market do not have 50 per cent of the market, nor do they in the narrower market line of in-plant feeding.

It appeared at first glance, however, that today's suit challenging the acquisition of the B. F. Goodrich Company by Northwest Industries, Inc. would still be possible, even if the task force proposals were written into law.

As for the Robinson-Patman Act, the task force proposed that no discriminations in price between different customers be considered illegal unless they (1) were systematic and part of a pattern of favoring larger customers, or (2) threatened the elimination of a "significant" competitor, or (3) involved discrimination of a geographical basis with sales below cost in some areas—the type of price discrimination by chain groceries that led to adoption of the Robinson-Patman Act in the first place.

The major proposal of the task force dealing with patents provides that, "if the patentee chooses to license others rather than exploiting the patent himself, he shall make such licenses available on nondiscriminatory terms to as many competitors as may desire it."

The task force would also require publication of all patent license agreements and

would ban enforcement of a patent against some infringers if the patent owner has not taken "reasonable steps" to enforce the patent against others.

[From Business Week, May 24, 1969]

THE SWITCH ON MERGERS: REPORT OF PANEL PICKED BY JOHNSON RUNS COUNTER TO NEW TACK ON CONGLOMERATES

President Nixon's chief antitruster, Richard W. McLaren, performed the unpleasant job this week of releasing a Johnson Administration task force report on the antitrust laws that was weak where he has been emphatically strong—but strong where he has been quietly weak.

The report, written last summer by a blue-ribbon panel of lawyers and economists headed by Dean Phil C. Neal of the University of Chicago Law School, was implicitly critical of the attack on conglomerates that got under way as soon as McLaren took office.

Using the argument that the giant diversified companies are dangerously increasing industrial concentration, the Justice Dept.'s Antitrust Div. has sued Ling-Temco-Vought, International Telephone & Telegraph, and this week Northwest Industries. The Neal group pointedly warned that any attack on conglomerates through the existing Clayton Act would have to be through a "contrived interpretation."

The Neal task force also proposed a major change in the patent laws to require equal treatment of licensees and rewriting of the Robinson-Patman Act.

It was only after a lot of public—and private—heat was applied that the Neal report saw the light of day. President Johnson ordered it early last year, during a short burst of public controversy about conglomerates. Delivered to the lameduck President in June, it was confined to the dustbin until it was picked up as a weapon by opponents of the Justice Dept.'s new look at conglomerates.

The last bit of pressure came from LTV's James J. Ling, whose company was selected as McLaren's first test case. Sitting on the same panel with the Republican head of the Antitrust Div. on Wednesday, Ling talked of a "still secret" report that would "exonerate the conglomerate movement of any monopolistic tendencies." He demanded that the report be released. Without comment, the Justice Dept. complied later in the day, handing out Xeroxed copies to reporters.

Alternative. Actually, the Neal group was not all that concerned with defending the conglomerate movement—or James Ling. Its real disagreement was only over whether existing law covered diversified mergers. Denying that the Clayton Act was adequate, it suggested that Congress draft a new law barring any company with assets of more than $250-million from acquiring any market leader in a concentrated industry, where four companies have more than 50% of the business.

The panel also urged Congress to write new legislation that would eventually lead to the breaking up of big companies in highly concentrated industries such as autos, flat glass, tobacco, and organic chemicals. The proposed law would allow courts to declare that an "oligopoly" existed in any industry where four companies accounted for more than 70% of sales. In such a case the companies would be given one year to reduce their share (presumably by spin-offs) to no more than 12%. If they did not do so voluntarily, the government could get a court order directing the required action within four years.

This is just the sort of head-on attack on oligopoly that McLaren's Democratic predecessors dreamed of—and occasionally proposed. But so far McLaren has viewed such a campaign as too disruptive even to be talked about.

[From the Washington (D.C.) Post, May 23, 1969]

CAUTION URGED WITH MERGERS

(By Morton Mintz)

A Nixon Administration task force report on competition warns against vigorous action on conglomerate mergers because of inadequate knowledge about them.

This finding runs counter to the policy of the Justice Department. Backed by Attorney General John N. Mitchell, Richard W. McLaren, Assistant Attorney General in charge of the Antitrust Division, has filed three suits to break up major conglomerate mergers.

A member of the task force said yesterday that the report is "ill-suited to the tastes of McLaren and Mitchell." McLaren had no comment and declined—at least temporarily—to release the report.

The head of the task force—seven professors of law and economics and two business executives—was University of Chicago Economist George J. Stigler. The group was appointed in January by then President-elect Nixon and submitted its report in March.

A member of the task force, asking not to be named, noted that the unit called for an immediate study of the financial operations of conglomerates in securities markets.

In a 10-month-old report released by the Justice Department Wednesday, a Johnson Administration task force staked out a different position on conglomerates—one intended to make acquisitions by these large diversified corporations consistently procompetitive.

The recommendation of the Johnson advisers: a law to prevent any large firm from acquiring any leading company in an industry in which four leaders have half or more of the market.

The Nixon task force member reached yesterday confirmed one publication's account of additional differences between the views of most of his colleagues and the Justice Department:

ORGANIZED CRIME

In an interview last Friday, McLaren said that steps have been taken to use the antitrust laws against "strong-arm" business methods—an idea McLaren and Mitchell discussed at their first meeting in January in New York City. But the Nixon task force said the Antitrust Division should not be responsible for tasks such as "combatting organized crime or the achievement of general political goals."

MERGER GUIDELINES

These were promulgated late in the Johnson Administration. McLaren said that he uses them, and hopes to enlarge them with "more specifics." But the Stigler group called them "extraordinarily stringent, and in some respects indefensible."

But the Stigler unit and McLaren agree on other points. Both want criminal antitrust penalties sharply increased from the present $50,000, for example. Both are concerned about ways to make regulatory agencies stimulate competition in the industries in their jurisdiction (the task force said that insofar as trucking is concerned, there is "no respectable case for economic regulation").

The most controversial recommendation of the Johnson consultants was for a law to attack existing industrial concentration by forcing "oligopoly" firms to reduce their share of the market to a maximum of 12 per cent. The Nixon advisers want no such legislation—or, for that matter, use of existing laws to dissolve dominant firms such as General Motors. McLaren, in the interview, indicated that his views were along similar lines.

[From the Wall Street Journal, May 23, 1969]

STUDY OF CONGLOMERATES FOR NIXON URGES NO ANTITRUST SUITS TO BAR THEIR MERGERS

(By Louis M. Kohlmeier)

WASHINGTON.—The growing conglomeration of antitrust studies of conglomerates includes a secret one made for President Nixon soon after his election last fall.

The Nixon study is thinner and less formal than most, but, like the others that have been finished thus far, it hasn't made any perceptible impression on its intended beneficiaries.

A major recommendation is that the Justice Department not sue to prevent conglomerate mergers—meaning those of companies that aren't competitors. "Vigorous action on the basis of our present knowledge is not defensible," the study asserts.

But Richard W. McLaren, the Chicago lawyer Mr. Nixon picked to head the Justice Department's Antitrust Division, has undertaken a crusade against large conglomerates, filing suits to stop them from taking over companies that are leaders in their industires. His targets have been among the nation's largest conglomerates—Ling-Temco-Vought Inc., International Telephone & Telegraph Corp. and Northwest Industries Inc.

PRESENT LAW SEEN SUFFICIENT

Mr. McLaren is trying to prove that big conglomerate mergers can be dealt with under existing antitrust law and thus there isn't any reason for Congress to enact a new law. His suits have been approved by his boss, Attorney General Mitchell, and Mr. Mitchell is perhaps closer to the President than anyone else in the Nixon Administration.

The Nixon study wasn't released by the Justice Department. The department's public information office confirmed yesterday that such a study had been made, but refused to release it, although the same office the day before had released the antitrust study that had been prepared last year for President Johnson, which he had kept secret.

The public information office defended its secrecy on the Nixon report by saying that it was more informal than the Johnson study and was written to be read in confidence by Nixon Administration officials.

Details of the study were confirmed elsewhere.

Both the Nixon and Johnson studies were headed by University of Chicago academicians. But there are differences between the two. George J. Stigler, University of Chicago Law School professor who headed the Nixon group, is generally regarded as a conservative on antitrust matters. Phil C. Neal, dean of the same school, headed the Johnson group and has a more liberal reputation.

The other members of the Nixon group were six professors of law or economics and two industry executives—R. H. Mulford, president of Owens-Illinois Inc., and Alexander L. Stott, vice president of American Telephone & Telegraph Co. The 11 other members of the Johnson group were professors or practicing lawyers.

On conglomerate mergers, the Nixon study group says "we seriously doubt that the Antitrust Division should embark upon an active program of challenging conglomerate enterprises on the basis of nebulous fears about size and economic power."

It also says antitrust laws shouldn't be used to combat "social problems," "organized crime" or for the "achievement of general political goals." Attorney General Mitchell has suggested using such laws to break up syndicated gambling rings and other operations of organized crime.

The Nixon task force is critical of the Federal regulatory agencies, which control private industries that in general are exempt from antitrust laws. It takes the agencies to task for "excessive rigidity, expensive review of economically trivial details and frequent failure to achieve any important results." And it criticizes them for using their licensing powers to restrict entry into regulated industries and for restricting price and rate competition in the airline, railroad and other industries.

The study singles out the Interstate Commerce Commission's regulation of the truck-

ing industry, saying "there is no respectable case for economic regulation" of trucking.

It also criticizes the Federal Trade Commission, saying its "overzealous enforcement of consumer-protection" laws hasn't helped consumers so much as it has protected some small businessmen. The criticism apparently relates to the FTC's enforcement of the Robinson-Patman Act which bars manufacturers from giving price discounts to big customers unless the discounts and other allowances also are made available to small retailers.

COMPARISON OF STUDIES

The Nixon group doesn't recommend any new legislation or the use of present antitrust laws to attack large companies in highly concentrated industries where a handful of corporations have the lion's share of total sales.

The Johnson group advocated a new Concentrated Industries Act to break up companies in "oligopoly industries" where four or fewer companies account for 70% or more of total industry sales. That group also proposed a new Merger Act to prevent large conglomerate companies from acquiring big corporations in concentrated industries.

President Johnson didn't propose any such laws to Congress and didn't disclose that they had been recommended. President Nixon has remained silent about his task force's report as his antitrust chief has attacked large conglomerate acquisitions.

A third antitrust study was recently completed by the antitrust section of the American Bar Association. It's a formal and voluminous document that brings antitrust laws up to date by tracing and explaining court interpretations of those laws in recent years. It doesn't contain recommendations, however.

CONGRESS TO USE REPORTS

All three reports will become part of the antitrust literature that Congressional committees will use later this year when they begin hearings on what, if any, new legislation is needed to deal with conglomerates and concentration.

In addition, Congress by September will have the benefit of at least two other studies. The FTC is studying conglomerate mergers. And the American Bar Association is studying the FTC, at President Nixon's request.

The House Antitrust subcommittee is makin its own study of conglomerates, and also is awaiting the FTC's study. The Senate Antitrust subcommittee, which already has held lengthy hearings on concentration and conglomerates, is awaiting the FTC report too.

[From Newsweek, June 2, 1969]

ANTITRUST: "LET'S TURN IT LOOSE"

For months there had been talk in conglomerate circles of a secret antitrust report prepared for President Johnson by a blue-ribbon task force of professors and lawyers under the direction of Phil C. Neal, dean of the University of Chicago Law School. The report, kept secret by the Johnson Administration, was said to recommend concentration of the Justice Department's fire on such giants as General Motors rather than on conglomerate mergers. In effect, it was rumored, the report would undercut the anti-conglomerate stand of President Nixon's antitrust chief, Richard W. McLaren.

Last week, almost a year after it had been submitted to the White House, the task force's report was made public—at the specific behest of McLaren himself, who went to Mr. Nixon and said, "Let's turn it loose."

The report's main target proved indeed to be the giants of what it called the "oligopolistic" industries, those where "monopoly power is shared by a few very large firms." It proposed a Concentrated Industries Act that would require divestiture of interests by companies dominating such fields as autos, steel and computers. In short, its message was break up GM, not Litton or Ling-Temco-Vought.

THE TERMS

But the conglomerates were by no means let off—certainly not to the extent they had hoped. The report recommended a second law, the Merger Act, that would prohibit the acquisition by "large" companies (i.e., with sales of more than $500 million or assets of more than $250 million) of "leading companies" in their field. Even so, the task force took a more lenient view of conglomerate mergers than McLaren has put on the record. "An active merger market," it said, "suggests a healthy fluidity in the movement of resources and management in the economy toward their more effective utilization." (Another, still-secret Presidential study apparently supports conglomerates even more forcefully.) Furthermore, the Neal study's proposed legislation—should it ever be enacted—would apparently invalidate the two major cases McLaren had already launched, one against the acquisition of Jones & Laughlin Steel by Ling-Temco, the other against the acquisition of the Canteen Corp. by the International Telephone and Telegraph Corp. Neither J&L, the sixth-largest steelmaker, nor Canteen, a food vendor, would meet the report's strict definition of what constitutes a "leading company."

Why had McLaren urged release of a report that, however musty and academic, could only make his life more difficult? McLaren's answer, as he put it in a cover letter transmitting the report to Congress, was that its publication "is simply designed to make the report available for study and comment." It was not, he took pains to point out, "in any sense an official endorsement" of the report. Certainly it was putting no brakes on McLaren's own merger-challenging course. On the same day the report was made public, his antitrust division took its third major anti-conglomerate action with the filing of a suit, in Chicago, to prevent the bitterly contested take-over by Northwest Industries, Inc., of B. F. Goodrich Co.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Messrs. MORGAN, GALLAGHER, JOHNSON of California, RANDALL, PEPPER, PICKLE, ANDREWS of North Dakota, STAFFORD, LANGEN, and HORTON (at the request of Mr. BOGGS), members of the Canada-United States Interparliamentary Group, for today and the balance of the week, on account of official business attending meetings of Canada-United States Interparliamentary Group.

Mr. AYRES (at the request of Mr. GERALD R. FORD), through June 13, on account of official business as U.S. delegate to ILO Convention.

Mr. DANIEL of Virginia (at the request of Mr. BOGGS), for Tuesday, June 3, and the balance of the week on account of Armed Services Committee business.

Mr. KYROS (at the request of Mr. BOGGS), for Tuesday, June 3, through Thursday, June 12, on account of official business.

Mr. BROWN of Ohio (at the request of Mr. GERALD R. FORD), through June 10, on account of official business in France and England as a representative of the House Committee on Interstate and Foreign Commerce on matters relating to transportation and communications—to wit: Railroad research centers at Vitry, France, and Derby, England; the French mail delivery service by air; air cushion cross-channel ship between England and France; the supersonic transport and other aviation developments, including the displays of two companies for his district, Grimes Manufacturing & Textron, Inc., at the International Air Show in Paris; and public and private broadcast communications facilities in France and England.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. HALPERN, for 5 minutes, today; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. CAFFERY) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. TUNNEY, for 10 minutes, today.

Mr. SISK, for 30 minutes, today.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. PATMAN in four instances.

Mr. SCHERLE (at the request of Mr. ERLENBORN) to extend his remarks following Mr. ERLENBORN.

(The following Members (at the request of Mr. HASTINGS) and to include extraneous matter:)

Mr. HASTINGS.
Mr. STEIGER of Wisconsin.
Mr. PETTIS.
Mr. CEDERBERG.
Mr. SAYLOR.
Mr. RIEGLE.
Mr. BOB WILSON in three instances.
Mr. SCHWENGEL.
Mr. KLEPPE.
Mr. MATHIAS.
Mr. ASHBROOK.
Mr. ZWACH.
Mr. MCCLURE.
Mr. WYMAN in three instances.
Mr. BUCHANAN in two instances.
Mr. MIZELL.
Mr. AYRES.
Mr. DENNEY.

(The following Members (at the request of Mr. CAFFERY) and to include extraneous matter:)

Mr. EILBERG.
Mr. LONG of Maryland.
Mr. DADDARIO in two instances.
Mr. ASHLEY in three instances.
Mr. WILLIAM D. FORD.
Mr. ROSENTHAL in five instances.
Mr. O'HARA in three instances.
Mr. BROWN of California.
Mr. PICKLE in two instances.
Mr. HICKS in two instances.
Mr. ANDERSON of California.
Mr. SLACK in two instances.
Mr. CONYERS in three instances.
Mr. DANIELS of New Jersey.
Mr. GRIFFIN in two instances.
Mr. ZABLOCKI in two instances.

SENATE BILLS AND JOINT RESOLUTION REFERRED

Bills and a joint resolution of the Senate of the following titles were taken

from the Speaker's table and, under the rule, referred as follows:

S. 83. An act for the relief of certain civilian employees and former civilian employees of the Bureau of Reclamation; to the Committee on the Judiciary.

S. 275. An act for the relief of the village of Orleans, Vt.; to the Committee on the Judiciary.

S. 499. An act for the relief of Ludger J. Cossette; to the Committee on the Judiciary.

S. 728. An act for the relief of Capt. Richard L. Schumaker, U.S. Army; to the Committee on the Judiciary.

S. 757. An act for the relief of Yvonne Davis; to the Committee on the Judiciary.

S. 901. An act for the relief of William D. Pender; to the Committee on the Judiciary.

S. 1193. An act to authorize the Secretary of the Interior to prevent terminations of oil and gas leases in cases where there is a nominal deficiency in the rental payment, and to authorize him to reinstate under some conditions oil and gas leases terminated by operation of law for failure to pay rental timely; to the Committee on Interior and Insular Affairs.

S. 1236. An act for the relief of Homer T. Williamson, Sr.; to the Committee on the Judiciary.

S. J. Res. 112. Joint resolution to amend section 19(e) of the Securities Exchange Act of 1934; to the Committee on Interstate and Foreign Commerce.

ENROLLED BILLS SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 684. An act to amend title 38 of the United States Code in order to make certain technical corrections therein, and for other purposes;

H.R. 2718. An act to extend for an additional temporary period the existing suspension of duties on certain classifications of yarn or silk;

H.R. 2940. An act for the relief of Henry E. Dooley;

H.R. 10016. An act to continue until the close of June 30, 1971, the existing suspension of duties for metal scrap; and

H.R. 10015. An act to extend through December 31, 1970, the suspension of duty on electrodes for use in producing aluminum.

SENATE ENROLLED BILL AND JOINT RESOLUTIONS SIGNED

The SPEAKER announced his signature to an enrolled bill and joint resolutions of the Senate of the following titles:

S. 1995. An act to provide for the striking of medals in commemoration of the 150th anniversary of the founding of the State of Alabama;

S.J. Res. 13. Joint resolution to provide for the reappointment of Dr. John Nicholas Brown as Citizen Regent of the Board of Regents of the Smithsonian Institution; and

S.J. Res. 35. Joint resolution to provide for the appointment of Thomas J. Watson, Jr., as Citizen Regent of the Board of Regents of the Smithsonian Institution.

ADJOURNMENT

Mr. CAFFERY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 50 minutes p.m.), the House adjourned until tomorrow, Wednesday, June 4, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

824. A letter from the Comptroller General of the United States, transmitting a report on savings by routing cargo through the military port at Subic Bay in the Republic of the Philippines, Department of Defense; to the Committee on Government Operations.

825. A letter from the Director, Office of Economic Opportunity, Executive Office of the President, transmitting a draft of proposed legislation to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, and for other purposes; to the Committee on Education and Labor.

826. A letter from the Secretary of the Treasury, transmitting a report on the status of active foreign credits of the U.S. Government and of international organizations, as of June 30, 1968, pursuant to the provisions of section 634(f) of the Foreign Assistance Act of 1961, as amended; to the Committee on Foreign Affairs.

827. A letter from the Secretary, Export-Import Bank of the United States, transmitting a report on the amount of Export-Import Bank insurance and guarantees issued in April 1969 in connection with U.S. exports to Yugoslavia, pursuant to the provisions of the Export-Import Bank Act of 1945, as amended, and the applicable Presidential determination; to the Committee on Foreign Affairs.

828. A letter from the Chairman, Interagency Committee on Mexican-American Affairs, transmitting a draft of proposed legislation to authorize appropriations for expenses of the Interagency Committee on Mexican-American Affairs; to the Committee on Foreign Affairs.

829. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in the case of certain aliens found admissible to the United States under the provisions of section 212(a)(28)(I)(ii) of the Immigration and Nationality Act; to the Committee on the Judiciary.

830. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in cases in which the authority contained in section 212(d)(3) of the Immigration and Nationality Act was exercised in behalf of certain aliens, together with a list of the persons involved, pursuant to the provisions of section 212(d)(6) of the act; to the Committee on the Judiciary.

831. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders suspending deportation, together with a list of the persons involved, pursuant to the provisions of section 244(a)(1) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

832. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice transmitting copies of orders suspending deportation, together with a list of the persons involved, pursuant to the provisions of section 244(a)(2) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

833. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to authorize appropriations for the highway beautification program for the fiscal year ending June 30, 1971; to the Committee on Public Works.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANNUNZIO (for himself, Mr. ADDABBO, Mr. BIAGGI, Mr. BRASCO, Mr. BURTON of California, Mr. BUTTON, Mr. DONOHUE, Mr. FARBSTEIN, Mr. FRIEDEL, Mr. GALLAGHER, Mr. GILBERT, Mr. GONZALEZ, Mr. HORTON, Mr. KOCH, Mr. LEGGETT, Mr. MIKVA, Mrs. MINK, Mr. OTTINGER, Mr. PODELL, Mr. POWELL, Mr. ROGERS of Colorado, Mr. SCHEUER, Mr. WOLFF, Mr. CLARK, and Mr. PRICE of Illinois):

H.R. 11808. A bill to amend the Small Business Act to make crime protection insurance available to small business concerns; to the Committee on Banking and Currency.

By Mr. ASHLEY:

H.R. 11809. A bill to establish a National Commission on Pesticides, and to provide for a program of investigation, basic research, and development to improve the effectiveness of pesticides and to eliminate their hazards to the environment, fish and wildlife, and man; to the Committee on Agriculture.

H.R. 11810. A bill to prohibit the sale or shipment for use in the United States of the chemical compound known as DDT; to the Committee on Agriculture.

By Mr. AYRES (for himself, Mr. PERKINS, Mr. GERALD R. FORD, Mr. BELL of California, Mr. ERLENBORN, Mr. DELLENBACK, Mr. ESCH, Mr. STEIGER of Wisconsion, Mr. HANSEN of Idaho, and Mr. RUTH):

H.R. 11811. A bill to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, and for other purposes; to the Committee on Education and Labor.

By Mr. CAREY:

H.R. 11812. A bill to amend part B of title XVIII of the Social Security Act to include prescription drugs among the medical expenses with respect to which payment may be made under the program of supplementary medical insurance benefits for the aged, and to authorize the Surgeon General to make drugs available without charge to individuals eligible under such progarm in certain cases where such drugs are critically needed but are not regularly available; to the Committee on Ways and Means.

By Mr. COLLIER:

H.R. 11813. A bill to amend title 13, United States Code, to increase the penalties for wrongful disclosure of information by employees of the Bureau of the Census; to the Committee on Post Office and Civil Service.

By Mr. DANIELS of New Jersey (for himself and Mr. OLSEN):

H.R. 11814. A bill to amend the Railroad Retirement Act of 1937 to provide for equal treatment of men and women with respect to eligibility for annuities on the basis of age 60 and 30 years of service; to the Committee on Interstate and Foreign Commerce.

By Mr. DEVINE (for himself and Mr. KYL):

H.R. 11815. A bill to amend section 1461 of title 18, United States Code, relating to the mailing of obscene matter, to define obscene, lewd, lascivious, indecent, filthy, and vile, and for other purposes; to the Committee on the Judiciary.

By Mr. DINGELL:

H.R. 11816. A bill to establish a Joint Committee on Environmental Quality; to the Committee on Rules.

By Mr. DULSKI (for himself, Mr. ADDABBO, Mr. BIAGGI, Mr. BINGHAM, Mr. BUTTON, Mr. FARBSTEIN, Mr. HALPERN, Mr. HASTINGS, Mr. HORTON, Mr. KING, Mr. MCEWEN, Mr. OTTINGER, Mr. PIKE, Mr. POWELL, Mr. HANLEY, Mr. STRATTON, and Mr. WOLFF):

H.R. 11817. A bill to prescribe standards

for congressional redistricting, and for other purposes; to the Committee on the Judiciary.

By Mr. EDWARDS of Louisiana:

H.R. 11818. A bill to amend the Internal Revenue Code of 1954 to provide a basic $3,000 exemption from income tax for amounts received as annuities, pensions, or other retirement benefits; to the Committee on Ways and Means.

By Mr. ICHORD (for himself and Mr. HUNGATE):

H.R. 11819. A bill to provide for orderly trade in footwear; to the Committee on Ways and Means.

By Mr. KING:

H.R. 11820. A bill to amend title 28, United States Code, to establish certain qualifications for persons appointed as judges or justices of the United States; to the Committee on the Judiciary.

H.R. 11821. A bill to establish a Small Tax Division within the Tax Court of the United States; to the Committee on Ways and Means.

H.R. 11822. A bill to amend title II of the Social Security Act to increase to $3,000 the annual amount individuals are permitted to earn without suffering deductions from the insurance benefits payable to them under such title; to the Committee on Ways and Means.

By Mr. McFALL:

H.R. 11823. A bill to amend the laws under which Federal financial assistance is provided for schools in federally impacted areas, so as to include in the computations the number of children living in federally assisted low-rent housing; to the Committee on Education and Labor.

By Mr. McMILLAN:

H.R. 11824. A bill to amend title XVIII of the Social Security Act to provide payment for chiropractors' services under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. MATSUNAGA (for himself and Mr. HOLIFIELD):

H.R. 11825. A bill to repeal the Emergency Detention Act of 1950 (title II of the Internal Security Act of 1950); to the Committee on Internal Security.

By Mr. MOLLOHAN:

H.R. 11826. A bill to provide additional benefits for optometry officers of the uniformed services; to the Committee on Armed Services.

H.R. 11827. A bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses; to the Committee on Interstate and Foreign Commerce.

H.R. 11828. A bill to amend the Internal Revenue Code of 1954 to increase from $600 to $1,200 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemptions for a dependent, and the additional exemptions for old age and blindness); to the Committee on Ways and Means.

By Mr. O'HARA:

H.R. 11829. A bill to establish in the State of Michigan the Sleeping Bear Dunes National Lakeshore, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 11830. A bill to assure the safe passage of all students enrolled in institutions of higher learning, and for other purposes; to the Committee on the Judiciary.

By Mr. POLLOCK:

H.R. 11831. A bill to provide for an additional staff employee for each Member of the House of Representatives representing a congressional district which is the only congressional district authorized for an entire State; to the Committee on House Administration.

By Mr. PURCELL:

H.R. 11832. A bill to provide for the establishment of an international quarantine station and to permit the entry therein of animals from any other country and the subsequent movement of such animals into other parts of the United States for purposes of improving livestock breeds, and for other purposes; to the Committee on Agriculture.

By Mr. ROGERS of Florida:

H.R. 11833. A bill to amend the Solid Waste Disposal Act in order to provide financial assistance for the construction of solid waste disposal facilities, to improve research programs pursuant to such act, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. ROONEY of Pennsylvania:

H.R. 11834. A bill to reclassify certain key positions in the postal field service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. TAFT:

H.R. 11835. A bill to amend title 39, United States Code, to provide extra compensation for officially ordered or approved time worked by postal field service employees, on any day designated by Executive order as a national day of mourning; to the Committee on Post Office and Civil Service.

By Mr. TAYLOR:

H.R. 11836. A bill to provide additional benefits for optometry officers of the uniformed services; to the Committee on Armed Services.

By Mr. WILLIAMS:

H.R. 11837. A bill to require the termination for 1 full year of Federal financial assistance to colleges and universities which are experiencing campus disorders and fail to take appropriate corrective measures forthwith, and to require the termination for 1 full year of Federal financial assistance to teachers participating in such disorders; to the Committee on Education and Labor.

By Mr. BETTS:

H.J. Res. 756. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mrs. DWYER:

H.J. Res. 757. Joint resolution to authorize appropriations for expenses of the Office of Intergovernmental Relations, and for other purposes; to the Committee on Government Operations.

By Mr. KING:

H.J. Res. 758. Joint resolution proposing an amendment to the Constitution of the United States relating to the power of the Supreme Court to declare any provision of law constitutional; to the Committee on the Judiciary.

H.J. Res. 759. Joint resolution proposing an amendment to the Constitution relating to the appointment of members of the Supreme Court of the United States; to the Committee on the Judiciary.

By Mr. MINISH:

H.J. Res. 760. Joint resolution to provide for the issuance of a commemorative postage stamp in honor of Robert Francis Kennedy; to the Committee on Post Office and Civil Service.

H.J. Res. 761. Joint resolution designating January 15 of each year as "Martin Luther King Day"; to the Committee on the Judiciary.

By Mr. POLLOCK:

H.J. Res. 762. Joint Resolution to authorize the President to issue a proclamation designating the 30th day of September in 1969 as "Bible Translation Day"; to the Committee on the Judiciary.

By Mr. TALCOTT:

H.J. Res. 763. Joint resolution to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week"; to the Committee on the Judiciary.

By Mr. WYMAN:

H. Con. Res. 281. Concurrent resolution, support of gerontology centers; to the Committee on Education and Labor.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DOWNING:

H.R. 11838. A bill for the relief of Robah N. Browder; to the Committee on the Judiciary.

By Mr. EDWARDS of California:

H.R. 11839. A bill for the relief of Parviz Faramarzi; to the Committee on the Judiciary.

By Mr. FALLON:

H.R. 11840. A bill for the relief of Mrs. Maria Anastasia Mendoza and her minor children, Gavino Nora Mendoza and Maria Nora Mendoza; to the Committee on the Judiciary.

By Mr. KEITH:

H.R. 11841. A bill for the relief of Robert A. Pickering; to the Committee on the Judiciary.

By Mr. WYMAN:

H.R. 11842. A bill for the relief of Ludger J. Cosette; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

134. The SPEAKER presented a petition of Zora B. Hays, Asheville, N.C., relative to the Supreme Court, which was referred to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

PRIZE LETTERS CALL FOR RETENTION OF NATIONAL ANTHEM

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. SAYLOR. Mr. Speaker, each year the Anita, Pa., Post Office in Jefferson County sponsors a letterwriting contest for the sixth-grade class of the Parkview Elementary School. Dorothy J. Nelson is the postmistress at the Anita facility. With the assistance of the sixth-grade English teacher, Mrs. Zimmerman, the children choose a topic they wish to write on, do their own research, and submit letters for judging.

This year 29 letters were submitted on the subject of the national anthem. All the letters express very clearly my own feeling that it would be a terrible mistake for Congress to change our national anthem. I am sure that after reading the prize letters, Members of Congress will be as impressed as I am that these representatives of the younger generation are concerned with saving the valuable traditions of our country.

I have appended to my remarks, the

prize-winning letters in the two divisions of the contest. First prize for the girls was captured by Cindy Brown; second prize went to Becky Young; and third prize went to Pam Brady. Douglas Lyle captured the first prize for the boys; Tom Kurtz received second prize; and Kevin Baranoski won third prize.

The prize letters follow:

FIRST PRIZE—GIRLS

ANITA, PA.,
March 26, 1969.

DEAR MRS. NELSON: We are facing a problem. Should we change our National Anthem? Some people want to change our National Anthem just because some notes are too hard to sing. I think this is a very poor way to feel. Everything has to be easy to do these days or no-one is interested in doing it.

Another reason I have heard of its being changed is because it is not modern, which may be true, but the words tell a story that is part of our history. I think it would be very wrong to change our National Anthem because everyone all over the world is familiar with the tune and the story it tells.

Sincerely yours,

CINDY BROWN.

SECOND PRIZE—GIRLS

PUNXSY, PA.,
March 26, 1969.

DEAR MRS. NELSON: I don't think the National Anthem should be changed. It was our first National Anthem to be written, and should be the only one. It was based on what our men were fighting for. It is based on the flag which stands for freedom and what is right. If we changed everything our forefathers have done, we won't have anything to stand for later on in life.

It is like removing a root on which the country was built. It would be like removing something the older people cherished for so long. It would be like parting with an old friend or something that could never be replaced. So I don't think we should change it.

Yours truly,

BECKY YOUNG.

THIRD PRIZE—GIRLS

ANITA, PA.,
March 26, 1969.

DEAR MRS. NELSON: Have you heard that some people would like to change our National Anthem. They would like to change it to My Country 'Tis of Thee, or America the Beautiful. They said it was easier to sing these songs.

I don't think this is right. I don't think we should change it when we have had it for about forty years.

I think Francis Scott Key would be very proud of his poem. But just think how he would feel if someone changed it.

Just as every country has a National flag, every country has a National Anthem, and the one we have now is very beautiful.

John Stafford Smith wrote very beautiful music to Francis Scott Key's poem. He too would be very proud to know that his music became our National Anthem.

The words to the Star-Spangled Banner are beautiful, and have a great meaning. I don't see why anyone would want to change it. As for me, I don't want it to be changed.

Sincerely yours,

PAM BRADY.

FIRST PRIZE—BOYS

REYNOLDSVILLE, PA.,
March 25, 1969.

DEAR MRS. NELSON: I think we should not change the National Anthem.

It has been our heritage since September 1814. The sight of the American flag still flying over Fort McHenry after a fierce battle lasting several days and nights inspired Francis Scott Key to write the song.

With the trouble in our land today the anthem serves as an inspiration to our fighting men stationed all over the world. So I think we should not change the National Anthem.

Sincerely yours,

DOUGLAS LYLE.

SECOND PRIZE—BOYS

PUNXSUTAWNEY, PA.,
March 25, 1969.

DEAR MRS. NELSON: I don't think we should change our National Anthem because it has been our official anthem for 38 years. Its stirring words were written by Francis Scott Key while he was watching the bombardment of Fort McHenry. Some of the words in it are taken from our Bible. If they change the words of the anthem it will not be ours, as it tells the story of our flag.

It is what Key saw and felt in his heart and it is not up to the people to change it. We should all ask ourselves if we want it changed or not.

Yours truly,

TOM KURTZ.

THIRD PRIZE—BOYS

DE LANCEY, PA.,
March 26, 1969.

DEAR MRS. NELSON: Some people want to change the National Anthem and some don't. I think we shouldn't change this song because we have had it for many years. It was written by Francis Scott Key and was adopted as our National Anthem in 1931. It is now part of our history.

All Americans know this song as our National Anthem. If we change this song it would cause much confusion. Some of the famous singers say it is a good anthem. This is why I think we should keep the National Anthem.

Yours truly,

KEVIN BARANOSKI.

KENNEDY, TUNNEY JOIN CALIFORNIA GRAPE BOYCOTT

HON. ROBERT B. (BOB) MATHIAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. MATHIAS. Mr. Speaker, the State of California has recently become the center of a nationwide controversy which has led to the boycotting of stores which sell our table grapes.

Legislation is now before the Senate which attempts to settle this controversy and provide necessary guidelines to protect the interests of all concerned—farmers, workers, and the housewife or consumer.

The bill—S. 2203—authored by Senator GEORGE MURPHY is aimed at assuring the uninterrupted flow of an adequate supply of food products from our farms to consumers.

Mr. Speaker, under unanimous consent I submit for the RECORD a column from the Long Beach, Calif., Press-Telegram, by L. A. Collins, Sr., which I believe discusses this situation very informatively and shows how it is being made a nationwide issue:

KENNEDY, TUNNEY JOIN GRAPE BOYCOTT

(By L. A. Collins, Sr.)

When Sen. Edward Kennedy and Congressman Tunney flew to Calexico to join the farm workers committee seeking to organize grape workers in California they, in effect, endorsed the movement to picket and boycott stores that sell table grapes. The leader of the force is Cesar Chavez from the Delano area where he has been trying to organize the farm workers for several years. Aided by unions in other areas, stores have been picketed in a secondary boycott to put pressure on the growers to accept union control of their farms. If the movement is successful we may expect the same illegal boycott of other California farm products in the organizing effort. Statements by Kennedy and Tunney support this effort which affects not only the workers but also retail stores and consumers.

Their statements on the issue would make it appear the vineyard workers are terribly underpaid and deserve to be organized to bargain with the growers. This is not borne out by the official Crop Reporting Board of the U.S. Department of Agriculture. That report shows California farm workers are the highest paid in the whole United States. The report shows the average for the U.S. is $1.20 an hour. The California rate is shown as $1.60 an hour. A report by the growers shows that grape workers are paid a basic wage of $1.50 an hour. But they are also paid 15 to 25 cents a box they pick. The average on that basis amounts to about $2.50 an hour.

Sen. Kennedy indicates he is trying to help the army of workers who are migrants without homes who are left helpless after the harvest season. Actually about 90 per cent of the grape workers in the Delano district—where the union is concentrating its efforts to organize the workers—are permanent residents of that area. About 5,000 of them work in the vineyards during crop picking seasons. About half that number are employed the year around.

Many of these workers are not heads of families. Many are housewives, students and casuals working the crop season—September through December—to supplement their family income. Most of the family heads are employed the year around irrigating, pruning, stripping, fertilizing and other work in growing the crop. The higher-than-most-farm-worker-incomes have been existent in the Delano area for many years.

It is this better-than-average pay that has given the union so much trouble in signing up workers. The present strike has been going on several months. If the union could sign up a majority of the workers it would have reason to ask the government to enforce negotiations between the union and the growers. The union has failed to get the workers to sign up—so it has taken the road to illegal boycotts hoping to hurt the industry in selling the crops. They have been successful in a few cases where chain stores have discontinued buying the table grapes. But these chains are small in number and the competing stores have more than made up for the lost outlets.

This writer would support NLRB action to assume power over labor-management problems if a majority of the workers signified they wished to be represented by the union. But where this is lacking he supports the growers who are fighting against the higher costs that would be incurred by union domination. The cost of such increases would have to be passed on to consumers.

A DIRECT POPULAR VOTE METHOD

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. DADDARIO. Mr. Speaker, recently the Connecticut State Chamber of Com-

merce unanimously adopted a resolution urging the adoption of a direct popular vote method of election for our President and Vice President. Carl N. Hansen, president of the Connecticut State Chamber of Commerce, Inc., wrote to me on May 23, pointing out that both on the national level and within the State of Connecticut there is strong support for electoral reform. His letter provides strong statistical evidence of these sentiments, including the results of several polls, and therefore I would like to bring it to your attention:

MAY 23, 1969.

Hon. EMILIO Q. DADDARIO,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DADDARIO: The following resolution was proposed and unanimously adopted at our Board meeting Wednesday, May 7, 1969:

"The Connecticut State Chamber of Commerce supports abolition of the Electoral College and urges Congress to adopt a direct popular vote method to elect our President and Vice President.

"A direct vote for the President would sweep away possible abuses of the current method, including those that could arise from the right of state legislatures to direct methods of choosing electors, the right of electors to disobey instructions, and the advantages of big states over small states. It would also eliminate the possibility that the popular vote winner would not be elected President."

Popular support for reform is strong both throughout the nation and in Connecticut. A 1966 membership referendum, conducted by the National Chamber of Commerce, revealed that 90% of the respondents favored reform. A nation-wide Gallup Poll, conducted in late 1968, indicated that 80% of those polled support immediate reform of the system. And, a recent survey of over 4,000 employees of the Travelers Insurance Company has revealed that over 80% favor the direct election of the President.

I trust you will give this matter serious consideration.

Sincerely,

CARL N. HANSEN,
President.

TRIBUTE TO HOWARD N. WAYMIRE

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. ANDERSON of California. Mr. Speaker, I rise today to pay tribute to Mr. Howard N. Waymire, retiring principal of Leuzinger High School in Lawndale, Calif., for his 29 years of outstanding service in the field of secondary education.

Mr. Waymire began his career at Leuzinger High School in 1940 as a teacher of industrial arts. He was appointed chairman of the industrial arts department in 1942 and named boys' vice principal in 1947. In 1950 Mr. Waymire was promoted to director of guidance and curriculum. Ten years later, the Centinela Valley Union High School District board of trustees named Mr. Waymire principal of Leuzinger High. He has served in this capacity for nearly 10 years, providing guidance and leadership to a high school of 2,200 students and 100 faculty members.

Howard Waymire was born in Norwalk, Calif., on April 12, 1908, the son of a successful building contractor. A short time later the Waymire family moved to Overton, Nev., where Howard attended the public schools. In 1926 he graduated from Maopa Valley High School.

Mr. Waymire attended the College of Engineering at the University of Reno, married his wife Vern, and moved to Los Angeles where he received his AB degree in 1939 with a major in English from Occidental College. Later he received a master's degree in education and an administrative credential from the University of Southern California.

It was, however, his abilities in woodworking, machine shop, and welding that got him his first teaching job, and began nearly a three-decade career at Leuzinger.

Mr. Waymire's service to Leuzinger has been closely paralleled with service to the community. He is a member of the Hawthorne Kiwanis Club, the YMCA board, and a founding member of the Fine Arts Association of the Centinela Valley. He was also affiliated with the Hawthorne Symphony Association and the school district's Citizens Advisory Committee.

Mr. Waymire won the respect of faculty members at Leuzinger for his dedicated support of projects in classroom teaching which stress innovative approaches to learning. As one of the strong supporters of fine arts in the school and community, his tenure as principal saw Leuzinger recognized for its outstanding theatrical productions.

On June 11, 1969, Howard Waymire will be honored by a testimonial dinner for his unselfish devotion and dedication to education and the community. It is my privilege to join in saluting Howard N. Waymire for the outstanding job he has done as principal of Leuzinger High School.

OIL PATCH PATRIOTS

HON. CHARLES H. GRIFFIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. GRIFFIN. Mr. Speaker, the spring issue of Petroleum Today contains an article on the vital national security role of the Emergency Petroleum and Gas Administration and the volunteer executives who man it.

The article features the leadership of Emmett Vaughey, administrator of region 3 of EPGA. A noted and respected independent oil producer of Jackson, Miss. Mr. Vaughey is a worthy example of business executives, who give freely of their time and talents when called to Government service. Because of their love and faith in America, these men perform important missions that have no glamour and little publicity.

I commend the following article to my colleagues:

OIL PATCH PATRIOTS

"Gentlemen, the United States has been attacked by an enemy using nuclear weapons."

The oil executives in the large meeting room stirred uneasily. The government official on the platform glanced at his papers and continued: "The information we now have shows that untold numbers of people have been killed and the oil industry throughout the South has been badly hit.

"The refinery at Pascagoula, Mississippi, is 60 percent destroyed and still burning. Most of the other refineries in the region have been knocked out. A few are still working at full capacity, but they mainly produce fuel oil—not gasoline. Hospitals, civil defense, and the military are clamoring for gasoline, and our surviving storage tanks are only half full.

"All right, gentlemen. What are you going to do about this?"

For Emmett Vaughey, a dapper, white-haired Mississippi oilman sitting in the front row of this Atlanta motel meeting room in December 1968, the words were familiar. He'd heard them before at other similar meetings Government officials had talked dispassionately about nuclear attacks or limited wars like Vietnam, of refineries wrecked or hurriedly converted to wartime fuel production.

The words were also familiar because they were part of a script, a script which had been outlined several years earlier by Vaughey and other oilmen.

Vaughey, a quiet-spoken petroleum executive in his 60's, heads his own independent production company in Jackson, Mississippi. He is also the administrator of Region 3 of the Emergency Petroleum and Gas Administration (EPGA). Region 3 extends from North Carolina to Florida and then west to Mississippi. Vaughey is responsible for mobilizing the petroleum industry in this area during wartime or periods of international unrest. The 75 other men in the Atlanta meeting room were also mostly petroleum industry volunteers.

That morning last winter, Vaughey had looked about the meeting room. Many of the men were ones he himself had recruited. "These are all good men," he remarked. "There's plenty of work piling up back on their office desks while they participate in these test exercises. But they've decided this is a job worth doing. And their companies agree with them about this and let them do it."

The purpose of the Region 3 test exercise was to simulate the problems the men would encounter if their section *were* hit by nuclear bombs. If it happened, these are the men who would apply federal direction to the petroleum industry in their area.

On the podium, John Ricca, deputy director of the Office of Oil and Gas and a full-time "exercise director" with EPGA, was describing other exercises that had been held across the country.

Vaughey nodded at Ricca. "John has a specially tough job. I've just got my 40 volunteers to keep tabs on. But he's got his work with Oil and Gas, and then he's in charge of EPGA. That's eight regions with over 600 men. He's got to run these exercises, evaluate them, plan for new ones. It's a grueling job."

When Ricca finished speaking, exercise kits were handed out and the volunteer reservists quickly walked off to their rooms to work on their particular problems. Though this was only a game exercise, the problem had been carefully prepared by the Office of Oil and Gas staff so as to seem *absolutely* realistic.

Amid a haze of cigarette and cigar smoke, the reservists in the various state groups hung up their jackets and began to hammer out the steps they would take once telephone communications resumed.

"You have to treat the exercise like the genuine thing," one of the reservists later explained. "People are dead, the industry is wrecked, and there you are in a room with a telephone and a pack of cigarettes, and

you've got to get the oil and gas moving again. So what do you do?"

Buzz. The first step is simple, the reservists agree. Pick up the phone and get to the governor or the people at the state resource agency. Let them know you are on top of the problem. Now the job becomes more complicated. Get in touch with the refineries and terminal operators. How much fuel do they have? Get to the state resource people who have already pooled tank trucks and barges. What transportation is available? No oil moves without your say-so.

Now—who gets oil first and how do you get it to them? Are there enough operating personnel in the refineries or will you have to bring them in?

Is there enough electricity, water, and gas to run the industry?

One man on a phone in a room arguing, shouting, pleading, with the weight of a mangled industry on his shoulders.

This is the way it would be; and this is what the reservists attempted to describe in a written report during the first day of the EPGA exercises.

As the men worked, Emmett Vaughey circulated about the motel, stopping in at various rooms.

"Our biggest problems are procedural questions. The men wonder about things like, 'Do I have the authority to freeze deliveries?' 'How do I do it?' Fortunately, we have a lot of state resource officials sitting in on the exercise. These are the people we'd be talking to in a real crisis, and they are working out the procedures right here with us."

By the end of the day, most of the now exhausted reservists were finishing up their written reports. The next morning, they convened in the meeting room. It was now assumed, for the purposes of the exercise, that the time was 20 days after the initial nuclear attack. Telephone wires had been repaired and the states in the region could now communicate with regional headquarters and with one another.

"This is where I get busy," says Vaughey. "We divide the room up into regional divisions for transportation, marketing, and refining, and put the various men in each division together. Reports are exchanged. The marketing people work out their major problems and then present them to the refinery people. The refinery people get together with the transportation group to find out how they can get their products moving around the region."

Through the afternoon, Vaughey wandered from group to group. Officially, the exercise was over at 5 p.m., but Vaughey continued to move about the room talking to his volunteers. He missed a flight that was to take him to New Orleans for a business meeting. Finally, almost reluctantly, Vaughey packed and dashed for the airport.

Several days later, sitting in the deep shade behind the porch columns of his Colonial-style home in Jackson, Mississippi, Emmett Vaughey talks about the problems of keeping oil flowing. "You begin with the premise that without petroleum, the nation would come to a standstill. You can't name an industry that doesn't need oil or gas. But there are times, like World War II, when the demands are so great that you have to start balancing priorities. This was why the government created the Petroleum Administration for War, or PAW, back in 1941. It had the incredibly complex job of balancing civilian and industrial oil needs against the requirement for keeping the oil moving to armies all over the world."

Vaughey is no newcomer to the business of moving oil. He got his start in the petroleum industry digging ditches in the Oklahoma oil fields back in the 1920's and according to his own estimate, has done "just about every job you can find in the oil business." During the Korean War, he moved to Washington with his wife and daughter and went to work for the Petroleum Administration for Defense (PAD), which was a successor to PAW.

"But the trouble with both PAW and PAD was that we had to wait till we got into a shooting war before we established them. Then in 1962, the National Petroleum Council, which advises the Secretary of the Interior about oil matters, was asked to correct the situation. In the event of another war, the country couldn't afford to wait months while a new organization was set up. We needed a standby organization that could be activated at a moment's notice. So EPGA was founded in 1963."

Actually, it took two years to work out the basic framework of the new organization, and Emmett Vaughey was one of a group of oilmen who flew up to Washington every month to help hammer out the shape of EPGA. Then Emmett and the others spent another two years developing the training techniques.

Vaughey had nothing but praise for his volunteer reservists. "Most of these men give many days to studying manuals and participating in these exercises. They are doing all this to prepare themselves for something they hope will never happen. It takes character and dedication to work on a job which you hope will never be needed."

EUROPEANS SMILE OVER SST LEAD

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. BOB WILSON. Mr. Speaker, I would like to share with my colleagues the following article from the San Diego Union regarding French and British advances in the development of a supersonic transport. As a nation that has had the unquestioned lead in air transportation, it is inconceivable that we would let Russia, France, and Britain pass us by. We must build the SST and maintain our position in front with the fastest and best aircraft in the world's airlanes.

The article follows:

EUROPEANS SMILE OVER SST LEAD

(By Thomas Nuzum)

PARIS.—France and Britain's flying needle, the Concorde, has given Europe a shot in the arm.

Europe finally has taken the lead over the United States in the key industrial sector of civil aviation, French newspapers chortle as a result of the first flight of the Concorde prototype on March 2 from Toulouse.

The British press has been more reserved about the Anglo-French supersonic transport. Some papers call it a joint triumph in technology. But others note that the plane's 10 years of development was a $2 billion gamble that has yet to pay off commercially.

"It flies but so did the pterodactyl," commented the Manchester Guardian. The pterodactyl was the awkward flying lizard that became extinct.

FRENCH PROUD

The prestige-conscious French are proud that Concorde will use as much power as the Queen Mary. Commercially conscious Britons note that all that power will only fly an average of 130 passengers across the Atlantic.

It will be eight months before test pilot Andre Turcat tries the prototype out at its top speed of 2.05 times the speed of sound. Many more months will pass before it is certain if operating costs will stay within the extremely narrow profit margin of Mach 2 planes.

Profitability will determine whether the two countries can sell 250 Concordes at $20 million each in order to break even.

Military planes only hit supersonic speeds for a few minutes at a time. Concorde must keep it up for two hours straight in order to span the Atlantic in around three hours.

THREE COOLING SYSTEMS

To keep passengers from being fried if the air-conditioning system breaks down, the plane has two other cooling systems in reserve. Although the air temperature is 68 degrees below zero at Concorde's cruising altitude of 65,000 feet, no cool air will be available.

Air will be taken into the air-conditioning system hurling along with the rest of the plane at 1,380 miles an hour. Wing edges, the plane's nose and air intakes will suddenly compress the air so greatly that it will heat up to 261 degrees.

This hot air flowing along the plane's surfaces would bake those inside without unique air-conditioning systems. Air taken into the conditioners will be further compressed by jet turbines until its temperature rises to 1,110 degrees.

This highly compressed air will pass through two heat exchangers in the wings. It will be cooled by the relatively "cool" air outside and by fuel in wing tanks to a mere 390 degrees.

THIRTEEN BELOW ZERO

Then this air will be allowed to decompress as it spurts into pipes along the skin of the fuselage. Decompression will cool the air instantly to 13 degrees below zero.

It is supposed to keep the passengers' cabin at 70 degrees. Air-conditioning problems of America's supersonic transport will be still tougher. At the top speed of 1,800 miles an hour, outside air will be compressed until its temperature is 570 degrees compared with a mere 260 around Concorde.

To penetrate the atmosphere with the least possible air friction, Concorde's fuselage was designated nearly as slender as a needle. It is only 9½ feet wide although 194 feet long. There will only be room for four passengers to sit abreast. The wing span of the production models will be only 33 feet, 10 inches.

Concorde is scheduled to be certified for commercial service in 1973 or 1974.

THE DISGRACE OF INDIFFERENCE TO DISHONOR

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. WYMAN. Mr. Speaker, it must be a shock to columnists like Marquis Childs to encounter face to face the nihilistic cynicism of some modern young people. Mr. Childs' description of such an encounter appeared recently in the Washington Star and is as disturbing in retrospect as it must have been in person. For the utter lack of patriotism and loyalty it indicates must result from a failure on the part of parents and teachers. It could not just happen, and it is disturbingly prevalent among the hippie sect—each of whom is somebody's child.

It is as basic a truth as the fact that day follows night that the freedom and material prosperity we now enjoy in America was earned or preserved for us

by courageous Americans, many of whom gave their lives in the process.

Each generation must be prepared to risk lives if it is to remain free. Representatives of a society that has possessions or a way of life that other people want must be ready to fight in order to protect and preserve it so that it may be passed on to its children to enjoy.

As for the putrefying characters described by Mr. Childs, they have nothing, for their souls are apparently lost.

We used to reflect on the profound lines of the poem:

Breathes there a man with soul so dead
Who never to himself hath said:
"This is my own, my native land!"

It is tragic that there should be such driftwood in human form in this beautiful land of ours—that is still the land of opportunity if you are willing to apply yourself.

FEARS OF NEW VIOLENCE DARKEN A BRIGHT SPRING DAY AT HARVARD

(By Marquis Childs)

CAMBRIDGE, MASS.—An obliging legislature having changed three holidays during the year to fall officially on Monday, this state alone among the 50 observed Memorial Day on May 26, thereby making a long weekend. It turned out one of those perfect spring days when in full sun the great elms on Boston Common, in their new green, look as though they had been washed with a brilliant dye.

For Harvard the weekend was a respite, a truce of sorts after the shattering storm—the "bust" as it is called locally—that left the University divided into hostile factions. The 4 a.m. police action to end a sit-in at University Hall stirred passions such as Fair Harvard had never known before.

The fear is that the storm will break again on commencement day, June 12. Whether Harvard will ever be the same is being asked—hopefully by the student left determined to break up the old power structure, and despairingly by many who see the precedent of disruption and violence setting a pattern that will make it impossible to return to the tranquility of the past, when Harvard stood, as all Harvard men believed with no undue humility, in the forefront of scholarship and research.

On this last long weekend before the end of school, Harvard Yard was quiet. For many, exams are still to come and, what with the excitement of rallies, protests, and demonstrations, a lot of extra cramming was going on to make up for lost time.

Liberated spirits among the young sprawled on the banks of the Charles River, Harvard and Radcliffe in happy amity soaking up the sun. Beads, bells, costumes of every weird variety, the Indian predominating—this was Harvard that even 10 years ago would have been unrecognizable.

But the weekend was not all cramming mixed with la dolce vita. Students for a Democratic Society were out on the street corners pushing their radical biweekly, the Old Mole. The name is taken from the quotation from Karl Marx on the masthead, "We recognize our friend, our old mole, who knows so well how to work underground, suddenly to appear: the revolution." Mole is shrewdly, even brilliantly, edited to exploit all the discontents of the young. The first page of the current issue is splashed with red and headlined: "Outcry From Occupied Berkeley." Heavy stress is put on disruption in the high schools as the next front being opened up.

Cliche though it is, "generation gap" says more about what is happening in universities and colleges across the country than anything else. The alienation at times seems to be total. The young have little to say to their elders.

This reporter came on an incident on Cambridge Common that dramatized the alienation with the theatricality that would give a professional dramatist pause. A tall man wearing the uniform of the Disabled American Veterans stood arguing in a closely packed knot of the young. On his overseas cap was the legend Sr. Vice Commander Disabled American Veterans of Massachusetts.

The young were mostly hippie types, bearded, long hair. Cambridge is attracting hippies from all over the country as San Francisco once did. Three men and one young woman had faces painted dead white with symbols around the eyes and mouth, part of a street theatre. They were not hostile to the tall veteran so much as contemptuous.

"I suppose you call yourself a hero, do you?" one of the young men, more conventionally dressed than the others, said.

"No, I don't call myself a hero," the veteran replied. "I was in the Korean War, I was shot up a bit."

"Why did you go?"

"I went because it was my duty."

"Would you say what Stephen Decatur said?" This from one of the painted faces. "'My country, may she always be right, but my country, right or wrong.'"

"Yes, I would say that."

"So even if your country wasn't right, like in Vietnam, you'd go out and shoot 400 gooks."

This brought derisive laughter. A bit later the veteran called it off and shrugged his way out of the crowd. No, he wouldn't give his name? He didn't want publicity. He just wanted to see if you could talk to these people.

The incident took place against the backdrop of a Civil War monument, a standing figure of Lincoln, topped by a uniformed soldier of the Northern army, the sides defaced by swastikas, names, smears daubed on. I stood copying the inscription when a young woman detached herself from another group to say, "What are you copying down there, you big four-letter word. We'll make you pay for copying that."

The inscription was:

"The soldiers and sailors of Cambridge whose names are inscribed here died in the service of their country in the war for the maintenance of the Union. In perpetual memory of their valor and patriotism . . ."

SALUTE TO GENERAL KOSTER

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. SCHWENGEL. Mr. Speaker, the citizens of West Liberty recently paid tribute to one of their outstanding citizens, Maj. Gen. Samuel W. Koster. General Koster is presently serving as Superintendent of the Military Academy at West Point. I join wholeheartedly in the tribute paid to General Koster by the citizens of West Liberty and by a recent editorial in the Muscatine Journal:

WEST LIBERTY'S SALUTE

West Liberty paid tribute yesterday to one of its sons who has gained distinction in the service of this nation.

Major General Samuel W. Koster, superintendent of the United States Military Academy at West Point, came back to the hometown Tuesday to be the commencement speaker for the West Liberty High school senior class of 1969.

General Koster was the guest of honor at a luncheon sponsored Tuesday noon by the West Liberty Chamber of Commerce. It was a chance for him to greet many of the friends he knew as a boy in West Liberty and his schoolmates from the Class of '37.

Willard Salemink, West Liberty Chamber of Commerce president, summarized the situation accurately when he said "We often have commencement speakers who tell the graduates to set their objectives, work hard and attain their goals. Today, we honor a man who has done exactly this."

Dr. John Carey, a lifelong friend who introduced General Koster at the luncheon, recalled that "Sam" was a perfectionist and a good student. He was also a school athlete, "the center on two of the better basketball teams this high school ever produced."

General Koster graduated from the U.S. Military Academy in 1942. He is a veteran of World War II and the Korean conflict. He was commander of the 23rd Infantry Division in Vietnam until he was named in June, 1968, as superintendent of the U.S. Military Academy at West Point.

West Liberty has a right to be proud of General Samuel W. Koster. He has served this country faithfully in war and peacetime, and continues to serve in the important job of educating the young men who will be the backbone of the Army officer corps in the future.

PROBLEM OF PERSISTENT PESTICIDES

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. ASHLEY. Mr. Speaker, I am introducing legislation today to counter the serious threat to the environment, fish and wildlife, and man posed by the indiscriminate use of persistent pesticides. To meet this danger, I am proposing two bills: The first would ban the use of DDT in the United States; and the second would establish a National Commission on Pesticides to improve the effectiveness of pesticides and to eliminate their hazards to the world we live in.

Well documented research has indicated that pesticides are a basic cause of serious disruption of the ecological balance, of permanent injury and death to fish and wildlife, and a potential threat to the health and welfare of the general public. The persistent pesticides do not disintegrate rapidly—for example, DDT remains about 50-percent toxic for 10 years—and thus accumulate in sufficient concentration to kill wildlife and fish through the poisoning of foodstuffs they eat or by interfering with reproduction.

Scientists have discovered decreasing reproduction rates in both birds and fish. In many birds, DDT and other persistent pesticides have caused a thinness of the eggshell, thereby increasing egg breakage and decreasing overall reproductive success. This phenomenon has brought the penguin of the Antarctic, the petrel of Bermuda, and the bald eagle and peregrine falcon of the United States to the point of extinction.

At the same time, many fish face reproduction problems because these pesticides penetrate the yolk sac and poison the main source of young fish. This phenomenon caused the death of a mil-

lion coho salmon fry last spring. Only recently, the Food and Drug Administration impounded 28,150 pounds of Lake Michigan coho salmon. The FDA found that the salmon contained 19 parts per million of DDT and three-tenths of a part per million of Dieldrin—both levels considered hazardous by both the FDA and the World Health Organization.

Many scientists are concerned that the reproduction capabilities of other fish may be harmed. This is especially so in the case of lake trout, which spend 6 or 7 years in the water before sexual maturity as compared with only about 2 years for the salmon. The New York Health Commission has, in fact, reported that high concentrations of DDT are being found in the lake trout of New York's central and northern lakes.

What is especially frightening about the ever-increasing number of cases of affected wildlife and fish is that the pesticides have managed to travel so far to reach the animal in question. Thus, in order to infect the coho salmon, DDT and Dieldrin probably traveled hundreds of miles through air, water, and soil, and were consumed through the normal food chain of up to half dozen organisms. Moreover, the Bermuda petrel never go to the mainland and there certainly is no DDT spraying in the Antarctic where penguins are becoming extinct.

The effect of the wide use of these pesticides on man are just beginning to become apparent. At the 1968 Lake Michigan Water Pollution Conference, spokesmen for the U.S. Bureau of Commercial Fisheries testified that the concentration of pesticides could reach a level lethal to man and aquatic life if the heavy use of pesticides is continued. During a recent conference on pesticides in Stockholm, evidence was presented that DDT, even in very small quantities, could affect human metabolism. One of the studies cited was Russian research that indicated that Russian workers whose jobs bring them in contact with DDT and other organochlorine pesticides were found to suffer from changes in the liver which slowed down the elimination of wastes from the body.

Dr. Robert Risebrough, an environmental scientist at the University of California at Berkeley, stated that the effect on man may be serious. He has found enough accumulation in man to stimulate enzyme production, which acts as catalysts for bodily processes, such as digestion. And more recently, a Swedish scientist found that breast-fed infants are ingesting twice the amount of DDT compounds recommended as a maximum daily intake by the World Health Organization. What is perhaps most frightening is the likelihood that these findings represent merely the top of an iceberg.

In the United States, two committees have pointed out the dangers of environmental pollution caused by pesticides. The Wiesner Committee in 1963 urged cutbacks in the use of such persistent pesticides as DDT:

> The accretion of residues in the environment (should) be controlled by orderly reduction in the use of persistent pesticides. As a first step, the various agencies of the Federal government might restrict wide-scale use of persistent insecticides, except for necessary control of disease vectors. The Federal agencies should exert their leadership to induce the States to take similar actions. *Elimination* of the use of persistent toxic insecticides should be the goal. (Emphasis added).

The report of the environmental pollution panel of the President's Science Advisory Committee in 1965 also dealt with this subject. It recommended:

> Research should be encouraged toward the development of pesticides with greater specificity, additional modes of action, and more rapid degradability than many of those in current use.
>
> Pesticide effectiveness should be increased and total environmental contamination decreased by further research leading to the more efficient application of pesticides to the target organisms.

Reaction around the world is only beginning to take form. Sweden has just banned the use of DDT for a period of at least 2 years. According to the London Observer, this is the first time any nation has instituted such a sanction on a pesticide.

Several States in the United States have recently started to meet the problem. Arizona, concerned with increased residues of DDT in milk and other food products, has banned DDT for 1 year. The Pennsylvania State Senate Committee has recommended banning DDT from use in the fields and forests.

Michigan, Illinois, and Wisconsin have already issued recommendations against the use of DDT for the Dutch elm disease, one of the primary targets of DDT use in the United States today.

It is time that we, too, recognize the dangers of pesticides. I think the case for banning DDT is clear, particularly since other less persistent pesticides are now recommended for the areas where DDT was previously used. Moreover, a permanent National Commission on Pesticides would provide a significant step toward better and safer control of our environment. We must act today, Mr. Speaker, before any permanent damage is done to man and his environment.

PACKAGING AND LABELING ASPECTS OF SPECIAL INTEREST TO THE CONSUMER

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. DANIELS of New Jersey. Mr. Speaker, Mr. Walter Melleng, a very active senior citizen who lives in Kearny, N.J., was kind enough to send me an article from Consumer Bulletin, which is worthy of the attention of all Members of this House and all persons who read the CONGRESSIONAL RECORD.

The article deals with deceptive methods of packaging and points out the need for stricter regulation to prevent consumer frauds.

Mr. Speaker, I include this article at this point in the RECORD:

PACKAGING AND LABELING ASPECTS OF SPECIAL INTEREST TO THE CONSUMER

It is said that the public and Congressional concern about deceptive packaging rumpus started because Senator Hart discovered that the boxes of shredded wheat consumed by him, Mrs. Hart, and their children were becoming higher and narrower, with a decline of the net weight from 12 to 10¼ ounces, without any reduction in price. There were still twelve biscuits, but they had been reduced in size. Later, the Senator rightly complained of a store-bought pie in a handsomely illustrated box that pictured, in a single slice, almost as many cherries as there were in the whole pie.

The manufacturer who increases the unit price of his product by changing his package size to lower the quantity delivered can, without undue hardship, put his product into boxes, bags, and tins that will contain even 4-ounce, 8-ounce, one-pound, two-pound quantities of breakfast foods, cake mixes, detergents. A study of drug store and supermarket shelves will convince any observer that all possible sizes and shapes of boxes, jars, bottles, and tins are in use at the same time, and, as the packaging journals show, week by week, there is never any hesitation in introducing a new size and shape of carton or bottle when it aids in product *differentiation*. The producers of packaged products argue stoutly against changing sizes of packages to contain even weights and volumes, but no one in the trade comments unfavorably on the huge costs incured by endless changes of package sizes, materials, shapes, art work, and net weights that are used *for improving a product's market position*.

When a packaging expert explained that he was able to multiply the price of hard candies by 2½, from $1 to $2.50 by changing to a fancy jar, or that he had made a 5-ounce bottle look as though it held 8 ounces, he was in effect telling the public that packaging can be a very expensive luxury. It evidently does come high, when an average family pays about $200 a year for bottles, cans, boxes, jars and other containers, most of which can't be used for anything but stuffing the refuse can or the trash burner.

An article in Supermarket Merchandising noted that wrapped in Avisco cellophane "plebeian mixtures of ground ham and pork" go at $1.39 a pound, all because "of the garnish of a pineapple ring and a red cherry"—"Not a bad way of handling ham and pork scraps that were formerly discarded."

"Six rosettes" of ground chuck were "quality priced" at "6 cents more per pound to cover additional handling and packaging materials." Mr. X's "smart tricks have yielded smart profits," the article concludes.

THE CONSUMER'S RIGHT TO COMPARE

Packagers resent the idea of having commodities compared on cost-per-ounce basis; this, they hold, degrades the brand concept and disregards quality differences. Yet they may as well get used to this idea of price comparison, for government agencies intend to aid consumers in comparing unit prices; the point is strongly made and emphasized in the law itself, in its very first paragraph.

Packages and their labels should enable consumers to obtain accurate information as to the quantity of the contents, and should facilitate value comparisons. That's what the law says. In that respect, it's not a bad law. We doubt that the principle will be soundly implemented.

THE NEW LAW

The new Fair Packaging and Labeling Law has major defects, among which are: *1*) the fact that its administration is divided among three government agencies, with very different outlooks and approaches to problems of industry and consumers; *2*) the door is opened wide to an endless, unmanageable series of hearings and regulations (Regulations already total about 40,000 words and their language is so intricate and involved and in so many cases related to clauses in prior legislation affecting the scope and details of the work of the Food and Drug

Administration and the Federal Trade Commission that only big business concerns can afford the staff and legal counsel which will make the rules understandable); *3*) it allows slack filling if it is "functional," which means that slack fill is permitted if it "helps to protect the contents," or if the manufacturer chooses to fill by an inherently inaccurate method because it is fast, the law will not stop him. (It has not stopped him in the past, under previous legislation, because the trial court held that the manufacturer's convenience was more important than a design of package that would not deceive the consumer); *4*) as to the vital matter of naming the ingredients, a major loophole is provided in that no "trade secret" need be divulged; *5*) many products are excluded from the operation of the new law; meats and meat products, poultry and poultry products, tobacco and its products, seeds, insecticides and fungicides, certain drugs, liquors, certain containers; *6*) postponements of enforcement are freely permitted—as they were under the Food, Drug and Cosmetic Act—when the bureau chief considers this to be "in the public interest."

Hereafter, competition on the basis of small differences of weight or volume may not be the unquestioned right of the manufacturers; we may be coming to a stage where standardized weights and volumes of packages of cereals and cake mixes are to be expected, such as we now have with flour, bread, beans, sugar, and many other commodities. Figures in even ounces, pints, and half pints, without the familiar 0.1 and ⅞ ounce appendages, are surely coming, as the government gets deeper into the problem of control of packaging.

INCOMPLETE ADDRESSES PERMITTED

The new packaging law requires, as did the Food and Drug Act, that the package shall give the address of the producer or distributor, but the Federal Trade Commission has "interpreted" the law, paralleling a long-established similar ruling by the Food and Drug Administration, to mean that the address *need not be* one that will enable the Post Office Department to deliver a letter to the firm in question.

We hold that the address provided on the label on the package should be one that is sufficiently complete and detailed that the consumer can use it to make contact with the manufacturer or distributor on any product which he happens to have bought and about which he may wish to enter a complaint for replacement of or redress for an unsatisfactory article.

The reasoning of the Food and Drug Administration and the Federal Trade Commission as to why the full address is not necessary is too long to give here. It will suffice to say that on this the governmental reasoning is entirely unconvincing.

The consumer should not be required to locate a city directory or telephone directory of a distant city to find out how he can reach by letter or telegram the maker of Boffo corn flakes or Pinko brand bug spray. In case of poisoning of a child, as happens often with household articles, it may be a matter of the utmost importance that the physician be able to make *immediate* contact with a manufacturer of an insecticide or oven cleaner to identify some ingredients of the product. The manufacturer should, as a plain duty to the public, go beyond the government requirement and furnish his full name and address on the package label and in all accompanying wrappings, boxes, or booklets.

We believe that consumers may expect a long period of ineffective and unsatisfactory enforcement of the new law. This will come in part from the inherently involved nature of governmental procedures, the complication that the law is enforced by three different bureaus, and in part from the fact that the law as passed is obscure in meaning and the regulations under it as set up by the Food and Drug Administration and the Federal Trade Commission are exceedingly involved and capable of being understood only by highly-paid professionals.

The law can do some good with its labeling provisions and its expected reduction of diversity, but there are some who doubt whether the results will be worth the cost to industry and the taxpayer. It would be far better if the industry were to set its own house in order, without government compulsion, by voluntary standardization of package sizes and weights, elimination of slack fill and deceptive package shapes, use of large, clear, contrasting lettering showing weights and ingredients, lettering meant to be located and read quickly, and last, by bringing the light of reason to package designers who tend to work too close to the edge of legality and sound business ethics.

Industrial leaders should bear in mind that to avoid serious and costly trouble with the anti-trust laws, groups of business firms setting up standardization committees to establish package sizes, weights, and labeling principles, *must* include fair representation of consumers and those government departments that are properly concerned with a particular commodity.

LIFE ON THE FARM IS GREAT BUT IT SHOULD PAY BETTER

HON. THOMAS S. KLEPPE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. KLEPPE. Mr. Speaker, Laurel Hannegrefs, a student at Minot State College, Minot, N. Dak., presented to me in a recent letter some views on the current farm situation which I would like to share with my colleagues. I believe they will be especially interested in the discussion of the values of rural living and the fact that low farm prices are destroying this cherished way of life. The text of the letter follows:

LIFE ON THE FARM IS GREAT BUT IT SHOULD PAY BETTER

This letter is a response to the questionnaire my parents received in the mail recently. The issue about which I wish to comment is federal legislation to help increase grain prices for the farmers. The price of everything else in this country seems to be skyrocketing but that of grain. Farmers must buy high-priced equipment but they do not get enough income from their crops to pay for the machinery. Therefore, most farmers find themselves so far in debt that they have to worry and work the rest of their lives to get out.

Maybe I'm prejudiced because I grew up on a farm, but I feel that if something were done to increase farm prices, a few other problems would be taken care of, too. For one thing, if grain prices were increased, there would very likely be a reduction in the migration from rural to urban areas. Farmers are forced to give up and look for work in the cities if they don't receive enough money for their grain to support their families. Therefore, if grain prices were increased so that farmers could support families, it follows that they would be less anxious to look for work in the cities and more content to stay on the farm.

Another problem which might be affected by a price increase in grain is the youth problem—the unrest and dissatisfaction in youth today. I grew up on a farm and I will never regret it. I feel farm children discover a world that city children never get the real opportunity to see. It is a difficult world to describe, but it involves freedom, beauty, appreciation of animals and nature. It is living with nature and God and appreciating them both. A young person who grows up on a farm seems to be less restless and dissatisfied because he can find so many things to do on a farm. City children, however, have such a limited play area and limited activities that they often resort to pranks and trouble to occupy their time. As they grow older, they need cars and beverages to create excitement.

Farm youth often resort to such things, too, but there may be less chance of it because they have duties to attend to on the farm. Farm children find a freedom from all the people, cars, and other city problems. They find security within their own families whose members often work closely together to keep the farm going. City youth are often so unfamiliar with this freedom and security due to their city problems that they turn to rebellion and demonstrations. But if more children are to be given the opportunity to grow up on a farm, the grain prices must be increased so that their parents can afford to live on a farm and raise their children on it.

Yes, the small farmers are becoming the victims of many problems including income and competition from big farmers. One of the main solutions may be an increase in grain prices so that farmers can continue to enjoy the freedom and security of their homes and land.

WHEN JOHNNY COMES MARCHING HOME

HON. FLOYD V. HICKS

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. HICKS. Mr. Speaker, in these times of tension and turmoil, it would seem appropriate to remind America and our friends that the U.S. Government is not sitting still.

Steps are being taken; progress being made. We know of the various social programs designed to make life more livable for black Americans and those burdened with ghetto birth.

But little is known of the work in this field which is being done by the Department of Defense, to many minds an improbable agency for social betterment. Among the Department's programs is project transition, which is of particular interest to me since I am able to observe it at first hand. There is a project transition at Fort Lewis, Wash., which is located in the district I represent in Congress.

From July 1, 1968, through March 31, 1969, more than 1,900 soldiers received training in skills in the Fort Lewis program, and another 3,500 received vocational counseling. Business, industry, schools, and the Federal Government participate in this excellent cooperative program to prepare servicemen to make the transition from service life to civilian life. More important in most cases, it enables them to make the vital transition from a disadvantaged past to a promising future.

One of the most distinguished of foreign correspondents in Washington,

D.C., has done the people of America and Great Britain a real service in bringing such efforts to their attention. He is Donald Ludlow, Washington correspondent for the Daily Mirror, one of the most widely circulated newspapers in the world.

Mr. Ludlow has had a most distinguished career gathering news in many parts of the world, including many years in the United States. His perceptive story in the May 16 editions of the Daily Mirror outlines the background of "Black Johnny" in the armed services, and what happens when our black servicemen come home.

I commend his story to the attention of my colleagues.

I insert the story as follows:

In a death cell at the State penitentiary in Columbus, Ohio, sits bearded Fred "Ahmed" Evans, Black militant and former sergeant in the American Rangers, a Commando outfit.

His crime: leading a shooting spree that killed three police officers and a Negro passerby, an incident that sparked off three days of race riots in Cleveland, Ohio, with arson and looting and cost seven more lives. Three of Evans's followers have yet to be tried for murder.

Evans, 37, won his stripes in Korea, reenlisted, lost his stripes, hit a White officer, served eighteen months' hard labor in an Army prison and was given a dishonorable discharge.

He has been described as "a nonviolent man who preached Black pride." But blood is on his hands. Unless he is reprieved, Evans will be the first man to go to the electric chair in America in two years and the first in Ohio in six years.

His fate is not so important as the fears that men of his calibre, trained in the arts of killing and guerrilla war, have aroused in the hearts of White and moderate Black America.

The middle class of both races, angry with each other but prepared to talk rather than fight it out, are asking: What happens when Black Johnny comes marching home from Vietnam?

The average age of the returning Negro serviceman will be about twenty-two-and-a-half; he will be restless, "battle-prone," highly skilled in the use of all kinds of weapons and explosives—and himself explosive material for the racial tensions to which he will be returning.

The risks of battle aside, he will have lived well in the Forces with good food, good clothing, money in his pocket. He will not be prepared to live less well, much less see his family in the squalor of the ghettos.

Just how dangerous an element in American society, already torn with unrest, is Black Johnny likely to be?

First some figures: currently there are some 66,000 Black Americans in the Vietnam Forces, 45,000 in the Army, 8,700 in the Marines, 9,300 in the Air Force and 2,800 in the Navy.

Negroes make up 10.7 per cent of the total of American servicemen in Vietnam—little short of the 11 per cent which his people represent in America's total population.

Black Johnny is certainly doing his share in Vietnam by anybody's standards and he will want his share when he comes back.

Will he turn from war abroad to civil war at home?

Views vary widely. With crime rampant in the streets of every American city—ninety killings in Washington this year—fear will obviously mount at the return of the young Black lions.

The White House, the Pentagon and Congress are well aware of this fear and are trying to "cool" it. A questioner is answered by a question: Why should a Black Vietnam veteran be any more dangerous than a White Vietnam veteran?

The questioner is reminded that after every war the civilians have been frightened of the returning soldier: "They have given him a gun and taught him how to use it."

Just the same, this time greater efforts than ever before are being made to see that the Vietnam veteran—Black and White—should be helped to readjust to civilian life.

The Pentagon is running a multimillion dollar scheme called "Operation Transition" which, during the last six months of a young veteran's service, is designed to better his lot in life. He can get a high school diploma and if he has not acquired a skill in the services he will be taught one.

Private industry is co-operating, notably the giant motor car makers of Detroit, always looking for good mechanics. The American branch of Volkswagen has joined in the scheme.

Operation Transition has been going less than two years but the results seem rewarding. And Black Johnny is taking more advantage of it than White Johnny—twenty per cent of the trainees are black, double their percentage in the Forces.

By the end of June, one thousand men will have been trained as law officers—and a fifth of them will be Black.

The Veterans Administration, a branch of the Pentagon, with a budget of 7,000 million dollars a year, is offering bigger and better benefits such as: cheap medical care, educational care, support through college, even, if a man is married, cheap insurance, guaranteed housing loans, widows' pensions and child support. And Black Johnny is taking advantage of these benefits to get ahead.

Black veterans are also re-enlisting in the Services at much higher rates than their White comrades. Here are the figures:

Army: Whites 12.8 *per cent, Blacks* 31.7 *per cent.*

Navy: Whites 16.7 *per cent, Blacks* 22.5 *per cent.*

Marines: Whites 9.7 *per cent, Blacks* 15.9 *per cent.*

Air Force: Whites 17.5 *per cent, Blacks* 26.9 *per cent.*

A top official of the House Armed Services Committee told the other day about a young Negro veteran who came to ask his Congressman to help him get back into the Army after Black militants had been pressuring him to join them.

The young Negro said: "Man, I've seen enough of war. None of the leaders have seen a real battle and know what it means. We Black men can fight for our rights, but if we fight with guns we're sure going to lose."

War is an ugly thing, but it does have a maturing quality.

INFLATION COSTS MULTIPLY

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. ZWACH. Mr. Speaker, redundant as it may sound, inflation is our most serious national problem. The fire from this destructive force caused by feeding champagne appetites on beer incomes, has so rotted and destroyed our socioeconomic bases that we must face the possibility of our Nation crumbling.

Certainly we live in a fools' world to continue our spend-happy ways and to be completely oblivious to the deepening smoke and heat arising from the fire below us.

The editor of one of the great daily newspapers in Minnesota, the St. Cloud Daily Times gives us an on-the-spot analysis of the great damage that reckless spending has already done. In order to share Mr. Harold Schoelkopf's views, I am reproducing his editorial:

INFLATION COSTS MULTIPLY

(By Harold Schoelkopf)

One of the gravest domestic problems that face the American people is inflation, and there seems to be no sure or certain remedy for it.

The American dollar, once worth 100 cents, has declined in value, at latest calculations, to something like 42 cents in buying power.

Of course, almost all residents of this country suffer from inflation, but those who are hardest hit are those who live on fixed incomes—the pensioners, the retired persons on pensions, the folks whose incomes have not kept pace with the inflationary spirals, and those whose incomes have not increased. There are even wage earners who still live on incomes set 10 to 20 years ago, and who now are forced to dip into frugal savings to meet current bills.

Meanwhile the costs of almost everything are going up and up. Our tax bills zoom upward to heights unimagined even a few years ago. The social security deductions from pay checks move higher and higher. Even our little items like fishing licenses cost more these days, and there is no apparent end in sight.

While these costs increase, those on fixed incomes are more and more moved to seek relief on public welfare payrolls, and these in turn have reached levels undreamed of. A lot of independent people who thought they had laid aside an adequate "nest egg" for their declining years, are forced to turn to the counties for enough money to give them their daily bread.

There are other folks, who have reached and passed the normal retirement ages, who cannot quit their jobs simply because the costs of their simple living cannot be met by whatever retirement incomes they may have, or the supplemental social security checks.

Retirement incomes or pensions, in some instances available only to a favored few, fall far short of providing the incomes needed for a modest livelihood, and so more and more elderly folks, who have worked most of their lives to make a living, are forced to turn to the relief rolls, or if they are still able, to try to secure some other "moonlight" jobs to make ends meet.

There used to be a time, and not so many years ago, either, as time is measured, when prudent, hard-working wage earners could set aside a few dollars a week or a month in a savings account to provide for the sunset years of life, but those times have long since passed. Now the government, federal and state, dips into those savings, and takes its lion's share of an accumulated interest, and in many cases, requires that the principal sums be included to meet tax demands.

Those of us who are now figuring our state and federal income taxes are well aware of this situation, and there is little if any relief in sight.

Taxes on homesteads, that some families have taken years to acquire, are growing so high that the householders are not any longer able to meet their tax bills, and must give up their lifetime homes to seek much more modest domiciles. The number of families forced to sell their homesteads at bargain prices is growing year by year, and the elderly folks pay the ultimate penalty of parting with their homes or having them taken from them.

These things happen in an America that prides itself on its great prosperity, the growth of its national product, the affluence of so many of its people, but what is

overlooked is the fate of so many millions of the little folks who have no relief, no redress, no forum in which to express their hardships.

Yes, indeed, this is a rich (although perilously close to a bankrupt nation) but the riches of the domain do not filter down to the people most deserving of help and consideration. Many of those elder citizens who held their heads high in past years as home owners and prompt taxpayers, are finding it next to impossible to meet their ever increasing costs of mere survival.

This is a prosperous thriving America? There are millions of persons who like to have that statement spelled out in plain language.

CONGRESSMAN HORTON SUPPORTS AMENDMENT TO EQUALIZE DISTRIBUTION FORMULA OF FUNDS IN THE MEDICAL FACILITIES CONSTRUCTION AND MODERNIZATION AMENDMENTS OF 1969

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. HORTON. Mr. Speaker, tomorrow, my colleague from New York (Mr. OTTINGER) is offering an amendment to the Medical Facilities Construction and Modernization Amendments of 1969 to eliminate the inequitable distribution of funds in the bill which favors predominately rural States.

As a Congressman whose district and State are severely affected by this inequity, and is in dire need for additional medical facilities, I fully support Mr. OTTINGER'S proposal.

The Hill-Burton distribution formula was fine in 1946—it was intended to stimulate the growth of much needed hospitals in underdeveloped States. That need has been largely met. It is now an out-dated formula because of the needs of larger numbers of people in the more populous States.

Mr. OTTINGER'S proposal will not increase the total amount authorized in this bill. It will merely allocate funds more fairly based solely on population, per capita income, and need for facilities. It will assure that the people of all States are treated fairly.

I urge my colleagues to support this amendment.

CHARLES J. EIB—ONE OF THE "GOOD PEOPLE"

HON. JOHN M. SLACK

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. SLACK. Mr. Speaker, each and every one of us serving in Congress must stand up to the buffetings of daily controversies. We attempt to reflect by our actions the wishes of our constituents so that our work will give meaning to the phrases "government of the people, by the people, and for the people." We try our best, but we do make mistakes.

Yet, when we face an uncertain outlook, when we are beset by doubts, when the choices to be made are all without promise, we do what we must because each of us is sustained by the confidence and trust of certain individuals whom we know to be "good people" back home.

They are the Americans who form the solid moral base on which all of our national power has been built. They work. They build. They hold organizations together. They set the tone of life in their communities. They take satisfaction from every good fortune met by every neighbor. Each and every one of them is irreplaceable.

Today it is my melancholy duty to take note of the passing of one such man, Charles Johnson Eib, owner and editor of the weekly Nicholas Chronicle published at Summersville, W. Va., in my congressional district. For 55 years he was connected in one way or another with weekly newspapers. During those years he was a vital and constructive force among the people of the area he served. Like many other persons who knew him, I shall miss his calm and rational counsel and his energetic good cheer. He came, he was with us for a span of years, he helped whoever he could however he was able, and now he is gone and we are the poorer for his passing.

Mr. Speaker, I commend to your attention the obituary of the late Charles Johnson Eib, along with a tribute to him by the Reverend L. Bruce Cooper and an excerpt from Publisher's Auxiliary which reported the start of his career 20 years ago:

CHARLES J. EIB

Charles Johnson Eib, 67 years of age of Summersville, Nicholas County, died Saturday morning, May 24, 1969, in the Charleston Memorial Hospital following a long illness. He was the son of the late Charles Burton and Maude Johnson Eib and was born at Peel Tree in Barbour County on the 21st day of May, 1902.

He was a member of: the First United Methodist Church of Summersville, the Board of Stewards, the Summersville Lodge A.F. & A.M. No. 76, the B.P.O.E., the Summerville Lions Club, the Summersville Chamber of Commerce, and a former official in the West Virginia press association.

Mr. Eib was Editor of the Buckhannon Record at the time of his graduation from Wesleyan College. He acquired a Journalism Degree from West Virginia University and was once selected by the Publishers Auxiliary as Editor of the Week, a national recognition, while he was owner and publisher of the Barbour Democrat at Philippi. He had been owner and publisher of the Nicholas Chronicle at Summersville, for the past eight years.

He is survived by his wife, Kathryn Jane Kincaid Eib, of Summersville, two sisters, Miss Irene Eib and Mrs. Blair Simons, both of Elkins. One niece, Mrs. Carl J. Johnson, Jr., and one great niece, Miss Kristen Johnson, both of Upper Mont Clair, N.J.

Funeral services were conducted Monday afternoon at 2 p.m., at the First United Methodist Church at Summersville with the Rev. Virgil Ware officiating, assisted by the Rev. L. Bruce Cooper and burial followed in the Walker Memorial Park at Summersville.

[From the Summerville (W. Va.) Nicholas Chronicle, May 29, 1969]

A TRIBUTE TO CHARLES J. EIB

(By Rev. L. Bruce Cooper)

Some seven or eight years ago, Charles and Jane Eib came to our town, to become neighbors and citizens with us. Being a Pastor of long service, I have watched the Town develop and grow. I soon discovered that we have received valuable citizens with the coming of Charles and his good wife to be with us. I found Charles to be a Christian gentleman in every respect. He soon became one of the leaders in helping to make this a better town and place to live.

He was for every good program both for the expansion and development of the Town, as well as one who tried always to keep a spirit of warmth and good will among all our citizens. He was never on guard to keep anything out that would divide and bring anything mean or ugly within our mids't. Charles was a Methodist and was educated in the Methodist School. Yet, he seemed that in some way he too, belonged to me. It must have been because he was interested in all Ministers and Churches, while he was loyal to his own. He was a member of our Team, the team that is ever working for the betterment of Summersville, and the happiness and pleasure of our people. God must be especially pleased with those who do justly and love mercy and walk humbly with their Lord year after year. Of their reward, the half has never yet been told. John Bunyan, in his immortal "Pilgrim's Progress" describes the Christian pilgrims when they reached the gates of the Celestial City. According to his description several of the King's Messengers came out to meet them. These were clothed in white and shining rainment, and their melodious voices echoed throughout heaven. They greeted the pilgrims at the gate. Over the gate was written. "Blessed are they that do His commandments, that they have the right to the Tree of Life, and may enter in through the gates into the city." The bells ring for Christian and his companion, and the Messengers said "Enter ye into the joy of our Lord." Good bye Charles, for a little while, we'll see you in the morning.

[From Publisher's Auxiliary]

EDITOR-OF-THE-WEEK: EIB WAS INDUSTRIOUSLY WEEDING POTATO PATCH WHEN PUBLISHER SAW HIM AND OFFERED A JOB

This is Charles Eib's birthday. The editor of the Barbour Democrat and the Philippi (W. Va.) Republican was born 47 years ago today, May 21, in Barbour county, the son of Mr. and Mrs. Charles B. Eib. He attended Belington high school and West Virginia Wesleyan college.

He started his 35-year newspaper career when he was but 12 years of age. He was working in the garden of his home, cutting out the weeds in the rows between the potatoes.

"Being in a hurry," he explained. "I was making the weeds fly, so that I could take part in a ball game which was in progress on a neighboring lot.

"Fred E. Thompson, then publisher of the Belington Progressive, a weekly in our home town, happened to pass along the street and seeing that I appeared to be industrious, stopped and offered me a job in his printing plant," Eib continues.

So began a career that included at the outset, sweeping out the shop, running errands and setting type and, years later, editing such West Virginia papers as the Buckhannon Record, Grafton Press, Follansbee Review and the Preston Republican in Terra Alta and operating jobs on other dailies and weeklies in West Virginia and Ohio.

"When Mr. Thompson purchased a typesetting machine, his sister became the regular operator," Eib recalled, "But a few months later she was offered another job, and I became the operator.

"I didn't particularly care for the printing office at first, but the $3 a week . . . came in mighty handy, so I stayed with the Progressive until I completed high school. Of course, I received several raises from my starting salary. I stayed in the business because it offered steady employment at good

wages. This work often meant long hours, but as long as one had the will to work, there was always an opportunity to make a good livelihood."

Then there was the time an auto dealer asked him to buy a new car.

"I explained I had just taken over the paper (in his home town) and was not able to make the purchase at that time," Eib said. "He insisted that I buy, and told me that he would take care of the financial end. I bought the car, and in a few weeks I received a large advertising order from a national gasoline company, for which the auto man was distributor, which amounted to within a few dollars of the price of the car.

"Neighboring publishers could not understand how I got such a large advertising order."

In Eib's opinion, the newspaper business may not be the best profession in the world, and perhaps not the most profitable, but it is one which continually offers a challenge—"to produce a better paper, to turn out a better printing job, to put over a community project."

"Then, too, there are always obstacles to be overcome," he adds. "Such as a balky machine, a new process, or new ideas to work out; one never needs to worry about what will happen next."

Eib says he has found it difficult to accumulate anything, either in equipment or money, when working on a fixed salary. It's easier, he claims, "to accumulate a little more of this world's goods as one goes along than it would be working on a fixed salary."

Eib's first venture into politics didn't prove as successful as his expertness at hoeing potatoes. He was a candidate for delegate to Democratic national convention, but ran fourth in a four-man race—"and so became cured." Formerly, he was Democratic chairman of Barbour county. He also is a former secretary of the West Virginia Journalism conference and his local Rotary club. At present, he is active in the Kiwanis club, Masons, Elks and Moose.

As to hobbies, Eib notes:

"For the past three years, I have found little time to indulge in them. Heretofore, I have been a wide reader; I like movies, too. Also, bridge, good plays, golf. Used to like tinkering with radios, and was interested in an amateur station, but have given this up. Like sports of all kinds, because sports, like life, often offer the unexpected at the most unexpected times."

AMERICA'S TURMOIL

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. CEDERBERG. Mr. Speaker, there is a growing need for our citizens to clearly understand and be genuinely concerned about the turmoil abroad in our land. The following speech which appeared in the June 9, 1969, issue of the U.S. News & World Report by James L. Robertson, Vice Chairman, Board of Governors of the Federal Reserve System, is one of the best I have read on this subject.

A "CONCERNED CITIZEN" SPEAKS ABOUT AMERICA'S TURMOIL

(A most unusual speech was made on May 22 in Omaha, Nebr., by James L. Robertson, Vice Chairman of the Board of Governors of the Federal Reserve System. It was not reported generally in the press because it was delivered by a banker talking to bankers, and he would normally be expected to discuss financial matters. But he didn't. Instead, he addressed himself in a most penetrating way to the problem of the hour in America—the disturbances and disorders and threats of revolution, particularly among the nation's youth.

(Mr. Robertson has had a wide experience in government, first as a clerk in the U.S. Senate Post Office and later as a special agent of the Federal Bureau of Investigation. After graduate work at Harvard Law School, he joined the legal staff of the Office of the Comptroller of the Currency and rose to the post of First Deputy Comptroller. He has been a member of the Federal Reserve Board for 17 years, three of these as Vice Chairman. The full text of his speech is printed below.—DAVID LAWRENCE, Editor.)

(By James L. Robertson, Vice Chairman, Board of Governors, Federal Reserve System)

A truck driver was sitting all by himself at the counter of the Neverclose Restaurant down by the depot in my hometown, Broken Bow, Nebraska. The waitress had just served him when three swaggering, leather-jacketed motorcyclists—of the Hell's Angels type—rushed in, apparently spoiling for a fight. One grabbed the hamburger off his plate; another took a handful of his French fries; and the third picked up his coffee and began to drink it.

The trucker did not respond as one might expect of a Nebraskan. Instead, he calmly rose, picked up his check, walked to the front of the room, put the check and his half-dollar on the cash register, and went out the door. The waitress followed him to put the money in the till and stood watching out the window as he drove off. When she returned, one of the cyclists said to her: "Well, he's not much of a man, is he?" She replied: "Nope. He's not much of a truck driver either—he just ran over three motorcycles."

Like the trucker's response, mine will be different, too—hopefully though without running over any motorcycles. As a central banker, I might be expected to talk about the awesome domestic and international financial problems which are the subject of my official concern. I am concerned about those problems and especially the need to combat inflation hard enough and fast enough to keep it from getting out of hand.

I will be glad to discuss those matters later, in response to questions, if first you will let me speak briefly—not as a central banker, but as a concerned citizen—about a matter which is or should be of deep concern to each and every citizen of this great land. I refer to the crisis that is manifest in the chaotic conditions that have developed in many of our institutions of higher learning, and even in some of our high schools.

I find myself increasingly troubled by these developments. It might be inaccurate to say that people are apathetic about it, but too many of us are seemingly content to be handwringer, head-shakers, and condemners. This is not the way Americans typically respond to difficulties. We tend to be activists and problem solvers. Our motto when confronted with a difficulty is: "Don't just stand there; *do* something!"

Today, we appear to have too many people, mostly young ones, who think of themselves as problem solvers and activists but who want to *undo* something. They want to undo and destroy what it has taken men centuries to build. They have an almost ferocious conviction of their own righteousness and wisdom. They see themselves as the only real devotees in the world of the true, the good, and the beautiful. But to those of us who have lived a little longer and acquired a little more knowledge, and a little more experience, what they seek is neither true, nor good, nor beautiful.

One of the advantages that age has over youth is that we have been in their position, but they have never been in ours. We know those fiery passions, that hot idealism, that unshakable certainly that one has within his grasp the solutions to all the world's problems. But experience has taught us that reason is a better guide to action than passion, that beautiful dreams of the young idealists sometimes end up as bitter nightmares, and that those men who had the greatest certainty that they had the final solution to all problems have ended up portrayed in the history books as tyrants and enemies of mankind.

This is not to say that we should discourage the dreams of the idealists and the aspirations of our youth. Quite the opposite, we should encourage those dreams and aspirations and pay heed to the expressions of dissent which flow therefrom, for there is the source of orderly change and progress. But we must teach them what we taught their older brothers, what we ourselves were taught, and what our fathers were taught—that our wants and aspirations must be tempered to accommodate the legitimate wants and aspirations of others who live with us on this planet; that other people have rights and that these rights are embodied in laws that have been worked out over hundreds of years to make it possible for men to live together in some degree of harmony and to work for common ends; that these laws are our protection against others trampling on our rights; that if we ignore or destroy the law, we jeopardize our own liberty as well as the liberty of others.

We have recently seen a distinguished Harvard professor and Nobel Prize winner explain and justify the behavior of those who would destroy the law by saying, in effect, that these young people want something very badly and they have not been able to get it in any other way. This is very much like explaining and justifying the behavior of a child who throws a tantrum in a department store by saying that the youngster wanted a toy fire engine very badly and had no other way of getting it. Sensible parents know that children must be taught at an early age that throwing temper tantrums is not an acceptable way of getting what they want. This is done by punishing—not rewarding—those who engage in unacceptable conduct.

Society must do the same. The good parent is not the permissive one who tolerates and encourages temper tantrums in children. The overwhelming majority of parents realize this and hence it is possible to walk through our department stores without having to step over the bodies of screaming children lying in the aisles pounding their fists upon the floor.

Unfortunately, this is not true of our colleges, where mass teen-age temper tantrums have become a regular part of the campus scene.

The other day the Chief of Police of Los Angeles retired after a quarter century of service and stated that he was about ready to write off a whole generation of young Americans because of their attitude toward authority. Now, we cannot afford to write off a whole generation of young Americans—not even its small minority about whom I am talking. Every generation plays a vital role in the process of keeping civilization alive. We cannot write off a generation if we hope to transmit to the generations to come the values that man has laboriously nurtured and protected over the centuries.

Our country has survived and prospered because of the ideas on which it was founded. People from all parts of the globe came here to live. They spoke a variety of languages and had widely disparate economic, social, and cultural backgrounds. Yet they succeeded in building a great nation.

A nation is more than a collection of human beings who live in the same geographical area. To constitute a viable nation, these human beings must sense a community of interest, must share a common set of operational values.

America's glory lies in the fact that it won voluntary acceptance of its values from men and women of widely different backgrounds. This was perhaps largely because so many were attracted to this wild country in its early days precisely because they were impressed by what we stood for. Many had fled from authoritarianism and tyranny, to live in a land that offered them both liberty and justice.

This has always been the kind of country that allowed wide latitude to its citizens in both speech and action. However, it was expected in return that the citizens would respect and support the institutions, laws, and customs that were essential to the survival of a society of this kind.

It was expected, for example, that the citizens would accept the principle of majority rule, and obey the laws approved by the majority.

It was expected that the majority would respect the constitutional safeguards erected to curb its power and safeguard the rights of minorities.

It was expected that when the majority decided that the national interest led the country into conflict with a foreign enemy, all citizens, regardless of their personal views or national origin, would support and defend the United States. Thus it was that Nebraska's great statesman, Senator George W. Norris, after having vigorously opposed America's entry into the first World War, declared his unstinting support for the Commander-in-Chief once war was declared.

Underlying these operational principles were some commonly accepted moral values that helped bind the American people together. We shared a belief in the Judeo-Christian religious and ethical values—respect for truth, respect for human dignity, consideration of the rights of others, and a common conviction that man had a higher purpose in life than animalistic gratification of his sensual desires.

It is true that we have made many mistakes and that our practices have not always matched our beliefs, but we have generally recognized the value of aspiring for more than we could hope to achieve. And we were generally understanding and tolerant of our human and social imperfections, knowing that it was vain to expect to build Utopia here on earth.

The ideas that made this nation what it has become—a beacon in a dark world—did not spring up overnight. They were not the product of any single individual. They grew and developed over centuries before they reached their present development here.

These ideas will not die overnight, but what is transpiring at this moment in our country is a concerted effort to bring about their demise. The turmoil on the college campuses is but a symptom of it. A minority, but an articulate and activist minority of young people—young people who may be future teachers, writers, and political leaders—apparently have been persuaded that the cementing ideas that made this a great nation are false. Indeed, some of them deny that this nation has achieved anything praiseworthy. These young people have a different set of ideas and ideals.

They believe that freedom of expression for those with whom they disagree should not be tolerated.

They believe that laws which are not to their liking should be ignored and flouted.

They believe that their country is generally wrong in its disputes with foreign countries and hence they have no obligation to give it any support or to rise to its defense.

They proclaim their respect for truth, but they show little interest in undertaking the kind of arduous and dispassionate search for facts that is essential if truth is to be found.

They profess profound respect for the rights of all men, but they physically assault those whose opinions differ from their own, invade the privacy of their offices, rifle their files, and boastfully publish private correspondence of others to achieve some political advantage.

John W. Gardner, in his recent Godkin Lectures at Harvard, put it well when he said:

"Sad to say, it's fun to hate. . . . That is today's fashion. Rage and hate in a good cause! Be vicious for virtue, self-indulgent for higher purposes, dishonest in the service of a higher honesty."

But as he and many others have pointed out, it takes little imagination to visualize the kind of state these youthful revolutionaries would create if they had the power. Constitutional safeguards for the rights of even those who arrogate power unto themselves—let alone everyone else—would cease to exist. There would be no freedom of expression. Truth would be what the rulers believed, not what objective investigation might show. Personal privacy would disappear.

The age of Orwell's Big Brother would be upon us, for the historic pattern of continuing *violent* protest is clear. First comes revolution, with the overthrow of the good along with the bad, followed by chaos, and finally by dictatorial control. Only then could the long, agonizing struggle to obtain the four freedoms begin anew.

Perhaps because of the obvious risk of losing so much for so little, some of us are tempted to say: "It can't happen here!" But it happened, in our lifetime—in Russia, Italy, Germany, all of Eastern Europe, China, and Cuba.

It could not happen here if we took greater pains to preserve and protect the operational values of our society.

It will happen here if through carelessness we permit these values to be lost to that generation that some people are already prepared to write off.

We must appreciate that changes in basic ideas take place slowly, almost imperceptibly. What has happened on our college campuses is merely a reflection of an attack on our basic ideas that has been going on for many years. When the competing ideas begin to produce the kind of overt behavior we now observe, they have already secured a strong and dangerous foothold.

The question is, are we prepared to battle for the preservation of the ideas that made this country great? Do we believe in them enough to insist that they be transmitted to succeeding generations? Or will we—beset by doubts and uncertainty—decide that it is too much trouble to stave off the onslaught of the totalitarians?

Our survival as a free nation may well depend on our answer to this question: Is it too much to ask that our youth be taught—at school as well as at home—to value and respect the ideas that have given this country unexampled freedom as well as material abundance?

I, for one, do not think we price liberty too high when we ask that those who wish to enjoy it give their allegiance to the institutions and ideas that make it possible, even while seeking to change them through nonviolent dissent.

Edmund Burke once said, "The people never give up their liberty but under some delusion."

What is the source of the delusion that has led so many of our brightest youth to place liberty in jeopardy? If we are to be more than hand-wringers and head-shakers, we must probe for the answer to that question.

For me, it is difficult to escape the conclusion that the finger points at those of us who have neglected the education of our youth, and especially at those who condone, forgive, and even justify violations of law and outrageous assaults upon the rights of others.

Would that every parent and teacher take upon himself the responsibility of conveying to the young the wisdom contained in Burke's words:

"Men are qualified for civil liberty in exact proportion to their disposition to put chains upon their own appetites; in proportion as their love of justice is above their rapacity; in proportion as their soundness and sobriety of understanding is above their vanity and presumption; in proportion as they are more disposed to listen to the counsels of the wise and the good, in preference to the flattery of knaves."

PRELUDE TO INDEPENDENCE

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. DOWNING. Mr. Speaker, each year the restored Colonial Capitol of Virginia at Williamsburg is the scene of the "Prelude to Independence." The occasion commemorates the activities of Virginians which paved the way for the Declaration of Independence, July 4, 1776.

This year we were honored to be addressed by former Vice President Hubert H. Humphrey. I am pleased to include his remarks today in the Extensions of Remarks:

REMARKS BY THE HONORABLE HUBERT H. HUMPHREY

I am grateful for the invitation to join in celebrating the memory of the Great Virginians whose decisions made here almost two centuries ago led the way to American independence.

A celebration such as this has a direct bearing on our mental health as a nation. For in a very real sense, a nation like an individual, can be a victim of amnesia. If it loses the memory of its own past, it can be at a loss to know what it is in the present, and what it wants to be in the future.

Today, I want to dwell on the relationship between living Americans and a sense of the American past. I am convinced that this matter is of central importance to all other topics now at the focus of American attention.

Every generation looks at the world through the prism of its own experiences. My own generation was no exception.

We came to maturity at a time of great trouble in the world. All units of economic value had collapsed Totalitarian dictatorship and democratic appeasement destroyed the hope for peace.

All of us knew that something was profoundly wrong in many aspects of American life. Yet, with few exceptions, my generation did not feel hostile to the whole of the American past, we did not reject the entire web of legal and political institutions we inherited from other generations. Nor did we call for their overthrow in a thrust of violence and force.

Our thoughts and actions were governed by a political equation between the idea of progress and the idea of order, on the side of progress, we insisted that laws and institutions can no more resist the need for change than a grown man can wear the clothes which fit him as a boy.

We are convinced that if the need for change was denied while life moved on, the predictable result would be a violent explosion that could shatter existing institutions.

On the side of order, we insisted that if

existing institutions were simply destroyed in the name of progress, the people would find their hope for liberty and progress destroyed in an unlimited war of all against all. There would be no standard of conduct to which all alike could appeal.

By striking a balance between the two sides of the equation, we came to a definition of our own task, namely: To cleanse and purify the body of existing laws and institutions and to retain what was best in them. That which was conserved became the foundation on which we could raise a bridge binding the American past to its unfolding future.

It would be an abuse of language to say that everything my generation hoped to do was done. Nor did everything that was done, gain the objects in view. At some points, there was a short fall between intentions and achievements.

What my generation achieved, however, was no small thing. We laid the basis for a tremendous advance in the material and intellectual conditions of American life, and for a world security system that has thus far spared us the carnage of a nuclear war.

How do things stand today?

Serious minded and vocal members of the rising generation of young people have framed a troubled indictment which demands our attention regardless of whether or not we agree with what it said. The indictment, stripped to its essentials, goes like this:

The whole order of American politics, inherited from the past, has lost its relevance in the face of rapid, accelerated and pervasive changes. These changes, differing in quantity and quality from any experiences in the past, have broken the link between public talk and the possibility of being heard, between urgent needs and the capacity of our established institutions to respond to them. In fact, the structure of the institutions, and the people who control the levers of effective power in them, makes it impossible to effect changes in society in an orderly and coherent way.

And the indictment continues:

Only a person who denies the evidence of his own senses can deny the shameful reality of two Americas in our midst—the one affluent and often indifferent, the other miserable and seething with frustration.

It is a reality made all the more offensive when placed alongside the fact that affluent America is in a position to enjoy the benefits of an economy, an educational system, and a communications network, all more highly developed in America than any other nation known in human history. Yet it chooses wilfully not to see or care very much about how the other America, the deprived America, lives.

And the indictment concludes:

There is a clinching proof that the structure of American politics inherited from the past has lost its relevance to present needs. It can be seen in the order of values which governs the mechanism of American politics when it comes to the allocation of national resources. It is a mechanism geared almost automatically to pour out limitless billions of dollars in support of armament systems beyond the limits of rational and justifiable needs.

Yet the same system strains at a gnat when asked to support programs designed to deal with dangerous conditions in our internal security—the crisis conditions in our cities, in our impoverished rural areas, the crisis conditions of inequality opportunity, the crisis conditions of hunger, unemployment, educational deprivations among the submerged one-fourth of our population, white and black alike.

It is a system geared to pour out untold billions of dollars in order to put two men on the moon, but is sullen and canker-hearted when asked to help put a dispirited man back on his feet right here on earth.

Most of the young people who have framed this anguished indictment stop with the indictment itself. They do not go on to say that existing institutions must be destroyed or overturned, or that the necessary changes of modernization should be entrusted to disorderly or even violent means.

They retain a residue of respect for the political and legal system inherited from the past.

But they demand repair and remedy—they seek above all to humanize our institutions—to broaden the base of participation and to open the avenues of opportunity. This young generation of responsible radicals is filled with anger and indignation over our failures to do what it knows can be done. Yes, impatient, angry, but not irresponsible—such are their characteristics.

They deserve our thanks, not our rebuke, to them we must listen and act. They remind us that freedom's work is never done—that the American revolution is a continuing one, unfinished and ever changing.

If we fail, the shape of our future is already visible to us in a miniature prototype. I refer to the activities and motivations of a still small group of young people—white and black alike—who have been pressing an "age-war" more virulent than any previously known in American history.

The members of this small group, whether in the colleges or the ghettos, despise the kind of social changes that are made in small steps. Change—for this new breed of rebels—must be total, beginning with an assault on all existing institutions and social relationships.

In one breath, the young rebels insist on absolute truth. "Tell it like it is." In a second breath, they are suspicious of any truth, saying that it is only a lie concocted in the interest of what they call "the establishment."

In one breath, they insist on the right for full participation in self-government. In a second breath, they say that the more a man is involved in the life of organized society, the more he is likely to be corrupted by it.

In one breath, they insist on a neat and rational order for society. In a second breath, they say that orderly thought and action imprison a man and corrupt the honesty of his responses. Orderly thought must therefore be displaced by a stress on spontaneity, by a direct response to immediate circumstances, by a purifying, discontinuous happening.

The young rebels of whom I speak are not troubled by the fact that they have no coherent program for action, or that their impulses—generous in some respects, dangerous and absurd in others—discharge themselves in almost any direction and in almost any form.

Since they view themselves as an elite—an embodiment of the total good—they feel morally armed with the right to make only their own voice heard and to gag all others.

They feel morally armed to prevent any other people from meeting, to invade any assembly or classroom, to break up any proceedings where people of divergent views seem to be engaged in a rational, groping search for a common understanding. They, the destroyers—the nihilists—to them and their tactics, we must not yield.

If there is any ground for comfort in all this, it is that we have been forced anew to consider the meaning of dissent and civil disobedience in American politics—or more particularly, the tradition of dissent and civil disobedience stemming in good part from the great Virginia dissenters whose work we honor today.

The great Virginians who labored here were not schoolboys. They were mature men, leaders in their respective communities, heads of substantial enterprises, with much to lose if they erred, they were not given to rash adventures, nor given to raising hell just for the hell of it.

Before they embarked on their great act of dissent and civil disobedience which led to a revolt and then a revolution, they carefully debated among themselves the most difficult of all political questions.

At what point does the need for "order" in the state and society take precedence over the need for "justice" in the state and society—or the other way around?

How much injustice is tolerable for the sake or order?

How shall the modes of protest be expressed? Against what objects? Decided by whom?

Who shall say if the avenues of legal relief for the redress of grievances exist in point of fact? Who shall say if these avenues exist only on paper, but not in the world of real things?

The great Virginians recognized that unless they asked and at least struggled with possible answers to these old questions, they could become useless to themselves and to the cause they intended to promote by their dissent.

They could become useless if they were to bring to their act of dissent the wrong kind of behavior, the wrong kind of strategy, the wrong sense of their own moral autonomy.

They could become useless, if the act of civil disobedience were permitted to degenerate into a breaking of all laws, good or bad, simply because they are laws.

They could become useless, even if their initial cause was just if by lack of moral and intellectual discipline they were to open the gate to indiscriminate dissent and to indiscriminate civil disobednience as a way of life.

Their act of civil disobedience was not a private act. It was not a conspiracy in a corner. It was a public act made in the open by a regularly constituted representative body of the community, a public act agreed to only after a full debate and an approving vote.

Instead of coupling their civil disobedience with a clamor for amnesty if they failed to carry their object, they made it clear that they were prepared to suffer the loss of their fortunes and even their lives if their revolt should fail.

They ventured to prove that they had resorted to civil disobedience only because they exhausted every available constitutional means for a redress of their grievances, or only because the constitutional means as they existed on paper were in fact inoperative in practice.

They made it abundantly clear that they were not protesting in the abstract, but that in breaking the law binding them to the British Empire, their object was to bring to birth the terms of a new policy under which they could live more happily.

They clearly distinguished, in the words of George Washington "between oppression and the necessary exercise of lawful authority . . ." and between the "spirit of liberty and that of licentiousness." That is why, once they had unanimously instructed the Virginia representatives at the Continental Congress to propose independence for the American colonies, they allowed no gap to develop in the legal structure of Virginia itself.

They promptly went to work on a new constitution for the independent state of Virginia—a constitution which by law, enlarged the market place for public freedom, enlarged the political space in which more Virginians than ever before would have the right of access to the public realm, to their share in public power, to participate in the conduct of public affairs with its discussions, deliberations and decisions.

In short, the whole object and achievement of the Great Virginia dissenters was to uphold the concept of law by establishing it on a broader basis of consent than had been

possible when Virginia was held in tutelage by the English monarchy and parliament.

For all these reasons, the great Virginia dissenters led the way to a durable and positive achievement in independence—as against the trail of wreckage left in the wake of some of our present-day advocates of violence.

Does politics have any answer to give to the case of America's young rebels of today who seek to manipulate other people by coercive means—by gun-play, fire-bombs, intimidation, physical assaults, kidnappings?

I hesitate to say. If, as some medical men believe, the pattern of behavior has all the earmarks of paranoia, then politics may have to be guided by the psychiatric profession in dealing with the sickness.

It is my view, however, that politics can at least keep their numbers small instead of gaining them new recruits from among young people who still retain a residue of respect for the legal and political forms inherited from the past.

Before I come to the ways and means, let me note two sets of realities that are often overlooked and that lie at the heart of our present predicament.

First, there was the oversight of the comfortable people in the United States who on the one hand applauded the actions of Dr. Martin Luther King, Jr., which gave currency to the strategy of non-violence, but who on the other hand, turned away when it came time to remedy the injustices and discriminations which prompted Dr. King into the streets.

These comfortable people saw the non-violent strategy simply as an instrument for restraining restive Negro Americans.

This oversight was the father to other things that were overlooked. For example, the very success of the non-violent methods used in getting long-needed civil rights legislation on the statute books created the illusion that the battle for civil rights was over. In fact, it had only begun.

The laws, all indispensable in themselves, had only established the conditions for legal equality between the constitutional rights of whites and blacks alike.

They did not, of themselves, achieve a condition of equity measurable in terms of concrete rights—the right to a job of decent pay, the right to adequate income if one cannot work, the right to an education which spurs rather than hobbles human creativity, the right to decent housing in safe neighborhoods, the right to a decent diet, and the right to access to the benefits of modern medical science.

Those of us who battled year in and year out to reconstruct an edifice of legal equality between the two races were not under any illusion about what had been accomplished even when the year 1964 brought the legislative effort to the peak of success.

We knew this was only a down payment on the larger and more difficult task of translating legal language into improved material conditions in the day to day life of Americans who were black.

We also knew that if there was a default or failure of nerve with respect to this larger, more difficult task, two things would happen:

First, there would be a tendency on the part of people whose hopes for a better life had been aroused, to lose faith in the normal operations of the law as the best instrument for the promotion and distribution of justice.

Secondly, and in a related degree, if the non-violent tactic which had helped get necessary civil rights law on the statute books did not lead directly to tangible social improvements, the predictable result would be an escalation of social tensions and a loss of capacity to solve the problems of social justice by peaceful means within the framework of law.

If these two melancholy predications were to be proven false, it was also clear from where the primary remedial initiative must come. It must come primarily from the privileged segment of our society. The main beneficiary of all the good things our society has to bestow.

It could not be expected to come from the segment of the American population that had been denied for so long full participation in America's economic, social and political life.

Unfortunately, the privileged segment of our society did not provide that initiative in a measure commensurate to the need. Unlike the signers of the declaration of independence they did not pledge their lives, their fortunes, their sacred honor to secure these rights.

Everyone, of course, still talks about the urgent need for peace between the white and black races in America. But what kind of peace? On what terms? Achieved how? Where? By whom?

A peace which depends on walls and moats each race builds around itself, announces on its face that the spirit of war is in the air. A peace which comes after human rages have spent themselves in violence is of the kind covered by the cry of Isaiah: "In peace is my bitterest bitterness."

Peace has something to do with the habits of the heart in the encounters of daily life, and with perceptions that are a guide to actions which are beyond the reach of the law.

It has something to do with the truth that the white and black races in America are like two mountain climbers tied to the same rope. Their fate is indivisible. If they do not move in mutual support of each other, then as surely as the law of gravity exists, they will fall together into a deadly abyss where violence will be the rival of violence.

Above all, peace has something to do with justice, with equity, and with measures in the public realm that promote justice and equity in the private realm of daily experience.

The specific things that have to be done should no longer be a subject of mystery. They were clearly stated in the report of the Kerner Commission. They were restated again a year later—this year—in the study released by Urban America and the Urban Coalition.

Through these and similar sources, we have again been told—and it is true—that poverty remains a pervasive fact of American life, and that the continued disparity between this poverty and general affluence was and remains a source of alienation and discontent.

We have again been told—and it is true—that ghetto schools continue to fail, and the small amount of progress made in improving the quality of these schools has been counterbalanced by a growing atmosphere of hostility and conflict in many cities.

We have again been told—and it is true—that there are no programs that seriously attack the continued existence of the slums.

Each of these failures states the need for remedial measures. The question is not whether we have the power of mind required to devise the social inventions that can give effective form and force to the remedial measures. We have that inventive power. And, we have the means and the resources. The question is, do we have the will—the determination. Will we make the commitment?

That inventive power and that commitment will not be brought into full play unless all of us are keenly aware of the stakes at issue. They are the same stakes which confronted the great Virginians of the American Revolution after the American War had been won—to establish a government under a new constitution for a more perfect union.

As in their case, so now in our own, we are confronted with the need to prove anew that men can establish good government through reflection and choice, rather than entrust their future to the play of accident and force.

Here I come to the second reality that is often overlooked. It is that the traditional dividing line between domestic and foreign affairs has become in all our cardinal questions as indistinct as a line drawn through water.

What we do in the world arena has a direct bearing on what we can do at home. What we must do at home, has a direct bearing on what we can and must do in the world arena. And precisely on this account—we must be clear about our national priorities. The paramount priority requiring persevering patience and yet a sense of urgency, is the attainment of peace in Vietnam, and I know that the President is as interested in achieving peace, as was the former President, and I pledge myself to support the President in his quest for peace.

The growing debate focused on the anti-ballistic missile system is only symptomatic of the more fundamental decisions that must be reached over the size and nature of military spending.

Unless we are successful now in slowing down the nuclear arms building, it can be predicted without qualification that we will be caught up in a new spiraling arms race that will cost hundreds of billions of dollars, and be meaningless in securing either side any military advantage. The level of danger will be raised—the balance of terror more precarious.

It can be predicated, further, that as this military spending accelerates, our urgent domestic needs will be neglected and our efforts to mobilize the country in getting at the running sores in our internal life will fall woefully short of need.

We may then find ourselves in the peculiar position of a people devoured from within by bitter and embittering social conflicts, while our outer face is that of a superpower bristling with weapons systems, but all amounting to a hard shell encasing an empty center.

We must come to see that our security is threatened more immediately and more directly by the missiles of hate and bigotry and injustice and violence that are loose within our own borders, rather than the nuclear missiles of the Soviet Union that are checked by the policy of mutual deterrence. And we must set our priorities accordingly.

Surely high on the list of priorities is to promptly initiate discussions with the Soviet Union directed toward halting the expansion of both offensive and defensive nuclear weapons. Already precious time has been lost.

To complicate this urgent task by injecting issues of trade and political disputes of many years standing is both dangerous and unrealistic.

To wait for Congress to act on the issue of the ABM before initiating negotiations is neither necessary nor desirable. The time to negotiate is now.

If the negotiations are successful, then we will be spared the cost of the weapons. If the negotiations should fail, we will know, at least, that we tried to save mankind from an experience of dangerous escalation in armament. The world looks to us for moral leadership. We dare not default.

Let me speak candidly: In this time of rapidly rising tension and festering alienation, to delay in coming to grips with the issue of arms control and our social and economic problems is to only intensify the danger. It is like trying to cap a volcano only to find that in the end it explodes with even greater force and destructive power.

We paid dearly in the 1960's for our failure in the 1950's to come to grips with the problems of race, urban decay, education, and poverty.

The price will be higher and the level of danger will be greater if, in the next two to four years, we fail again to set our national priorities wisely and make the national investments that the American society so desperately needs.

This cannot be a time of relaxation, of taking it easy, of again turning our faces from the unmet human needs around us.

Yes, now, as in the time of this Nation's birth, we must resort to the terribly difficult ways of civilized and rational men—fearlessly striking down that which hobbles our national growth but always with a decent respect for the opinions of others, always with a firm grasp on democratic principles and liberties, and always with an unclouded view of where we are ultimately headed. This is the spirit of the American Revolution.

I recall the words of Adlai Stevenson—"Democracy is not self executing. We have to make it work, we have to understand it . . . not only external vigilance but unending self-examination must be the perennial price of liberty, because the work of self government never ceases."

With a sense of urgency and destiny as if creating a new nation, we must ventilate the clogged stale channels of political participation and social opportunity. The refreshing winds of change must be directed to constructive purposes through debate and dissent—through dialogue and discussion—until decision and direction are achieved.

This is the meaning of government by the consent of the governed—the social contract of equals. To do less would be disrespectful of our heritage and unworthy or our priceless legacy of freedom and independence.

ABM DESERVES "YES" VOTE

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. LIPSCOMB. Mr. Speaker, a great newspaper, the Los Angeles Times, editorially endorsed the "Safeguard" ABM system on June 1.

The Sunday editorial on the ABM issue stated:

The Times, after careful weighing of the arguments on both sides, urges Congress to vote "yes."

It further states—

This recommendation is based on the conviction that such action offers the best hope of preserving the credibility of our strategic deterrent without jeopardizing prospects for an arms limitation agreement with Moscow.

For review by my colleagues, the Los Angeles Times editorial is inserted in the RECORD under leave to extend my remarks:

[From the Los Angeles Times, June 1, 1969]

ABM DESERVES "YES" VOTE

(ISSUE.—President Nixon's ABM proposal has been debated for weeks. Has anyone come up with a workable alternative?)

For weeks a national debate has raged over whether Congress should vote "yes" or "no" on President Nixon's proposal to go ahead with the prototype phase of the so-called "Safeguard" system of antiballistic missile defense.

The Times, after careful weighing of the arguments on both sides, urges Congress to vote "yes."

This recommendation is based on the conviction that such action offers the best hope of preserving the credibility of our strategic deterrent without jeopardizing prospects for an arms limitation agreement with Moscow.

Although the fact has tended to get lost in the confusion and acrimony of debate, Mr. Nixon is in full agreement with the ABM critics on the fundamental importance of a Soviet-American accord on arms limitation.

Such an agreement, negotiations for which are expected to begin in July or August, would enable us to channel more money into education, housing, urban transportation, job training, etc., without any impairment of our national security.

If past experience means anything, however, the talks are likely to drag on for years. Meanwhile, we cannot rationally ignore the potential peril represented by the continuing Soviet buildup in offensive missiles and missile-firing submarines.

The great attraction of the Administration's Safeguard proposal is that it offers the President a relatively inexpensive means of keeping his options open in a period when nobody knows whether the Russians will opt for arms control or an intimidating nuclear capability.

No one, least of all President Nixon, questions that as of now we could absorb a surprise Soviet missile attack and still have enough missiles and bombers left to destroy the Soviet Union in retaliation.

But, as the President has observed, the Russians may be "substantially ahead of us in overall nuclear capability" by 1972 or 1973—if we stabilize our forces at present levels while they continue building ICBMs and Polaris-type submarines at the recent rate.

At best, U.S. acceptance of an inferior power position would leave the world vulnerable to nuclear blackmail on the part of the Soviets.

At worst, it could tempt the Soviet Union into believing that it could make a surprise nuclear attack on the United States without suffering devastation in return. Obviously, the problem is to keep them convinced otherwise—but by means which will not endanger an arms control agreement.

President Nixon's answer is Safeguard—a limited ABM system which admittedly could not protect U.S. cities from a Soviet saturation attack, but which is designed to insure the survivability of enough Minuteman ICBMs to deter the Russians from making the gamble.

Safeguard's total cost is estimated at $8 billion, including warheads, if it proves necessary to build the whole system. But President Nixon has made it amply clear that he hopes it will not be necessary.

In essence, the President is asking congressional approval to go forward on two prototype installations for completion by 1973. Cost of the prototypes is estimated at $2.1 billion—or an average of $400 million annually for five years, which is just about one-half of 1% of our total defense budget.

Whether the rest of the system ever would be built depends upon the progress of arms control talks. Construction even of the prototypes could be halted anytime a workable system of arms limitation is agreed upon.

A number of prominent scientists have expressed skepticism that Safeguard will actually work. But equally prominent scientists are convinced that it will.

The Russians are unlikely to gamble on who is right. As one eminent scientist put it, "They will be deterred by the very fact that it might work"—and deterrence, after all, is the name of the game.

Another charge by the critics is that Safeguard will endanger the arms control talks. But the Kremlin, which already has an ABM of sorts around Moscow, has given no such indication.

Several alternatives to Safeguard have been proposed, but none appear to offer the same combination of protection for our deterrent and consistency with the goal of arms control.

We could, for example, step up deployment of offensive missiles to offset the Russian buildup, but this might indeed look provocative to the Kremlin and impair chances of ending the arms race.

Another alternative, previously favored by The Times, would be to hold off on approval of Safeguard pending a reading on the progress of the arms control talks.

But the negotiations may go on a long time. And the Administration argues persuasively that if Safeguard does not go forward now, costs would go up and it could not be built in time for the potential period of peril beginning in 1973.

In the absence of a "compromise" that will satisfy this objection, Congress should vote "yes" on Safeguard.

IDAHO BUSINESSWOMAN FOILS CRIME

HON. JAMES A. McCLURE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. McCLURE. Mr. Speaker, the Idaho Federation of Business and Professional Women's Clubs brought to my attention some time ago the heroic act of one of their members, Mrs. Langdon, of Twin Falls, Idaho. This week, that organization will honor their former State president for the brave action which probably prevented serious harm to a small child.

I include in the CONGRESSIONAL RECORD at this point, a copy of the article which describes the incident. I am sure you will all be heartened to learn that there still are those fine American citizens who are willing to become involved in the events surrounding them.

The article referred to follows:

BUSINESS AND PROFESSIONAL WOMAN ACTIVELY ENGAGED IN CRIME PREVENTION

Under a heading "Twin Falls Citizens Praised for Getting Involved" in the Times News of Twin Falls, Monday, August 5, 1968, is the following news item:

"Action by a Twin Falls businesswoman and several other concerned citizens drew praise Monday from Twin Falls Police Judge Harry Turner.

"Judge Turner said that in the present day, when everyone is more concerned with not getting involved than helping a fellow man, it is encouraging to find citizens who will get involved in the interest of justice.

"A Twin Falls city police report Monday showed that Mrs. Marion Langdon probably prevented a serious crime Sunday when she bothered to go to the assistance of a crying child.

"Mrs. Langdon witnessed a man take the youngest, a little girl, and lead her toward a house. They first entered the house, then immediately left going to a shed at the back of the property. At this point the little girl began crying.

"When Mrs. Langdon when to the child's assistance and questioned the man as to whether or not he was the child's father, he ran. She called to a passing automobile and others in the area to follow the man while she called the police department.

"Officers reported the man was in custody of four other interested citizens when they arrived.

"The suspect was in custody Monday charged with disorderly conduct and being drunk in a public place.

"Others who assisted Mrs. Langdon were identified on the police report as Jim and Rick Lockhard, Kimberly; Jim Ledbetter, 436 Jefferson Street and Charles McNiel, a serviceman home on leave from the U.S. Navy.

"The three children told officers a man gave the older youngsters money to go to the store and gave the little girl two quarters to go with him."

(NOTE.—Mrs. Langdon, who owns and operates a business in Twin Falls, is a past state president of the Idaho Federation of Business and Professional Women, and is a member of the Mountain Home BPW club. She is certainly living according to our Collect, and is "out in front" in preventing crime. Congratulations, Marion). (Marion also was selected Idaho Mother of the Year several years ago.)

A PEOPLE TO PEOPLE IDEA—A PARTNERS PLANE FOR PEACE

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. FASCELL. Mr. Speaker, 3 weeks ago today, 351 delegates from 17 nations of the hemisphere rose to their feet and cheered the approval of a resolution which asked President Nixon to make available one aircraft to serve the cause of peace and understanding in the hemisphere.

These Partners of the Alliance delegates were from 37 States and from 38 areas of Latin America. They were meeting in Salt Lake City in search of new ways to carry the Alliance for Progress to the people through self-involvement.

In 1968, citizens in the Partners of the Alliance in the United States sent more than 660 tons of agricultural, educational, and hospital equipment to their Partners in Latin America. All packing and shipping arrangements were made by those private citizens, but the tragedy, Mr. Speaker, is that countless tons of additional equipment and large numbers of technical assistance volunteers could have been added to the development resources had transportation been available.

It is my understanding that the Partners have not been able to accept many contributions of excellent equipment because their warehouses already are bulging with an estimated 800 tons of equipment that despite their best efforts they are unable to transport.

In 1968, 350 volunteer technicians were involved in Partners development projects with transportation assistance from AID. During that same period, however, 1,250 additional volunteers from the United States and 560 program volunteers from Latin American nations traveled on Partners project missions under private funding. Though this is an outstanding record of private response to the challenge of the Alliance for Progress, it is again a tragedy that countless other professional and technical volunteers who were ready to give of their time and talents were unable to do so because of a lack of transportation assistance.

While the ship *Hope* plows the seas in its great humanitarian undertaking to teach and to heal, the time has arrived for another bold effort—a Partners' Plane for Peace—which can bring the citizens of the hemisphere together in an even closer working relationship.

Mr. Speaker, the resolution adopted at the Fourth Inter-American Conference of the Partners of the Alliance pointed to the thousands of aircraft assigned to military and defense purposes throughout the world. The resolution petitioned the President to assign one plane to serve the cause of peace and understanding in the hemisphere. I join with the citizens of the 75 Partners committees throughout the hemisphere in asking that a Partners Plane for Peace be made available to match people and equipment with needs and opportunities.

CHAUTAUQUA INSTITUTION

HON. JAMES F. HASTINGS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. HASTINGS. Mr. Speaker, I am pleased to call attention of the House to an article in the Washington Post concerning one of the most notable centers in the world for education, entertainment, culture, and recreation.

The article deals with Chautauqua Institution, an expansive, tree-shaded summer colony on the shores of Lake Chautauqua in southwestern New York State. There is not anything like it in the Nation today which typifies more the essence of America.

Under the leadership of its president, Dr. Curtis W. Haug, Chautauqua Institution today is a worldwide showcase for all that is superlative in the arts, music, and literature as well as serving as a forum for figures of national and international prominence in all fields of endeavor.

Presidents have made some of their most important pronouncements from the platform of the amphitheater. President Franklin Roosevelt made his famous "I hate war" speech there and Theodore Roosevelt called it the "most American spot in America" and truly it is.

The above-mentioned article follows:

CHAUTAUQUA

(By Matilda D. Mascioli)

"It's an institution," claims its president. "It's a crazy house!" counters a wag. "It's where you find your thing," adds a teenager.

It's all of this and more. For snuggled on the shores of a lake in the southwestern corner of New York State is a spot for a family vacation. It's Chautauqua—the place Teddy Roosevelt called the "most American spot in America."

Though Chautauqua was founded in 1874 by the Rev. John Heyl Vincent, a religious editor, as a retreat for Methodist Sunday school teachers, today it is a bubbling, booming cultural mecca. No less than the beat of Count Basie thumps out over the waters of Lake Chautauqua.

"Don't confuse us with those traveling tent shows, orators and revivals you've heard about," bristled an old-timer in a rocking chair on the veranda of the Athenaem Hotel as she watched the day's arrivals and departures. "They took our name but had no ties with us. Those circuses folded up in the '20s and we're still here!"

At Chautauqua you can write—or read—a poem or a novel; play the violin, oboe, flute, or horn; take ballet lessons, birdwatch, weave, paint; see a movie, opera or play; attend concerts or lectures on world crises; get expert tips on the stock market. You can even learn to tune a piano. Or you can just loll by the lake, swim, cruise, water ski, go fishing, hike in the woods and play shuffleboard.

You name it; Chautauqua has it. Everyone is encouraged to be himself, improve himself, and to have fun doing it.

Last year over 50,000 persons spent at least a day or all of an eight-week season pusuing the program of fun and fact-finding that the Chautauqua institution offers every July and August. The town swarmed with people of all ages, from babies in perambulators to senior citizens with canes. A large proportion were young people.

A gatehouse and a high fence around the grounds mark Chautauqua on New York State Highway 17J, 16 miles north of Jamestown. Entrance is by paid admission. Daily, weekly, or season tickets range from $1 for a 12-hour weekday stay to $60 for the entire eight-week season. The gate fee entitles admission to practically all events except operas, plays, classroom courses and a few special programs.

A gateway parking lot takes care of your car for the duration of your stay. Cars are permitted on the grounds only for deliveries and unloading or loading of baggage. "In Chautauqua you walk," commented our rocking-chair informant. "Even people with chauffeurs have to walk for we've left many of our fine old trees standing right in the middle of the streets."

Rooms and apartments are also available in private homes and church houses. Pleasant eating places are everywhere, all with extremely modest prices. A note to the Publicity Department, Chautauqua Institution Chautauqua, New York 14722, will bring you a packet of pamphlets.

The biggest bargain is the ten-cent, round-trip scenic bus ride of the 700-acre enclave. The route starts and ends at Bestor Plaza, the town's hub. Radiating off Bestor Plaza are quiet, narrow streets shaded by enormous trees. Small, square houses with verandas, curlicued cornices and handkerchief lawns line both sides. Round globes, nostalgic of a past era, light Whyte street, the main intersection.

As the bus jogs along you become aware of bird warbles mingling with violin arpeggios, piano cadences and flute tones—the "cacophony of Chautauqua." What appears to be a scattering of shacks in the woods turns out to be "Piano Village," a series of studios for piano practice. George Gershwin wrote his "Concerto in F" in one of them.

An eight-sided white building stands at one intersection. Over the door a sign reads "The Octagon Poets." There recognized and fledgling poets meet to read, discuss and write poetry. On the lakefront is the ballet studio. Around the bend are the Boys' and Girls' Clubs.

At the other end of town is the Recreation and Education Center. Classes start with 3-year-old toddlers who learn to use toys, books, playground slides, seesaws and sand piles. For high school youngsters there are courses in English, history, mathematics, the sciences and typewriting. For college students and adults the program offers not only usual studies with particular emphasis on the arts, but also such topics as fund-raising techniques, study of the Chinese language, and—as a sign of the times—a seminar on narcotics education.

Everyone is bound sooner or later to meet in the amphitheater, a 7000-seat open-sided structure where lectures, religious services, movies and jam sessions take place.

But the temptation to relax lures many away from all this intellectual stimulation. A cruise on the "Gadfly," which tours the lake, shouldn't be missed. The lake is famous

for muskie, which the New York State Conservation Department breeds in hatcheries just above Chautauqua. Water skiing, canoeing and sailing regattas are all part of the program.

ROMULUS TOWNSHIP BEGINS HOME CONSTRUCTION

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, I would like to call the attention of my colleagues to a successful program now underway in the township of Romulus, in my congressional district, to provide low-rent housing for families who will be relocated because of an urban renewal project.

Utilizing the Department of Housing and Urban Development's turnkey program, Romulus Township has begun construction of 101 homes on scattered sites in the community. This project is an excellent example of how local communities are making effective use of the many and varied programs that have been authorized and funded by Congress.

Romulus Township officials made their first application for this program in September 1966. Working closely with my office and with the Department of Housing and Urban Development, they obtained $15,000 in planning funds early in 1967.

On January 10 of this year, the Department approved a $1,906,334 loan to enable the community to proceed with its plans. The homes will include 52 duplexes and 49 single-family units. They will be built by the Urban American Land Development Company, and then purchased by the township's Housing Commission for rental. Annual contributions by the Federal Government will enable the Commission to keep the rents within the means of low-income families.

The Housing Commission will sell long term bonds to repay the HUD loan, and then retire the bonds with the rental income.

I am very proud of the farsighted community planning on the part of Romulus officials which has made this program possible. I am also proud to be serving in a Congress which has enabled local communities to solve their problems through cooperation with Federal agencies.

Romulus Township is a community of nearly 20,000 persons, with an area of 36 square miles, making it one of the largest municipalities in my district. The township has already made some moves toward becoming a city, and all recent estimates show Romulus to be on the verge of a great population boom.

The low-rent housing program was conceived and brought into being by a dedicated group of officials, which includes Roderick Smith, supervisor; Alfred J. Perry, clerk; Joseph Wallis, treasurer; and Trustees Ellis Pennington, Jimmie C. Raspberry, and James Stewart.

Others who have served as township officials during the past 3 years include Edmund Bizek, supervisor, and Norbert Wegienka, trustee.

Current members of the township's Housing Commission are Eugene Wilson, president, and John Guerst, Felix Rogalle, Ernie Davis, Sadie Ward and Donald Harris. Former members are Vira Petraska, Bernard J. McGrane, Alfrida Melvin and David Layne.

To this outstanding group of public servants, I offer my sincere congratulations for an excellent example of how enlightened cooperation between Federal and local agencies can help progressive communities plan for the future, and put Federal tax dollars to work on local projects to benefit local residents.

WHAT EISENHOWER REALLY SAID

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. BOB WILSON. Mr. Speaker, in recent months, reams of paper have been devoted to speculation and comment on former President Eisenhower's parting words regarding the military-industrial complex. A great deal of distortion has crept into the original meaning of his words. The following editorial from Navy magazine put the General's words regarding defense industries and the necessity of maintaining a strong defense posture into a more balanced perspective and I include this editorial in the RECORD:

WHAT EISENHOWER REALLY SAID

When the tough old soldier finally succumbed at 79 after an unprecedented number of heart attacks and other illnesses, the nation lost one of the greatest and certainly the best loved leaders of our age. We still leave to history a detailed appraisal of Dwight D. Eisenhower's record as Allied Commander in Europe in World War II and as President of the United States. He had his critics during both periods, particularly as President. But if he failed to do some things some people feel he should have done, Ike unquestionably was victorious in war and successful in keeping the United States prosperous, strong and at peace during his years in the White House.

His breadth of view was well known. He coined the term "parochial" for those military leaders and others who judge things only by partisan or preconceived concepts. Although a West Pointer, General Eisenhower immediately saw the tremendous advantages of the Polaris submarine and a nuclear power surface Navy and pushed such developments more than any other President. He backed aircraft carriers and strategic air and missile power, often to the dismay of the Army. We say no more about the late former Commander-in-Chief for two reasons. NAVY published a full length article about him in March. And we feel the urgent need to comment on a current movement which uses another term he coined.

We refer to the powerful current of anti-militarism that is sweeping the country which blames "the military-industrial complex" for most of our current ills. In his farewell address as President, Ike warned against the *potential* danger of large armed forces and a huge arms industry gaining "unwarranted influence" in our nation, while at the same time stressing that both were "vital" to our survival.

The phrase, quoted completely out of context, has become the catch-word, the spearhead of an attack against anything concerned with maintaining an adequate U.S. national defense and almost everything America has stood for. Not only the militant radicals, but respected liberal Senators, editors, columnists, commentators, scientists and professors have used the phrase as "proof" that not only should defense spending be drastically cut to add billions immediately to solve the real problems of poverty and the cities, but also in support of anything they personally oppose concerning the military. They lose sight of the totally important factors of military strength needed to preserve the Republic.

These sophisticated leaders of American thought—who are quick to accuse others of the crime of lifting statements out of context—use the bare phrase or a sentence or two of Eisenhower's comment in a way that undoubtedly would distress him if he were here. The alleged "military-industrial complex" is cited constantly as a reason to vote down the ABM, new warships, planes, and other proposed weapons systems. The term appears in every argument for abandoning the ROTC, military research at universities, barring military or defense industry recruiters from campuses, ending the draft and in favor of any number of unilateral disarmament proposals, pulling out of Viet Nam without honor and turning the other cheek at whatever North Viet Nam does to us.

Eisenhower's oft-quoted warning about the dangers of a combination of large armed forces and a big defense industry did indeed warn of the "potential for the disastrous rise of misplaced power" which could endanger American liberties and democratic processes.

But this was only a small part of what he said in a speech primarily concerned with his great desire to maintain peace. He warned against the danger of global Communism, and then said:

"A vital element in keeping the peace is our military establishment. Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction."

He noted that the U.S. military organization and American industry had greatly changed since pre-World War II days, when we had no armaments industry and when "American makers of plowshares could, with time and as required, make swords as well."

"But now," he added, "we can no longer risk emergency improvisation of national defense; we have been compelled to create a permanent armaments industry of vast proportions" and a 3.5 million man military establishment. His warning against the "potential" of a "military-industrial complex" gaining "unwarranted influence" and endangering "our liberties or democratic processes" followed.

What Life magazine called the current "highly emotional general attack on the U.S. military establishment" has stimulated new Congressional investigations into Pentagon "waste" and charges that the "military" has dominated U.S. foreign policy, overcommitting the nation around the world. There has indeed been "waste" in that a number of weapons systems have been cancelled either because they failed to measure up to standards, were outmoded before they were ready, or were late and costs ran up and performance improvement proved marginal. But war is waste, and this is the nature of the game. Pentagon decision-makers must agonize between chancing mistakes on risky new weapons with great promise or catastrophe if they wait until the other side achieves some technological breakthrough that would leave the United States open to attack. Russia has been building a new prototype fighter plane almost every year and scrapping it in favor of a new model. All nations always have done the same thing with the same results and the same charges of "waste." Some of

it could have been avoided, and top military officers must bear a share of the blame.

But it is important to note that civilian leaders, not only in the Pentagon but also in the White House and State Department, for the past eight years, have made the major decisions on weapons systems and strategy—not the uniformed leaders who now are getting the most criticism. They did not make the decisions on major strategy in the Viet Nam War, on the Bay of Pigs, in the Cuban Crisis, or in leaving the Northwestern Pacific so unguarded as to make the *Pueblo* and EC–121 incidents possible.

Military officers, unhappy at being the targets of recent attacks, resent even more the fact that General David M. Shoup, retired Commandant of the Marine Corps, and long a military maverick, joined the assailers with a vitriolic attack on the officers corps as the leaders of the "military-industry complex" in an article in Atlantic magazine. He accused many of them, in effect, of being "war lovers." Another retired Marine officer, Colonel Robert Heinl, now military analyst of the Detroit News, accuses Shoup of "going sour" on his profession and country because of frustrated "political ambitions" and a "desire for publicity."

The origins of the present attack on the military are clear. General Earle G. Wheeler, chairman of the Joint Chiefs of Staff, blames it on "frustration" against the Viet Nam War, which "has gone on so long," with no clearcut outcome, along with a rejection by many Americans of our involvement in "other nations' security affairs" in unpopular wars like Korea and Viet Nam, as well as the huge cost of new weapons.

There is no question but that U.S. military policy and force levels are in for a thorough reexamination. But this can have its good side. In reviewing overseas commitments including the maintenance of many divisions and air units in Europe, which Mr. Eisenhower criticized, Congress can take a good look at alternate and more economical strategies, such as the seabased one. But, looking back on history, we are concerned lest the new wave of antimilitarism gets out of hand. We recall the fervent belief in the '20s of the Kellogg Treaty solemnly outlawing war. And how Senator Gerald Nye, and his Subcommittee Counsel, Alger Hiss, almost convinced the American people, in a highly publicized Congressional investigation, that the "merchants of death" (munitions makers) were largely responsible for wars, causing many Americans to ignore Hitler and other aggressors. Somehow, the current attack on the "military-industrial complex" smacks of the Nye-Hiss "merchants of death" campaign of the '30s which almost left America unguarded when World War II came.

FARM GRAB

HON. ROBERT H. MOLLOHAN

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. MOLLOHAN. Mr. Speaker, last week this body imposed a limitation of $20,000 on the Federal aid to any one farm. Since then, there have been a number of editorials from newspapers in my home district in West Virginia, and not one of them has opposed that restriction.

Representative of the feelings of these newspapers in the State of West Virginia, the Intelligencer of Wheeling. This newspaper has long served West Virginians by being a watchdog of Government spending and Government programs. The following editorial is another effort to save money for the taxpayer by that newspaper:

[From the Intelligencer, May 31, 1969]

FARM GRAB: CORPORATE WINDFALLS ONLY CASUALTIES OF CEILING ON BENEFITS

The $20,000 farm aid limit voted by the House of Representatives strikes this newspaper as the soundest piece of agricultural legislation advanced in a long time.

Yet the proposal already is under fire, and from no less a person than the new Secretary of Agriculture, who has expressed the hope that "The Senators will reverse this action."

Mr. Hardin's reasons, as reported in Washington press dispatches, seem a bit obscure. He is not, he told reporters at a press conference called to explain his viewpoint, judging the "morality or ethics" of big benefit payments to large corporate farmers. But he doesn't feel that this is the appropriate vehicle for dealing with the subject. The House tacked on the $20,000 ceiling as an amendment to the agricultural appropriation bill. Hardin says the time to consider the subject of benefit limits is when Congress takes up revision of general farm programs next year.

The time to slap on a limit, if it is to be done at all, is now when the business at hand is the appropriation of money. If, as the Secretary of Agriculture seems to feel, there is danger in the limitation of reactivating an old cotton program under which big growers would continue to get unlimited support, Congress assuredly can take care of that in separate legislation. By next year the political situation may be unfavorable.

The big stated purpose of agricultural aid as it has evolved during the past quarter of a century or so was rescue of the family farmer. It hasn't worked out that way. Farm families by the millions have been deserting the land, more and more of their acreage falling into the hands of big operators who took advantage of the federal subsidy to expand their holdings.

It was inevitable, perhaps, even desirable, that agriculture, especially where big crops like grain and cotton are concerned, would become big business in the mass production sense. But there is no more economic reason or social justice in subsidizing a big mechanized farm than in helping a steel mill or a coal mine.

The House has taken a first step in a good direction by putting a ceiling on the amount any individual operation can collect. Unlike Mr. Hardin, this newspaper hopes the Senate supports rather than reverses the House action.

A BLUEPRINT FOR PEACE IN VIETNAM

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. DON H. CLAUSEN. Mr. Speaker, today President Nixon departs for Midway Island for a round of talks with President Thieu of South Vietnam. From these meetings could come new and innovative alternatives toward ending the war in Vietnam, and securing a viable and lasting peace throughout Southeast Asia.

Yesterday, I was privileged to communicate to the President some of the views of us in the Congress and throughout the Nation share regarding our overinvolvement in Vietnam and the search for peace there that we all so diligently hope and pray will soon come to pass.

Today, I should like to share with my colleagues some of the thoughts and recommendations I have conveyed to the President on the eve of his departure for Midway.

One of the real agonies of Vietnam, which explains in part, not only our involvement in the war but much of the dissention, confusion, and misunderstanding that prevails over this question, has been the failure of the past to explain to the American people the historical background that led up to the deployment of U.S. fighting men in the Vietnam conflict.

The plain truth is, that the people in this country have never been told the full story or the complete truth about the virtual collapse of the Southeast Asia Treaty Organization—SEATO—and its inability or refusal to respond and provide security for free people when aggression first "raised its head" in South Vietnam. Regrettably, SEATO, the regional security organization, established under the U.N. Charter for the purpose of defending free people and free nations against aggression has flatly failed to effectively respond or "handle" the threat to these countries' internal security.

Another failure, with regard to informing the American people, has been to neglect "telling it like it is"—that this conflict in Vietnam is a "new kind of war" commonly known as "guerrilla warfare"—completely unlike the conventional wars of the past. In a conflict wherein unconventional strategy and tactics are employed by the enemy, many people are still trying to evaluate and make judgments on the conduct of the war using conventional terms.

Back in August of 1968, Candidate Nixon had this to say before the platform committee in Miami:

The (Johnson) Administration has either not recognized that this is a new and more complex kind of war, or has not seen its significance. The result is that the old style, conventional military aspects have been overemphasized, and its other dimensions—psychological, political, economic, even diplomatic—have gotten too little attention. . . . We need far greater and more urgent attention to training the South Vietnamese themselves, and equipping them with the best of modern weapons. As they are phased-in, American troops can and should be phased-out. This phasing-out will save American lives and cut American costs. Further, it is essential if South Vietnam is to develop both the military strength and the strength of spirit to survive now and in the future. It is a cruel irony that the American effort to safeguard the independence of South Vietnam has produced an ever-increasing dependency in our ally. *If South Vietnam's future is to be secure, this process must now be reversed.*

This is precisely why I have, since 1965, advanced the so-called phase-in/phase-out concept through the creation of a free Asian security force which would, on a carefully conceived, realistic, and methodical timetable, phase-in motivated, trained, and properly equipped South Vietnamese and other Southeast Asian manpower as U.S. troops are phased out or phased back to the initially acceptable advisory and supporting role previously agreed upon as the U.S. commitment to those SEATO countries threatened with Communist subversion or aggression.

Such a security organization, in my

judgment, is the only way in which free nations in Asia will be able to fill the security vacuum that was created around the free nations of Asia following the withdrawal of the French security forces from that part of the world and the subsequent reluctance on the part of SEATO to fulfill its defense obligation to the participating nations.

That the United States had to respond at all to the conflict in Vietnam is totally unrealistic when you stop to think of the 1 billion people in Southeast Asia who are perfectly capable of defending themselves.

This is why I firmly believe and strongly recommend that, if we are to prevent future Vietnams, SEATO must either be updated and revitalized—or replaced by a mutual and more viable security organization in Southeast Asia that would require a pro rata sharing of the manpower needed from each participating nation to provide the security that is now totally lacking in the Pacific Basin communities.

Since January of this year, a concerted effort has been underway to provide the training and modern equipment needed by South Vietnam's armed forces to permit them to assume their rightful burden and increased responsibilities for the actual conduct of the war until such time as a reasonable and honorable settlement of the conflict can be negotiated in Paris.

Thus, as I see it, the "phasing-in" stage is, in fact, well underway and this is the direction we must take.

In an editorial appearing in the Hearst newspaper in March 1968, Editor in Chief William Randolph Hearst, Jr., had this to say:

Now here is the crux of my thinking. The U.S. has some 500,000 men over there fighting their war. This is about one man for every 400 of our total population. If the Asian countries only equalled this effort—and they should do more with the enemy at their borders—they could, and should, field an army of around a million. Besides this great numerical advantage, it would have a tremendous psychological effect. Right now, Ho Chi Minh has the advantage of being able to say he is fighting what he calls white imperialists. With a million or more Asians facing him on the battlefield, the picture would be put in proper perspective, to say the least.

Mr. Hearst and I have consistently agreed on this approach. Unbeknown to each other, Bill Hearst and I were publicly expressing similar points of disagreement and disenchantment with the conduct of the Vietnam war. He wrote an editorial, "Plugging the Dike in Vietnam," while I developed a "blueprint for peace"—the "phase-in, phase-out" concept through the creation of a free Asian security force."

Our suggestions were similar then, and if you read President Nixon's platform statement of 1968, you will note the same ring of similarity in his announced objectives and recommendations for a satisfactory solution to the Vietnam problem. I am pleased to see him following through on his previous position.

I am also pleased to see President Thieu traveling to and communicating with other Southeast Asian leaders. This is absolutely essential if we are ever going to develop the firmed-up SEATO or free Asian security organization required to help solve the Vietnam problem and prevent further Communist encroachment and/or subversion of the other free Asian countries of South Korea, Taiwan, the Philippines, Indonesia, Singapore, Malaysia, Thailand, Laos, Burma, Cambodia, Australia, and New Zealand.

We, in the States, have 200 million people. There are 1 billion people in Southeast Asia. Is it not fair to expect that the prime source of manpower required for the "antiguerrilla" and "counterinsurgency" ground forces come from these countries that have the primary threat to their security?

I say absolutely, and it is this message I have asked President Nixon to convey to President Thieu and all the free Asian leaders:

As I said in the CONGRESSIONAL RECORD of March 18, 1968:

My own judgment is that such a program is feasible—that the manpower is available, that the idea is practical, logical, and fair, and that the free Asian nations can be convinced of this diplomatically . . . It suggests a broad but positive and orderly plan for reducing U.S. involvement in Vietnam without any sacrifice to our basic security requirements. Further, it would place the conduct of the war in the hands of the Asians themselves, who must now take a new look at the ground rules.

With security as the key, I can forsee the Free Asian Security Force providing the type of security that SEATO and the U.N. were expected to provide.

Eventually, however, there must emerge the kind of regional cooperation among the nations of the Pacific Basin that will promote economic growth through a type of Asian-Pacific Common Market. How can this be accomplished? Here we can export our free enterprise system in the same way we helped Japan recover from the ashes of World War II to become the strongest economic power in the Far East in less than 15 years.

As President Nixon has said:

Vietnam does not exist in isolation. Around the world, we should mobilize our diplomatic forces for peace . . . We need such an effort not only to speed an end to the war in Vietnam, but also to lay the groundwork for the organization of a lasting and larger peace. Certainly one of the lessons from the agony of Vietnam is that we need a new diplomacy to prevent future Vietnams.

The potential for future Vietnams is all around us—in Laos, Thailand, Burma, South Korea, the Mideast, Eastern Europe, in Africa, and South and Central America.

If we are, in fact, going to avoid future entanglements such as Vietnam, then, certainly, a "new diplomacy" must now be forged out of the jungles and the graveyards of Vietnam. A diplomacy, I submit, that places far greater emphasis on political, diplomatic, and economic initiatives—rather than on military crusades. As there is, as President Nixon has said, no military solution to the conflict in Vietnam, neither is there a military solution to present or future foreign problems.

The world has grown weary of war and in our quest for peace, we have become embroiled in such national controversy as whether or not Saigon should have a so-called "coalition government." In the first place, President Nixon has not suggested or proposed a U.S.-imposed "coalition government" on the people of South Vietnam. Instead, he talked of "free and open elections" by all the people of Vietnam and their right "to self-determination." Quite frankly, this is not a proper or fitting matter for the United States to determine and I believe the President has made this absolutely clear.

In this regard, I believe we should stop kidding ourselves. In Communist terminology, "coalition government" is a tool whereby the Communists are handed a tool for the complete domination and imposition of their will on the people concerned. We have seen this pattern develop not only in Eastern Europe after World War II, but more recently in Laos where the Communists are "using" Laos as part of the Ho Chi Minh Trail to ferret men and supplies to South Vietnam.

The key point I want to make is this:

Can you imagine the impact a strong free Asian security organization would have on the negotiators from Hanoi, the Soviet Union and Red China—North Vietnam's principle military equipment suppliers?

As Mr. Hearst stated:

If the Asian countries equalled our effort, they could field an army of a million men.

If Hanoi and the Communist negotiators in Paris fully realized that they would have to face the manpower supplied from 1 billion Asians backed by our military and technical training programs, I think they would change their attitude and their "tune" at the negotiating table in Paris.

Simultaneous to this, however, we must demonstrate by deeds, not just words, our strong desire and intention to cooperate economically and diplomatically to help accelerate free nation building in their part of the world, with all of the associated benefits—the most important of which is a vastly improved standard of living.

OCEAN RESOURCES AND MARINE BIOMEDICINE

HON. JERRY L. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. PETTIS. Mr. Speaker, Dr. Bruce W. Halstead, director of the International Biotoxicological Center of the World Life Research Institute in Colton, Calif., today presented testimony before the Committee on Merchant Marine and Fisheries which I would like to call to the attention of the entire House. He explains the need for a national marine biomedical program of worldwide scope and outlines procedures necessary to getting such a program underway. He lists areas of study vital to determination of information we must have if we ever hope to properly and safely develop the full potential offered by the sea.

Dr. Halstead's full testimony follows:

The term "marine biomedicine" as used in this presentation is concerned with such disciplinary areas as marine biochemistry, pharmacology, pharmacognosy, toxicology, nutrition, micobiology, physiology, epidemiology, taxonomy, ecology, pathology, ethnobiology, medicine, marine biomedical litera-

ture documentation and retrieval, bionics, technology and instrumentation that have a bearing on national and international marine-derived solutions to health problems. Although the aforementioned areas appear to be of greatest concern, marine biomedicine is not necessarily limited to these subjects. In brief, marine biomedicine is concerned with those aspects of the total marine biotope that have both a direct and indirect bearing on man's health and welfare.

INTERNATIONAL SCOPE OF MARINE BIOMEDICINE

International cooperation in the scientific study and use of the sea and its biomedical resources is imperative for the following reasons: The world ocean covers 71 percent of the earth's surface. Most countries have sea coasts and make some use of the sea, although national jurisdiction extends over only a small fraction of the ocean's area; the remainder is common property. The waters of the world ocean and their contents intermingle without serious restraint. Many oceanic processes are of large scale and are driven by forces of planetary dimension. The organisms inhabiting the sea are influenced by these processes and forces, and their distribution, abundance, and behavior are often influenced by events occurring far beyond the territorial limits recognized by man (FAO Fisheries Rept. No. 41, Suppl. 3, October 1967).

In this regard, it is recommended that a national marine biomedical program should be global in scope and integrated with the international cooperative efforts of such organizations as the Food and Agriculture Organization of the United Nations, World Health Organization, Scientific Committee on Oceanic Research, International Biological Program, International Council for the Exploration of the Sea, and other international agencies. A more detailed report of the recommendations of these organizations appears in a booklet entitled "International Ocean Affairs; a Special Report of the Joint ACMRR/SCOR/WHO (AC) working group on the Implementation of the United Nations Resolution on the Resources of the Sea" published in FAO Fisheries Reports No. 41, Suppl. 3, FRM/R41 Suppl. 3(En), Rome, October 1967.

In order to fulfill the the need for protein for the world's burgeoning populations, many countries including the USA will have to augment drastically both agricultural and marine resources. If it is decided to increase the harvesting and to start the herding of marine animals, then it is essential to study not only the health safety of potential food species but also the organisms in their food chain which are potential contributors to biotoxicity and pathogenicity in man.

RECOMMENDATION FOR A SYSTEMS MANAGEMENT APPROACH

It is recommended that a systems management approach be used in order to avoid useless duplication of effort and funding. The systems approach has been used with much success in the development of the space program, and it is believed that it would contribute materially to the successful operation of the projected marine biomedical program. It is believed that present grant-in-aid methods are inadequate to meet our future national oceanographic requirements.

Industrial management techniques, engineering "know-how," economic data evaluation methods, etc., can be of value in developing procedures for the utilization of marine biomedical resources. There is need for further exploration of the manner in which industry, government, and academic institutions can work together in areas of mutual interest.

THE NEED FOR A NATIONAL MARINE BIOMEDICAL COORDINATING COMMITTEE

If our national goals are to be achieved, leadership from our national Government must be forthcoming. It is most urgent that marine biomedicine be recognized by our leaders in Government as a specific disciplinary entity, that our existing deficiencies in this field be clearly understood, and that adequate governmental organization be provided to deal properly with the subject. It is apparent that some facets of marine biomedicine merit greater attention and fiscal priority than others.

Since the subject matter is multifaceted and international in scope and comes within the purpose of several Federal agencies, a coordinated approach is highly desirable. It is therefore recommended that a standing Marine Biomedical Coordinating Committee (MBCC) be established and that this committee operate under the National Council for Marine Resources and Engineering Development (or its successor—if the present Council should be disbanded).

It is further suggested that the membership of this committee include representatives of the following groups: President's Scientific Advisory Committee, National Council for Marine Resources and Engineering Development (or its successor), Department of Health, Education, and Welfare (Public Health Service, National Institutes of Health), Department of Interior (Bureau of Commercial Fisheries and Federal Water Pollution Control Administration), National Science Foundation, Environmental Science Service Administration, Department of Commerce, Atomic Energy Commission, Department of State, National Aeronautics and Space Administration, Department of Defense (ONR), and a select number of consultant specialists from universities, research institutes, industry, and biological and medical professional societies.

The purpose of the MBCC would be to establish national goals and to coordinate programs of interagency, national, and international importance in the area of marine biomedicine. The MBCC could serve a useful function as a scientific advisory body to the U.S. Congress. The activities of MBCC should be assisted by means of a full-time executive secretary and a clerical staff.

ESTABLISHMENT OF NATIONAL INSTITUTE OF MARINE MEDICINE AND PHARMACOLOGY

The Congress of the United States should be encouraged to establish a National Institute of Marine Medicine and Pharmacology (NIMMP) within the Department of Health, Education, and Welfare. The institute should be established for the purpose of conducting and supporting marine research with a view to advancing scientific knowledge in marine biochemistry, pharmacology, pharmacognosy, toxicology, nutrition, microbiology, epidemiology, physiology, taxonomy, ecology, pathology, to ethnobiology, bionics and technology as it may relate to the causes, diagnosis, prevention, treatment, and control of physical and mental diseases and other impairments of man. The NIMMP should have an advisory council to advise, consult with, and make recommendations to the Surgeon General on matters relating to marine medicine and pharmacology. The institute should be authorized to provide training and instruction, establish traineeships and fellowships, and provide research grants to public or other nonprofit institutions. An international exchange of graduate and post-doctoral students should be encouraged. Numerous landlocked schools and universities are desirous of obtaining access to marine field facilities. Every attempt should be made to provide access to adequate educational and research facilities for these inland institutions. Educational programs should also be provided for the training of skilled technicians. There is urgent need for more adequate support of educational programs in marine biomedicine.

THE NEED OF REGIONAL MARINE HEALTH LABORATORIES

The Public Health Service presently operates three marine health laboratories. These are situated in Washington, Rhode Island, and Alabama. These laboratories are concerned with the general areas of the health aspects of water pollution control, nutritional values and health hazards of sea resources, marine biotoxicology, infectious agents, hypersensitivity reactions to marine products, physiological effects of the marine environment on man, pharmaceuticals and drugs from the sea, and other general marine health problems. The present support level of these laboratories is inadequate. These laboratories should be upgraded, adequately funded, and their operations expanded. These regional laboratories should be adequately equipped for advanced sophisticated analytical research.

It is further recommended that additional sites be considered for the establishment of regional marine health laboratories in Alaska, Hawaii, Rhode Island, California, Florida, Texas, or the Virgin Islands. One or more of these laboratories should serve as technical documentation centers.

THE NEED OF REGIONAL MARINE BIO-MEDICAL FIELD LABORATORIES

There is urgent need for international field research facilities for investigators needing to work in specific geographical (continental or insular, temperate, subtropical, tropical, or polar) oceanic regions. Field research units would in most instances be minimal field facilities but with maximum accessibility to field resources. These laboratories would be used primarily for the procurement of living specimen materials, ecological, physiological, and other types of activities that could not be conducted to a greater advantage elsewhere. Each laboratory would be of a standard format and would have collecting gear, diving equipment, and small vessels (approx. 45 ft.) suitable for making local field studies.

The following field sites are recommended on the basis of their strategic environmental and geographical locations. These field units could be operated either under contract with a private nonprofit organization or directly by a governmental agency. Recommended sites are as follows:

Trust Territory (Palau,* Jaluit), Line Islands (Palmyra), Samoa, New Caledonia,* Society Islands,* Great Barrier Reef,* Korea,* Japan,* Ethopia, India,* Virgin Islands (St. Johns*), Cozumel, Honduras, Canal Zone,* Indonesia (Ambon*), Thailand,* Seychelles, East Africa,* Aegean-Adriatic areas, British Isles,* West Africa, Azores, Brazil,* Galapagos Islands,* Gulf of California*, Pt. Barrow, Alaska,* Palmer Station, Antarctica.*

Most of these localities are readily accessible by air transportation.

Particular attention is directed to the fact that the greatest assemblage of marine organisms possessing biodynamic substances is found within the Malay Archipelago (Sumatra, Java, Lesser Sunda, Moluccas, Timor, New Guinea, Borneo, Celebes and the Philippines). It is noted with deep regret that the United States has not used to advantage one of the richest biotic provinces in the world which is available to our country through Palau in the Trust Territory. Palau lies on the eastern border of the Malayan Archipelago and is about 400 to 600 miles northeast of Ambon in the Moluccas where the Soviets had almost completed building an enormous oceanographic facility for the Indonesian Government. It is highly recommended that a biomedical research laboratory be established in Palau at the earliest possible moment.

THE NEED FOR A NATIONAL RESEARCH VESSEL FACILITY

A single large research ship (5,000 ton class) should be made available and equipped as a national facility for marine biomedical

* Indicates that there is an existing facility, but most of these present facilities are in dire need of more adequate support.

investigations. In addition, it is recommended that smaller vessels (approx. 45 ft. in length) be assigned to regional field facilities for local operations. These vessels should be specially designed for biomedical ocean work and adequately equipped for survey, collecting, and diving operations. Special attention needs to be directed to the problem of refrigeration and low temperature requirements suitable for the preservation of venoms, enzymes, etc. Many scientists are desirous of investigating biomedical problems but are unable to obtain the necessary logistics support. Laboratory and research vessel facilities are urgently needed for biomedical studies.

INSTRUMENTATION NEEDS

It is imperative that the effectiveness of instrumentation to be used at sea be increased, since this is the major avenue by which the effectiveness of the research investigator can be improved. The design of instruments intended for use in the marine environment is at present left to the ingenuity and usually meager facilities of the individual who needs them. Although miracles are achieved by this route, it subverts time of biologically trained men, and their lack of training in engineering and some of the physical sciences is often evident in the result.

It is therefore recommended that funding for research and development of instrumentation, collecting devices, diving research vehicles, and data handling and processing equipment be specifically directed towards that segment of our economy which can best satisfy this need—industry. In order to guide the selection of projects to be funded, it is suggested that review panels be set up within the framework of the Marine Biomedical Coordinating Committee for this purpose. These review panels would have the specific task of making recommendations of areas of technology and instrumentation which need improvement. The means for effecting this improvement would be left to industry and engineers, working in close collaboration with scientists.

RECOMMENDED AREAS OF MARINE BIOMEDICAL RESEARCH

The following are some suggested areas of marine biomedical research which are urgently in need of attention. Undoubtedly there are other priority areas which have been overlooked, but these suggestions provide a rough guideline to the scope of marine biomedical research that is needed.

Taxonomy and ecology of medically important marine organisms, particularly dangerous marine animals of all types. Studies should include photographic documentation of their habits, habitat, identification, etc.

Screening of marine organisms for biological activity.

Investigation of the food web of marine orangisms.

Study of triggering mechanisms in the production of toxicity cycles in marine organisms.

Uses of marine organisms as biomedical research tools.

The investigation of industrial waste product contaminants involved in the food web of marine organisms.

The use of marine organisms as sources of new drugs.

Investigation of marine biochemical substances as models for the development of new synthetic chemicals.

Evaluation of health safety standards for new marine-derived foods.

Development of laboratory culture techniques of marine organisms that are likely to serve as sources of either new foods or useful biochemical agents.

Clinical aspects, diagnoses, treatment and prevention of marine biotoxications and other marine-induced diseases.

Study of disease processes in marine organisms.

Epidemiology of marine biotoxications.

Mass aquaculture techniques for the production of food and useful biochemical agents.

Study of the effects of aquaculture as it relates to environmental disease production and control mechanisms.

Origin of toxic and other biologically active substances in marine organisms.

Development of surveillance systems of commercial marine food and drug products.

The study of the use of marine organisms by primitive native groups.

Chemical and pharmacological properties of biologically active marine substances.

Marine bionics.

Chemotaxonomy of marine organisms.

Investigation of food detection and sensory mechanisms in marine animals.

A national file for the storage and retrieval of marine health information.

Investigation of the nutritional potential of plankton.

Investigation of marine pathogenic microorganisms.

The study of hypersensitivity reactions to marine organisms.

Physiological effects of the marine environment on man.

The relationship of marine organisms to the Man-in-the-Sea Program.

Health aspects of ocean pollution.

Anatomy of the venom organs of marine organisms.

Physiological hazards relating to diving, such as: effects of pressure, inert gases, increased oxygen tensions, etc.

PUBLICATION OF RESULTS

There is a dearth of useful marine information that is available to both the scientific and lay public. Greater attention needs to be directed to the quality, publication and public dissemination of scientific findings. Adequate funding should be provided for the publishing of investigative results in technical journals and well illustrated manuals, monographs, and books. Documentary educational films are needed for civilian and the Military. The production of these films should be encouraged and funded.

ECONOMIC RETURNS

Benefits to be derived from biomedical research are both immediate and long-term. Laboratory studies have shown that there is a vast spectrum of marine bioactive substances having antibiotic, antiviral, and fungicidal properties. There is evidence that many of these substances will have immediate commercial potential. There is also a great variety of systemic drugs affecting the nervous system, cardiovascular, urinary, gastrointestinal, and various other organ systems. Some of the greatest medical problems facing mankind today are concerned with the chronic degenerative diseases, cancer, heart disease, neurological disorders, mental health, arthritis, etc. Marine organisms provide an untapped wealth of plants and animals that either store or produce a fantastic array of complex chemical substances, many of which offer exciting possibilities as new therapeutic agents.

World fisheries are beginning to expand rapidly into tropical seas, and greater attention is being directed to shallow-water shore fisheries operations. There is urgent need for a more effective utilization of the so-called "trash species" in warm water areas. The utilization of a broader spectrum of tropical marine organisms as food products has brought about an unprecedented confrontation with an enormous array of poisonous marine organisms. Toxic marine organisms range throughout the phylogenetic series of plants and animals. The toxicity of some of these poisons are about 10,000 times that of sodium cyanide or about 3,000 times that of our better war gases. With the necessity of developing protein concentrates from an ever increasing variety of marine organisms, it is urgent and necessary that the edibility of all marine organisms be evaluated, particularly if they are likely to be used in the production of protein concentrates.

The prospects of using protein resources from the sea for human and animal consumption are becoming increasingly more difficult as toxic industrial wastes are being discharged into the marine environment. The devastating outbreaks of Minamata disease in Japan document the serious threat that industrial wastes contribute to the food economy of the sea. The Minamata situation points up the fact that in the future we must be prepared to cope with toxic products from both natural and industrial sources which become incorporated in the complex food web of the sea. In the preparation of FPC we may also encounter a concentration effect of trace elements and other industrial chemical compounds that could eventually result in serious disease problems. This is an area of research that is going to require carefully controlled long-term chronic toxicity studies. At the moment there is no evidence that any serious consideration is being given this subject.

Important economic by-products will also result from a national effort in biomedical oceanography in the area of education. New job opportunities will be developed and new educational programs will be required.

The untapped biochemical wealth of the sea offers some of our richest resources with the promise of immediate returns as nutrients and useful therapeutic agents which are likely to prove to be highly effective against some of mankind's most devastating ills. Marine biotoxins play a dual role of being able to preserve life as well as to destroy it. We must learn how to utilize these substances for the benefit of all mankind.

NEED FOR INDUSTRIAL-GOVERNMENT LIAISON

Provision should be made to establish an effective liaison between government and industry. If the biochemical wealth of the oceans is to be successfully utilized, there must be brought about a much closer working relationship between government and industry. Most pharmaceutical companies are not in a position to undertake the expensive logistics, procurement, and documentation program that is required before a marine organism can be assayed for its pharmacological properties. These initial studies will of necessity have to be funded by government. A great deal of fundamental research will be required in order to develop commercially feasible aquaculture techniques for the rearing of marine organisms having marine pharmaceutical potential. It is noteworthy that at least one commercial company (Aquarium Systems, Inc., Wickliffe, Ohio) is presently exploring the rearing of marine pharmaceutical organisms. It is important that some sort of a cooperative program be established with private enterprise so that compounds having commercial potential can be profitably marketed and thereby enhance our economy. This is a very critical area that must be carefully evaluated if these biochemical products are to be of economic value to our nation.

LACKAWANNA OPPOSES OIL DRILLING IN LAKE ERIE

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. DULSKI. Mr. Speaker, the issue of underwater drilling for oil and gas has had prominent attention of late, partic-

ularly in view of the accident off the California coast.

There is now a proposal for oil and gas drilling in Lake Erie about which the people of the Niagara frontier are rightfully concerned.

Lake Erie already has a serious pollution problem with which local, State, and Federal officials are striving to deal as fast as possible.

Our people are worried that oil and gas drilling may add new complications to an already extremely difficult situation.

On May 20, I submitted for the CONGRESSIONAL RECORD a resolution from the legislature of Erie County, N.Y., in vehement opposition to the proposed lake drilling.

Now the City Council of Lackawanna, N.Y., has passed a resolution expressing its opposition "to any drilling for oil or gas in Lake Erie because of the imminent dangers of pollution."

The resolution urges Governor Rockefeller and our State and Federal legislators to "take any and all action to prevent such drilling."

The council approved the resolution by unanimous vote and a copy of the resolution, No. 30, signed by Council President Melvin D. Wodzinski, has been sent to all parties.

The anxiety of our people in the Buffalo area is very clear and I hope that there will be careful consideration of all of the aspects of the drilling proposal before final action is taken.

INCREASE MINORITY REPRESENTATION ON DRAFT BOARDS

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. BROWN of California. Mr. Speaker, even though President Nixon shows interest in at least one aspect of selective service reform—a lottery draft concept—I doubt if any changes will be occurring in the near future.

For young men now subject to inequities and distortions contained in the current draft apparatus, the prospect of future reform does not mean very much. Too many present regulations and practices utilized by the Selective Service System seem to me to be flagrant repudiations of basic democratic concepts upon which our Nation was formed.

Already this session I have introduced a bill (H.R. 8428) calling for a 5-year transition to a full volunteer military, with a lottery draft employed during the interim. I still stand behind my position that even though a volunteer army may offer certain grave dangers, on balance it is a better system than the current draft-oriented military—with or without a lottery mechanism.

In addition to that bill, I have indicated my support of draft reforms proposed by other colleagues. In April I joined with my friend from New York (Mr. KOCH) in a bill (H.R. 10500) clarifying the definition of conscientious objectors; soon, I will be a cosponsor of a proposal by my friend from Texas (Mr. ECKHARDT) which seeks to give registrants the right of legal counsel before a draft board.

This week, I entered a new bill which asks for change in another facet of the Selective Service System—minority representation on draft boards.

Three years ago, I discovered that in the parts of Los Angeles County where there was a heavy concentration of Mexican-American citizens, the three draft boards serving those areas only had one Mexican-American member. Furthermore, he was the only person of Mexican-American descent in all Los Angeles County—and there are over 600,000 Mexican-Americans in the county—to be on a draft board.

Given the wide autonomous powers granted individual draft boards, composition of the boards may result in varying responses to similar situations. That is, there could be deferment or drafting of some men in some communities who would have been given a different status in a different community. Whether or not the racial and economic makeup of boards has contributed to the range of policies taken by different boards is hard to either say or prove, but I believe it certainly could have such implications and is a matter that should be corrected.

Since 1966, when I first brought up the underrepresentation of Mexican Americans on Los Angeles boards, there has been some improvement in getting better minority participation. Within a year—by July 1967—Mexican-American board members jumped from only that one to six. Now, nine Mexican Americans serve on boards throughout Los Angeles County.

Yet, still more needs to be done. If the proportion of Mexican Americans on Los Angeles County boards were to be "truly representative of the community they serve"—as President Johnson ordered in his 1967 draft reform address—instead of nine, there would be 20 Mexican Americans serving today.

Since President Johnson's speech, nationwide minority membership on boards has risen. According to a chart in the May issue of "Selective Service," the monthly publication of the national Selective Service System, between March 1967 and March 1969, the number of minority group members serving on local boards increased from 801 to 1,688.

Over that period, Negro membership zoomed about 230 percent—from about 300 to nearly 1,070—and from about 37 percent of all minority board members to around 63 percent. The percentage growth of Spanish-surnamed members rose the least of all minority groups, going up about 26 percent over the 2-year period.

The bill I introduced yesterday (H.R. 11799) aims at further increasing minority participation on local selective service boards. It says that the "President, in making such appointments, and the Governors or other officials, in making recommendations for such appointments, shall insure that the individuals forming the membership of a local board substantially reflect the ethnic and economic composition within the boundaries of the area which such board serves."

I believe additional minority representation would help, in part, to assure fair and equitable treatment for all registrants, and could also provide better community participation and acceptance with board actions.

JUDGE JOHN S. SIMMANG

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. PICKLE. Mr. Speaker, central Texas has lost a great leader and all of us have lost a great friend. Hon. John S. Simmang, district judge of the 21st Judicial District of Texas, died recently of a heart attack.

Judge Simmang was widely known at all levels—he worked with Presidents and Governors, but he also sat at the table with the common man.

Judge Simmang began practicing law in his native Giddings in 1929. Although he was widely traveled, he never had any desire to leave Lee County. His father, the late E. T. Simmang, practiced law in Giddings beginning in the late 1800's. His brother was also an attorney.

The judge served as Lee County attorney from 1954 until 1969, when he resigned to accept the post as district judge. This career was never to be fulfilled. Judge Simmang died after having served only 5 months. This loss will be keenly felt.

His son, Michael, has continued the family law tradition. Mike is the district attorney, a job he took the first of this year.

From 1938 until 1952, Judge Simmang served as judge of his county. He was cocounsel for Bluebonnet Electric Co-op for 27 years. During his tenure, this co-op strung lines into the back country and generated power for thousands of people.

Not content with these credentials, Judge Simmang also served as president of the Texas Association of County Judges. During this tenure, he personally worked to make the dream of farm-to-market roads a reality.

John Simmang was a common man in philosophy, but not in action. He was without equal in getting things done. For example, he served on the Giddings Chamber of Commerce, the volunteer fire department, the industrial foundation, and the State school committee.

The list of his service organizations fills a telephone book.

Judge Simmang was an astute Democratic worker. Years ago, he joined hands in helping a young man in his bid for election to Congress. That young man later became President of the United States—Lyndon B. Johnson.

Judge Simmang was born in Giddings in 1906. He died in 1969. In those years between, John Simmang carved out a new central Texas. He carried his area to heights they never dreamed of. In a quiet but firm manner, this man asked

all of us to deliver more than we thought we could—and then he would hold our hand until we did, helping over the rough spots.

The years of John Simmang's life were a gift to all of us. I will miss him sorely, as will all his many friends.

Mr. Speaker, let me close by including remarks written by a young man Judge Simmang encouraged. This tribute is written by Buddy Preuss, editor of the Giddings Times and News—one of the Judge's own:

LEE COUNTY HAS LOST A FRIEND

(By Buddy Preuss)

The people of Lee County have lost a friend with the passing of Judge John S. Simmang.

This man loved Lee County and its people like few others I have ever known.

Yet the prominence of becoming District Judge didn't change his attitude about the common people. He had dined with the highest dignitaries of this nation, including Presidents and Governors. But his heart always came back to his beloved Lee County, the place of his birth and childhood, where he followed in his father's footsteps as an attorney in the practice of law.

Although Judge Simmang had associated with the highest officials of the land, he was more often than not seen dressed in work clothes associating with people of all races in this area who truly earned their living by the sweat of their brow. He, too, spent as much time as possible at his farm with his cattle.

Judge Simmang loved the outdoors. Nothing probably hurt him more in this respect than the decision of the Corps of Engineers to drain Flag Pond when the Somerville Dam was built. Yet just last week, he made an all-out effort to help obtain lights for the Neils Creek Park on the Lee County side of the Somerville Lake. He realized the importance of these lights in protecting those Lee Countians and others who were using this park for recreation.

It was announced at all three Lee County Sheriff's Posse rodeos last week that Judge Simmang had donated lights above the bucking shoots so that his people could better enjoy the sport of rodeos.

These are just a few of the recent contributions Judge Simmang made to this community. Thousands of things he has done for untold numbers of individuals and families in Lee County will never be known. It didn't make any difference whether you were rich or poor, black or white. If it was help you needed, the Judge was there to give it.

Not only did he often give free legal advice to those who couldn't afford his services, but often reached down into his pocket to help those who needed it. And he made countless contributions to various churches and civic organizations.

The "little man" meant just as much to Judge Simmang as the fellow with lots of money and great honor. Thousands in this area will testify to this fact.

He had reached the height of his career with his election as District Judge last November. It is quite possible that he could have had appointments to even higher judicial offices had he wanted it. But Judge Simmang didn't want to leave Lee County. The good life among his friends meant more to him than a high political position. So his short 5 months as District Judge still allowed him to live in the place of his youth.

He was happy these past few months, probably happier than he had ever been. Yet he was the first to admit the shortness of life on this earth. He talked about it almost as if he expected not to be here much longer. Still he loved life and lived it.

Those living in Bastrop, Burleson and Washington counties were already beginning to realize the fairness of Judge Simmang on the bench. He received a very complimentary article just last month from the publisher of the Brenham newspaper. These are the kind of men we need more of on the benches of our courts. Fair, yet not so liberal to be too lenient to those found guilty of a serious crime.

It hurts me to thinks that the Judge could not have been spared long enough to fill at least one term as an example to the judicial branch of our government.

I will never forget how Judge Simmang about two years ago accepted a county court case, the first held in nearly 2 decades in this county. He knew it wouldn't make him any money in big fees, but he was fighting for a principle. And without principle a man's word or his character means nothing.

So Judge Simmang and his son Michael won a court case which allowed $500 for 3 "wolf dogs" which had been shot by a man because he claimed the dog was disturbing his cattle. The dog belonged to a colored gentleman who had been hunting wolves as sport for years, helping to cut down on the wolf population in this area.

Whatever Judge Simmang believed in, he would fight to the end for it. This is the way it was with his political beliefs. Back when Lyndon B. Johnson first campaigned for Congressman in this 10th District, it was Mr. John who headed his campaign in the Lee County area. And he backed Lyndon Johnson all the way to the Presidency.

Both LBJ and the Judge were instrumental in getting the LCREC, now Bluebonnet Electric Co-Op, for Giddings. It's meant a lot to the economy of this community and has helped to give electricity to the entire rural area.

The Judge also served at one time as President of the County Judges & Commissioners Association, helping to get roads for rural areas.

One of Judge Simmang's most recent contributions to this community came just last year when the Giddings State School Committee, of which he was a member, helped obtain the State School for Boys to be located at Giddings. Although the Judge did not live to see this become a reality, the School will be a monument to his untiring work for a better communtiy. And it will employ several hundred people, most of whom will be the "common people" he cared so much for.

Yes, Judge Simmang will be missed. But then he is finally getting to rest from his labors. It can be said of him, "Well done, thou good and faithful servant."

He was a servant of the people.

THE ECONOMICS OF MANPOWER POLICY

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, the need for a more effective national manpower policy was eloquently expressed by Secretary of Labor Shultz in a speech he gave recently before the Associated Employers of Illinois. I am inserting the distinguished Secretary's speech in the RECORD because of my conviction that his wards clearly indicate that the time has now arrived to develop a more comprehensive approach in the manpower field. The speech follows:

THE ECONOMICS OF MANPOWER POLICY

(Remarks by Secretary of Labor George P. Shultz, Associated Employers of Illinois' luncheon, Chicago, Ill., May 23, 1969)

Manpower policy 50 years ago consisted of putting a "Help Wanted" sign in the window, or a classified ad in the local newspaper, or calling on a private employment agency.

These methods continue today and serve individual purposes but they are not adequate for a national Manpower Policy.

We know that an acute shortage of labor on the one hand and substantial idle manpower on the other add up to economic waste.

Those are the circumstances today. It is this waste that a national manpower policy seeks to overcome. These circumstances are further complicated by inflation, which we are dealing with as firmly as we can without throwing the economy into reverse.

Manpower training programs serve a twofold purpose:

1. The direct social benefits of giving the hard-core unemployed a sense of usefulness to themselves and society are well known.

2. The economic effects of an active manpower policy are not so well known.

The major promise of manpower programs as a tool of economic policy was stated quite articulately by Gosta Rehn and adopted by the Council of the 22-country OECD (Organization for Economic Cooperative Development) in 1964:

An active manpower policy has the special advantage of being expansionist with regard to employment and production but anti-inflationary with regard to costs and prices."

In terms of the current economic situation the challenge is to take the steam out of inflation while defeating the upcreep of unemployment. Manpower programs can increase the supply of useful labor and thereby increase the ability of the economy to match output and demand.

If manpower policies are to be fully effective in supporting both economic and social objectives, however, further strengthening and more flexibility is needed in three major areas—the public employment service, the unemployment insurance system, and manpower training programs.

In the first of these areas—the public employment service—we have seen some progress, including

The separation of unemployment insurance from placement functions, so that the emphasis can be shifted to placement, particularly for the hard-core, who are seldom part of the unemployment insurance system,

Steps toward computerizing labor market information,

The elimination of job discrimination, and

The coordination of employment service operations with training and other programs for the disadvantaged.

Yet, despite these improvements, problems remain. To date, there has been little training of employment service personnel. State salary levels have remained inadequate. And virtually no preparation has been made for possible large-scale lay-offs.

In the unemployment insurance system, immediate action is needed to correct such deficiencies as the inadequacy of unemployment insurance benefits which are typically low in relation to the past income of the unemployed, especially the male head of household; coverage for only 3 out of 4 workers; and the fact that half the States still refuse benefits to many trainees.

Our training programs also need improvement. We have not yet, for example, developed adequate measures of the number of people who need training. Even with the uncertainties concerning need, however, there are indications that only a limited number of those who require training are getting it.

In addition, we have not yet fully met the training needs of the nation's youth, even though youth have been one of the special target groups for manpower programs.

Steps needed to strengthen all these programs—the unemployment service, the unemployment insurance system, and training programs—can be taken under present authority, programs, and funding.

We are planning, for example, or have already begun:

Vacancy surveys to pinpoint training needs that exist side by side with unemployment.

To direct more training and placement to service jobs—insurance, banking, hospital work and other manpower shortage areas that are less vulnerable to economic downturn than are jobs in the goods producing areas.

To set up Job Banks in 36 cities, and computerize job-matching in the employment service systems of 3 or 4 States next year.

To shift out-of-school Neighborhood Youth Corps training opportunities to preparation that leads to jobs in the public or private sector.

To expand successful programs—like JOBS—to more cities, and non-profit and public sector organizations.

To streamline administration.

To give the States more freedom and flexibility to tailor job training to local and individual needs.

But these changes, though important, would not be enough to deal with a rise in unemployment. If that happened, resources to combat the rise must be available quickly. This means considering such ideas as whether or not training and work experience opportunities should increase automatically if unemployment rises, and whether Governors should be able to command additional manpower resources for spot unemployment problems.

In order to have resources for long-run economic purposes, we can also make substantial manpower investments that would provide economic strength, and greater production and productivity.

These investments would include:

Greatly expanded upgrading of the workforce.

Determined steps to avoid occupational accidents and diseases.

Prisoner training and placement.

More extensive training of welfare clients and steps to bridge the gap from school to work.

By taking steps in all these areas, the nation's manpower policies can become a permanent, flexible, and sizable means of attaining both full employment and economic stability.

WHAT AMERICA MEANS TO ME

HON. CLARENCE E. MILLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. MILLER of Ohio. Mr. Speaker, on May 22, 1969, the Civitan Club of Marietta, Ohio, awarded a scholarship to Bruce Dunn, 131 Oakwood Avenue, Marietta, Ohio. One of the requirements to apply for this scholarship was to write an essay on "What America Means to Me."

With the actions of many young people across this Nation, the rioting and boycotting of colleges, it is refreshing to find a young man of the caliber of Mr. Dunn. I believe that this essay shows what the majority of the young people in this country feel for America.

Mr. Dunn's ambition is to become a doctor of veterinary medicine and he will enter Ohio State University in the fall of 1969. He has been an outstanding citizen not only in the community but at his school. He was tapped for National Honor Society and has won several honors in speech contests. Also, he has spent many hours assisting teachers in the field of chemistry and agriculture.

I submit Mr. Dunn's essay for inclusion in the RECORD at this point so that my colleagues and other concerned Americans may share the thoughts of this patriotic young American:

WHAT AMERICA MEANS TO ME

In today's world of growing strife and discord, it is reassuring to know that there is still one nation which will defend to the death man's basic freedoms. These basic freedoms of speech, press, and religion, contained in a single document nearly two hundred years ago, are guaranteed to any person in these United States, regardless of race or creed. Even when the freedoms are used to reach out and strike down the same government which protects these rights, our American way of thinking feels it must defend these citizens all the more. Thus, America means to me the protection of certain basic rights given to man, often abused and often restricted in other nations.

One has only to look back at his heritage to find ancestors coming from many countries in Europe. People have come from Britain, Ireland, Germany, France, Poland, and many other nations from all over the world. They have immigrated to the great melting pot of the world, where the only true natives were the American Indians. What was the one thing that so many people of such widely different backgrounds found in a strange country so very far from their own homes? I believe that they were looking for freedom. And the only way that many could ever find freedom was to start to build it in a new and untamed land. Although these people were often separated by a language barrier, they were commonly united by one will and one desire. With this common goal in mind, these early pioneers tried to and did overcome any obstacle in their path, often paying the price with life itself.

Yet, today, many of us seem to have slammed the door on our proud heritage. We have forgotten the sacrifices made at Valley Forge, Bull Run, and Pearl Harbor, so that we may enjoy a more perfect way of life in this country. Instead, many are picking up the protest marchers' sign and picketing against the very rights which make America such a great country to live in. These very people who value freedom of speech and expression refuse to realize that it takes every citizen of a nation working together to protect these freedoms.

To me, America has not only proven herself first in freedom, but also first in many other fields. For example, my basic field of interest, agriculture, has progressed more in the past two hundred years in America than in the rest of man's known history. Only in this nation was land available to anyone who wished to settle and work it. Instead of returning all of their profits to the state, the early pioneers who were willing to work were able to pass on a meaningful existence to their children. American agriculture has progressed a long way from the time of the fork and mule to today's modern push-button farms. This was all done through hard work and Yankee ingenuity.

When he had nearly completed the settling and exploration of the wilderness on this earth, the American pioneer turned to a new and vast wilderness—outer space. Although another nation was the first to put a manned system into outer space, America was quick to see the importance of exploring a new frontier where man exists as a speck of dust. Brave new explorers, willing to risk their lives in much the same manner of our early pioneers, set forth into space with not even the promise that they would return alive. Yet while an astronaut is in space, each and every American seems to be with him and a part of his family. These men who are willing to risk their lives to explore new possibilities for the success of future generations are the real heroes of American history today. This is only one of the reasons why I can say with pride, "I'm proud that I'm an American."

America has meant the difference between success and failure to many of our modern inventions. Only in this nation have equal chances been given to anyone willing to search for and come up with a new idea. By our laws the rights and inventions of individuals are protected so that a government or another individual may not steal the rewards of another's work. Evidence of equal opportunity in this field is shown through the hundreds of inventions of such men as Thomas Edison. Often the right to investigate new ideas is taken away from the citizens of other nations. America has meant to me the opportunity to give birth to ideas of my own.

Education is the backbone of a nation. The welfare and economy of the nation stem from that education, no matter how poor or how good. We, who live in the United States, are fortunate to have the best education system in the world. It is no longer only the rich man who is educated. Ever since America's early public history there has been some form of free public education available to anyone willing to take advantage of it. Today, free public education is given to every male and female of this nation from kindergarten through the twelfth grade. But education does not stop here. College is available to anyone willing to meet the scholarship requirements. Federal aid or scholarship funds are available to almost one fifth of those who attend our colleges today. Therefore, it is not necessary for the education of any American today to stop after a few years in grade school.

Even though one does not have the aptitude for a college education, vocational training schools are available to develop the best talents of anyone willing to attend. People graduating from these vocational training courses are well prepared to enter into a useful place in society, instead of an unemployment line.

While proving herself first at home, America has often stepped out of her boundaries to help another nation, whenever in need. This has meant our men leaving our shores and fighting in behalf of another people. Any nation wishing our assistance for the sake of freedom and peace has never been turned away. Often this has brought rash criticism and ill feelings against the United States, but this we have withstood. The very survival of many small countries has been due to the fact that only the United States was willing to stand up for the underdog.

Along with revolution and war come the needs of many innocent individuals involved. These innocent ones are the children, the aged, the sick and the invalids or victims of circumstances. While being mighty in war, America has proven herself mighty in the time of need. We have moved to share our abundance with those who are less fortunate, even though those less fortunate may be our enemies of tomorrow. Thus, America has proven herself as an humanitarian nation. This has meant to me that an individual or a nation is truly great when he can bend to help his fellow man.

In summary, one can look at his heritage to see what America has meant to him. I am

proud of my native land and proud to be an American because of some of the reasons I have discussed. Yet these are but a few examples of what makes America and her people great. The United States can function as a republic only when I, as a citizen of this country, am willing to take the responsibility of voicing my own opinion in the operation of its government. This nation will continue to be the greatest in the world so long as we are a government "of the people, by the people, and for the people!"

PRESIDENT FERDINAND E. MARCOS

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. AYRES. Mr. Speaker, as the Republic of the Philippines celebrates the 23d anniversary of its independence, it is increasingly evident that this vibrant young republic, under the dynamic leadership of President Marcos, is a major force in Asia in the struggle against communism. It is one of the main bastions of freedom in the Pacific.

For this reason, it is important for us to be adequately informed of the accomplishments of President Marcos' administration—a period that coincides with our involvement in the war in Vietnam.

I am most grateful to my good friend, Dr. Diosdado M. Yap, editor and publisher of Bataan magazine and president of Capital Publishers, Inc., for the valuable information he has given me about the achievements of the Marcos administration. Dr. Yap has condensed the full text of President Marcos' fourth and last state-of-the-nation address delivered during the opening of the fourth session of the Sixth Congress of the Philippines.

In reviewing the accomplishments recorded by this administration during the last 3 years, Dr. Yap pointed out that President Marcos has recommended bold proposals for legislation this year to "sustain the significant gains we have in major areas." His third year in office, President Marcos stated, was the year when "we expanded our scope to include the public services, foreign relations, domestic and foreign commerce, and industry. This year as distinguished by the confirmation of our competence for progress."

President Marcos further stated that the material achievements during the era of his stewardship "represent, above all, a transformation of the Filipino spirit, from defeatism, sloth, and self-depreciation to a new level of energy, self-esteem and the will to achieve our goal." This spiritual and intellectual transformation is the "new Filipinism."

ACCOMPLISHMENTS

In summarizing the 114 printed pages assessing the current state of the nation, the following outstanding accomplishments, among others, must be enumerated:

First. Built more concrete roads than were ever built from the turn of the century to 1965.

Second. Reduced in 3 years by almost 50 percent the backlog of schoolrooms which had accumulated through the decades.

Third. Made spectacular breakthrough in rice production which enabled the Philippines to export this staple for the first time in history.

Fourth. Raised the land reform program to the level of serious action for the first time. At the end of 1965, a total of only 12 municipalities had been proclaimed land reform areas. From January 1966 to October 1968, the present administration declared 50 municipalities as land reform areas.

Fifth. Initiated bold and decisive support to the growth of private industry. The board of investment, created in 1968, has set up a system of priorities in our accelerated industrialization effort.

Sixth. Investment has increased. The private sector has regained faith in the government. In fiscal year 1965–66, the total paid-up capital investment by newly registered corporations, partnerships, and single proprietorships was P323.7 million. In fiscal year 1967–68, this amount rose to P478.4 million, an increase of 47 percent.

Seventh. The economy, in a state of ruin at the end of 1965, has gained new life. This is reflected in the growth rate achieved in 1968.

Eighth. The external stability of the currency has been maintained. In the last quarter of 1968, as a result of these measures, we had a $25 million surplus. Before that, we had successive deficits, ranging from $14 million to $38 million.

Ninth. Community development projects increased by 427 percent. This increment has benefited more than six million people.

Tenth. Obtained unprecedented benefits for labor.

Eleventh. Industrial peace was maintained. The incidence of strikes was reduced by 65 percent compared with the previous administration.

Twelfth. Gave the country its first workable manpower development program.

PROPOSED LEGISLATION

The President made the following proposals for immediate legislation:

First. Creation of a presidential commission to study the possibility of major changes in our Government system to eliminate obstacles to growth.

Second. Establishment of a trust fund from which can be drawn increases in teachers; salaries, cost-of-living allowances, and other fringe benefits.

Third. Opening up of adequate channels for public school teachers to communicate their grievances.

Fourth. Complete and immediate embargo on the importation of all luxury and nonessential goods.

Fifth. New resources of revenue to be provided to finance the legitimate requirements of our people for improved living conditions.

Sixth. A tax on foreign stocks, land, and buildings acquired abroad by residents of the Philippines.

Seventh. Present tariff rates should be assessed and revised to promote industrialization.

Eighth. Congress to define exactly the areas in which we are prepared to extend temporary national treatment to foreigners, and the areas in which we are willing to give only most-favored-nation treatment.

Ninth. Review of the present government schemes of financial assistance to private industry to favor Filipino capital and, at the same time, discourage importation of nonessentials.

Tenth. Appropriation of the Rice and Corn Administration be increased to 40 million a year.

Eleventh. Appropriation of a sum sufficient to liquidate long overdue obligations of the RCA.

Twelfth. Congress and the executive should adopt as a basic policy that investments in agriculture from now on be concentrated as much as possible below the typhoon belt.

Thirteenth. The creation of a special fund for peace and order.

Fourteenth. Integration of all police agencies of Manila and suburban areas under a Metropolitan Command patterned after Scotland Yard.

Fifteenth. Examination of the possibility of giving the national government more latitude to step into the peace and order problems on the local level.

Sixteenth. Setting up branches of the Court of Appeals and the Court of Agrarian Relations in various regions.

Seventeenth. Establishment of a research and advisory staff for every court of first instance.

Eighteenth. Judges of first instance with unreasonable number of undecided cases be denied the privilege of being reassigned to another jurisdiction until they have cleared their dockets.

Nineteenth. Enactment of a law defining the guidelines for the creation of private corporations for a public purpose.

Twentieth. Enactment of an export incentive bill.

Twenty-first. Enacting of a law authorizing the President to designate export processing zones.

Twenty-second. Establishment of more science high schools.

Twenty-third. Creation of a fund to support more barrio high schools.

Twenty-fourth. Creation of a special fund for the University of the Philippines.

Twenty-fifth. Revision of the UP Charter to guarantee academic freedom and self-determination.

Twenty-sixth. Revision of charters of government colleges and universities so as to provide for student membership in the boards of regent.

Twenty-seventh. Establishment of a P3 million permanent trust fund, the earnings of which will finance the expenses of student organizations.

Twenty-eight. Passage of a Magna Charta for students.

Twenty-ninth. Mustering of the will and the funds to declare Central Luzon as a land reform area by 1969.

Thirtieth. Grant of congressional authority to sell the lands now occupied by Fort Bonifacio, Camp Aguinaldo, Camp Crame, and other government properties in the four cities of the metropolitan area, the proceeds to constitute a huge fund to finance land reform and agriculture.

Thirty-first. Immediate enactment of the pending manpower development bill.

Thirty-second. Authorizing the Mindanao Development Authority to borrow money from foreign sources to finance major turn-key projects.

Thirty-third. Updating of existing laws on power distribution so that cheap power may be extended to all.

Thirty-fourth. Changing the entire orientation of our public housing policy to suit needs of the low wage-earners.

Thirty-fifth. Establishment of a workable unemployment insurance scheme.

Thirty-sixth. Creation of a workers' bank with GSIS and SSS providing seed.

Thirty-seventh. Immediate passage of pending medicare bill.

Thirty-eighth. Appropriation of sufficient funds to reactivate public defenders.

Thirty-ninth. Creation of a Textbooks Commission for Public Schools.

Fortieth. Establishment of trade and cultural relations with countries of Eastern Europe.

The biography of President Marcos follows:

BIOGRAPHY OF H. E. FERDINAND E. MARCOS, PRESIDENT OF THE REPUBLIC OF THE PHILIPPINES

Of all the present Asian leaders, President Ferdinand E. Marcos of the Republic of the Philippines shows every sign of becoming the most persuasive and most deeply committed to the cause of democracy, both as a system opposed to communism and dedicated to peace with freedom.

It is not difficult to believe in this, for Ferdinand Marcos, born on Sept. 11, 1917, belongs to the generation that grew up in a time that was still stirred by World War I and in a country that was imbued with the democratic ideals learned from America, and passionately embraced by a people and their leaders who longed for freedom.

Ferdinand Marcos was a studious youth, as reflected in his high grades from elementary school through high school and college, and it was because of his serious mind that he soon became conscious of politics and the dynamics of government. Pursing a law course in the state university, the University of the Philippines in Manila, he became a student leader and participated in student demonstrations against certain national ills at the time and for the early attainment of independence.

His life suddenly took a dramatic turn, when even as he was finishing his law course, he was accused of the murder of a political enemy of his father, Mariano Marcos, a public school teacher turned politician, who served a term as representative in the Philippine Legislature and later was appointed governor of Davao province in Mindanao. The young Marcos was subsequently convicted by the local court in a highly controversial decision. He appealed his case while still in detention, at the same time continuing to review for the bar examinations.

He passed the bar in 1939, with one of the highest grades in bar history, and won his case, Philippines-Northern Luzon. This unit fought inside enemy lines in the rugged terrain of the Cordilleras range in the Mountain Province.

During the Liberation Campaign, President Marcos fought in one of the decisive battles of the war, the Battle of Bessang Pass, which led to the capture of General Yamashita, the commanding general of the Japanese Imperial Forces in the Philippines.

President Marcos emerged from the war with nearly every medal and decoration for courage and gallantry the Philippine and American governments could bestow on a soldier. He received, in all, 27 medals and decorations, making him the most decorated Filipino soldier in World War II. Four of his decorations were for five wounds sustained in battle.

His first taste of civil administration was his assignment to establish a government in the areas cleared of Japanese by his outfit, in Northern Luzon. He continued to do this, first as combat officer then as judge advocate general and civil affairs officer of the USAFIP-NL. From this experience, he went actively into public service.

He served as a technical assistant to President Manuel A. Roxas, the first President of the Republic of the Philippines, in 1946, then led a mission of Filipino officers in 1947 to Washington, D.C., to secure from the U.S. Congress arrears-in-pay and other benefits for Filipino World War II veterans.

In 1949, at 32 years, he ran for the Philippine Congress, and won a seat as representative of the second district of his home province, Ilocos Norte, in Northern Luzon. It was the same district once represented by his father. This lanuched his political career.

He served as Congressman for three consecutive terms—one term is four years—and after his third term, he ran for senator and won the highest number of votes among the senatorial candidates. That was in 1949. As with his career in the Lower House, he was a leading senator, occupying vital positions of leadership.

In the Senate, he was minority leader and then President. He also served as a member of the National Economic Council, the Council of Leaders and the Council of State.

A prolific lawmaker, he established a record during his terms in both Houses for the most number of important bills introduced, many of which were passed. He pioneered in land reform legislation, championed the Land Tenure Act in the House and steered the passage of the Land Reform Code in the Senate. He also worked to strengthen trade unionism, was cosponsor of the Magna Carta of Labor and the Anti-Scab Law.

President Marcos, had, indeed, a broad interest as legislator, which ranged from agriculture to civil liberties, economics to foreign relations. It was as though he was rehearsing for the Philippine presidency, for which he set his hat from the jump-off point of the senate presidency, which he held at the time he broke off with the then President Macapagal and the Liberal Party, and joined the Nacionalista Party.

In the Nacionalista Party national convention of 1965, he fought a hard but masterly battle, with the odds against him, being a neophyte member of the party while contesting the presidential nomination with veteran Nacionalista leaders. The resounding triumph of President Marcos, in a way, indicated what was to come in the presidential campaign that was to follow. As it turned out, it was an uphill battle all the way, but the votes ultimately gave President Marcos a clear-cut mandate from the people.

In his first six months in office, President Marcos spiritedly faced up to the crisis in government, which had to contend with low morale, depressed public funds, and an economic slump. Today, there is a new briskness in government operations, resumed economic activity, and fresh public confidence in the national leadership.

In foreign relations, President Marcos unequivocally reiterated Philippine support of the free way of life and the Philippines' staunch opposition to communism, as proven by his vigorous advocacy of Philippine assistance to South Vietnam in its struggle against communist aggression. He has also sparked the resumption of Philippine diplomatic ties with the Federation of Malaysia, the recognition of Singapore, and the rapproachment between Malaysia and Indonesia. He has enunciated a policy of support for any move to strengthen economic, cultural and mutual defense agreements among friendly Asian countries, in the interest of common development and stability.

VOCATIONAL EDUCATION IN A TRILLION DOLLAR ECONOMY

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. PUCINSKI. Mr. Speaker, on May 30 I addressed the Career Academy annual convention in Milwaukee and discussed America's great need for a workable and effective program of vocational education in our schools to acquaint our young people with the world of work and what it means to be an adult.

Following is the text of my remarks:

VOCATIONAL EDUCATION IN A TRILLION DOLLAR ECONOMY

In his book, "Making Education Relevant," Marvin Feldman of the Ford Foundation said:

"We can no longer tolerate an educational system which ignores the world of work; where occupational studies are considered inferior to general studies, and where youngsters in vocational courses do not receive the training necessary for entry into college and those in college preparatory courses are denied vocational experience which relates their learning to reality."

The United States is now in its 10th year of continuous, expanding prosperity—a standard of living unmatched in the history of the world. Within a very short time, our nation will be a trillion dollar economy.

In the midst of this abundance and this plenty, we are confronted with disorders in high schools and colleges, civil discontent, hunger and poverty. How can this be?

Sixty percent of America's high schools have experienced some form of disorder—to a lesser or greater degree—and I suspect the most prevelant cause is a disenchantment by young people with the type of schooling they get.

In the midst of our unequalled prosperity, more than 4,000,000 Americans are unemployed—the vast majority willing and anxious to work.

Within the next 2 weeks, approximately 1,000,000 high school graduates will enter the job market, to a great extent unprepared for anything but unskilled labor.

Some 26 million young people have entered the nation's job market for the first time in the last 10 years. Of this number, a minimum of 30% were under-educated for the specific jobs available.

Only 1 student in 10 who leaves school without a bachelor's degree has some preparation for a specific occupation.

Thirty percent of the able-bodied unemployed in America this very morning are between the ages of 16 and 19.

This pool of potential talent is going to waste because American education has consistently and brutally ignored the one common ingredient in all of our lives.

Our educational system has relied on and continued to stress rote memorization of history, language and the arts, while at the same time failing to incorporate these subjects into an equally important discipline—the world of work.

Only one student in 5 goes on to college after completing high school. The other 80% enter the labor market, most of them ill-prepared and poorly trained to confront technology head on. These young people have spent 10 to 12 years behind desks in class-

rooms, and most of them can count on the fingers of one hand the hours they have spent actually preparing for the real world.

I am not suggesting, nor would I, that we ignore the scholastic disciplines. And I do not propose to engage in a debate with those who favor the liberal arts to the exclusion of technical skills.

I do propose a massive restructuring of our system of education in America. Our present system—and I speak to you today with more than 10 years of solid work in looking into all aspects of American education—our present system is unrealistic. It fails to serve the young people it is supposed to be preparing for life.

Far too many students are bewildered and confounded by the sheer choices with which they are confronted when they leave school. And far too many of them are blocked from making any sort of meaningful choice because they have not been exposed to legitimate work experience.

It is for this reason that I strongly believe that this last third of our 20th century belongs to vocational educators.

For years vocational educators have been striving to interest their colleagues in the merits of correlating the skills, training, and information available in education to encourage students to explore the outside world and to prepare them to live in it as productive adults, not national liabilities.

For too long occupational education has floundered in the backwater of American life. All too often young people were being trained for outmoded jobs.

We need a major restructuring of our thinking in education today. We need a curriculum geared to the world as it is, in which students will earn their living and develop as adults. If there is a salvation for American education, I firmly believe it lies in a greater emphasis on developing occupational skills.

This is why I believe we need to enlist the help of proprietary schools such as your own Career Academy to train the massive labor force America needs as it passes a trillion dollar economy in the 70's and reaches for a 4 trillion dollar gross national product by the end of this century.

Our children are not stupid; neither are they interested in being preserved in cocoons of ignorance and shielded from learning what it is to be adult until that magical age of 21.

Occupational training can offer a workable, exciting solution to educating our children. It can offer them distinct choices. It can acquaint them with methodolgy and technology and give them a firm grounding in the skills they will need to find jobs that mean something, not only to them, but to their communities.

We need an entirely new sense of direction in job training too! One of the major faults in our massive job training programs instituted by the Federal Government in recent years is that we have tried to train people primarily for entry skills. We have trained them to do only that which will get them on a payroll—any payroll—as quickly and painlessly as possible.

But in our effort to help them earn their own way, we neglected Step 2, which is to provide them with the training necessary to progress in their jobs. As a result, too many of our Federal programs have been a tragic and costly failure; and too many thousands have abandoned these instant jobs feeling discouraged, disappointed, and enraged.

Most of them feel they've been conned. And many of them are right. The tragedy is that you can never get them to try again.

We have the means to reach these young people and to offset and eliminate their restlessness and dissatisfaction in our nation's private trade schools.

We don't need new programs, for the techniques and technology that already are available are more than adequate for this massive task.

There are in America today more than 7,000 private trade schools which could absorb with no delay—immediately; tomorrow—more than 1 million hard-core unemployed for meaningful training programs, and your own network of Career Academies scattered throughout the United States is the most effective of them all. Career Academy is the Cadillac of trade schools in America.

All of these schools have been approved for their academic standards by the Veterans Administration and are today training tens of thousands of young men benefitting from the G.I. Bill of Rights.

We have gone through a noble experiment in job training in this country only to see program after program fail to reach its goal.

The huge cost of the Job Corps; the millions of dollars spent on manpower retraining; the highly touted National Alliance of Businessmen which was to have spent $2 billion training the hard-core unemployed for meaningful employment—all of these have had—at best—only limited results.

That is why I so firmly believe the time has come when we ought to put this whole program of occupational education into proper perspective.

For the very young people still attending elementary and high school, we ought to fully fund the Vocational Education Act of 1968 which I sponsored, and which would bring meaning to American public education.

For those who are now out of school or who seek a faster orientation in a meaningful occupation, I propose the Federal government fully utilize this very impressive network of trade and career schools we have in America.

Your own Career Academy is today a national asset because it has the know-how, experience, and the capability of closing the gap between those unprepared for gainful employment and the employer who so desperately needs their services. We need only look at the weekend want-ad columns to see jobs begging to be filled.

Your Career Academy has developed an outstanding capability in recruiting, training, and above all, in placement after the training cycle, in meaningful employment.

America's trade schools offer the greatest hope for job training.

Contrast your orderly and systematic approach to job training with some of the government-sponsored programs, and you will see what I mean.

I submit that a hard-core unemployed American has three strikes on him when he tries to go the route of being trained by an employer. First of all, because he is considered hard-core unemployed, his fellow workers in his new job environment subliminally display an antagonism toward his presence; the foreman or other supervisor in the plant—already overburdened with his normal responsibilities—rebels against the extra responsibility of training the so-called hard-core unemployed recruit; and finally, the recruit himself—bewildered and inexperienced—becomes easily frustrated and drops out of the training program at the slightest provocation.

This is why the drop-out rate in the recruitment efforts of hard-core unemployed is so unnecessarily high and costly to the taxpayer.

In my judgment, it is a tragic mistake not to utilize the proprietary schools of this country with their excellent record of achievement in this great effort to deal with hard-core unemployment in America.

Your own experience as administrators of these schools teaches you that the orderly process of occupational training, which you can provide even to those totally unskilled, gives a student confidence, competence, and stability.

During the whole course of training, the student develops work habits which prove invaluable to himself and to his future employer.

It is for this reason that I have proposed to the Secretary of Labor that if we really want to have effective programs of training, we enlist your help. For you can provide that bridge between the world of unemployment for the hard-core unemployed and the meaningful world of work. All over this country employers are finding, in ever-increasing numbers, that this transition is not as easy as they thought.

In a growing number of situations, American industry which has invested in plants in the ghetto, is now finding that the absentee rate among the hard-core unemployed which employers try to train themselves, is making the venture so costly that in too many instances they have abandoned these projects.

Training or retraining of those who were unemployed or underemployed is a job for the experts. There is no short cut to produce "instant workers" and the sooner this nation learns this truism, the sooner we will start making meaningful progress toward fulfilling the needs of America's expanding industry.

In this room today we have men and women who hold the key to the future of America's economic progress.

Our nation cannot achieve a trillion dollar economy and train a force of 100 million workers to keep that economy going without your help.

More than a decade ago, Paul Goodman in his book *Growing Up Absurd* recommended that students be trained for eventual employment by allowing them to combine school with a job. He proposed that schools, with the cooperation of business and industry, offer work experience programs to students to help them develop skills and receive academic credit.

Such a work experience program would be for all youngsters in high school wishing to take advantage of the opportunity, and it would have the added advantage of assisting needy students to continue their education.

Mr. Goodman's idea was a brilliant one ten years ago and a brilliant one today. It is surely no secret to any parent or anyone who cares to read a newspaper that students drop out of school largely because they find it irrelevant and unrelated to what they are going to do for most of their lives.

About 95% of the young people who lose their first jobs lose them not because of any lack of potential ability or intellectual proficiency; they lose them because they just don't know what is required of them on the job.

Work experience helps the student to feel a sense of achievement and of growth and maturity. He learns to recognize the value of work and, hopefully, learns that regular attendance at school and work pays off.

That is why I maintain that this last third of our 20th century belongs to you as vocational educators. You have the skills and the ability to make productive adults out of unemployable adolescents.

Among the more than 7,000 vocational education schools in America, Career Academy here in Milwaukee surely ranks among the most distinguished of this group.

Last spring the report of the National Advisory Commission on Civil Disorders reported that nearly 80% of the persons involved in disturbances were employed in intermittent, low-status, unskilled jobs.

Dr. Kenneth Clark and countless other experts in the field of social science have repeatedly stressed the importance of jobs that provide the worker with dignity, opportunity, and respect. Surely this is not asking too much of a nation that was founded on the premise that every man has value and integrity that should be nurtured in freedom.

It is imperative that we create courses of study so welded to employment that students are permitted the widest number of career choices. Unskilled labor is becoming obsolete

and options for the poorly educated decline daily.

With a curriculum that involves the student in preparing for his own future, that develops his skills and self-knowledge, and that also gives him a broad view of the humanities and their application to his own world and his place in it—it is logical to expect that a great number of students will be motivated to remain in a school environment until they earn their diploma.

That diploma means a passport to income and a worthwhile career in a trillion dollar economy. Seeing to it that every able-bodied American youngster has that passport to opportunity is my responsibility as Congressman and yours as vocational educators.

LOS ANGELES ATTORNEY APPOINTED CHAIRMAN OF INTERAGENCY COMMITTEE ON MEXICAN-AMERICAN AFFAIRS

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. ROYBAL. Mr. Speaker, it is a real pleasure for me to offer my congratulations to a fellow Californian, Mr. Martin G. Castillo, of Los Angeles, on his appointment as Chairman of the Interagency Committee on Mexican-American Affairs.

Mr. Castillo brings with him an excellent background of education, personal knowledge, and professional experience to his new position on the Federal level, and I am confident he will be able to do an outstanding job of continuing and advancing the vital work already begun by the Interagency Committee.

A 37-year-old attorney, member of the Los Angeles law firm of Leis, Gershan & Castillo, and graduate of Loyola University Law School, Mr. Castillo is a former fighter pilot who currently holds the rank of captain in the U.S. Air Force Reserve.

I am particularly happy about Mr. Castillo's appointment because knowing of his deep interest in improving opportunities available to America's Spanish-surnamed citizens, I believe that, as Chairman of the Interagency Committee, he will maintain the tradition of strong, active leadership in identifying and meeting the unique needs of the Nation's second largest minority group.

Because of his intimate knowledge of the problems, challenges, and potentialities of the Spanish-speaking community, Mr. Castillo is a strong advocate of the proposition that every American, regardless of race, color, creed, national origin, or ethnic background, should be offered a chance to enter into the mainstream of all aspects of our Nation's life—to obtain a full share of the tremendous economic, social, and educational benefits of our great land.

I know Mr. Castillo will make every effort to fulfill the Interagency Committee's Presidential mandate, both to assure that Federal programs are reaching the Spanish-speaking community and providing the assistance required, as well as to seek out new policies and programs that are relevant and meaningful to this significant segment of our country's population.

And, since the Committee is the only Cabinet-level voice within the executive branch designed specifically to represent Spanish-surnamed Americans in the highest Government councils, Mr. Castillo will now be in a position to make a major contribution toward achieving the Committee's goal of increased jobs, better housing, improved health care, and wider educational opportunities for members of the Spanish-speaking community.

THE DEFENSE DEBATE

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. ROSENTHAL. Mr. Speaker, there has been significant press, radio, and television coverage of the recent Congressional Conference on the Military Budget and National Priorities. The Conference report, issued June 1, inspired many newsstories and much editorial comment.

As an originator of the Conference, I have been pleased to see this reaction for it fulfills a basic purpose of the Conference: to inspire discussion among citizens on what our national priorities are and where defense spending finds its place among them.

The Long Island Press on Monday, June 2, 1969, contributed the following intelligent comment on this discussion:

THE DEFENSE DEBATE

A welcome sense of reason is emerging in the debate over the role of the "military-industrial complex" in national affairs. Too much of the debate has been animated by emotional tirades for and against the defense establishment.

Apologists for giving the Pentagon carte blanche too often cry "communist menace" to justify enormous expenditures with a minimum of constraint and questioning. The result has been the creation of a vast and powerful force within America that has taken on a life of its own, espousing policies and taking actions that often inhibit any genuine approach to peace.

On the other hand, too many, like the Nobel Prize winning biologist, George Wald, go to the simplistic extreme of just wishing away the realities that bother them. This is all one world, he said in a recent, widely hailed speech, and "the thought that we're in competition with Russians or with Chinese is all a mistake and trivial."

It may well be a mistake, but it won't be a trivial one until the Russians and Chinese agree with Prof. Wald that there is no competition.

As a panel of American and European analysts pointed out the other day in a study of Soviet naval policy, the Russians are embarked on a maritime strategy aimed at controlling the seas of the world. There is nothing trivial about this—or about the various communist pressures throughout the world, in the Middle East and Middle Europe, in Latin America and Asia. Does Prof. Wald or anyone else really believe that if we simply throw away our bombs and bombers the rest of this world will follow suit?

The ugly fact of life is that there is deadly competition, mutual distrust, feeding on each other. We must do all possible to end this, but until there are guarantees that all agree on arms controls, we dare not weaken our defense capability.

But it is one thing to acknowledge the need to maintain our military strength. It is another to let the military dominate our national existence, and draw on our resources far beyond any rational need. And it is here that voices of responsible criticism are raised with relevant urgency.

Last week, a House-Senate economic subcommittee blasted the Pentagon's wasteful procurement policies that artificially inflate the budget and line the pockets of defense contractors.

In a blistering report, the congressmen showed that "the evidence is convincing that procurement expenditures can be substantially reduced without diminishing national security. In the past, literally billions of dollars have been wasted on weapons systems that have had to be canceled because they did not work . . . The result of the absence of effective cost controls, has resulted in a vast subsidy for the defense industry . . ."

Pentagon officials quickly agreed with the report. They pointed out it dealt with practices occurring under the previous administration and they said the Nixon Administration is overhauling the purchasing procedures.

That's fine for a beginning. Executive initiative is essential. But so, too, is constant and vigorous congressional review. And this, among other things, was what has been proposed by 45 congressmen in a report, issued last night, on the proceedings of a conference on military budget and national priorities held in March.

The report was signed by nine senators and 36 representatives, including five Long Island Democrats: Benjamin Rosenthal, a sponsor of the conference, and Shirley Chisholm, Lester Wolff, Allard Lowenstein and Hugh Carey. It called for the creation of a Defense Review Office to analyze defense spending for Congress; a temporary national security committee to look into military-industry relationships, and a reduction of security classifications.

These are welcome signs that Congress is ready to take away the Pentagon's blank check that has allowed 80 per cent of our federal expenditures to go into defense costs, an amount greater than all federal, state and local outlays for social security, health, education, housing and agriculture.

Readjusting this gross imbalance need not in any way endanger the basic needs of national defense. Indeed, if we can divert the billions now being wasted into domestic channels crying out for assistance we shall be doing a great deal to strengthen the national security by building up our internal strength.

THE WAR MACHINE UNDER NIXON

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. RYAN. Mr. Speaker, during its first 4 months in office, the Nixon administration has repeatedly pointed to rising inflation in the economy as the major problem confronting the Nation.

In order to reduce inflation, the administration has emphasized making substantial cuts in Federal expenditures. The bulk of the proposed budget cuts for fiscal year 1970 are in the domestic area. Although it has recommended some reduction in the military budget, the plain fact is that the President has taken $3

from civilian needs for every $1 from the military budget.

The substance of the reductions proposed for the military for the coming fiscal year are examined in the detail that is so often lacking in the Armed Services Committees of Congress in an article by I. F. Stone which appears in the June 5 issue of the New York Review of Books. In addition to examining how these so-called reductions actually conceal an increase of nearly $3 billion in non-Vietnam defense expenditures, the article, entitled "The War Machine Under Nixon," discusses the broader implications of putting the acquisition of weaponry and nuclear overkill above starved domestic programs.

If the allocation of resources proposed in the administration's budget for fiscal year 1970 is indeed an indication of where, as Mr. Stone puts it, "Washington's heart is," there is little doubt that the heart of this Government belongs to the Pentagon.

The waste and extravagance which have permeated defense spending for the past decade constitute one of the most scandalous episodes in our history, especially in light of the continued postponement of vital domestic needs in our society.

The reallocation of resources which is so urgently needed if we are to meet our numerous domestic problems, on the basis of the budget it has presented to Congress for fiscal year 1970, is not to be the policy of the Nixon administration. Given that fact—and I think we must recognize that it is a fact—it is up to Congress to assume the responsibility of halting the runaway spending of the Pentagon and rechannel the resources of the Federal Government into domestic programs that offer solutions to our multiple domestic needs.

The article by I. F. Stone on the defense budget follows:

[From the New York Review of Books, June 5, 1969]

THE WAR MACHINE UNDER NIXON

(By I. F. Stone)

In government the budget is the message. Washington's heart is where the tax dollar goes. When President Nixon finally, and very tardily, presented his first budget proposals in mid-April in a mini-State of the Union message, he said "Peace has been the first priority." But the figures showed that the first concern of the new Administration, as of the last, was still the care and feeding of the war machine.

Only Nixon's style had changed. "Sufficiency" rather than "superiority" in nuclear armaments remained the new watchword. But in practice it was difficult to tell them apart. Administrations change, but the Pentagon remains at the head of the table. Nixon's semantics recalled John F. Kennedy's eight years earlier. The Eisenhower Administration had waged battle for four years against the bomber gap and the missile gap with the slogan of "sufficiency." "Only when our arms are sufficient beyond doubt," was Kennedy's elegant riposte in his Inaugural, signaling a new spiral upward in the arms race, "can we be certain without doubt that they will never be employed." The rhetoric was fresh but the idea was no different from John Foster Dulles' "position of strength." This is the *plus ça change* of American government and diplomacy. It emerged intact after Nixon's first three months in office, too.

At a press conference four days after his budget message, Nixon said again that "sufficiency" in weaponry was "all that is necessary." But a moment later he was clearly equating it with nuclear superiority. He said he didn't want "the diplomatic credibility" of a future President in a crisis like that over Cuba's missiles "impaired because the United States was in a second-class or inferior position." A press corps obsessed with the latest plane incident off North Korea did not pause to consider the implications. Was "diplomatic creditbility" to be measured in megatons? Were we preparing again to play a thermonuclear game of "chicken," to see who would blink first at the prospect of instant incineration? Was this not the diplomacy of brinkmanship and the strategy of permanent arms race?

No correspondent asked these questions, and Nixon did not spell out the inferences. His tone was softer, his language more opaque, than that of the campaign, but the essential "security gap" theme had not changed. The main emphasis of Nixon's first months in office, the main idea he tried to sell the country, turned out to be that it was in mortal peril of a Soviet first-strike capacity. The new Administration sought to overcome a mounting wave of opposition to the ABM and to the military generally, by ringing the bells of panic.

True, the Secretary of State often seemed to deny the perils the Secretary of Defense painted. Which was the party line? It was indicative that when visiting editors were given a press kit on the ABM April 7, with a covering letter on White House stationery, signed by Herbert G. Klein as Nixon's "Director of Communications," the only thing new in that kit, the only news it contained, *and the one bit on which nobody commented*, was the "document" the Administration had chosen as the first item. It was a reproduction of a column in which Joseph Alsop three days earlier had exuberantly portrayed the "grim" (a favorite Alsop word) dangers of a first strike from Laird's new monster, the Soviet SS–9. The leading journalistic Pied Piper of the Bomber Gap and the Missile Gap had been enlisted by the new Administration to help it to propagate a new Gap. If the White House stationery and the Klein signature were not enough to make Alsop's nightmare official doctrine, the reproduction of the column carried at the bottom of the page this imprimatur, "Prepared under the direction of the Republican National Committee, 1625 Eye St. N.W., Washington, D.C." The candor was dazzling.

The Budget Bureau fact sheets which accompanied Nixon's spending proposals sought to create the impression that on the military budget, as on so much else, Nixon in power was reversing the course set by Nixon on campaign. "Military and military assistance programs account for $1.1 billion (27%) of the $4.0 billion outlay reduction [for fiscal 1970]," said one fact sheet, "and $3.0 billion (55%) of the cut in budget authority." But, as we shall see, while the cuts in domestic civilian programs proved all too real, those in the military budget were either dubious or deferrals.

There was in the Nixon budget one complete and dramatic about-face on the FB–111. Six months earlier, just before the election, at Fort Worth, where General Dynamics was building this new strategic bomber, Nixon had promised to make the F–111 "one of the foundations of our air supremacy." Now it was put permanently on the shelf. Procurement of the bomber was cut back sharply for fiscal 1969, which ends June 30, and abandoned altogether for fiscal 1970. Only the F–111D, the Air Force fighter version of this plane, was to stay in production a while longer.

Thus *finis* was soon to be written to the career of the multi-purpose, multi-service plane originally known as the TFX, one of McNamara's most costly misjudgments. But on this, as on almost every other item of apparent economy in the Nixon-Laird revisions of the Pentagon's budget, the few hundred millions saved in fiscal '69 and '70 were linked to commitments which would cost literally billions more in the decade ahead. Every short step back hid another leap forward in expenditures.

The TFX was McNamara's effort to stall off the drive of the bomber generals to commit the country to an entirely new manned bomber in the missile age. He gave them the FB–111, the bomber version of the TFX, instead. Laird reduced FB–111 procurement in fiscal '69 by $107 million and eliminated altogether the planned outlay of $321 million in fiscal '70. But he then added $23 million for fiscal '70 to speed "full scale engineering" of the new intercontinental bomber AMSA (Advanced Manned Strategic Aircraft) for which the Air Force and the aviation industry have been lobbying for years. "The FB–111, Laird told the Senate Armed Services Committee March 15, in an echo of the lobby's arguments, "will not meet the requirements of a true intercontinental bomber and the cost per unit has reached a point where an AMSA must be considered to fill the void."

It will be quite a void. The cost overruns, which had more than doubled the price of the FB–111, now, became the excuse for going ahead with a far more expensive bomber. The net saving of $405 million in fiscal '69 and '70 ($107 plus $321 minus $23 million) will commit the country to a new plane which Senator Proxmire told the Senate April 22 will cost at least $24 billion during the next decade. Such illusory economies place heavy first mortgages on the future in favor of the military and at the expense of social needs.

Even so, there was hidden in the F–111 cutback a $200 million consolation prize for General Dynamics. The formal budget document [1] carried an increase of $155.7 million for "Production of F–111D at minimum sustaining rate related to FB–111 cancellation." I was puzzled by this reference to a "sustaining rate." What was being "sustained"—military needs or General Dynamics?

I found a fuller explanation when *Aviation Week & Space Technology* arrived for May 5. It said the revised Nixon procurement plans for General Dynamics F–111D provided $599.8 million for aircraft "plus $56 million for advance procurement and $71.4 million to cover excess costs generated in fiscal 1968." It said the total of $727.2 million "represented a sharp increase over original fiscal 1970 plans of $518 million." Indeed this is an increase, though *Aviation Week* did not say so, of $209.2 million rather than the $155.7 specified in the budget message.

The increase had been approved by Deputy Defense Secretary David Packard—a director of General Dynamics until his Pentagon appointment—to counterbalance a cut of $320.9 million in the FB–111 program. It would "enable General Dynamics to retain its present production facilities." Not only did thirteen of these fighter planes crash in their twenty-six months of operations [2] but Senator Curtis of Kansas, in a comprehensive Senate speech last October 3, said they were not maneuverable enough as fighters. They are effective only as tactical bombers against enemy forces like those in Vietnam, which have no air cover of their own. Yet the government was not cutting back on its original plan to buy 331 of these F–111D's.

This in only one of many examples in the budget of how easily the Nixon Administration finds millions for such dubious military purposes but not for urgent social needs. The $200 million consolation for General Dynamics is the same amount—a very inade-

Footnotes at end of article.

quate amount—Nixon set aside in his budget message for riot-devastated cities. Nixon got a lot of publicity out of his order to give this urban program priority, but it didn't have enough priority to be a $200 million addition to the budget. It was just deducted from the meager amounts already available for other urban purposes.

II

Those who still look for the "shape" of the Nixon Administration are bound to remain bewildered. Shape is another word for policy, and policy requires the substitution of decision for drift. The campaign promised decision from one direction, the right. The situation requires decision from another direction, which might be called the left. Nixon turns out to take his stand—though that is too strong a word—in the middle of makeshift compromises. Whether on electoral reform or tax reform or poverty, feeble and inadequate half-measures are the rule. This shapelessness is the shape of the new Administration.

Hand-to-mouth decisions are standard in all governments, and inertia is basic in politics as in physics. But drift is only safe in quiet waters; to let inertia have its way in stormy seas is to risk disaster. Richard Nixon in the Sixties is beginning to resemble Calvin Coolidge in the Twenties, when the country kept cool with Cal, just before going over the brink with the stock market crash and the Great Depression.

To let inertia reign in the American government is also to let the military dominate. The sheer size of the military establishment, its vast propaganda resources and its powerful allies in every business, locality, and labor union affected by the billions it spends every year, gives it momentum sufficient to roll over every other department and branch of the government. In the absence of a strong hand and hard choices in the White House, the Pentagon inevitably makes the decisions. If nothing else, it makes them by default.

But there is more than default, and more than meets the eye, in the military budget. The readiest source of campaign funds and political support for nomination and election as President lies in the military-industrial complex. It is also the most skillfully hidden source. I suspect that the 1968 campaign, like the 1960, was preceded by deals which called for a buildup in military procurement. This would help to account for the steep increase in appropriations by the Kennedy Administration despite its discovery on taking office that the "missile gap" did not exist.[3]

The two plums the military-industrial complex most wanted on the eve of the 1968 campaign was the ABM and AMSA, a new advanced strategic bomber. In 1966 the Armed Services Committees of both houses recommended extra funds to speed both projects. A Congress still comatose on military matters dutifully voted the money. But McNamara refused to spend it. Johnson made two moves during the following year which cleared the way for both projects. In September 1967 he forced McNamara to swallow the bitter pill of advocating a "thin" ABM system in which the Secretary of Defense clearly disbelieved. Two months later Johnson made the surprise announcement—as much a surprise to McNamara as to the press—that he was shifting the redoubtable Pentagon chief to the World Bank. That cleared the way for AMSA, too, and with both projects it also cleared the way for the 1968 campaign.

As late as January 1968, in his last posture statement as Secretary of Defense, McNamara was still fighting a rear-guard action against AMSA. He argued that the principal problem lay in the growing sophistication of Soviet air defenses. "Repeated examination of this problem," he told Congress, "has convinced us that what is important here is not a new aircraft but rather new weapons and penetration devices."

AMSA began to inch forward when Clifford replaced McNamara. In Clifford's first posture statement last January, he struck a new note when he declared the FB–111 would be too small to carry the new weapons and penetration devices McNamara had in mind. One wishes one knew more about this, since it seems unlikely that McNamara would have overlooked so simple a point. While Clifford said "we are still uncertain whether a new intercontinental bomber will be needed in the 1970s," he more than doubled the research and development funds for AMSA, increasing them from $30 million in fiscal 1969 to $77 million in fiscal 1970, "to keep the program moving."

The Nixon-Laird revisions two months later went further. They not only added $23 million more for AMSA but authorized the Air Force to move into the engineering phase, the last stage in R and D before procurement. "Now, after a very careful review," Laird told the Senate Armed Services Committee March 27, "we have decided to cut off the FB–111 program . . . and concentrate our efforts on the development of a new strategic bomber, AMSA." General Dynamics, which lost out when Nixon phased out FB–111, will be one of the bidders on AMSA.

ABM and AMS together could spell $100 billions in electronic and aviation contracts in the years ahead. AMSA itself may prove a bigger gamble and a far more costly error than the TFX. *Space/Aeronautics* for January published a special issue plotting future trends in strategic warfare. It pointed out some of the pitfalls which may lie ahead for AMSA. About eight years elapse between concept definition and actual production in developing a new bomber. But Pentagon intelligence has never been able to come up with estimates of enemy threat valid for more than two or three years. "Thus," this Conover-Mast publication for the aerospace industry concluded, "there is no way of telling, the critics of AMSA claim, whether we would be committing ourselves to a system we really need or to what will end up as an immensely costly mistake."

The survey admitted that AMSA would be "less vulnerable than the B–52 and perform better," but added philosophically that "in a nuclear exchange time is too important an element for bombers to have any real effect." In other words even the fastest bomber may have no targets left after the far swifter missile exchange is over. One firm intelligence forecast emerged from the survey. "If AMSA is built," *Space/Aeronautics* said, "it will probably be our last strategic bomber. Once the present generation of Air Force commanders is gone, the top-level manpower will not be there to produce the sort of pressure that has kept AMSA alive for so long." Once the bomber admirals are dead, the clamor for a new bomber will die out, too. But the last fly-by will cost plenty.

III

AMSA is only one of many new military projects hidden in the new 1970 budget which will add billions to the future costs of government. "The present inflationary surge, already in its fourth year," Nixon said in his April 14 message, "represents a national self-indulgence we cannot afford any longer." But the principal beneficiaries of that indulgence are the military and their suppliers. And they seem to be exempt from anti-inflationary measures.

Fully to appreciate what the miltiary is getting one has to begin with a disclosure made in the Budget Bureau's presentation of Nixon's budget revisions. Nixon had to squeeze $7.3 billions out of the normal civilian and welfare activities of the government in fiscal 1969 (which ends June 30 of this year) in order to meet the expenditure ceilings imposed by Congress when it enacted the 10 percent surplus income tax. This reduction over and above Johnson's budget for FY 1969 was made necessary by certain "uncontrollable" items. An example is the interest on the public debt which rose by $300 millions. But the biggest uncontrollable item, ten times that much, or $3 billion, was an increase in Vietnam war costs over and above those originally estimated by Johnson.

So all sorts of civilian services during the current fiscal year have had to be pared to meet the unexpected increase in the cost of the Vietnam war. Now let us couple this revelation about the 1969 budget with a basic decision made by Johnson in the 1970 budget. In that budget Johnson for the first time, on the basis of his decision to end the bombing of the North, which was very costly, and perhaps in expectation of less combat on the ground in the South,[4] forecast the first sharp cutback in Vietnam war costs. This was estimated as a savings of $3.5 billion during fiscal 1970.

This was to be the country's first "peace dividend." But instead of applying this $3.5 billion in the 1970 budget to starved civilian and welfare services, or to reduction of the deficit, Johnson added this $3.5 billion *and $600 million more* to the money available for the Pentagon to spend on procurement and activities other than those connected with the Vietnam war. *The total increase in the non-Vietnamese military budget as projected by Johnson was $4.1 billion more, even though he estimated the Vietnam war was going to cost $3.5 billion less.*[5] In his April 14 message, Nixon said of our domestic needs, "what we are able to do will depend in large measure on the prospects for an early end to the war in Vietnam." The Johnson 1970 budget projected the first slowdown but proposed to use the savings entirely for military expansion. Nixon went along with that decision.

From the Pentagon's point of view there could not have been a smoother transition than the shift from Johnson to Nixon. Nixon revised Johnson's social and welfare programs downward but left his military budget essentially untouched. It read like the handiwork of the Johnson who was the ally of the military and the armament industries as chairman of the Senate Preparedness subcommittee during the Fifties. Johnson's last defense budget was not only the highest ever sent Congress—$81.5 billion as compared with the World War II peak of $80 billion in fiscal 1945—but laid the basis for a huge expansion in spending during future years. It gave the go-ahead signal to a wide variety of projects the armed services had long desired.

Nixon had campaigned on a "security gap" but Johnson left few if any gaps to fill. "The number of new programs spread through the new defense budget," *Space/Aeronautics* commented in its February issue, "is astounding in comparison with the lean years from fiscal 1965 to 1969." Among them were $400 million for "major developmental activity on no fewer than six new aircraft" and—biggest item of all—an increase of $1.64 billion to a total of $2.85 billion for the Navy's surface ship and submarine building program. Arms research and development was boosted $850 million to a total of $5.6 billion, including work on such new monsters as missiles which can be hidden on the ocean floor.

This farewell budget also put Nixon in a bind. As *Space/Aeronautics* pointed out in that same editorial, if Nixon tried to cut back appreciably on the Johnson budget, he would open himself to "security gap" charges. On the other hand "if he doesn't defer or cancel at least some of them, and if the war in Vietnam cannot be brought to an honorable close some time next year, he will face a crushing arms bill in fiscal 1971, when many of these starts begin to demand more money." That was the risk Nixon and Laird preferred to take.

Footnotes at end of article.

IV

Nixon claims to have cut $4 billion from 1970 outlays, and taken $1.1 billion, or 27 percent, from the military. Critics have protested that he took $3 from civilian needs for every $1 he took from the military. But even this is illusory.

From another point of view, even if we accept the Nixon cuts at face value, the military will have $3 billion more in fiscal 1970 for non-Vietnamese war purposes than it had in fiscal 1969. We have seen that Johnson budgeted a $3.5 billion cut in Vietnam war costs for fiscal '70 and then added $4.1 billion to the military budget for projects unconnected with the Vietnam war. If you deduct Nixon's $1.1 billion from that $4.1 billion the Pentagon is still ahead by $3 billion.[6] If Nixon had applied the whole projected saving of $3.5 billion on Vietnam to civilian use or deficit reduction, the fiscal 1970 total for national defense would have been reduced to $97,499 million. All Nixon did was to *cut the Johnson increase* by a fourth.

Even this may turn out to be—at least in part—a familiar bit of flim-flam. Since Johnson began to bomb the North in 1965 and take over the combat war in the South, almost every annual budget has underestimated Vietnamese war costs. These have had to be covered later in the fiscal year by supplemental appropriations. The under-estimate in fiscal 1969, as we have seen, was $3 billion. The fiscal 1970 budget is running true to form.

The biggest "economy" item in the Nixon military budget is $1,083.4 million, which is attributed to "reduced estimates of ammunition consumption rates." [7] Just how much of the estimated $1.1 billion "saving" in outlays for fiscal 1970 will be the result of lower consumption of ammunition in Vietnam was not made clear. The $1,083.4 million is given as a net reduction of obligational authority in fiscal 1969 and 1970. It is one of the three main items in that $3 billion cut in obligational authority for fiscal 1970 which make it possible for the new Administration to claim that 55 percent of the total cut in obligational authority for 1970 ($5.5 billion) came from the military. Obligational authority is not necessarily or entirely translated into actual outlays during the fiscal year in which it is granted.

This projected cut in the rate of ammunition consumption is in addition to Johnson's projected cut of $3.5 billion in Vietnam war costs. Though Laird does not blush easily, even he seems to have been embarrassed by this particular "economy." "To be perfectly frank," said Laird, who rarely is, when he first broached this item to the House Armed Services Committee on March 27, "I think the ammunition consumption rates for Southeast Asia are based on rather optimistic assumptions, particularly in view of the current Tet offensive." Yet, under pressure from the White House to show more economy, the optimism rose sharply in the next four days. The following table shows the change in estimated savings for ammunition and its transportation in millions of dollars in those four days:

	Mar. 27	Apr. 1
Ground munitions	−$380.0	−$460.0
Ammunition transport	−34.4	−34.4
Air munitions	−417.9	−511.9
Ship gun ammunition	−47.1	−77.1
Total cuts	879.4	1,103.4

These figures are for total obligational authority for fiscal years 1969 and 1970. Perhaps the Administration hesitated to make public its actual outlay estimates for these two years, since they may easily turn out to be higher rather than lower, and may have to be met later in the year by a supplemental appropriation. Between March 27 and April 1 Laird boosted the estimated reduction in total military outlays for FY 1970 from "about $500 million" to $1,113 million. Most of the increased "economy" seems to have come from this ammunition item.

There are several indications in the official presentations themselves which lead one to think Laird was right to be queasy. The original 1970 budget projected consumption of 105,000 tons a month in ground munitions through December 1970. Actual consumption in January was given as 96,000 tons, but that was before the recent enemy offensive got under way. The consumption of ammunition must have risen sharply with the fighting in February, March, and April, but when I asked the Pentagon for the monthly figures since January, I was told they could not be given out. "We can only say," an official spokesman told me, "that the Secretary's projections are being borne out." If that is true our troops must have been meeting enemy attacks with switch knives.

Another indication—how I love tracking down these liars!—appears in what we know about the volume of bombs dropped on South Vietnam and Laos since we stopped bombing the North. The Pentagon's own figures on total tonnages dropped show little change. Total tonnages dropped in September and October last year, before the bombing of the North stopped, were almost 240,000. Total tonnage dropped in January and February of this year, when it was dropped only on Laos and South Vietnam, was more than 245,000. There was an increase of 5,000 tons. That increase makes the estimate of a saving of more than a half billion dollars in air munitions for fiscal '69 and '70 look very phony indeed.

Laird himself said consumption of air munitions was rising. On March 27 he told the House Armed Services Committee that while consumption had been estimated at 110,000 tons per month for the twenty-four months from January 1969 to December 1970—that doesn't sound like much *de*escalation ahead, at least in the air!—"actual consumption is now running at about 129,000 tons per month." Yet he projected a saving of $42.5 million on air munitions in fiscal 1969 and $375.4 in fiscal 1970. When he got back to the committee four days later, he placed actual consumption even higher, at 130,000 tons a month, but also projected higher savings! Now he was to save $89.5 million on air munitions in fiscal 1969, or twice the figure four days earlier, and $442 million for fiscal 1970, an increase of $47 million over the earlier estimate. Yet Laird said he saw "no indication that consumption will decline by very much during the next twelve-to-eighteen months." How then were expenditures on air ammunition to be lower than expected when the tonnage of bombs dropped was running higher than expected? Non-Euclidean geometry is not half so exotic as Pentagon arithmetic.

The ammunition figures for Vietnam are stupendous. The original Johnson-Clifford '70 budget in January projected the cost of ammunition in Vietnam during fiscal 1970 at $5.2 billion. This expenditure of shot and shell over Vietnam is two-and-a-half times the total 1970 revised Nixon budget of $2 billion for the Office of Economic Opportunity (down $132 million), and more than twice the revised elementary and secondary education outlay for '70 which he set at $2.3 billion (down another $100 million).

V

After this razzle-dazzle on ammunition, the next largest item of military saving in the Nixon-Laird budget revisions is the ABM. Let us return to the formal document sent Congress by the President. There on page 17 [8] are given "principal changes in 1970 budget authority resulting from 1969 and 1970 Defense program changes." The second largest of these is $994 million for "Reorientation of the antiballistic missile program to the new Safeguard system." This and the ammunition item make up almost $2.1 billion of that $3 billion cut in military obligational authority on which the new Administration commends itself.

A businessman in financial difficulties who thought up such savings for his stockholders would soon be in jail for embezzlement. The "reorientation" of Sentinel into Safeguard may reduce spending in fiscal 1970 but only by adding at least $1.5 billion and possibly $5.5 billion more in the next few years. This is an expensive rebaptism or, better, if we consider the phallic significance of these monsters, re-circumcision. Nixon had an easy way out of the ABM fight if he wanted one. He could have announced that like Eisenhower he had decided to keep the ABM in research and development until he was sure it would not be obsolete before it was deployed.

If he had been a little more daring, and a little less beholden to the military-industrial complex, he might have cut billions [9] from the military budget immediately by offering a freeze on all new deployment of strategic defensive and offensive missiles if the Russians did likewise as a preparation for strategic arms negotiations. This would not only save at least $5 or $6 billion in the new fiscal year but ensure our present nuclear superiority and fully guarantee against first strike nightmares.[10]

Nixon chose instead a tricky stretch-out. This offered some reductions in the new fiscal year, as compared with Johnson's ABM proposal, but at the expense of higher costs later. This ingenious compromise made it possible to offer an apparent saving to the taxpayer *and* larger eventual orders to the electronics and missile industries. This not only fulfilled the Administration's promise of New Directions but enabled it to move in opposite directions at the same time. Johnson's Sentinel was estimated to cost $5.5 billion; Nixon's Safeguard, variously from $6.7 to $7 billion, or $1.5 billion more. This may prove another official underestimate. An authoritative service which covers all developing major weapons and aerospace systems for industrial and governmental subscribers places the total cost of Safeguard much higher.

This is DMS, Inc. (Defense Marketing Service), a ten-year-old service now a part of McGraw-Hill. I had never heard of it until an anonymous reader sent me a reproduction of its report on Nixon's Safeguard. I checked with its Washington office by telephone and was given permission to quote it. Its detailed analysis places the total cost of the system at $11 billion and ends by warning that "in a program as complex as Safeguard, historical experience indicates costs in the long run are likely to be considerably higher." When Senator Cooper put the DMS analysis into the *Congressional Record* May 8, he noted that it did not include "about $1 billion AEC warhead costs." This would bring the total cost of Nixon's Safeguard past $12 billion.

Since the ABM authorization will soon be before Congress and this defense marketing service is known only to a restricted circle, we give its computations here:

Perimeter acquisition radar (PAR)	$560
PAR unit cost is estimated at $80 million, will be installed at 7 sites	
Missile site radar (MSR)	1,500
MSR unit cost is estimated at $125 million; will be installed at 12 sites	
Spartan missile	1,050
Unit cost of Spartan when deployed is estimated to be $3 million; DMS believes there will be 350 missiles installed	
Sprint missiles	560
Unit cost is estimated at $800,000; DMS believes 700 missiles will be deployed with a greater number at Minuteman sites than at other sites	
Data processing subsystem	1,500

Footnotes at end of article.

Includes new generation computer, memory banks, displays, tapes and discs plus an extensive amount of software	
Command, control and communications	$500
Warheads	210
Figure assumes 1050 warheads at a cost of $200,000 each. AEC funds are used for development and production	
Construction	2,100
Figure assumes construction costs will average $300 million annually through 1975	
Total investment for 12 sites	7,980
Research and development	2,400
Figure assumes R&D costs of $350 million per year through 1975. Does not include the $150 million per year which will support work on new radars and interceptors	
Operations and maintenance	700
Figure based on an average operation cost of $100 million annually through 1975	
Total Safeguard cost through 1975	11,080
Assumes no cost overruns.	

The DMS report notes that we have already spent $4.5 billion on the ABM from fiscal 1956 when the Army started the Nike Zeus program, through fiscal 1968, and that the research efforts which made Nike-Zeus obsolete before it could be deployed are still going on, at a cost of $350 to $500 million annually. "A number of new concepts as well as hardware," the report said, "are currently under investigation." These threaten Safeguard with obsolescence too. "Preliminary research," DMS said, "has pointed the way toward the following types of advances": One was radars of much higher frequency so the interception "would be made with either a much smaller nuclear warhead or even a conventional high explosive charge." Another was a new third stage for Spartan so the missile could fly out at greater ranges and "maneuver through a cloud of decoys to find and destroy the real warhead." A third—most expensive of all—was "defensive missiles carried either in ships or large aircraft deployed closer to the enemy's launching sites."

We give these details to show that in embarking on the ABM we are embarking on a wholly new sector of the arms race with a high rate of obsolescence to gladden the hearts of the electronics companies and of A.T.&T., whose Western Electric has long been the main contractor. The reader should note that the three advances cited in the DMS report are relatively simple and foreseeable developments. All kinds of "far-out" possibilities are also being investigated. The secret hope which lies behind all this Rube Goldberg hardware is that some day somebody will turn up a perfect ABM defense and thus enable the possessor to rule the world because a power so armed can threaten a first strike, knowing it will be immune to retaliation.

The most candid expression of this viewpoint was made by Senator Russell during the defense appropriations hearings in May of last year. "I have often said," Senator Russell observed, "that I feel that the first country to deploy an effective ABM system and an effective ASW [anti-submarine warfare] system is going to control the world militarily."[11] This control of the world, however, may be on a somewhat reduced basis. Six months later, during the Senate's secret session on the ABM (November 1, 1968), Senator Russell admitted, "there is no system ever devised which will afford complete protection against any multiple firing of ballistic missiles . . . we will have no absolutely foolproof defense, I do not care how much money we spend on one, or what we do." Senator Clark replied that casualties would be so high as to destroy civilization "and if there are few people living in caves after that, it does not make much difference." To which Russell made his now famous rejoinder, "If we have to start over again with another Adam and Eve, I want them to be Americans and not Russians." (*Congressional Record*, E9644, November 1, 1968.) Thus we would at last achieve an unchallengeable Pax Americana! And thus the ABM turns out to be another variant of the military's unquenchable dream of an Ultimate Weapon, to leap some day like a jackpot from a slot machine if only they go on pouring money into R and D.

Footnotes at end of article.

VI

I would ask the reader's indulgence for one more foray into the labyrinthine depths of the Pentagon budget. Deeper knowledge of these recesses is necessary if we are ever to hunt down and slay the dragon. I want to deal with the next largest source of the Nixon military "economies." These involve deferrals of expenditures amounting to about $480 million. Most critical comment has been content to note that mere deferral of spending is not real economy, since what is saved in fiscal '70 will be spent later. There is a more important point to be made. These deferrals, if closely examined, provide additional proof of how recklessly and wastefully the Pentagon dashes into production before full testing and evaluation have been completed, before it knows, in other words, that these expensive weapons will work. We will see how much pressure it takes to make the Pentagon admit this elementary error.

To grasp the full significance of these so-called "economies" of Nixon and Laird we must see them against the background of revelations by two Senators, one the leading pillar of the military in the Senate establishment, Senator Russell; the other, a former Secretary of and long-time spokesman for the Air Force, who has turned against the military-industrial establishment, Senator Symington.

During the secret debate on the ABM last November 1, Russell told the Senate one of the "most serious mistakes" he had ever made as Chairman of the Armed Services Committee, which passes on all military requests for authorization, and as chairman of the Senate subcommittee, which passes on all defense appropriations, "was in allotting vast sums to the Navy for missile frigates before we knew we had a missile that would work on them." He said "we built missile frigates, we built missile destroyers and missile escort ships" on the basis of "unqualified" testimony of "everyone in the Department of Defense and in the Navy" that effective missiles were being developed. "It probably cost the taxpayers," Russell said, "$1 billion, because they have had to rebuild those missiles three times.

A more comprehensive statement of the same kind was made to the Senate by Symington on March 7 of this year. He put a table into the CONGRESSIONAL RECORD (at page 5602 that day) which showed how much had been spent on missiles in the past sixteen years which were no longer deployed, or never had been deployed, because of obsolescence. The total was fantastic. Symington gave the names, the expenditures, and the life-span of each missile. The total cost of those no longer deployed was $18.9 *billion* and the cost of those which were abandoned as obsolete or unworkable *before* deployment was $4.2 billion. The total was $23 billion. Imagine what those wasted billions could have done for our blighted cities!

Symington's table was introduced to underscore his point—buttressed by past testimony from McNamara—that the ABM would soon be another monument to this kind of expensive obsolescence. Another inference to be drawn from this table is how many billions might have been saved if the Pentagon had not rushed so quickly into these miscarriages. Behind the glamorous names which flashed through the appropriations hearings and the ads in the aeronautical and military trade journals—Navaho, Snark, Dove, Triton, and even Plato (what did he do to deserve *this* honor?)—lies an untold story of beguiling missile salesmanship and drunken-sailor procurement methods. It might be worth billions in future savings if a Congressional investigating committee really dug up the full story and its lessons.

The need for such an investigation becomes plain if one examines the funny thing which happened to SRAM (acronym for short-range attack missile) on Secretary Laird's way to and from the budget forum on Capitol Hill between March 27, his first appearance before the House Armed Services Committee, and his second appearance on April 1, just four days later, SRAM is one of the new missiles which have been under development. It is supposed to be mounted on a bomber so it can be rocketed into enemy territory from a position more than a hundred miles away from the enemy's defense perimeter. The idea is to circumvent the enemy's defenses by stopping the bomber out of their range and lobbing the missiles over them.

SRAM has had several predecesors, all expensive, of course; it is not a simple contraption. The predecessors appear in Senator Symington's table. Crossbow, Rascal, and Skybolt were earlier attempts at a stand-off missile; they cost a total of $962.6 million before they were abandoned prior to deployment. Hound Dog A, which cost another $255 million, is another missile in the same family which is no longer deployed. SRAM is very different in capability, range, and complexity. SRAM is intended to do for the bombing plane what penetration aids do for the ICBM. SRAM is supposed to carry all kinds of devices to confuse the radars of the enemy defense.

When Laird appeared before the House Armed Services Committee on March 27 he referred, without further explanation, to "delays experienced in the SRAM development production program." The original Johnson-Clifford budget last January for fiscal 1970 called for the modification of all seventeen B–52 squadrons of series G and H at a total cost of about $340 million to enable them to carry SRAM. The "modification kits," as Laird described them, were to be bought from Boeing "at a total cost of about $220 million," and it was planned to buy kits for twelve squadrons in 1970, leaving the rest to be modified in 1971. Laird proposed to save $30 million in fiscal '70 by equipping only ten squadrons in '70 and the remaining seven in '71. He said "This change will give us a smoother program."

But the White House and the Budget Bureau, desperate for ways to cut, put pressure on the Pentagon and four days later Laird was back before the Armed Services Committee. Now instead of $30 million he proposed a deferral of the SRAM program amounting to $326 million. It now appeared that he had been less than candid with the committee. The cryptic references to "delays" turned out to be quite an understatement. He came forward with new changes in the SRAM program, all of them—he explained—"related to the difficulties encountered in the development of this Short Range Attack Missile." Now it was not "delays," but "difficulties."

Laird went on to quite a revelation. "We have now reached the conclusion," he told the committee, "that procurement of operational missiles should be deferred until the test program conclusively demonstrated that they will work as intended." So "we have deleted most [but not all!] of the missile procurement funds" from fiscal '69 and '70, for a total cut in the two years of $153 million.

Then he proposed to defer not only the missiles but the modifications designed to enable the B–52s to carry them. "Inasmuch as

we do not know when operational missiles will be available," Laird said, "we have also deferred all special SRAM modification work on the B–52s and FB–111s." The total net deferral—after adding $17 million to R and D for "a greater portion of the overhead cost" (another consolation fee?)—was to be $326 million.

This shows how much pressure it takes to squeeze the fat out of the military budget, and a little more candor out of the Pentagon. Why didn't Laird tell the committee on March 27 what he revealed on April 1? But for the extra pressure, the Pentagon would have gone on with procurement of the SRAM before knowing whether it would work, and with modification of the strategic bombers to carry the missiles before it was sure that it would have the missiles. What if further testing modifies the missile, and this requires a change also in the kits which modify the planes to carry these missiles? Why risk the waste of millions?

The SRAM story raises similar questions about Laird's rather cryptic references in his budget presentation to a similar deferral of "about $160 million" in the Minuteman ICBM program. The most important part of that "saving" is due, as Laird told House Armed Services on March 27, to "a slowdown in the deployment of Minuteman III." This is the Minuteman which will carry MIRV–"mutiple independently targeted reentry vehicles," i.e., additional warheads independently targeted. It was tested for the first time last August 16 with three warheads.[12] "While we are confident," Laird said, "that the Minuteman III will perform as intended, we believe it would be prudent to reduce somewhat the previously planned deployment rate, at least through the FY 1970 procurement lead-time." Why only somewhat, and what does somewhat mean for the whole program? "This delay," Laird went on, "would serve to reduce the amount of overlapping of R & D and production and provide more time for production." Why risk has overlapping altogether until testing has been completed? Laird himself said he was planning to accelerate operational testing "to help ensure that the missile is working well before we return to the originally planned rate in FY 1971." "Mr. Chairman," Laird said, patting himself warmly on the back, "this reflects our determination to minimize cost overruns resulting from R and D modifications after production has commenced." But perhaps more serious cost overruns could be avoided if Minuteman III, like SRAM, were subjected to further deferrals.

A franker if ironic account of the Minuteman III cuts appeared May 5 in *Aviation Week*. It says "The reason for the reduction is fear of reliability problems with the new missile." It said the Air Force had "decided 'to reduce the concurrency of development and production' of the missile in order to insure reliability of all components." Even the Foreign Service could not have hit upon a smoother phrase to equal that "concurrency of development and production." *Aviation Week* added, "The cutback was publicized by some Defense Dept sources as evidence of US willingness to reduce strategic offensive armaments prior to arms reduction talks with the Soviets, but that was not the reason."

This effort to make the Minuteman cuts look like evidence of Pentagon enthusiasm for arms talks originated in Laird's own presentation on April 1. In a super-slick conclusion he told the Committee, "Our decision to slow the Minuteman III deployment—though necessitated for other reasons—provides a period of time in which arms limitation agreements could become effective at a lower level of armaments. . . . It remains to be seen, of course, whether our potential adversaries will similarly indicate with actions that they, too, are serious about desiring meaningful arms limitation talks." These are the moments when Laird sounds as if he were dreamed up by Molière.

But beyond any question of personality or politics, the almost irresistible momentum of the military machine which is slowly transforming American society finds its ultimate rationale in the theory of deterrence. It is to this and the permanent arms race it generates that I would like to turn in a concluding article.

FOOTNOTES

[1] House Document No. 91–100. 91st Congress, 1st Session. *Reductions in 1970 Budget Requests. Communication from the President of the United States*, p. 17.

[2] AP in Omaha *World Herald*, March 7, 1969.

[3] Carl Kaysen, who was Kennedy's Deputy Special Assistant for National Security Affairs, has given us more precise figures than I have ever seen before in the chapter on "Military Strategy, Military Forces and Arms Control" in the Brookings Institution symposium, *Agenda For The Nation* (Doubleday, 1969). He wrote (pp. 562–3) that the decisions of 1961 and 1962 by Kennedy "called for the buildup by 1965 of a US strategic force of nearly 1,800 missiles capable of reaching Soviet targets; somewhat more than a third were to be submarine-launched. In addition, some 600 long range bombers would be maintained. *This was projected against an expected Soviet force of fewer than a third as many missiles and a quarter as many bombers capable of reaching the United States.*" (Our italics.) The "overkill" was worth billions to the aviation and electronics industries.

[4] According to a little-noticed press release by Senator Stephen M. Young (D. Ohio), a member of the Senate Armed Services Committee, which has access to much information otherwise secret, Johnson had originally planned a cutback of troops in Vietnam. Young asked Nixon to recall two divisions before July and more later with an announcement, "We have accomplished our objectives in Vietnam. Our boys are coming home." Young said Johnson had decided on a similar announcement last year but was talked out of it by the Joint Chiefs of Staff.

[5] Since I have been challenged on this "peace dividend" by some colleagues, and others have wondered by what elaborate computation I arrived at it, I give the source, p. 74 of *The Budget of the U.S. Government for Fiscal 1970*. It says, "As shown in the accompanying table outlays in support of Southeast Asia are anticipated to drop for the first time in 1970—declining by $3.5 billion from 1969. This decline reflects changing patterns of combat activity and revised loss projections. *Outlays for the military activities of the Department of Defense, excluding support of Southeast Asia, are expected to rise by $4.1 billion in 1970, to provide selected force improvements.*" (Italics added.)

[6] Even that understates the case. Down near the bottom of the budget outlays table of the Nixon revisions is $2.8 billion more for "civilian *and military* pay increases." (Our italics.) Laird in his April 1 presentation said this would add $2.5 billion but failed to make clear whether this was for the whole government or only for Pentagon civilian and military—almost half the civilian employees of the government work for the Pentagon. Clifford in his 1970 statement gave a figure of $1.8 billion for Pentagon pay increases but did not make clear whether this included the civilian employees. So pay raises will add between $1.8 billion and $2.5 billion to this $3 billion figure.

[7] See page 17 of House Document No. 91–100, 91st Congress, First Session.

[8] House Document No. 91–100. Reductions in 1970 Appropriation Request Communication from the President . . . together with details of the changes. 91st Congress, First Session.

[9] The Johnson budget for 1970 placed the expenditure for strategic forces at $9.6 billion as compared with $9.1 in 1969 and $7.6 in 1968. Much of this is for deployment of new weaponry.

[10] "Such a freeze," Senator Percy declared in a speech April 17, "should be acceptable to the Defense Department. Secretary Laird has testified that our missiles on land and under the seas as well as our long-range bomber force present an overwhelming second-strike array. If a freeze—fully verifiable by both nations through satellite reconnaissance as well as other intelligence sources—is put into effect, the US deterrent will remain credible into the foreseeable future." But if the deterrent remains credible, what will the poor missile salesmen do?

[11] Department of the Army, Senate Hearings, Department of Defense Appropriations for fiscal 1969, 90th Congress, Second Session, Part II, page 868.

[12] "On August 16, said a special survey in *Space/Aeronautics*, page 88, last January, "Poseidon and Minuteman III were launched with ten and three warheads respectively."

THE 161ST BIRTHDAY OF JEFFERSON DAVIS

HON. CHARLES H. GRIFFIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. GRIFFIN. Mr. Speaker, today, I think it is appropriate that we take a few moments out to acknowledge the birthdate of one of the giants of America, a man whose moral courage and strength of purpose stand out in history.

Few Americans, Mr. Speaker, remember Jefferson Davis other than as the great President of the Confederate States of America. What most of us do not realize is the place of distinction occupied and richly deserved by this man who looms large, even in an age which produced such great figures as Lincoln, Daniel Webster, and Henry Clay.

Jefferson Davis was born on this day, June 3, in 1808, on the site of what is now Fairview, Ky. The Davis family moved, when the young Jefferson was still very small to Woodville, Wilkinson County, Miss. It was here that he grew up along the banks of the Mississippi River.

At age 16, Davis accepted an appointment to the U.S. Military Academy at West Point where he formed ties and attachments which were to serve him well in later life. Among these early close friendships were Albert Sidney Johnston, Robert E. Lee, and Joseph E. Johnston.

Widowed in 1835 after only 3 months of marriage to Sarah Knox, a daughter of the then Col. Zachary Taylor, Davis returned to Vicksburg, Miss. For the next few years, he occupied his time in cotton planting and reading constitutional law.

In 1845, Jefferson Davis was elected to the U.S. House of Representatives. During that same year, Davis formed and cemented the liaison with Varina Howell, a 19-year-old belle of Natchez, Miss., who was to be the great love of his life.

The outbreak of war with Mexico saw Congressman Davis resign his seat in the House in exchange for command of the First Mississippi Volunteers. After receiving severe wounds as a result of his

heroic service, Davis returned to Mississippi and was appointed to the U.S. Senate. While in that body, he distinguished himself as chairman of the Committee on Military Affairs.

In 1851, after yielding to the urgings of the Democratic organization of the State of Mississippi, Davis saw the only political defeat of his career in his campaign for Governor. In 1853, he was appointed as Secretary of War in the Cabinet of President Franklin Pierce. His service in this capacity can only be described as brilliant. During his tenure he was instrumental in obtaining pay raises for military troops, extensive improvements at West Point and Army posts, expansion of the Army, improved coastal defenses and in the engineering of the Gadsden Purchase.

Returning to the Senate in 1857, Davis attempted to close the ever widening gap between North and South, to make the voice of reason heard over that of radicalism. Even after the secession from the Union of South Carolina in December 1860, Davis remained a reluctant secessionist advocating that it should be turned to only as a last resort. Mississippi's secession a month later, however, brought Davis' resignation from the Senate. Returning to Mississippi he was immediately given a commission as major general in the armed forces of Mississippi.

Before he could accept his command, however, the convention meeting at Montgomery, Ala., chose Davis as the provisional President of the Confederate States of America; his inauguration taking place on February 18, 1861. A second inaugural was held on February 22, 1862, with the formal adoption of the permanent Confederate Constitution. Davis' primary concern during the first year of his Presidency was to avoid, at all costs, an open outbreak of hostilities with the North. President Lincoln's call for 75,000 volunteers and his decision to reinforce the U.S. garrison at Fort Sumter, in Charleston, S.C., with the subsequent fall of the fort, made war inevitable.

Davis led the new nation into a war against truly hopeless odds. With only one-fourth the white population of the Northern States, only a small percentage of the manufacturing capacity of the North, no navy, no powder mills, and an overwhelming lack of arms and materials. The South, nevertheless, mobilized and hundreds of thousands of young men abandoned their educations, their farms, and their families to rally to the Confederate colors.

But, cotton and courage could not make up for the essentials of war, and as the conflict progressed, the Confederacy was gradually bled of its substance and its life's blood. Even after the simultaneous fall of Gettysburg and Vicksburg in July 1863, Jefferson Davis continued to inspire his people.

Shortly after the fall of Atlanta to General Sherman in September 1864, an interview with Jefferson Davis appeared in the Atlantic Monthly. Its author, Edmund Rule, described Jefferson Davis as "a man of peculiar ability."

Our interview—explained why with no money and no commerce, with nearly every one of their important cities in our hands, and with an army greatly inferior in numbers and equipment to ours, the Rebels have held out so long. It is because of the sagacity, energy and indomitable will of Jefferson Davis. Without him, the rebellion would crumble to pieces in a day.

On April 9, 1865, General Lee surrendered to General Grant at Appomattox Courthouse, Va., thus ending the military action of the Civil War. President Davis was taken prisoner at Irwinville, Ga., on May 10 of the same year.

Imprisoned at Fort Monroe, Va., Davis was accused of treason. Conditions during his confinement were so bad that his health was severely impaired and he was released in 1867. Treason charges were dropped in 1868.

After the fall of the Confederacy, and the years of reconstruction, Davis was repeatedly urged to reenter the Senate. But, he refused to ask for amnesty. On December 6, 1889, at the age of 81, Jefferson Davis died in New Orleans of complications following a bronchial ailment. His body was returned to Richmond, Va., the Confederate Capital in 1893 for reburial.

Today, marks the 161st anniversary of the birth of this great man, Mr. Speaker, and I think it is fitting that he should be remembered on this date for what he was. As an officer in the U.S. Army, as a Member of this House, of the Senate, as Secretary of War and as President of the Confederate States of America, Jefferson Davis distinguished himself as a soldier and statesman. Although his cause was not nationally popular, his integrity, courage and spirit were held in high esteem by friend and foe.

A STUDY IN PATRIOTISM

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. WYMAN. Mr. Speaker, one of the most perplexing things about modern society is the lack of patriotism in the attitude of many of the younger generation. This phenomenon cannot be attributed solely to the Vietnam war.

Who has failed to inculcate genuine patriotism in the hearts of our young people? Is it parents? Teachers?

In this connection, the following column, written by Allan C. Brownfeld, and appearing in a recent issue of Roll Call, deserves thoughtful review:

A PATRIOTISM FOR TODAY

(By Allan C. Brownfeld)

On the night before her execution, Edith Cavell, speaking to the Rev. Mr. Gahan, noted that "Patriotism is not enough. I must have no hatred or bitterness towards anyone."

The modern world seems to be short both on patriotism and on love. In our own country, some have said that we must defend policies of the government, whether they are right or wrong. But is this the level of loyalty we really demand? Cannot we say, with Camus, that we wish to love our country, but to love justice at the same time? Can't we agree with Edmund Burke who, in his Reflections On The French Revolution, wrote that "To make us love our country, our country ought to be lovely?"

Memorial Day is a time when we reflect upon patriotism, upon the nature of love for one's country, upon the sacrifices which nameless men have suffered, often for feelings they cannot express, for reasons they do not understand. For, as Pascal knew, "the heart has its reasons that reason doesn't know." We love our country, perhaps, simply because it is ours, as we love our parents. But this is not enough. Patriotism is, in a sense, a nobler gesture and feeling. Jesus said that even the criminals love their friends and families. Patriotism of this kind is only a primitive defense of one's hearth. And patriotism, of course, is basically this at the beginning. But then it grows outward. "Love," as the lyric has it, "isn't love till you give it away."

Modern critics advance the view that to love one's country means, somehow, less love for mankind as a whole. They urge that men abandon feelings of kinship with a nation or a culture or a civilization, and transfer this feeling of affinity to all men. The goal of men truly living in peace and brotherhood, regardless of their race, their tongue, their religion, or other peculiar national attributes, is surely a good one. It is the traditional goal of our Judeo-Christian religious heritage, as it is of other world religions.

The question, then, relates not to goals but to means. Do we achieve world brotherhood and harmony by denigrating natural feelings of love and loyalty to one's own country, or do we achieve this by nurturing love of country while at the same time opposing both chauvinism and the concept that love of country somehow implies support for the transient policies of a particular government in power?

In this, as in most other areas, the best answer seems to come with some observation of man's nature. It is easier to achieve worthy goals by enhancing man as he is, rather than by tinkering with him. No one has yet changed man's nature, though dictators and tyrants have often made the attempt. Kipling may have understood a portion of this when he wrote: God gave all men all earth to live./But since our hearts are small,/ Ordained for each one spot should prove/ Beloved over all.

The man who is happy with his family is most likely to be happy with the world and with the people he sees and meets. The man who has good feelings toward his country is likely to have good feelings toward other men. Unfortunately, patriotism and love of country have often been used by destructive personalities to stimulate bigotry and hatred. In our own country we have had movements which tried to limit the concept of who was an American. This country, various groups at various times have said, is a "white man's country," or a "Christian country," or a country only of the native born, or a country only for those whose ancestors reached its shores at a specific time. This is not patriotism. It has been answered many times. The Negro leader A. Philip Randolph criticized those who said that this was a country for white men. It was, he said, a country for all of those who had fought and worked and sweated and died for it.

Religion has often been used in the same exclusionary manner. Jonathan Swift saw that men had "enough religion to make them hate but not to love one another." The same may be true with a certain kind of patriotism which looks inward in this manner and is truly destructive. If the critics of the modern world oppose it, they are right. But patriotism which is outward, which springs from love of the land, from happy memories, from ideals which look to all and are not limiting, such patriotism may be the very foundation upon which the brotherhood and peace we seek may be built.

If we destroy love for the things we love first and most naturally, how can we achieve

the universal love we seek in the long run? This problem was posed by C. S. Lewis when he challenged the modern intellectual critics who destroyed man's capacity to do the very things they later complained he was not doing.

He stated: "In a sort of ghastly simplicity we remove the organ and demand the function. We make men without chests and expect of them virtue and enterprise. We laugh at honor and are shocked to find traitors in our midst. We castrate and bid the geldings be fruitful."

Part of the feeling of alienation which is inherent in the modern world rests with our growing urbanization, our lack of feeling for natural beauty, our lack of connection with places. John Ciardi wrote, "I have a country, but no town. Where I was born is Interstate Highway 66." Often we cannot return to the scenes of our childhood for the bulldozer has been there first. When a building gets old enough to have memories inhabit the structure, we tear it down. The National Presbyterian Church here in Washington, D.C. has been replaced by an aluminum and glass office building. So what if Presidents prayed there, and history stopped there for moments of meditation and reflection? The old church was demolished and, for many Americans, their ability to gather strength from their roots has been destroyed by the destruction of such roots. "God," Cowper wrote, "made the country and man made the town." Men cannot give their ultimate loyalties to man made things.

Those who muse over the meaning of patriotism on this Memorial Day would do well to consider the fact that the old formulas are not keeping with the situation of today. The patriotism we must recapture is unlike the patriotism we have lost, just as the technological society toward which we are moving is unlike the agrarian society from which we have come. But even in this new world, the honor we hold for those who have paid with their lives for our freedom to reflect as we will, is unchanged. In fact, it is greater. For in a world where free reflection is stifled in all too many places, we still have the ability to chart our own course. Perhaps this is all men can ever really ask.

And patriotism never means that a country has not made mistakes, even grievous mistakes. It does not mean that we must blindly support what our country does if we find it to be wrong. But to love means to help make things better, and not to destroy, to correct flaws, to chart new and better courses. To love means never, in the midst of problems, to withdraw from the relationship. Patriotism demands even more of the critics, and it demands the tolerance of those who agree, as well as those who disagree. From such a patriotism a better world can be built and this after all, is our goal.

COUNTY ACTION FOR CONSUMERS

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. ROSENTHAL. Mr. Speaker, Nassau County of New York has an outstanding program of consumer protection which is becoming a model for local government throughout the country.

I was recently honored to address the county's first consumer conference. My remarks follow:

REMARKS BY MR. ROSENTHAL

Your Office of Consumer Affairs has been highly successful in protecting and representing the consumers of this county—so successful that it serves as the motivation and model for my legislation to provide federal grants for the establishment and strengthening of state and local consumer protection offices.

Your determination to hold this conference and the themes you have selected show that your Office of Consumer Affairs understands the plight of the American consumer.

Your panel discussion on the "Problems of the Low-Income Consumer" shows that the consumer struggle cannot be fought with the calorie charts of the home economist or the measuring cup of the homemaker.

The consumer revolution confronts the very integrity of the free enterprise system. If that system is to endure, its ultimate goal must be to provide goods and services that are fairly priced, safe, and effective. Today, a crisis in confidence exists for the consumer in the free enterprise system.

For the 20 million poor in our society, the movement toward this goal of equity in the marketplace will determine to what extent they shall enjoy the material fruits of our technological society—whether they are able to obtain credit at fair rates of interest; whether the food they purchase is as cheap, nutritional and wholesome as the food purchased from supermarkets in affluent areas; whether their salaries will be garnisheed and their jobs lost because they were pressured into buying a product at an inflated price. If left unfulfilled, the legitimate demands of the poor will become more and more radical.

On the other hand, your panel discussion on "Consumer Problems of Suburbia" suggests your proper refusal to accept the myth that the only valid consumer complaints concern the unconscionable door-to-door salesman, the disreputable ghetto merchant, or the fraudulent home repair operator. The reality, of course, is that the plight of the consumer is a 24 hour-a-day, 365 days-a-year phenomenon that affects the rich as well as the poor, the educated as well as the uneducated and involves some of our largest and seemingly most reputable industries and producers.

When we talk about economic crime in America, we think of the bank embezzeler or the Wall Street manipulator. But economic crime in America also involves the executives of our nation's largest plumbing fixture firms who bilked consumers out of hundreds of millions of dollars by fixing prices; economic crime also involves the deliberate effort of certain automobile companies to stifle the development of exhaust fume inhibitors and non-pollutant automobile engines; it involves the everyday deception of consumers by fake, misleading or uninformative advertising.

Economic crime in America involves the widespread practice by manufacturers of cleverly shrinking the contents of their packaged products without, at the same time, telling the consumer or reducing the price. Hearings to be held soon by my Special Consumer Subcommittee will show that hundreds and probably thousands of packaged food and toiletry products have experienced such subtle weight decreases and thus causing "hidden" price increases to consumers: Did you know, for example, that the Betty Crocker Country Corn Flakes that was 11 ounces in 1965 is now 10 ounces; that the Franco-American spaghetti that used to be 27 ounces is now 26½ ounces; that the 8 ounce can of Libby chile is now 7½ ounces? Prices go up and contents go down.

Are you aware that the Jergens Lotion that was 12½ ounces is now 10½ ounces; that the 8 ounce can of Breck Hair Set Mist is now 7 ounces; that 12½ ounce family size Halo Shampoo has shrunk by one ounce? Some of you may be interested in knowing that the 21 ounce package of Serutan is now only 18 ounces.

What is incredible to me, however, is that the "public-be-damned" attitude on the part of some producers extends to issues of health and safety. If the consumer revolution is to be won, it is absolutely necessary that society expand its traditional definition of crimes of violence. The number of persons needlessly killed in auto accidents each year is almost 100 times greater than the total death toll in all the riots in our cities in the last three years; deaths relating to gas pipe line and coal mine safety and occupational hazards far exceed the total number of persons killed in felonious assaults in this country annually. The number of hospital patients electrocuted annually by faulty equipment is five times the total death toll in our riots of the last three years.

How callous is industry's disregard for the public health and safety?

Hearings of the National Commission on Product Safety showed that the Hankscraft Model 202-A electric steam vaporizer could easily be tipped over by a child thus drenching him with scalding water. What is especially startling is that the manufacturer refused to take the vaporizer off the market even though more than 100 liability suits had been instituted against the company—40 of them involving explosions.

The Public Health Service has long reported serious burns on small children at the rate of 60,000 a year caused by the country's 4 million gas-fired floor heaters. The American Gas Association held that essentially nothing could be done. But in three weeks and for an $800 fee, a small Baltimore, Maryland firm devised several ways to eliminate the hazard.

For decades, serious injuries resulted from electric wringer washing machines. Since the late 1940's a mechanism which stops the rollers when the victim gets caught has been available to manufacturers at a cost of from $1 to $3. But a voluntary industry-wide standard did not take effect until October 1968, although almost 200,000 persons, half of them children, were being injured each year.

If American industry, then, is often unwilling to protect the consuming public from harm, who then will stand between people and dangerous products? Can we afford the luxury of relying on private organizations that test or rate products? Certainly Consumers' Union's work is excellent—but its resources and the circulation of its magazine are limited. Can we rely on the Underwriters Laboratories which, though performing a useful function, approved 100,000 color television sets with defective tubes that leaked excessive x-radiation?

And what about those magazines that award commendation or guarantee seals? The Goodhousekeeping Institute says it devotes an entire floor to research and testing facilities at an annual cost of approximately $1 million. But I don't always share Good Housekeeping's enthusiasm for its advertisers' products. Let me tell you why:

(1) In June of 1968, the FDA showed that the Sheffield Bronz Paint Corporation of Cleveland violated the Hazardous Substances Labeling Act in that its spray paints were falsely labeled as "non-toxic", even though they were actually highly flammable and toxic.

Three months later, in September 1968, Sheffield Quick Spray Enamels and Lacquer were advertised in the pages of Good Housekeeping, bearing its Seal of Approval;

(2) In April of 1969, the FDA reported that a shipment of Gold Medal flour contained rodent contamination, yet in the same month, Gold Medal flour was advertised in Good Housekeeping proudly displaying the famous Seal;

(3) In 1967 the FDA had withdrawn from the market a quantity of Land O'Lakes butter because it had a strange odor and the flavor of a petroleum distillate, but Land O'Lakes still bears the Good Housekeeping Seal.

(4) In January 1967 the FDA charged that

a shipment of Del Monte canned peaches shipped by California Packing Corporation, Sacramento, contained mold and had been prepared under unsanitary conditions, yet Del Monte peaches still carry the Good Housekeeping Seal.

(5) In the September 1968 issue of Consumer Reports, the Mirro-Matic Electric Coffee Pot was downrated for having a very sharp edge on top of the pot, for having no strength control and for misstating cup capacity. And yet in the following issue of Good Housekeeping, the Mirro-Matic Electric Coffee Pot was advertised with the Good Housekeeping Seal.

(6) In June 1968, Lees and Mohawk Indoor/Outdoor carpeting was rated "not acceptable" by Consumer Reports because of flammability problems, yet in November 1968, Mohawk and Lees were both advertised in Good Housekeeping with its Seal of Guaranty.

If that's not enough, I can also report that more than a dozen products bearing the Good Housekeeping Seal are presently under investigation by the Federal Trade Commission for false or misleading advertising.

Obviously, private organizations alone cannot protect consumers; government must necessarily take the lead in providing this protection.

The arena of consumer protection is one in which all levels of government can and should participate. Our role is to find out precisely what each level of government—local, state and federal—can do best to help the consumer.

Let me suggest a division of responsibilities.

A local government can capitalize on its intimate knowledge of local problems. In this county, we have an outstanding example of an effective consumer program because it is devoted to helping Nassau residents solve Nassau problems.

The local government can also educate. It can inform consumers of their rights and remind businessmen of their responsibilities.

The local government can also give immediate assistance—it can arbitrate disputes between consumers and local merchants or local representatives of national firms.

But local government cannot cross interstate lines. It cannot determine, on its own, if the practices of a local outlet are an isolated example of consumer fraud or part of a statewide or national pattern of deception. It must rely here on state and federal authorities.

What should the role of the state be in consumer protection? New York State, for example, has an excellent and active consumer frauds division under the Attorney General. Our state has improved and expanded consumer education programs. But, when Governor Rockefeller eliminated the Office of Consumer Council, he made statewide consumer protection essentially a one dimensional legal operation which offers a tiny fraction of the consumer services available through your Nassau County Office.

The great advantage the state government has is its ability to cover the larger economic unit with a uniform system of legal protection which benefits both the consumer and the businessman. But there are serious limitations at the state level, too. The most outstanding shortcoming is the states' inability to deal with interstate problems like auto safety, meat inspection, fair packaging and gas pipeline safety.

Another serious defect is the fact that industry lobbyists are in a position to exercise great influence over decisions of state regulatory bodies. So while the consumer gets important help from both the local government and at the state capital, the help is often too late and too limited.

I would like to tell you that consumer protection in Washington is far better, but that would be a blatant case of false advertising. Although the consumer issue has great visibility in Washington, there is no even-handed and effective representation of consumers' interest in the councils of government. Spokesmen who are committed to the consumer interest either don't exist at all or have little control over the decision-making processes of government.

The results are sometimes depressing. The Food and Drug Administration is charged with protecting the consumer against unsafe drugs, foods, cosmetics, and other products. And yet FDA has approved chemical agents for food products without adequate testing—only to later withdraw them on the basis of tardy studies. Oil of calamus, used for years in fruit, chocolate, root beer, vanilla, and many other food products, was withdrawn in 1968 because it was found to cause malignant tumors in animals. Another food additive, NDGA, was removed from the general safe list only after Canadian studies showing that it may result in hazards to health, resulted in its being banned there.

The consumers' fair weather friend, the Department of Agriculture, administers the Federal Insecticide Act, which is intended to protect the public from dangerous doses of poisons in pesticides. Sixteen years ago, both the Food and Drug Administration and the Public Health Service warned the Department of Agriculture of a possible health hazard from vaporizing devices that use pesticide pellets containing the chemical Lindane. These vaporizers are used in restaurants, so that you and I may have been exposed to the chemical many times over. Last June, the Agricultural Research Service which approved the use of these devices, despite the devastating evidence against Lindane, said that it would allow Lindane pellets for use in the vaporizers. But, after the release of a congressional report last February, with further damaging evidence against Lindane, the Agricultural Research Service tested Lindane vaporizers under restaurant conditions, and reported that, "By the end of five days' exposure, practically all food . . . contained illegal residues of Lindane." And so last month, the Department of Agriculture did what it should have done sixteen years ago and finally cancelled the registrations permitting Lindane pellets in more than thirty products.

Or consider the Federal Housing Administration's persistent refusal to require safety glass for sliding patio doors in homes whose mortgages it insures. The additional cost for each unit would have been $10. Although the Public Health Service reported 100,000 serious injuries a year resulting from collisions with patio doors, FHA did not change its position until I threatened them with a public hearing.

Why has the consumer been virtually ignored by so many federal agencies? The key to understanding the consumers lowly status is his lack of representation when decisions are made that vitally affect his interests.

In 1963 and 1964, the Department of Agriculture asked for comments on two significant changes in beef grade standards. Beef grade standards are important to the consumer because they provide guides as to the quality of meat. Although more than 800 people provided the Department with comments on both changes, only a handful were private consumer representatives. The reason: the Department does not solicit consumer opinion on proposed changes in grades and standards.

The Milk Marketing Administration of the Department of Agriculture sets the minimum price which farmers receive for their milk. These government decisions determine the minimum price you pay for milk. During all the milk marketing proceedings from 1963–1968 held in New York City and affecting all of New York State, no spokesman appeared for the consumer. The same pattern holds true throughout the nation.

The Oil Import Administration of the Department of Interior holds hearings to set import limits for inexpensive foreign petroleum products. These quotas directly affect the price you pay for fuel for automobiles, furnaces, and a host of other products. In all of the hearings held in the last five years by the Oil Import Administration, not one private consumer spokesman was present to testify on behalf of average citizens. The Oil Import Administration never represented the consumers interest in a way that would have led to lower gasoline and fuel prices. Before setting quotas, consumer representatives should have been actively sought out.

This persistent indifference of federal agencies toward their consumer protection responsibilities leads me to one inescapable conclusion: a central agency must be established in Washington to vigirously represent the consumer, and consumers must organize at the local and national levels and lobby in their own self-interest. To the extent that this conference goes beyond education to consumer action, it provides the proper catalyst for change.

But consumer advocates must adjust their strategies for change to a basic fact of life in the legislative process: once a law is passed, the problem that the law was intended to solve is not automatically corrected. Quite to the contrary, the forces that opposed that type of consumer protection legislation in Congress, swarm to the regulatory agencies administering the law and ultimately accomplish their objective there.

And so, what consumers must do is agitate for change. They must demand new laws when necessary, but they must always insist that existing laws be vigorously enforced and adequately funded.

This is what the consumer revolution is all about.

STUDENT DEFIES ATTACKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. BOB WILSON. Mr. Speaker, each morning the front page of the newspaper is filled with stories and vivid pictures of campus violence and disorder, but yet we fail to see news space allotted to the hardworking, nonviolent majority of students whose primary purpose is still to obtain a good education. The following story from the San Diego Union, which describes the activities of one young dedicated Vietnam veteran who refused to allow the hippies and militants to hinder his education, is an inspiring one and I would like to share it with my House colleagues:

LOS ANGELES STUDENT DEFIES ATTACKS, PRESSES BID TO HALT STRIFE

LOS ANGELES.—When militants threw up barricades at entrances to Los Angeles City College this spring, they reckoned without Stephen Frank, 22, a handsome veteran of the Vietnam war.

Frank promptly organized a group of 20 students who tore down the barricades so other students could get to their classes. And he incurred the continuing enmity of the militants.

Since then he has been working to repair damage from fires and acts of vandalism at the junior college, and speaking out against the violence he believes threatens his education, as well as that of 18,500 other students on the campus.

He received a complimentary letter from

President Nixon. He also has been mobbed, threatened and beaten.

THREATS, OBSCENITIES

Militant Negroes, muttering obscenities and threats, shadow him from the moment he steps on the campus. At night meetings, he is warned he will not get home alive.

While he was distributing leaflets in the student center, he was attacked by members of the Black Student Union, who smashed in his face and split his lip.

"Sure I'm scared," the stocky war veteran admitted. "I'm scared every time I walk on that campus. But the militants can't be allowed to prevent the rest of us from getting an education."

Frank is the national president of Voices in Vital America (VIVA), founded nearly three years ago by a group of UCLA students who felt anti-Vietnam war groups on campus presented only one side of the story.

Originally incorporated as the Victory in Vietnam Association, the group changed its name a year ago because the old label had become a misnomer.

NONPARTISAN GROUP

Although VIVA members pack gift boxes for servicemen, the group does not actively support the war. It is nonpartisan and currently interested in uniting college students opposed to violence and disruption on their campuses.

Frank joined VIVA last November, two months after returning to City College after a two-year stint in the Army, including eight months with the 1st Infantry Division in Vietnam.

"My social science teacher assigned the class to go hear a speech by Black Panther leader George Mason Murray on Nov. 8," Frank explained.

"He talked about the flag being a piece of toilet paper and said the only way to deal with Nixon and (U.S. Senate candidate Max) Rafferty was to put a bullet through their heads. I stood up and said I favored free speech, but that I was opposed to violence. Four goons from the BSU picked me up and carried me out. From a speech at my own school! And they weren't even students here," Frank said, still amazed.

"That's when I joined VIVA."

FOUNDED CHAPTER

He founded the Los Angeles City College chapter, which now has 200 members. In March, he was elected national president of the 35-campus organization, with chapters at Tulane, Yale, University of Florida, Ohio State, and Southern Illinois University.

Wearing a VIVA button on his bright red sweater, the speech major set up a table in the center of the campus to pass out VIVA literature.

"Militants overturned my table and burned 200 posters. A couple of days later, I called a rally in front of the administration building. About 200 people showed up. We were passing out literature and a mob suddenly jumped on the table and tried to push me off.

"Their reasoning was that VIVA or any group opposed to the student strike has no right to free speech.

"All students have grievances. I have grievances. But that doesn't mean I'm going to overthrow the government or set fires in classrooms. There are ways of redressing grievances in an orderly fashion.

"ORDERLY DISSENT

"We want to educate students on the problems of violence and show them the right way to solve their problems. We have an ombudsman program. Each campus has an ombudsman, someone who knows how to get things done. Students go to the ombudsman with their problems, and he tries to solve them. Changes are needed, but we must have orderly dissent."

As far as Frank is concerned, he sees nothing extraordinary in removing barricades at City College.

"When I got to school March 12," he recalls, "there were cafeteria tables piled up six feet high and eight feet wide across the entrances. I just started moving them, and other students came up and began to help. I told them not to get involved in a physical confrontation. Several times we retreated down the steps for a few minutes to avoid violence.

"Sure, I was scared, but I wanted to show the other students that if they show some backbone they can stop the militants from having their way. I think the closing of the school by the militants was a denial of the educational rights of others."

AMERICAN VETERANS COMMITTEE RESOLUTION ON EQUAL EMPLOYMENT OPPORTUNITY PROGRAMS

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. RYAN. Mr. Speaker, during its first 4 months in office, the Nixon administration has exhibited an alarming lack of understanding of its responsibility for enforcing equal employment opportunity among Government contractors. As one who has been greatly disturbed at the failure of Government agencies to vigorously enforce fair employment practices throughout Government and Government-subsidized industry, I was appalled by the Department of Defense's recent overruling of its own compliance staff in the case of three large textile firms—Burlington Mills, Cannon Mills, and J. P. Stevens. Such action—taken as it was in the face of strong recommendations for sanctions from compliance officials in both the Department of Defense and the Office of Federal Contract Compliance—only reinforces the reluctance many contractors have to eliminating employment obstacles to minorities. The message to industry—that it is not necessary to take requirements of equal opportunity seriously—will not be lost.

Similarly, the harassment of intimidation of Government officials charged with enforcing equal employment opportunity also diminishes the credibility of the Government's commitment to EEO programs. The attack on Clifford Alexander, former Chairman of the Equal Employment Opportunity Commission, by Senator EVERETT DIRKSEN—and the announcement one day later from the White House that Mr. Alexander would be replaced—will seriously impair the ability of the Commission to enforce equal employment opportunity. Coming as it did in the wake of a vigorous campaign by Mr. Alexander to expose and investigate discriminatory employment practices, the effect of this action, again, will be to tell industry that it need not take Government regulations prohibiting unfair employment practices seriously.

Mr. Speaker, the administration has a moral and legal responsibility to enforce the executive orders and Federal statutes which outlaw discrimination in employment.

During the course of last year's Presidential election, a good deal of attention was devoted to the issue of law and order. In the context of the campaign, lawlessness was primarily used to characterize the manifest expression of dissatisfaction and despair by minorities, poor people, students, and others concerned by the inverted and illogical way in which our national resources are being expended.

What was largely ignored, however, was the "lawlessness" which exists in the Government with respect to the enforcement of congressionally approved prohibitions against discriminatory employment practices.

One-third of the jobs in the National economy are attributable to Federal spending. If equal employment were enforced, millions of jobs, jobs previously denied minority citizens through discrimination, could be opened up to citizens now unable to earn a decent living wage.

The executive orders and statutes prohibiting unfair employment practices must be enforced if all our citizens are to have an equal opportunity to share in the affluence of this society. If the administration will not fulfill that responsibility, then it is up to Congress to insure that these laws are vigorously carried out.

I include in the RECORD the text of a resolution on this issue adopted by the National Board of the American Veterans Committee at their May 3–4, 1969, Boston meeting:

RESOLUTION ADOPTED BY NATIONAL BOARD, AMERICAN VETERANS COMMITTEE MAY 3–4, 1969, BOSTON, MASS.

EQUAL EMPLOYMENT OPPORTUNITY PROGRAMS

I

AVC expresses its grave concern over the recent actions of the Department of Defense in the handling of its Equal Employment Opportunity Program for Defense Contractors. The return to a practice of direct informal dealings between high Department of Defense officials and top officials of defense contractors which in the past has proved barren of results in promoting effectively equal employment opportunities has seriously impaired the usefulness of this program. Such direct dealing not only in effect grants immunity for past violations and from regular enforcement procedures but also demoralizes the administrative staffs within the Department of Defense and of Labor charged with the administration of the program. For they find themselves by-passed and their authority undermined. Only a return to strict accounting for progress to be achieved under well-defined action programs and their enforcement through regular established procedures, where compliance lags, can restore the damage done by the Defense Department's handling of its program in its dealings with the big Textile firms of Burlington Mills, Cannon Mills and J. P. Stevens.

Moreover, it is time that the Department of Defense publicy account for its stewardship of the equal employment opportunity program for defense contractors. Information on its activities and results in the form of detailed statistical data on initial hiring, upgrading and promotion of minority group employees have been unavailable to the public. General reassuring answers are no longer sufficient. We call on the new Secretaries of Defense and of the military departments to

publish full data on the operation of the program so that the success or failure thereof can be assessed and steps taken to render it more effective. We call on the cognizant Congressional committees to obtain and publish relevant information and to exercise their influence to render the program truly useful.

II

We further urge that the Civil Service Commission of the United States take new steps not only to continue to combat or prevent discrimination against employees but also to foster the employment of minority group civil service employees, their promotion to higher positions in the career civil service, than has hitherto been attained, and the correction of earlier acts of discrimination which have prevented in numerous individual cases promotions and advancement of civil service employees belonging to minority groups in the same manner and to the same extent as their white majority fellow employees.

III

We protest the harassment of public servants who devote their best efforts to the promotion of equal employment opportunity in business, industry and Government for employees belonging to minority groups. Instead of senatorial censure they deserve the support and commendation of the National Administration, of Congress and of all citizens intent upon ending discrimination in employment and all other aspects of public and private life. We commend in particular Clifford Alexander, the former chairman of the Equal Employment Opportunity Commission for his efforts to promote equal employment opportunity in accordance with the laws of the United States and hope that as a member of the EEOC he will continue his efforts in the cause of fair employment for all.

HOUSE OF REPRESENTATIVES—*Wednesday, June 4, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

God be merciful unto us and bless us; and cause His face to shine upon us.—Psalm 67: 1.

O Thou who art the bright sun of the world sending Thy light unto all Thy creation, shine Thou upon our hearts as we pray this moment, driving away the darkness of evil and enabling us to walk without stumbling, to live without soiling our lives or the lives of others, and to serve our country without fear and with fidelity.

Consecrate with Thy presence the way our feet may go, the way our minds may think, and the way our hearts may feel, that our work may be well done and our lives be filled with the glory of Thy spirit.

Bless our Nation with the grace of Thy favor, our leaders with the greatness of Thy wisdom, and our people with the goodness of Thy love.

In the spirit of Christ we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

AMENDING RAILROAD RETIREMENT ACT TO BAR DISCRIMINATION ON BASIS OF SEX

(Mr. DANIELS of New Jersey asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DANIELS of New Jersey. Mr. Speaker, I introduced a bill yesterday to bar discrimination on the basis of sex by the Railroad Retirement Act. This act provides that men who have 30 years of service under the act may not retire with a full annuity until they are 65 years of age. Women on the other hand may retire without loss of annuity if they have 30 years service at age 60. This is discrimination and it is illegal, I contend, under the Civil Rights Act of 1964.

Last week I cosponsored a House resolution which would amend the Constitution to prohibit discrimination against women because of their sex. Now I have introduced a bill to bar discrimination against men. Equal pay for equal work is a principle I have always supported. Similarly, fringe benefits should be the same for male and female workers who have made equal contributions to a retirement system.

Mr. Speaker, earlier this year I reintroduced legislation to provide for optional retirement after 30 years of service under the act regardless of age. This bill, H.R. 1040, is now pending before the Interstate and Foreign Commerce Committee. I mention this bill because in no way do I want the RECORD to show that I intended the bill I have introduced today to be a substitute for H.R. 1040. Rather, today's bill is intended to bring the Railroad Retirement Act into compliance with the view that men and women who make similar contributions should receive equal benefits. I shall continue to fight for earlier retirement rights for all persons—men and women alike who are covered by the act.

THE WORLD-FAMOUS REPUBLICAN CONGRESSIONAL BASEBALL TEAM

(Mr. CONTE asked and was given permission to address the House for 1 minute.)

Mr. CONTE. Mr. Speaker, I would like to take this opportunity to inform my colleagues, on both sides of the aisle, that the world famous Republican congressional baseball team held its first practice Tuesday morning.

Again this year, our untarnished record in the rollcall congressional baseball game is on the line. But if Tuesday's practice is any indication, my Republican comrades need not fear for the honor and the glory of the Grand Old Party.

Although our distinguished and illustrious ranks have been diminished by the loss of Congressman Don Rumsfeld to OEO, the depth and talent of the Republican sluggers have been strengthened considerably by the addition of Representatives WILMER "VINEGAR BEND" MIZELL, BARRY GOLDWATER, JR.—who will be playing right field—LOWELL WEICKER, and WILLIAM WHITEHURST.

Such a panorama of athletic prowess, including such veteran base-stealers and home-run hitters as "MIDAS-MITT" MICHEL, "RAPID" DON RIEGLE, "ALL-AMERICAN" MATHIAS, among many others, has never before been fielded for the rollcall baseball game.

My only hesitation is that the fans at R. F. K. Stadium, on June 17, after watching us demolish the Democratic baseball team, will be very disappointed watching the Senators and the Orioles.

Mr. HALEY. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I am glad to yield to the gentleman from Florida.

Mr. HALEY. In case of emergency, would you consider shifting Congressman GOLDWATER over to left field?

Mr. CONTE. Maybe center field but never left.

POSTAL REFORM LEGISLATION

(Mr. DERWINSKI asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DERWINSKI. Mr. Speaker, while I willingly joined the gentleman from Nebraska (Mr. CUNNINGHAM) in cosponsoring postal reform legislation, I feel it necessary to make practical comments on the legislative status.

Yesterday the Postmaster General commenced his presentation before the House Post Office and Civil Service Committee and it was apparent that he has a real selling job to do.

In my judgment the House Post Office and Civil Service Committee will eventually bring forth a bill providing for reform of the Post Office Department. Many provisions will undoubtedly differ from the proposal submitted by the administration. I intend to work within the committee to bring out a practical bill.

Earlier in this session I introduced H.R. 9640 to prohibit political influence with respect to appointments, promotions, assignments, transfers, and designations in the postal field service and to revise the laws governing the appointment of postmasters. I will offer sections of that proposal as amendments to the postal reform measure.

It is my judgment that the bill will be subject to considerable revision on the floor of the House. The Postmaster General has effectively described the archaic structure of the Department. In his presentation he provides basic arguments for reform of the Post Office. The upgrading of postal service with emphasis on modern techniques is certainly in the public interest.

HEALTH AND SAFETY IN THE BUILDING TRADES AND CONSTRUCTION INDUSTRY

(Mr. McDONALD of Michigan asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. McDONALD of Michigan. Mr.

Speaker, today I am confident the House will pass H.R. 10946, a bill to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects. I will support this legislation not only as a Representative who recognizes the need to protect construction workers under Federal contract, but also as a member of a building trades union and as a contractor.

Due to my past experience, I can speak of the many injuries and deaths I have personally witnessed at construction jobsites. In fact, I have narrowly escaped serious injuries myself on several occasions. I find it most alarming that never less than 2,300 construction workers have been killed and never less than 209,000 have been disabled during any given year since 1959.

Furthermore, it is estimated that in 1969 alone, work accidents will cause a loss of approximately $3 billion. In light of these shocking figures I wholeheartedly concur with Secretary of Labor Shultz when he indicated his support of legislation "which recognizes the Federal Government has a special obligation to those who work on Government contracts and extends safety and health protection to the one remaining class of workers who do not have the benefit of those protections."

For these reasons, I plan to vote for H.R. 10946.

THE PRESIDENT'S SPEECH AT THE AIR FORCE ACADEMY

(Mr. EDWARDS of Alabama asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. EDWARDS of Alabama. Mr. Speaker, today President Nixon is making a speech at the Air Force Academy in Colorado, which, in my opinion, should command the attention of every American and of all the world.

It sets forth, as well as I have seen anywhere, just what it is that this country is trying to do. He makes clear that we are prepared for new initiatives in the control of arms. He stresses the civilian control of our defense establishment, and he encourages the responsible critics who reveal waste and inefficiency in defense procurement.

But he demonstrates true and badly needed leadership when he states:

> I believe that defense decisions must be made on the hard realities of the offensive capabilities of our adversaries, and not on our fervent hopes about their intentions.

I hope that the thrust of this speech will be conveyed into every home in America and will be carried throughout the world in the most vigorous manner possible, not only by the commercial news people but by the U.S. Information Agency as well.

In my judgment this speech today, along with the President's remarks on college disorder yesterday, go a very long way toward restoring a sense of leadership to the Presidency—a sense of leadership in both domestic and international affairs for which America and the world have been crying out these past several years.

POSTAL REFORM

(Mr. SCOTT asked and was given permission to address the House for 1 minute.)

Mr. SCOTT. Mr. Speaker, my purpose in asking for a special order on Monday next is to talk with the membership of the House with reference to the various bills now before our Post Office and Civil Service Committee to reform the postal service.

I have considerable concern about proposals that would eliminate civil service protection and benefits for approximately one-fourth of all our civil service employees, more than 700,000 employees of the Post Office Department.

Mr. Speaker, there are a number of matters in my opinion about which the Members of the House should be cognizant before commitments are made by the Members for or against the Postmaster General's proposals.

I am also concerned about to whom the proposed corporation would be responsible. I think the people of this country look to Congress to protect their interests in this field. The purpose of the special order is to discuss these matters. I would ask any of my colleagues who are interested to join with me in that discussion at that time.

MRS. KATHERINE HARROLD'S SUGGESTION THAT MAIL AND PACKAGES TO SERVICEMEN IN COMBAT AREAS BE SENT WITHOUT CHARGE

(Mr. JACOBS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. JACOBS. Mr. Speaker, Mrs. Katherine Harrold, of Indianapolis, Ind., is one of my constituents who, in fact, is an elected public official herself.

It is with considerable pride that I pay tribute to her today for contributing the excellent idea which has taken form in the legislation I have just introduced.

Mrs. Harrold's very logical idea is that those who supply the servicemen to go into combat areas be permitted to send mail to them, including reasonable sized packages, without charge.

If this legislation should become law, and it certainly should, Mrs. Harrold will have become the benefactress of every American who has a loved one serving in the Armed Forces where there is danger.

PERMISSION FOR COMMITTEE ON POST OFFICE AND CIVIL SERVICE TO SIT DURING GENERAL DEBATE TODAY

Mr. DULSKI. Mr. Speaker. I ask unanimous consent that the Committee on Post Office and Civil Service may be permitted to sit during general debate today. We have cleared this with the Postmaster General and he feels he has sufficient time this afternoon to attend the meeting. Second, it has been cleared with the ranking minority member of the Post Office and Civil Service Committee.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

CALL OF THE HOUSE

Mr. PELLY. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 74]

Adams	Eckhardt	Moss
Anderson, Ill.	Edmondson	Murphy, Ill.
Andrews, N. Dak.	Fascell	O'Konski
Ayers	Flynt	O'Neill, Mass.
Barrett	Ford, Gerald R.	Ottinger
Bates	Foreman	Patman
Berry	Friedel	Pepper
Bevill	Fulton, Tenn.	Philbin
Blatnik	Gallagher	Pickle
Bray	Gettys	Podell
Brock	Gray	Powell
Brown, Calif.	Green, Pa.	Price, Tex.
Brown, Ohio	Gubser	Randall
Burke, Fla.	Hagan	Rivers
Cahill	Hanna	Ronan
Camp	Harvey	Rooney, Pa.
Carey	Hays	Rosenthal
Celler	Hébert	St. Onge
Chappell	Helstoski	Sandman
Chisholm	Horton	Scheuer
Clark	Johnson, Calif.	Sebelius
Clausen, Don H.	Kirwan	Slack
Conyers	Koch	Springer
Cowger	Kyros	Stafford
Culver	Langen	Steed
Daniel, Va.	Lennon	Stephens
Davis, Ga.	McKneally	Sullivan
Dawson	Macdonald, Mass.	Thompson, Ga.
Dent	Miller, Calif.	Tiernan
Dickinson	Mills	Wilson, Bob
Dorn	Mollohan	Wilson, Charles H.
Downing	Morgan	Winn
	Morse	Young

The SPEAKER. On this rollcall 333 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PROFESSIONAL PHOTOGRAPHY WEEK IN AMERICA

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate joint resolution (S.J. Res. 77) to authorize the President to designate the period beginning June 8, 1969, and ending June 14, 1969, as "Professional Photography Week in America."

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the Senate joint resolution, as follows:

S.J. RES. 77

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, as a tribute to the importance of professional photography in American life and in recognition of Photo Expo, the largest photographic exhibition

ever held in the United States, the President is authorized and requested to issue a proclamation designating the period beginning June 8, 1969, and ending June 14, 1969, as "Professional Photography Week in America", and calling upon the people of the United States and interested groups and organizations to observe such week with appropriate ceremonies and activities.

Mr. McCLORY. Mr. Speaker, I am pleased to give my support to the adoption of Senate Joint Resolution 77. It has been said many times that one picture is worth a thousand words. Certainly the photograph, and particularly the photographs of the skilled professional photographers of America, have informed and enlightened the citizens of our Nation.

Next week, the professional photographers of America are meeting in New York City where "Photo Expo," the largest photographic exhibition ever held in the United States, will also take place.

It is entirely fitting that the House of Representatives has acted today to adopt Senate Joint Resolution 77 sponsored by my colleague and the minority leader of the other body—Senator EVERETT M. DIRKSEN.

The adoption of this resolution gives assurance that a Presidential proclamation will be issued to commemorate the week beginning June 8, 1969, and ending June 14, 1969, as "Professional Photography Week in America." I am confident that the President's message will be gratefully received by all in attendance at the professional photographers meeting taking place in New York City.

Mr. Speaker, I take this occasion also to extend my congratulations to Professional Photographers of America, Inc., and its distinguished president, Earl G. Stanton, as well as to the other officers and members of this organization. It is the world's oldest and largest association of professional photographers, with its headquarters in my State of Illinois.

Mr. Speaker, I salute the professional photographers of America.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PROMOTION OF HEALTH AND SAFETY IN THE BUILDING TRADES AND CONSTRUCTION INDUSTRY

Mr. PERKINS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 10946) to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects.

The SPEAKER. The question is on the motion offered by the gentleman from Kentucky.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 10946, with Mr. HANLEY in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. Before rising on yesterday the Committee had agreed that the bill would be considered as read and open to amendment at any point.

AMENDMENT OFFERED BY MR. PERKINS

Mr. PERKINS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PERKINS: On page 3, line 7, after the word "financial" strike the comma

The amendment was agreed to.

AMENDMENTS OFFERED BY MR. ERLENBORN

Mr. ERLENBORN. Mr. Chairman, I offer a series of amendments, all of which have been agreed to by the majority and the chairman of our committee, and ask unanimous consent that they be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. ERLENBORN: On page 2, line 23, after the word "section" insert the following: "after an opportunity for an adjudicatory hearing by the Secretary"

On page 3, line 4, strike the words "a violation" and insert in lieu thereof the word "noncompliance"

On page 3, line 5, after the word "Secretary" insert the following: "after an opportunity for an adjudicatory hearing by the Secretary"

On page 4, line 23, strike "paragraph (1)" and insert the following: "subsections (b) or (d)"

On page 5, line 6, strike the following: "The Court shall have jurisdiction to affirm the action of the Secretary or to set it aside"; and insert in lieu thereof the following: "The Court shall have power to make and enter a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part, the order of the Secretary or the appropriate government agency."

Mr. ERLENBORN. Mr. Chairman, I offer this series of amendments en bloc on behalf of my colleague, the gentleman from Illinois (Mr. ANDERSON). Yesterday in debate on the rule Mr. ANDERSON explained these amendments that he intended to offer. Because the unavoidable absence of the gentleman from Illinois from the House has made it impossible for the gentleman to offer these amendments, I am offering these amendments on his behalf.

The amendments were thoroughly discussed yesterday during debate on the rule. These are mainly technical amendments to provide for an adjudicatory hearing by the Secretary before he determines noncompliance, and gives the court additional authority not merely to sustain or reject the findings of the Secretary, but would give the court authority to modify and enforce the decree as modified.

Mr. Chairman, as I stated in offering these amendments en bloc, they have been agreed to by the chairman of our committee, and I urge the adoption of the amendments.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Illinois (Mr. ERLENBORN).

The amendments were agreed to.

Mr. STEIGER of Wisconsin. Mr. Chairman, I move to strike the last word.

Mr. Chairman, in the last session of the 90th Congress, I rose in support of H.R. 2567, legislation covering the same subject matter as the legislation we are considering today. At that time, I stated that while I was in full support of the urgent need and purpose of construction safety legislation, I expressed reservations as to the particular language of the legislation as proposed at that time.

Today, we have before us H.R. 10946 which I submit is a considerably more complete piece of legislation overcoming the reservations that I previously held.

Substantial direct and indirect costs that are the result of high on-the-job accident rates comprise extremely significant but most often ignored items in the bid-cost structures of the construction industry. The excessively hazardous nature of construction work, also is cited as a justification for the generally higher wage scale relative to comparable skilled crafts and I might say that there is considerable merit to such a position. Some unions have required premium or hazard rates for particularly hazardous jobs. On this rationale alone H.R. 10946 can bring significant economic improvements in addition to the incalculable benefits from preventing human suffering.

Accident rates in the construction industry have historically been substantially higher relative to rates in other major industries. Over the years, disabling injuries in the construction industry have comprised about 11 percent of all disabling injuries due to industrial work accidents and have constituted about 20 percent of all industrial deaths.

It is also noteworthy that the construction industry in 1967 lost almost 33 million man-days of work due to disabling injuries during that same year, 1967, only 5,160,000 man-days were lost due to strikes in the construction industry.

The industry's high accident rate is directly reflected in exceptionally high expenditures per man-hour for workmen's compensation premiums. According to a very recent study by the Bureau of Labor Statistics of employee compensation, building construction contractors in 1965 made expenditures of 11 cents per man-hour for workmen's compensation premiums or about 2.5 percent of total employee compensation. This 11 cents amounted to 3 cents an hour more than employer expenditures for unemployment compensation which was 8 cents per man-hour. During that same year, 1965, insurance premiums in manufacturing were only 3 cents per man-hour.

While impressive efforts of individual safety-conscious contractors can be cited, the typical safety program is still fairly limited. Typically because jobs are usually of short duration, there is a tendency to overlook hazardous conditions and gamble on the risk that nothing will happen. Despite a degree of effort by contractor associations, unions, and insurance companies, some contractors do not follow approved safety practices. The

extent of coverage, adequacy of enforcement and recency of standards of State safety codes vary widely and mitigate against industrywide programing.

Safety experts contend that the construction industry, because it is so nomadic in employment structure and ever changing in working conditions, can only achieve effective accident prevention by systematic efforts and national standards. The Federal Government which expends a major percentage of construction dollars annually on its projects is the natural leader in reducing accidents in the industry. By the Federal Government assuming the leadership role in its construction activities it may reasonably be assumed that the benefits of its programing efforts will produce a valuable spin-off effect on the entire industry.

I would like to dwell for a few moments on the specific provisions of H.R. 10946.

First what is its coverage? Its coverage is limited to those Federal construction projects wherein the Davis-Bacon Act and other similar wage acts apply. It does not cover, and the report specifically states this, anything that is solely in the nature of a Federal loan guarantee or insurance including loan guarantees or insurance issued by the FHA and VA for individual home ownership.

Second, what does it authorize the Secretary of Labor to do? Briefly it allows the Secretary to establish safety and health standards but only after he has coordinated them with a statutorily established advisory board and has held public hearings. I am particularly pleased by the provision establishing the advisory board which is contained in this bill. This board is a reality because of my efforts and the support of the subcommittee. Further, it directs the Secretary to offer programs of safety education and training to employers and employees. It requires him to collect accident and injury data to measure the program's needs and results.

It also authorizes the Secretary to inspect Federal construction activities and seek compliance. Should the Secretary find it necessary he may resort to one of several legal sanctions to gain compliance. He may seek compliance under the Administrative Procedures Act before a hearing examiner or he may seek injunctive measures through the district courts or he may elect to seek to place the noncomplying contractor on the Comptroller General's list restricting the individual contractor from bidding on future contracts for 3 years. Also, the Secretary, if he finds it necessary may recommend to the contracting Government agency that the agency cancel the existing contract.

H.R. 10946, at the same time, provides the contractor with measures of appeal at every stage of any compliance action the Secretary may elect to use. An employer charged with noncompliance of the proposed law or regulations would be given full opportunity to be heard under the Administrative Procedures Act. If the Secretary seeks compliance in the district courts, the contractor would be afforded due process of the courts including the right of judicial appeal.

Another major intent of this legislation which the committee highlighted in its report was to utilize such State assistance in the administration of the act as is possible.

In closing, I would like to cite the position of the President on the need for construction safety legislation.

President Nixon in a letter dated April 20, 1969, to Mr. C. J. Haggerty, president of the Building and Construction Trades Department, AFL–CIO stated:

Our changing economy and social structure requires new measures and new methods of administration. For example, stronger construction safety laws are needed to stop the needless annual toll of lost lives, injuries and loss of wages.

Mr. Chairman, one of the points which has been under consideration during discussion of H.R. 10946 is that part which relates to the Secretary of the Department of Labor consulting with the Advisory Committee on Construction Safety and Health. I received a telegram from the commissioners of the Department of Industry, Labor, and Human Relations of the State of Wisconsin in which they urged an amendment to include requirements to have a full-time paid safety standards board to include State agency representatives with board empowered to use voluntary Advisory Committee in addition to Labor Department staff.

Mr. Chairman, I rise at this time to inquire of the chairman of the committee, the gentleman from Kentucky (Mr. PERKINS), or the gentleman from New Jersey (Mr. DANIELS), as to whether or not the language found on page 5 of the bill which states that three such representatives "shall be selected on the basis of their professional and technical competence and experience in the construction health and safety field," would encompass the capability of enabling a State representative to serve as a member of that Advisory Committee?

Mr. PERKINS. Mr. Chairman, if the gentleman will yield. There is no doubt in my mind. It is the intention of the committee that the language is broad enough to permit the representative from a State to serve as one of the public members on this tripartite Advisory Committee.

Mr. STEIGER of Wisconsin. I appreciate the comments of the gentleman from Kentucky.

Mr. DANIELS of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Wisconsin. I yield to the gentleman.

Mr. DANIELS of New Jersey. I would like to read and call to the attention of the gentleman from Wisconsin the remarks of the gentleman from Illinois (Mr. ANDERSON) which appeared in the CONGRESSIONAL RECORD of June 3, 1969, on page 14572 wherein he addressed his remarks particularly to the subject matter that the gentleman from Wisconsin has raised.

The remarks are as follows:

Mr. Speaker, I want to compliment the Committee on Education and Labor on the bill they are presenting for our consideration today, or which will be in order upon the adoption of this rule. I think they have answered the objections that we had to the legislation last year. I think in redrawing or redrafting the legislation and providing for an advisory committee which will be tripartite in nature with one-third of the representatives of the contractors, one-third from representation of organized labor and the building trades; and one-third representing the general public, these would include individuals from the States who are particularly qualified and have the expertise in this area of safety.

Mr. STEIGER of Wisconsin. I appreciate the contribution of the gentleman from New Jersey. I simply took this time to make sure the record is clear. I think it would be agreed both on our side and on the majority side that the State representatives clearly would be eligible to serve as a part of the tripartite board.

Mr. DANIELS of New Jersey. I certainly do agree with the gentleman's interpretation in that regard.

Mr. STEIGER of Wisconsin. Mr. Chairman, I yield back the balance of my time.

Mr. REID of New York. Mr. Chairman, I move to strike out the last word and rise in support of the bill.

Mr. Chairman, I rise in strong support of H.R. 10946, a bill to promote health and safety in the building trades and construction industry in all Federal and federally financed or assisted construction projects.

This bill would authorize the Secretary of Labor to promulgate Federal safety standards on Federal construction projects after public hearings and consultation with an advisory board, and would thereby extend to workers in the construction industry protection which is already provided to employees of Federal suppliers and service contractors.

In 1968, approximately 2,800 construction workers were killed on the job—this is the highest death rate for an industry in the United States. Over 20 percent of the workers killed yearly and over 11 percent of the workers disabled in on-the-job accidents in the United States are in the construction industry. The frequency rate for construction accidents is nearly double the national average.

This bill, insofar as it will raise safety standards for construction workers on Federal projects, will also reduce the number of serious construction accidents and the number of injuries to employees. I hope that the Congress will later enact the full occupational health and safety legislation to insure safe and healthful working conditions for all employees in this Nation; certainly this bill is a good beginning—but broader legislation is vital.

Mr. SAYLOR. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this time to direct a question to the gentleman from Illinois (Mr. ERLENBORN).

A short time ago the gentleman introduced a number of amendments which were agreed to and the gentleman made the statement that they were agreed to by both the majority and the minority members of the committee.

Yesterday one of our colleagues, the gentleman from Illinois (Mr. ANDERSON) talked to me about certain amendments. Were these the amendments which the gentleman from Illinois (Mr. ANDERSON), spoke to us about yesterday?

Mr. ERLENBORN. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the gentleman.

Mr. ERLENBORN. The answer is "Yes."

Mr. SAYLOR. I thank my colleague.

Mr. Chairman, I yield back the balance of my time.

Mr. HALPERN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise in enthusiastic support of this bill which is designed to promote health and safety in the construction industry on all Federal, federally financed, or federally assisted projects. I joined in cosponsoring this legislation after coming across some very disturbing statistics.

I understand that last year, in 1968, there were over 2,800 construction workers killed in this country. In that same year, over 230,000 construction workers were injured. No other industry has such high death and injury figures, and the main reason why these figures are so high is because there is not a good safety program in this industry.

Some States, including my home State of New York, have fairly good safety laws, but most States have a problem of enforcement because of their limited resources, and the demands which are made upon their budgets from other quarters. It seems clear to me, however, that generally one would have to concede that construction safety laws in this country are wholly inadequate.

I was surprised to learn that although Federal law provides protection to workers in the service and supply industries doing contract work for the Government, there are no Federal laws providing similar protection to workers in the construction industry doing similar contract work. I feel that this oversight in the law must be corrected and this bill would provide protection to construction workers on Federal contract projects.

Provisions have been written into my bill providing for administrative safeguards and judicial review to protect contractors from arbitrary and discriminatory actions by the Secretary of Labor in enforcing the safety program.

I feel this legislation provides an approach to the problem which will be fair to all parties and which will provide the construction workers on Federal, federally assisted and federally financed projects with the protection they need.

I believe enactment of my bill will reduce the number of serious accidents and greatly decrease the number of deaths of construction workers. It can also be expected to save the Government millions of dollars each year through reduced construction time and costs. At the present time accidents and deaths delay project completion dates, increase contractor liability and injury compensation costs, and the consequence is that increased costs are passed on to the Government through higher contract costs.

H.R. 10946 would reduce contractor liability when the contractor meets accepted safety standards, and there would be fewer accidents and deaths and therefore fewer job delays. There would also be improved operational efficiency and improved competition through reduced costs.

Enactment of this legislation would also encourage States to have similar construction safety programs if they do not already have one, and other States that already have such a program would be encouraged to improve it.

The bill will provide for minimum national uniformity in safe work practices on all Federal contract projects.

I am happy to note that the House Education and Labor Committee has unanimously reported the construction safety bill. I hope this legislation can soon be passed by the House, as each day's delay means more men killed or disabled for lack of an adequate safety program. I urge my colleagues in the House to give overwhelming support for this much-needed legislation.

Mr. WAGGONNER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I would like to ask the chairman of the committee, the gentleman from Kentucky (Mr. PERKINS), a question which has to do with his understanding of the use of a word which is on page 6, line 1 in subparagraph (2) which says:

> The Advisory Committee shall advise the Secretary in the formulation of construction safety and health standards and other regulations.

I would like the distinguished gentleman from Kentucky, the chairman of the committee, to tell me what the congressional intent is with regard to the use of the word "shall" in this instance?

Mr. PERKINS. Mr. Chairman, if the distinguished gentleman from Louisiana will yield, the committee used a mandatory word and not a discretionary one. When we used the word "shall," we intended that before the Secretary formulates any construction, safety and health standards that he must first consult the advisory committee.

The Advisory Committee "shall" advise the Secretary. That is mandatory. If the Secretary should attempt to formulate safety and health regulations without first consulting the advisory committee, his action would be null and void.

Mr. WAGGONNER. I thank the gentleman. I have just one further question. We had a situation similar to this with regard to a provision written into the highway beautification bill several years ago where the Secretary of Transportation was supposed to consult with the State officials, which he did, and then totally ignored them. It is not intended that these people on this advisory committee be totally ignored as they were in that instance; is it?

Mr. PERKINS. We did not use the word "may" which would give some discretion, we use the word "shall." It is mandatory that the Secretary consult the Advisory Committee before regulations are formulated.

Mr. WAGGONNER. I thank the gentleman.

Mr. EILBERG. Mr. Chairman, I rise today to add my voice to those who have spoken in support of the bill we are considering today to promote health and safety in the building trades and construction industry. This legislation is in my opinion absolutely essential.

I am alarmed that in 1968 over 2,800 construction workers were killed and no other workers, including miners, suffered greater loss of life. This shocking statistic is placed in sharp relief by the fact that construction workers suffered 20 percent of all work-connected deaths in 1968. Construction workers also suffered a higher disability rate than workers in any other industry when, in 1968, over 230,000 were disabled. This means that construction workers suffered at least 10 percent of all disabling injuries on the job.

The need for the legislation we are now considering is dramatized further by the fact that the construction industry injury frequency rate of 32 million man-hours was higher than any other industry with the exception of underground coal miners who had a rate of 36. Also, construction workers lost 33.5 man-days of work due to injuries which is almost equal to the man-days lost nationally in all strikes in 1967. The construction accident cost was $3 billion in 1968 and this was 50 percent of the national wage loss due to accidents. Since about $91 billion will be spent in 1969 on construction—10 percent of the gross national product—I think the bill we are now considering is absolutely essential to the health and welfare of the many construction workers across this Nation.

I have carefully studied H.R. 10946 and I would like to take this opportunity to congratulate the chairman and members of the committee on a job well done. In this bill they have provided an effective approach to the problem while at the same time providing the contractors with appropriate safeguards against arbitrary action by the Department of Labor in enforcing its provisions.

During the 90th Congress, I was disappointed that similar legislation did not pass when it failed to receive the required two-thirds vote necessary to pass under a suspension of the rules. Passage of this legislation today will not bring back the 10 construction workers who have been killed every day for the past 10 years but it will protect their sons from the same fate.

It is clear to me that we must act to provide construction workers with the safety and health protection that they need, especially when they are working on Federal, federally financed or federally assisted construction projects. I believe this is an area of primary responsibility for the Federal Government.

Contrary to what many of the contractors who testified before the Education and Labor Committee would have us believe, safety programs in the construction industry are not nearly what they must be. I know that some Federal agencies such as the Corps of Engineers and the Bureau of Reclamation do have good safety programs. But these two agencies are exceptions to the general rule. The fact is that there is no system of uniform standards among the Government agencies and there is a general lack of will to enforce what standards that do exist.

It is important to note that this legislation will not only benefit construction workers but will be of invaluable assistance to contractors as well. It will reduce injury compensation costs, improve efficiency, lower contract costs, improve competition and reduce contractor liabil-

ity when the accepted safety standards are met.

H.R. 10946 establishes a training and education program in the field of safety and health for the construction industry. My understanding is that this program will be limited to the projects which are covered by the bill. But, nevertheless, it will surely generate improved training and educational programs by contractors and labor organizations. Through the program, additional materials and information will be available on safety techniques and training methods and, as a result, the whole industry will benefit.

Further, I am pleased that this bill provides for a better reporting system for accidents and injuries and their causes than has been in effect previously. From my experience I know how important it is to have all the facts before you make a judgment and how necessary it is to know the cause before you can prescribe a remedy. Under the new reporting system which, under this bill, the Secretary is directed to initiate, more information will be available on accidents so that decisive measures can be taken to insure that they will not recur.

From the extensive hearings which have been conducted on the subject of occupational health and safety, it is apparent that the industry cannot do the job on its own. I don't think we can afford to let another year go by and with it ignore the thousands of construction workers who would be killed and disabled by our failure to take action to aid the construction industry in improving safety and health conditions for its workers. The need is too great and the human cost is too too high.

Some will no doubt say that safety programs cannot be legislated. I disagree. Congress legislated the Walsh-Healey Act in 1936 and 3 years ago the Service Contracts Act was passed. Back in the 85th Congress the Maritime Safety Act was passed.

The record of all the programs which were initiated as a result of this legislation has been one of success and improved working conditions for the workers covered by the legislation. I believe the same results can be achieved by passage of H.R. 10946 and I urge all my colleagues to join with me in voting for passage of this much-needed legislation.

Mr. BOLAND. Mr. Chairman, I want to express my support for H.R. 10946, a bill to promote health and safety standards in the building trades and construction industry.

In the area of labor legislation, the Federal Government has a role which it has not played often enough in recent years, that of setting an example by establishing high standards. Where it contracts with private contractors, it can set whatever standards justice dictates, for its pays the bill.

At present, for the three major categories of Government contractors, suppliers of goods, service contractors, and construction contractors, Federal law sets standards which require the payment to their employees of wages prevailing in the area in which they are employed. In two of the three categories, supplier contractors and service contractors, Federal law now also requires that safe and healthful conditions of work must also prevail for all employees. Only in contracts for construction is there no Federal requirement that safe and healthy working conditions be provided.

H.R. 10946 closes this gap. It does so by adding to the Contract Work Hours Standards Act a requirement that Federal and federally financed construction contracts contain a provision, applicable to any contractor or subcontractor contracting for any part of the work, assuring that any laborer, mechanic, or other employee shall not be required to work in any place or under any working conditions, which are unsanitary, hazardous, or dangerous to his health or safety.

This measure, Mr. Chairman, came from committee with bipartisan, unanimous support. Both H.R. 10946 and its companion measure, H.R. 10947, number among their sponsors members of both parties. The bill's objectives were endorsed by Secretary of Labor Shultz in testimony before the committee. Representatives of both labor and management also appeared in support of the objectives of the bill. Objections raised to earlier drafts of the bill, such as H.R. 3290, were considered and met in the committee considerations. H.R. 10946 is a joint effort to meet a problem—agreed to by practically all of the parties concerned.

Let me mention but two issues, where objections were met and clarifying language inserted in the bill. One concerned the scope of the law. The second clarified and delimited the authority of the Secretary of Labor to formulate minimum health and safety standards to assist contractors or subcontractors in meeting the bill's proposed requirements.

In the first instance, the question was raised whether the scope of the bill might not be construed as extending to cases where the Federal Government, by providing guarantees or insurance, only assists construction. Examples would be the Federal Housing Authority or the Veterans' Administration, who provide such assistance to foster individual homeownership.

The bill now clearly states that assistance cases are outside the scope of the law. Only construction financed in whole or in part by Federal loans or grants is within its scope.

The second instance concerns the authority of the Secretary of Labor. The bill now provides that he may promulgate health and safety standards only after public hearings and consultation with an advisory committee. The conduct of these hearings is formal and is required to be governed by the Administrative Procedure Act.

The Advisory Committee to assist the Secretary in formulating standards is tripartite in composition, with three representatives of contractors, three representing the building trades industry employees, and three representing the public. The public representatives must have competence in the field of construction safety. The rights of all parties are now safeguarded by the bill.

Mr. Chairman, there is one last point I wish to make. Some may have doubted that there was a need for such a bill. Do not the States have laws protecting the health and safety of all workers, including construction workers? Are there not well-established standards for such work? Why go through this involved process of having the Secretary of Labor devise and promulgate new standards?

In answer, Mr. Chairman, let me say that there are, today, no nationally accepted set of standards concerning safety in construction. Nor does the Secretary of Labor have, at present, authority to promulgate or enforce such standards, if they existed. The States are not doing an adequate job of enforcing such standards as they have. And the standards they have are not themselves adequate.

Allow me to cite some of the information brought out in the course of the consideration of this bill, H.R. 10946, in support of my statements, and of the bill.

According to the National Safety Council, over 20 percent of the workers who are killed each year in accidents, on the job, are killed in construction work. Over 11 percent of the workers disabled in such accidents are maimed in the construction industry. The frequency rate for on-the-job accidents is almost twice the national average for all industries. Measured in terms of severity, the number of days lost to accidents, construction has a higher figure than any industry with but three exceptions, mining, lumbering, and marine transportation.

Last year, there were 2,800 construction workers killed on the job. This was the highest death rate for any industry. There can be no question but that Congress can act to reduce these figures. It has the power to do so, and it thus cannot avoid the responsibility. We must act to pass H.R. 10946.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. HANLEY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 10946) to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects, pursuant to House Resolution 427, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

MEDICAL FACILITIES CONSTRUCTION AND MODERNIZATION AMENDMENTS OF 1969

Mr. MADDEN. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 428 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 428

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11102) to amend the provisions of the Public Health Act relating to the construction and modernization of hospitals and other medical facilities by providing separate authorizations of appropriations for new construction and for modernization of facilities, authorizing Federal guarantees of loans for such construction and modernization and Federal payment of part of the interest thereon, authorizing grants for modernization of emergency rooms of general hospitals, and extending and making other improvements in the program authorized by these provisions. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider without the intervention of any point of order the amendments in section 2, page 2, lines 23 through 25, and page 3, lines 1 and 2, and on page 5, lines 8 through 23, recommended by the Committee on Interstate and Foreign Commerce, now printed in the bill. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Indiana is recognized for 1 hour.

Mr. MADDEN. Mr. Speaker, House Resolution 428 provides an open rule with 2 hours of general debate for consideration of H.R. 11102, Medical Facilities Construction and Modernization Amendments of 1969. The resolution also provides that it shall be in order to consider without the intervention of any point of order the amendments in section 2, page 2, lines 23 through 25, and page 3, lines 1 and 2, and on page 5, lines 8 through 23.

The reasons for waiving points of order against certain sections of the bill are: In the bill as introduced, the authorization of loan guarantees—page 2, section 2—applied only to nonprofit private facilities. The bill was reported amended to include also in this section "public" facilities and the question of germaneness might be raised. Points of order are waived against the language in subsection (b) on page 5 because it constitutes an appropriation in a legislative bill.

H.R. 11102 would extend for 3 years the present program of matching grants to the States for construction and modernization of health facilities, with some modifications in the present program. It would establish a new program of Federal guarantees for loans made for construction or modernization of public or nonprofit private hospitals and other health facilities, with an added provision for an interest subsidy on such loans.

Since the inception of this program, slightly over $3 billion in Federal funds have been matched by slightly over $7.2 billion in non-Federal funds, leading to the construction or expansion of over 9,800 facilities. These projects have provided 425,000 inpatient care beds in hospitals and nursing homes, and have provided approximately 2,800 other health facilities such as public health centers, diagnositic and treatment centers, and rehabilitation facilities.

There is a present need for an additional 85,007 acute care hospital beds, 893 public health centers, 164,430 additional long-term beds, 872 diagnostic and treatment centers, and 388 rehabilitation facilities, with a total estimated cost of $5.3 billion. In addition, 455,130 acute and long-term care beds require modernization at an estimated cost of $10.5 billion.

This legislation would add to the existing program a new program of federally guaranteed loans, combined with an interest subsidy for construction and modernization.

It provides for not more than $300 million of guaranteed loans for each of the next 3 fiscal years. The amounts available for guaranteed loans are to be allocated among States under a formula which considers population, per capita income, and need for construction and modernization.

Under the guaranteed loan program, the bill provides that the Government will pay a subsidy on each loan of 3 percent on loans made to private nonprofit groups. Public hospitals and facilities are included in the guaranteed loan program; however, the interest subsidy is excluded.

The cost of the legislation would be for fiscal year 1971, $298.6 million; fiscal year 1972, $312.7 million; fiscal year 1973, $326 million—a total of 937.3 million for the 3 years.

Mr. Speaker, I urge the adoption of House Resolution 428 in order that H.R. 11102 may be considered.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. MADDEN. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I thank the gentleman for yielding.

What arguments were used before the Rules Committee in behalf of waiving points of order, particularly to page 5, lines 8 through 23? Does the gentleman recall the arguments made in behalf of waiving of points of order?

Mr. MADDEN. The authorization of the loan guarantee applies only to nonprivate facilities. The bill was reported amended to include also in this section public facilities, and the question of germaneness might be raised, and points of order are waived against the language in subsection (b) on page 5 because that constitutes appropriation on a legislative bill.

Mr. GROSS. I thank the gentleman for his explanation.

Mr. MADDEN. Mr. Speaker, I yield 30 minutes to the gentleman from California (Mr. SMITH).

Mr. SMITH of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as stated by the distinguished gentleman from Indiana, House Resolution 428 does provide an open rule and 2 hours of debate for consideration of H.R. 11102, Medical Facilities, Construction, and Modernization Amendments of 1969, which we ordinarily refer to as the Hill-Burton Act.

The points of order were waived in accordance with the statement of the gentleman. In addition, there is a transfer of funds provided on page 5.

The purpose of the bill is to extend for 3 years the current program of matching grants to the States for use in the construction and modernization of hospitals and other health facilities. The bill also creates a new Federal program of loan guarantees with an interest subsidy for loans made for either the construction or rehabilitation of public or private nonprofit hospitals and other health facilities.

Authorizations contained in the bill total $937,300,000 over a 3-year period. Broken down they total:

Fiscal year 1971	$298,600,000
Fiscal year 1972	312,700,000
Fiscal year 1973	326,000,000

The program has been a success. Since its inception in 1946 over $10,000,000,000 in hospital and other health facilities have been constructed. Of this total expenditure about $3,000,000,000 has been Federal funds; the rest have come from local tax efforts and private gifts. The need is, however, great for continued effort.

The loan guarantee program will be continued under the bill, with a new provision—an interest subsidy of 3 percent. This will be available on loans to private nonprofit groups on construction loans for hospitals and health facilities. It is believed this will stimulate construction and rehabilitation of facilities.

Loan guarantees will also be extended to public bodies constructing health facilities or hospitals or modernizing existing ones. This is done to help them get funding at better rates and so to stimulate construction and rehabilitation efforts.

Current law permits a State to transfer all or part of its Federal funds for new hospitals to modernization of existing facilities if the State determines it is in the best interest to do so. This authority is continued by the bill to ensure flexibility in meeting the existing needs.

Mr. MOSS, Mr. DINGELL, and Mr. OTTINGER have filed additional views. They support the bill but will offer a series of amendments. They believe the funding formula should be modified to reflect the ever-increasing needs of urban America, and to ensure that the greater portion of the funds are used to meet this need. They also believe more stress should be laid on modernization of existing facilities by increasing funding for this purpose and by cutting back on new construction funds. They also propose an additional $15,000,000 for use in constructing of community diagnostic and treatment centers in urban areas.

The bill was reported unanimously by the committee.

Mr. Speaker, I urge adoption of the rule.

Mr. MADDEN. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. STAGGERS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11102) to amend the provisions of the Public Health Service Act relating to the construction and modernization of hospitals and other medical facilities by providing separate authorizations of appropriations for new construction and for modernization of facilities, authorizing Federal guarantees of loans for such construction and modernization and Federal payment of part of the interest thereon, authorizing grants for modernization of emergency rooms of general hospitals, and extending and making other improvements in the program authorized by these provisions.

The SPEAKER. The question is on the motion offered by the gentleman from West Virginia.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11102, with Mr. ST GERMAIN in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from West Virginia (Mr. STAGGERS), will be recognized for 1 hour, and the gentleman from Illinois (Mr. SPRINGER), will be recognized for 1 hour.

The Chair recognizes the gentleman from West Virginia.

Mr. STAGGERS. Mr. Chairman, I yield myself such time as I may consume.

I should like to commend the gentleman from Indiana (Mr. MADDEN) and the gentleman from California (Mr. SMITH) for their explanation of the bill. I believe they went into it rather fully.

Mr. Chairman, the bill under consideration today is a good bill. It is one that has been carefully worked out both in the subcommittee and in full committee.

The Hill-Burton program has been in effect since 1946, and is one of the most successful Federal/State partnership programs on the books. Throughout its history, this program has been extended for relatively limited periods of time, ranging between 3 and 5 years, so that the Interstate and Foreign Commerce Committee has kept in very close touch with the program throughout its lifetime.

This year our Subcommittee on Public Health and Welfare held 4 days of hearings on this program, and then the subcommittee and the full committee held a total of 5 days of executive sessions on the bill.

I think it would be fair to say that all members of the committee support the bill, although a few members disagree with specific details, but support the overall program. The bill calls for appropriations totaling $937 million over a 3-year period for an extension of the existing program of matching grants for construction or modernization of facilities. In addition, the bill provides for a new program of guaranteed loans of up to $300 million a year. These loans would be made to either public or nonprofit private groups by private lenders for construction or modernization of health facilities. These loans would be guaranteed both as to principal and interest by the United States, and where the loan is made to a private nonprofit borrower, an interest subsidy would be paid, amounting to 3 percent of the unpaid balance of the loan per year.

Under the program originally enacted in 1946, over $10 billion of hospital and other health facilities construction has been carried out. Slightly over $3 billion in Federal funds have been matched by slightly over $7.2 billion non-Federal funds, leading to the construction or expansion of over 9,800 facilities. These projects have provided 425,000 inpatient care beds in hospitals and nursing homes, and have provided approximately 2,800 other health facilities such as public health centers, diagnostic and treatment centers, and rehabilitation facilities.

Mr. Chairman, information furnished by State agencies administering the program indicate a present need for an additional 85,007 acute care hospital beds, 893 public health centers, 164,430 additional long-term beds, 872 diagnostic and treatment centers, and 388 rehabilitation facilities, with a total estimated cost of $5.3 billion. In addition, 455,130 acute and long-term care beds require modernization at an estimated cost of $10.5 billion.

The reported bill would add to the existing program a new program of federally guaranteed loans, combined with an interest subsidy for construction and modernization of hospitals and other health facilities. This program would be in addition to the existing program administered by the Federal Housing Administration and the Department of Health, Education, and Welfare under which mortgages may be insured by the Federal Housing Administration upon payment of a premium for such insurance.

The principal advantage to be derived from the guaranteed loan program will be the substantial stimulation this program will give to private groups to obtain financing for new hospital construction. We anticipate that the full amount of guarantees will be utilized each year, providing a substantial increase in health facility construction and modernization. The initial budgetary impact will be relatively slight in comparison with the substantially increased construction and modernization which we believe will occur as a result of the combination of loan guarantees and interest subsidies contained in the bill.

With respect to the grant program, we believe it has demonstrated its value over the years, and should be continued as is provided in the bill.

Mr. Chairman, the extension and revision of title VI of the Public Health Service Act now pending before this House must be considered, and its final form determined, in the light of the fact that it is but one part, though an important part, of the Nation's overall health program. It is the point of departure in this Congress in our joint efforts to increase the efficiency, strengthen the capacity, and control the alarming rise in cost of our country's health care delivery system. The directions charted by this legislation can have a positive impact on each of these areas of legitimate Federal concern far beyond the initial impact of the dollars directly authorized.

Mr. Chairman, the program under this bill is badly needed. Our current national needs for hospital and other health facility construction and modernization are in excess of $16 billion. We feel that this bill will make a substantial contribution toward meeting this need and we recommend its approval by the House.

Mr. NELSEN. Mr. Chairman, I yield myself such time as I may consume.

In the period immediately following World War II there was a great need for hospital beds in rural areas. Without such beds medical care for large portions of the population was nonexistent. Doctors willing to serve in smaller towns had no facilities with which to carry on the kind of medicine necessary. From that need came the Hill-Burton Hospital Construction Act which provided funds on a matching basis with States and towns. State plans setting priorities were required, and this created the pattern for operation of the act. It was a well conceived scheme to get the job done, and time has proved it so. Today great advances have been made toward meeting the need.

As time went on it became apparent that changing times called for changing emphasis in medical facilities and in the creation of several new kinds of facilities. The practice of medicine was changing along with business, Government, and the inclination for more people to crowd into metropolitan areas. Ideas about proper treatment were emerging which required new approaches to facility construction as well. As a result, Congress has added to Hill-Burton in recent years. In addition to traditional community hospital beds for those who need intensive care, long-term care facilities, diagnostic and treatment centers, and rehabilitation centers have been added. The program has proved a great blessing to the ill. It has helped millions of Americans back to good health through improved hospital care and expanded care facilities. More and more communities have worked these into the local health care plan. Aside from Hill-Burton, but certainly part of the same pattern and purpose, have been the facilities for community mental health and mental retardation which now include care for drug addicts and alcoholics.

Hill-Burton has not been standing still. It may not have charged off in new directions at the first suggestion of those with specialized problems which were peculiar to a small area, however. When the need for modernization of city hospitals was first brought to light, a modest start was made by providing some funds which could be used for this purpose. I

must point out that even the original law probably could have been interpreted to cover the situation adequately. The problem seemed to be that of competition for the funds at State levels. There is no doubt that many modernization projects are of such magnitude that to finance them would blot up all the funds available for an entire State. Large teaching hospitals are the backbone of the system for creating new health professionals without which no hospitals will be able to operate. Many of them are now very old and have been neglected or put off in the dizzy spiral of costs. That is recognized.

It is for that reason as much as any other that the levels of authorization have not been drastically reduced for construction in the bill before the House today. It is also for that reason that H.R. 11102 leaves it up to each State to decide whether rural beds are in great need. The presumption would be that only a positive determination of a present pressing need for rural hospital beds would keep the money from other, newer priorities.

There will be a great deal of discussion here today about a principle of allotting money to the States which has been present in the Hill-Burton scheme for a long time and which is known as the squaring factor. This means that to determine how much money is initially allotted to a given State, one must determine the population of the State and then square its allotment percentage after the population figure has been divided into the available funds. It will be said, no doubt, that this is unduly preferential to rural areas or at least unduly harsh on States with large populations. There is no doubt that the formula thus applied helps States like Kentucky, Louisiana, West Virginia, Tennessee, and my own State of Minnesota. That is because they are the ones that need help the most.

What happens when we remove the squaring factor? Fourteen States would lose more than one-half million in formula funds apiece. Two of them, Kentucky and Louisiana, also Puerto Rico, would lose over 1 million each. And who would gain? States like New York, California, Ohio, and Massachusetts would gain. The formula was intended to put the money where there was the least possibility of reaching the goal without it. Now those as has want a bigger cut. If they have large problems, and I am sure they do, they also have far better chances to meet them.

It is very possible that no change in formula without massive Federal grants giving unreasonable percentages to large projects would solve the modernization problem of the big-city hospitals. An almost complete scrapping of Hill-Burton as we know it would result. There are those who argue that this is just dandy because the rural areas and smaller communities do not need help any more. That is strictly not so. The whole system of delivering health services is in a State of quiet—and in some corners not so quiet—revolution. Needs for new kinds of facilities and new systems, new equipment are going to continue and possibly increase everywhere. Big cities do not have a monopoly on health problems and they will not have. A complete shift in grant emphasis just is not the answer, and the bill which came from the committee recognizes that fact.

A new and very special program has now been included which we feel does attack the problem sensibly. Only by getting private funds involved will large modernization projects ever get off the ground. It has been difficult to interest private money in long-range loans based upon public or nonprofit operations of such institutions. No one should be blamed for this. It is a fact of life which we hope the bill can change. The new program would allow hospitals to borrow from private sources with a guarantee of that loan by the Federal Government, and in the case of nonprofit hospitals a further assist by way of an interest subsidy of 3 percent. We believe this method will prove cheaper to taxpayers. Over the 3-year period covered by this legislation loans up to a total of one billion eight hundred million dollars can be guaranteed. This is not hay.

If one has read the additional views to the committee report, he might get the impression that the use of grant funds for modernization is almost impossible or at best a dribble because the specific amounts assigned to modernization alone are smaller than those assigned to construction categories. To properly inform you on this point I wish to draw your attention to the fact that transfers among these various categories are possible at the discretion of the State authorities, where I certainly feel such discretion should lie. It is most interesting to note that the transfer authority is a one-way street. Funds may be transferred away from construction but not to it.

States can and should work out priorities for logical use of the grant funds which come to them. And if modernization is the problem, it can be so determined and handled accordingly. It is interesting to note, however, that only one of the big States has made any sizable or even significant shift of funds into modernization in the last 3 years although the authority has been there. The flexibility built into this program as found in the bill reported by the committee makes complete sense. It allows States to attack their individual problems but does not try to solve the internal bickerings by freezing the bulk of the funds in one category.

There are other innovations in the present bill which merit your attention because they demonstrate again the way the committee, and in past years the Congress, has tried to upgrade and streamline Hill-Burton. For one thing, the definition of "hospital" has been changed to eliminate some administrative roadblocks which have shown up. A project which wishes to include such things as home-care units and self-care units now must process its application through more than one channel. By including such items in the definition, a project may be treated as a whole and save considerable administrative duplication. Provision would now be required for extended care facilities in new projects.

The whole process for delivering medical services is being scrutinized under the partnership for health programs across the country. Many of these are just nicely getting underway. This bill makes it possible for such organizations, where in existence, to at least look over Hill-Burton projects. As time goes on we can and must bring all long-range planning and priority-setting machinery into gear. This is a first and very important step.

In my opinion the bill reported to this House by the Committee on Interstate and Foreign Commerce is a well considered, reasonable bill which gets at the problems of health facility construction in realistic terms and in a way which is fair to all of the wide variety of interests involved. I recommend its passage as reported.

Mr. STAGGERS. Mr. Chairman, I yield such time as he may consume to the gentleman from Oklahoma (Mr. JARMAN), the chairman of the subcommittee.

Mr. JARMAN. Mr. Chairman, H.R. 11102, the Medical Facilities Construction and Modernization Amendments of 1969, is the best of several alternative approaches in respect to providing Federal construction assistance in overcoming the present problems associated with the Nation's health facilities. In brief, these problems are essentially twofold: The extent of existing health facility capital needs, especially capital for modernization, and the need to encourage a better balance or mix of community health facilities, integrated in the functional sense. The Nation presently needs an additional 85,000 acute care beds, 893 public health centers, 149,413 additional long term care or extended care beds, 872 outpatient centers and 388 facilities for rehabilitation, at a total cost of $5 billion, at today's prices. However, the Nation's gravest health facility problem in terms of cost is to modernize or replace health facilities containing some 455,000 acute and long term care beds, at an estimated cost of $10.8 billion. Equally important, increased emphasis must be placed upon coordinated, community level health planning leading to a better balance or mix of community level health facilities and other health resources, integrated in the functional sense, capability of providing the full spectrum of facilities and services necessary to the continuity of patient care.

The bill properly addresses itself to this two-pronged problem by retaining those aspects of the existing health facility planning and construction program which have demonstrated their effectiveness in respect to these problems while, at the same time, changing and expanding the existing program in those areas where the need for such change and expansion has been clearly demonstrated. In summary, the bill would extend the authority for 3 years, the existing and proven portions of the grant program, provide new authority to administer a 3-year program of loan guarantees with interest subsidies, and loan guarantees, without interest subsidies. In addition,

the bill contains new authority for direct Federal grants to assist in the modernization of emergency rooms of general hospitals, as well as including several other overall provisions which would modify the existing program to deal more directly with specific health facility and health planning problems which have been clearly identified since the program's last extension in 1964.

For example, section 2 of the bill properly expands the Federal effort in dealing with the existing health facility needs through the creation of a 3-year $900 million loan guarantee program, with 3-percent Federal interest subsidies, which would assist privately owned nonprofit health facilities in both modernization and construction of additional health facilities. This alternative was selected after thorough consideration of all the facets connected with expanding the authority under the existing grant program to the extent necessary to have an appreciable impact on the Nation's health facility modernization and construction needs which are presently approaching $16 billion. Further, the interest subsidy provision will tend to reduce or at least slow the rate of ever-increasing individual patient-day costs since the payment of interest on loans will in part be assumed by the entire Nation rather than the individual patient.

At the same time the bill provides equally adequate loan guarantee assistance for the construction and modernization of publicly owned health facilities. Although interest subsidies would not be available to publicly owned health facilities, seeking loan guarantee assistance, publicly owned health facilities, unlike private nonprofit health facilities do have certain equalizing capital formation advantages such as their revenue or tax base, as well as the incentive of the tax-free status of the interest earned on their bonds.

The bill does not provide for direct Federal aid to health facilities which may be in need of emergency construction assistance since it was felt that the ongoing health facility planning efforts of the States were best able to determine where assistance is imperative, rather than through any direct Federal assistance program, which may or may not be compatible with a particular State's health facility planning effort. Further, the unnecessary proliferation of Federal health facility assistance program, especially when not a part of a State's ongoing planning efforts can frequently impede the execution of rationally developed State and community-level health plans.

The bill maintains the proper balance or quality of methods by which funds are allotted to the States by continuing the existing allotment formula for grant funds for new construction and continuing the health facility modernization need factor, as well as relative population and income in allotting modernization grants to the States. Recognizing further the merits of employing the health facility need factor, its use has been extended in the bill, along with relative population and relative income, in allotting loan guarantees to the States.

After lengthy consideration of the existing priority preference for the construction of additional health facilities in rural areas, it was agreed that each State could best decide, through their annual health facility plan, whether a rural area preference was in fact needed. Accordingly, the rural area priority preference was modified, to be made optional on the part of the States.

Section 3 of the bill provides the authority to administer a 3 year, $30 million authorization of direct Federal grants to assist in the modernization of emergency rooms of general hospitals. This provision, we feel, will have an affirmative impact upon the Nation's capability to deliver emergency health services to victims of highway and industrial accidents as well as other forms of mishaps. Since the provision provides for direct Federal project grants, it is expected that it would be administered in such a way to complement the State health facility planning efforts by seeking State agency consultation and assistance in its administration, especially as it relates to the States developing a State plan for emergency care services as a part of the State health facilities plan.

Section 13 of the bill is directed to assisting the further development of a coordinated community level health planning process, as well as insuring that the several community-level, federally assisted health facility and health planning efforts are mutually complementary. The section requires that the local areawide health planning agency bodies assisted under 314(b) of the Public Health Service Act be provided an opportunity to review the applications for assistance under the program. In the absence of a local areawide health planning agency assisted under 314(b), the State Community Health Planning Agency would be provided an opportunity to review applications for assistance under the program. In this way, we feel we have provided the basis for the necessary involvement of other health planning activities and at the same time have not placed upon the State agency administering this program and the project sponsors, an inordinately severe administrative burden.

The bill also recognizes the necessity for improving the continuity of care that is delivered to patients of general hospitals by requiring that general hospitals receiving assistance under this program agree to provide extended care services within the general hospital. However, since it is recognized that there may be some instances where it may not be possible or desirable for extended care services to be included in every general hospital assisted, there is adequate provisions for waiving this requirement.

Mr. Chairman, I urge the passage of H.R. 11102.

Mr. NELSEN. Mr. Chairman, I have no further requests for time.

Mr. STAGGERS. Mr. Chairman, I yield 10 minutes to the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Chairman, I want to congratulate my respected chairman (Mr. STAGGERS) and the distinguished chairman of the subcommittee (Mr. JARMAN) for the generally excellent job they did with this bill. This legislation incorporates many advances and improvements. In the report, and in some provisions of the bill, moreover, the committee recognizes the unquestionable shift in health needs in this Nation from the rural areas, for which Hill-Burton was originally designed, to the urban areas.

In another major advance, this legislation makes a start toward use of Federal aid to improve delivery of health services to the people rather than the past emphasis which has been mostly on assisting hospitals and the medical profession without regard for how they are serving people. I am particularly appreciative of the new definition of "hospitals" to include extended care facilities. Many of our hospitals today are overcrowded because there are a great many people occupying acute care beds who should not be there. Old people and convalescents who need care but who are not sick and, therefore, do not need treatment are occupying beds designed for the critically ill. This is primarily the result of the lack of adequate extended care facilities.

Expanding the definition of "hospitals" to include extended care facilities will make it possible to create alternative facilities for such people. Because these facilities are less expensive to build and much less expensive to operate, we can also then make significant inroads on our soaring hospital costs.

The new emergency room provisions of the bill will go a long way toward meeting the need for these facilities.

The use of financial statements from the hospitals is going to help us a great deal in trying to hold down the tremendous rise in the cost of hospital attention.

Mr. Chairman, these are good provisions and deserve support. My quarrel with the bill as reported by the committee is that it simply has not gone far enough to keep up with the rapidly changing conditions in our Nation. It has not taken the basic step that will make its really good provisions effective.

For example, in spite of its advances, the bill would extend for 3 years the basic Hill-Burton formula which gives such tremendous advantage to rural areas and seriously slights our growing urban areas.

The old Hill-Burton formula may have made sense in 1946 when the crying need was for medical facilities to serve rural areas. But, as the committee properly points out, the Hill-Burton Act has done a tremendous job to meet this rural need so that we now are to the point where we have satisfied 90 percent of the needs of the country in terms of hospital facilities. Parenthetically, I think it wise to point out that many and perhaps most of the facilities that have been built are already obsolete and in desperate need of modernization.

The committee admits the rural emphasis of the existing program in the report on page 8, and says:

> The program, therefore, provided priorities in construction of new hospital bed capacity for facilities serving rural areas. . .

The committee claims that this rural emphasis of Hill-Burton funds distribution has now shifted. The fact is it has not. Some 70 percent of the Hill-Burton funds at the present time go to communities with populations under 50,000.

A table is provided on page 9 which is intended to show that Hill-Burton money presently is being spent with an urban emphasis. That table has one of the most remarkable definitions of "urban" I have ever seen. It includes under the category "other urban," communities between 2,500 and 50,000 population. "Rural," it defines as only communities of 2,500 and under. Using that definition, the report purports to show that the majority of funds has been spent in "urban" areas—busy metropolitan centers of 2,500 "citified" souls. I think that is clearly misleading.

A community of under 50,000 is really rural and a hospital built in such a community serves a rural population. Certainly a community of 2,501 people cannot be accurately described as urban. If you take the figures for "other urban" and put them where they belong, with those that are labeled "rural," it proves conclusively and dramatically that the great majority—some 70 percent of Hill-Burton funds—do in fact still go to rural communities. In fact, a large majority of the funds go to communities of under 15,000 population and a large majority of the funds go to build small, inefficient hospitals with between 30 and 50 beds.

Now, simple reason argues that this rural emphasis must be changed.

Furthermore, the bill extends this loaded and inequitable formula to all the new grant programs with the exception of the modernization program. It extends the rural formula to the diagnostic center program. It extends it to the programs for extended care and rehabilitation facilities. Thus, the effort to meet the real health needs of the Nation is diverted and frustrated by a 20-year-old special-interest formula that has long outlived its usefulness.

I am going, therefore, to offer an amendment to change the formula to that which is used presently for modernization. It is a fair and equitable formula that gives no special advantage to any region. It is based on population, per capita income, and need. Not only is this fairer, it will make it possible for us to start meeting the urgent, unmet health needs in this country today.

Another problem with this bill is the failure to recognize the changed health priorities in this Nation. The committee states in its report that 90 percent of the need for new hospitals in the country has been met. The committee admits in its report the need for modernization is the overwhelming need all over the country. All the testimony before the subcommittee confirmed the primacy of the need for modernization.

Today we have in the country a situation where one-third of our hospital beds are obsolete. On page 6 of the committee report, it is pointed out that the burden is growing at an appalling rate. The report states that an additional 41,000 hospital beds every year are being added to the obsolete category.

Page 4 of the committee report shows that the need for all new construction in the country is $5.3 billion whereas the need for modernization is almost double that or $10.5 billion, with some 455,130 hospital beds requiring modernization.

Yet, the committee set exactly the opposite priorities in its authorization. The committee reduced the funds for modernization from $65 million last year to only $50 million next year and increased the amount for new hospital construction from $130 million to $135 million. It also added another $100 million for new construction programs for other medical facilities.

The need is 2 to 1 for modernization; the program is more than 4 to 1 construction. If that is not topsy-turvy I do not know what is.

Now the committee says the bill has an expanded provision under which the State agency can shift funds from new construction to modernization. That is an improvement, but it certainly is not enough. First, the State agencies naturally are going to follow the priority set by the Congress. We have not got the right to ask them to do otherwise. Second, setting priorities is a responsibility that Congress should exercise. To rely on a State agency to correct our misset priorities is an abrogation of our constitutional responsibility.

We know what the needs are. We know what the priorities should be. Why are we afraid to specify that modernization should receive the largest proportion of the funds provided under this act?

The gentleman from Michigan (Mr. DINGELL) is going to offer an amendment which will in effect reverse these priorities without substantially changing the total amount of funds.

One of the greatest needs throughout the country today is for providing facilities that can deliver health services where the people are and where the need is greatest. That was what Hill-Burton did for the poor rural communities, principally in the South when the need was greatest there. Now the need is in our urban centers and particularly in the economically deprived sections within those urban centers. Can we do less than help them as we helped the rural areas before?—especially since our program would not favor the urban areas as Hill-Burton favored the rural areas, but would only treat all areas equally.

Through our magnificent programs of medical research, we have amassed a tremendous amount of knowledge as to how to treat illnesses and accidents and yet we have largely failed to deliver these services to the people who most need them.

While there are funds for diagnostic and treatment facilities provided in the committee bill, they are tied to the Hill-Burton formula with its rural bias. In addition, the diagnostic and treatment facilities that are provided have to be constructed in connection with an actual hospital service.

And there is the nub: Hospitals are not built in the impoverished urban centers.

The diagnostic facilities that are really needed should be built where the people are—not where the hospitals are. The committee bill does have a waiver provision for special situations. But what they consider as a special situation is in fact the rule. And the only way to meet the conditions as they are is to provide diagnostic and treatment centers separate from hospitals to serve our urban poor. This ought to be the predominant theme of our effort rather than the special exception under this provision.

My colleague from New York (Mr. FARBSTEIN) will offer an amendment that will add $15 million to this program, earmarked specifically for urban diagnostic and treatment centers that do not require physical connection with a hospital. The committee's $20 million for centers to serve other areas will be unchanged.

In 1966 we provided for comprehensive health planning agencies to develop community oriented plans for meeting the health needs of our States. These agencies are now set up in every State of the country. In some States they are doing a good job in coordinating the needs for new hospitals and other kinds of facilities, such as extended-care, treatment, and rehabilitation facilities. In other areas, they are getting started in this job.

One of the great problems we have with the soaring hospital costs that we are experiencing all over the country today is that we are using so many of our health resources inefficiently. We are building hospitals that do not really serve community needs and as often as not we are not using them well. A community will build a hospital because of pride in having a hospital, even though there may be a perfectly good hospital that is underutilized within a few miles of the proposed construction. We cannot afford that today.

Within the State of New York, the Blue Cross program has proposed a 49.3-percent increase that will go into effect next month. This is becoming an unbearable burden for our people. We have to start making optimum use of the facilities available and building only the kind of new facilities that will serve our real needs. This is especially true of acute-care hospitals which are the most expensive kind of health facility to build and operate.

Now in an area where coordination is so important, more consultation with comprehensive health planning groups, as provided in the committee's bill, is not enough. These comprehensive health planning groups were created in the 90th Congress to give local communities a greater role in developing their health facilities and services. The expressed purpose of the program is to coordinate health programs, to do away with waste and inefficiency in the delivery of our health facilities. Having established this program, it is important that we really use it. What should be required is not just consultation but a clear finding that any program funded under this act is "consistent" with the comprehensive health planning, if any, adopted by the local comprehensive health planning group.

The gentleman from Texas (Mr. ECKHARDT) will offer an amendment to that effect.

Lastly, there are within many communities of the United States today

really desperate situations with respect to the delivery of health services. The Public Health Service released a survey during the last Congress which showed that 143 communities were in such critical situation. These communities were served by health facilities reporting annual occupancy rates of better than 90 percent—in many cases better than 100 percent. They had no alternative service and were unable to use any of the existing aid programs. There is a tremendous need for alleviating these emergency situations through a program of direct grants and loans. Therefore, the amendment which I offered last year providing for $100 million in grants and $35 million in loans directly to the communities in most critical need will be offered. This proposal was approved by the committee in the last Congress and was added to the administration's "partnership for health" bill. Unfortunately, it was narrowly defeated in floor action. The gentleman from Rhode Island (Mr. TIERNAN) will offer the amendment this year.

The committee has provided a new loan guarantee program that does not follow the loaded Hill-Burton formula. There are many good features of this program, but I still have grave doubts about it. The principal difficulty, as recognized by the committee itself in its report, is the same as with all such loan programs: the person who pays the additional cost of interest on the loan is the patient. He has to pay these medical costs at a time when he can least afford to pay them, when he is sick or hurt and not producing income. I think we ought to be thinking more in terms of total direction for the future, in terms of extending the grant programs rather than the loan program.

I would like in closing to point out that the administration in its testimony on this bill actually supported all five of these amendments that will be offered. The Under Secretary of Health, Education, and Welfare, John G. Veneman, in his testimony before the Health Subcommittee on March 25 of this year, made the following remarks:

When the Hill-Burton Program was initiated, the country had less than 60 percent of the general hospital beds needed for the care of its people. The most critical shortages existed in rural areas, where many families lived hours away from lifesaving care. As a consequence, the program required a rural emphasis. It has served its purposes well. Today, despite rapid population growth, 90 percent of the nation's need for general hospital facilities is fulfilled, thanks in large measure to Hill-Burton. We believe now that the priorities have changed and the needs for today are basically two fold: (1) modernization or replacement of existing and obsolete acute-care facilities in hospitals; (2) expansion of kinds of medical facilities that cost less thus can help control skyrocketing medical costs.

His testimony called for the very programs that we are now proposing in these amendments. The amendment of my distinguished colleague from Michigan (Mr. DINGELL) will assure that the highest priority is given to modernization. The amendments of my colleagues from New York (Mr. FARBSTEIN) and from Rhode Island (Mr. TIERNAN) will help to fulfill the second priority.

Under Secretary Veneman did not stop there. He recommended that grants be made "on the basis of population, per capita income, and the need for the construction or modernization," replacing the outmoded Hill-Burton formula. My amendment would put this into effect.

Mr. Veneman also called for the establishment of diagnostic and treatment centers to serve the urban poor saying:

Facilities for ambulatory care services such as those provided by hospital out-patient clinics and separate health centers will help balance our entire health delivery system.

This would be achieved by an amendment to be offered by my colleague from New York (Mr. FARBSTEIN).

Further, Mr. Veneman recommended:

Each project seeking financial assistance under this (legislation) should be submitted for review and comment to the appropriate areawide planning agency created under the provisions of section 314(b) of the PHS Act. The State Hill-Burton plan should be approved by the State health planning agency created under section 314(a) before awards from the State allotment are approved and funded.

The amendment to be offered by my colleague from Texas (Mr. ECKHARDT) would carry out this recommendation.

Finally, he called for the establishment of a separate fund "reserved for direct project grants to be made by the Secretary after consultation with the States, for innovative projects or projects reflecting critical needs of national significance."

The program established by the amendment to be offered by my colleague from Rhode Island (Mr. TIERNAN) would conform to the program described in Mr. Veneman's testimony.

The testimony can be found on pages 21 through 25 of the report of the Subcommittee on Public Health and Welfare of the House Interstate and Foreign Commerce Committee on Hospital and Health Facilities Construction and Modernization, serial 91–8.

Obviously, the enactment of these amendments will go a long way toward bringing the proposed legislation in line with the recommendations of the administration.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I will gladly yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I was interested in the gentleman's statement to the effect that 70 percent of the funds have been used in rural areas. I cannot find that in the report, and I wonder where the gentleman got such information.

Mr. OTTINGER. I got it from the committee report in the table on page 9. If the gentleman will add to the funds labeled "rural" those labeled "other urban," which the footnote indicates as representing communities with a population from 2,500 to 50,000, he will find they constitute 70 percent of the funds authorized.

Mr. CARTER. But in checking those funds I do not find that is so.

Mr. OTTINGER. Mr. Chairman, if the gentleman will add "other urban" funds to the funds labeled "rural" in the tables, he will find that.

Mr. CARTER. I see no reason to add the figures labeled that way, and I do not find these figures to bear out what the gentleman said.

Furthermore, in answer to what the gentleman said on this, I find there is yet a great need in rural areas for more construction. For instance, the commissioner of health of my State visited me today and told me they had requests for millions of dollars for new construction, and according to the present bill, only $4 million would be available, and if the amendment offered by the gentleman passes, my State would lose $43 million and other States would lose, and the gentleman's State of New York would gain.

Certainly I cannot agree with such an amendment, and I doubt the statistics submitted by the gentleman at the present time. I do not think the table will bear this out.

Mr. OTTINGER. Mr. Chairman, the statistics submitted are quite accurate. Furthermore, what I am proposing is only a shift in the emphasis of the program. The rural areas would not be eliminated. All we are proposing is to do away with the loaded formula which has given rural areas such an unequitable advantage. We are asking not that the more highly industrialized States be favored, but merely that they be treated equitably.

Mr. HUNGATE. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I will be glad to yield to the gentleman from Missouri.

Mr. HUNGATE. Mr. Chairman, I commend the gentleman for his statement in one respect, and that is in criticizing the archaic practice of the Census Bureau in considering anything greater than 2,500 should be considered urban. I am not sure the count should be 50,000, but I am sure it is over 2,500.

For instance, suppose we have a district of 5,000 people and no district over 50,000, would the gentleman consider the need for a hospital in that area?

Mr. OTTINGER. Yes. We do not eliminate that. We try to change the emphasis. Today we have about 75 percent of our population living in urban areas.

Mr. HUNGATE. Is it not possible to have a hospital in a city of two or three thousand within 10 or 15 miles of a city of perhaps half a million?

Mr. OTTINGER. That is why we try to provide a requirement for coordination with the health planning agencies so that the needs of the surrounding communities and the central cities will be taken into account.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. NELSEN. Mr. Chairman, I yield the gentleman an additional minute.

The CHAIRMAN. The gentleman from New York is recognized for an additional minute.

Mr. NELSEN. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I am pleased to yield to the gentleman from Minnesota.

Mr. NELSEN. Mr. Chairman, did I understand the gentleman from New York to say that the grant money for construction could not be used for modernization?

Mr. OTTINGER. I did not. I said there

was a provision for shifting funds from construction to modernization, but the priority we put on that is the reverse of the priority it should be. In other words, we provide $135 million for construction as against $50 million in the first year for modernization. That priority, we believe, ought to be reversed.

Mr. NELSEN. I just wanted to be sure we understood that. Under the Hill-Burton formula and under the authority granted to the States, moneys that presently are given for construction can be transferred to modernization under the authority granted to the States, under the authority set up by law of the Congress of the United States.

Mr. OTTINGER. That is correct. The States really should not be left to make this decision against the picture of a congressionally mandated priority of 2 to 1 in favor of new construction. They ought to be able to make these shifts in terms of the reverse.

Mr. NELSEN. Mr. Chairman, I yield 7 minutes to the gentleman from Kentucky (Mr. CARTER).

Mr. CARTER. Mr. Chairman, certainly I feel that the Hill-Burton Act has done a wonderful lot of good throughout our country, both in our cities and in our rural areas.

I know the need is great for improved medical care and for increased facilities both in our urban areas and in our rural areas. I feel that the present bill would expand the Hill-Burton Act to take care of such a need.

We have at the present time $135 million for new construction, in grants. I feel that this might well be increased, rather than that the formula be changed.

I want to bring to the attention of the Members, Mr. Chairman, that if the formula were changed 33 of our 50 States would lose money. Some would gain.

I must say that the need for more hospitals is evident not only in the rural areas but also in the urban areas. As I visit the hospitals throughout my district I find that even though they have had additions in the past few years they are still overcrowded, and patients are in the halls.

Just because a hospital is small does not mean it is inefficient. A hospital becomes an integral part of a community, and certainly it is appreciated by the people to whom it is a boon, a great help.

I certainly do not want to see the funds for the rural areas, or for 33 of our 50 States, diminished, as would be the case under the amendments which the distinguished gentleman from New York will offer later.

As for the comprehensive planning groups, of course, in that area we do have these groups in every State of our 50 States. But they are just starting. At the present time they have not reached the stage of competence, where they could take over the administration of Hill-Burton funds, such as the present groups in each State. It is my feeling that within the next 2 years, perhaps, these comprehensive planning groups can take over. Certainly their assistance is asked for under the present bill.

Of course, it has been brought out—and it is true—that the Hill-Burton Act will provide for diagnostic centers, usually within the hospitals but not necessarily so. These can be built outside the hospitals. Also, we have extended care units and rehabilitation centers, which will be extremely helpful and will lessen the load on our hospitals. That is the purpose of our extended care units.

Mr. FARBSTEIN. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from New York.

Mr. FARBSTEIN. It is admitted there is an insufficient number of hospitals throughout the country, and especially in the rural areas. Instead of building hospitals, with the tremendous cost involved, does the gentleman not believe we would be better advised to build health care centers, wherein physicians would work and there would be treatment for those people who need hospital care when they cannot get hospital care because of the tremendous distances between them? Would they not get ample treatment in the health care centers, and, in those situations when a hospital is absolutely necessary, could they not then be transferred to the hospital?

They will serve the rural areas as well as the poor areas where they have large health care centers rather than hospitals.

Mr. CARTER. As it happens, the diagnostic and treatment center is not a place for hospitalization. You cannot do caesarian sections in such a place. You cannot take care of hemorrhaging patients in a diagnostic and treatment center. You cannot insure the aged and the infirm and people who are really sick. They must be in a hospital and must have hospital care. Such centers, of course, would be of help to any community anywhere, whether yours or mine, but they do not take the place of hospitals.

Mr. FARBSTEIN. Granted, but——

Mr. CARTER. I refuse to yield any further at this time.

To lighten the load on the hospitals in New York or Kentucky or anywhere else we must have extended care facilities, because all of our hospitals have been overloaded by older people on medicare who stay longer than the physicians want them to. Extended care units have been expanded and should be expanded in your city and mine.

Mr. FARBSTEIN. Will the gentleman yield further?

Mr. CARTER. Only for a question and not a speech.

Mr. FARBSTEIN. Using your own argument earlier, you said that the hospitals are being overloaded and you wanted the health care centers. Could not the health care centers take the place of those hospitals in those situations which did not involve the extended treatment that you suggest?

Mr. ROGERS of Florida. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the distinguished gentleman from Florida.

Mr. ROGERS of Florida. If the gentleman will read the bill, he will find these facilities are all provided for in the bill. If the State decides that it meets the problem in your State, it may be done there.

Mr. CARTER. A diagnostic and treatment center is not a place where you keep these patients. They are places where diagnoses are made and treatment is done on an outpatient basis. Of course in any physician's office we try to diagnose the illness and the treatment of patients. This is not a place for patients to stay. They are helpful and necessary, but they do not supplant a hospital.

Mr. FARBSTEIN. Will the gentleman yield further?

Mr. CARTER. For a short question and not a statement.

Mr. FARBSTEIN. In answer to the gentleman from Florida, is it not a fact that under the Hill-Burton Act, however, these centers must be tied to hospitals?

Mr. CARTER. That is absolutely not according to the law. It does not require that it be in a hospital.

The CHAIRMAN. The time of the gentleman has expired.

Mr. NELSEN. Mr. Chairman, I yield the gentleman 2 additional minutes.

Mr. CRAMER. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from Florida.

Mr. CRAMER. I am very obviously interested in doing what needs to be done with regards to encouraging the construction of adequate hospital facilities, particularly in view of medicare and the great demand for hospital beds, because most facilities in the country are being overtaxed. As I understand it, I ask my distinguished colleague, we presently have two basic programs in existence; namely, the Hill-Burton Act, which is a program of direct grant money, and then you have your title XV of the FHA insurance program, which was passed last year, which is the FHA insured program.

Mr. CARTER. Yes, sir.

Mr. CRAMER. I, for one, have been very critical of the fact that this emergency insurance program has not been tooled up. As far as I know, there has been one loan made to one hospital. It is my opinion they have been dragging their feet on this and perhaps even dragging their feet intentionally, in the hopes of getting this bill, which does not come into being until 1971, anyway, and they have been discouraging the use of tools now available for use in the FHA insurance program. Why else would only one project have been approved? In view of that, I will ask this question: On page 5 of the report it says:

> The committee does not feel that the program provided in this legislation should serve as a substitute for the existing FHA insurance program. Rather, the three programs (grants, guaranteed loans, and insured loans) should complement each other, with projects determined to have the highest priority qualifying for grants of guaranteed loans, or a combination of both, and projects having a lower priority under these programs receiving loan insurance.

What does that mean? For instance, let me give you a specific example: At the Cedars of Lebanon Hospital in Miami, Dade County, an area where there is a clear need to fill a 2,900-bed deficit, according to the 1969 Florida plan, Cedars of Lebanon has requested FHA insur-

ance. What happens to them now? That is question No. 1.

Question No. 2 is: What happens, or is it possible in the future to have this——

The CHAIRMAN. The time of the gentleman from Kentucky has again expired.

Mr. NELSEN. Mr. Chairman, I yield the gentleman 2 additional minutes.

Mr. CRAMER. Mr. Chairman, if the gentleman will yield further, is it possible to have in the future under this language a combination which is possible today—FHA insurance and Hill-Burton funds? And why the low priority for loan insurance is what I want to know?

Mr. ROGERS of Florida. Mr. Chairman, would the distinguished gentleman from Kentucky yield?

Mr. CARTER. I would be happy to yield to the gentleman from Florida.

Mr. ROGERS of Florida. I am sure the gentleman from Florida (Mr. CRAMER) would want the State to determine the priorities. I am sure he would not disagree with this.

Mr. CRAMER. I agree with that.

Mr. ROGERS of Florida. Then, on that basic point we are in agreement, that the States should decide what areas have the greatest priority. It was stated this way because we felt that probably hospitals that are going to be built would probably want to have a higher priority in order to qualify for a direct grant under the Hill-Burton Act, under the State regulations or a guaranteed loan where they would have 3 percent of their interest paid. And, in fact, if they can qualify for either of those under the State plan, then they can come into the other and there would be a combination.

Mr. CRAMER. Mr. Chairman, if the gentleman will yield further, I would like to explain this, because this is extremely important and is a matter which I feel deserves a full explanation.

Do I understand that Dade County having a 2,800- or 2,900-bed deficit according to the 1969 plan, and there is a program to add 500 beds to Cedars of Lebanon and they are going to do it on the basis of an insured program under FHA, if they, in fact, get FHA insurance, does that 500 beds having been constructed under that program delete the possibility or remove the possibility of the additional beds being built under the Hill-Burton Act?

Mr. ROGERS of Florida. Mr. Chairman, if the gentleman from Kentucky will yield further, this change of priority, if any, has got to be determined by the Hill-Burton State agency.

Mr. CRAMER. At the present time they cannot?

Mr. ROGERS of Florida. No. In effect it would not bar them from building other beds under Hill-Burton if the State priority establishes their right. It would not bar them.

The CHAIRMAN. The time of the gentleman from Kentucky has again expired.

Mr. NELSEN. Mr. Chairman, I yield the gentleman 1 additional minute.

Mr. CRAMER. Mr. Chairman, if the gentleman will yield further, the point is this: How does the lower priority get into it? Let us assume the reverse of the Cedars of Lebanon approach, that a 500-bed hospital is built under the Hill-Burton Act. Can they go ahead in that same area and put up 500 more beds under this FHA insurance program?

Mr. ROGERS of Florida. Of course they could if sufficient State priority is established.

Mr. CRAMER. Under the present circumstances they cannot build the 500 beds with FHA insurance and Dade County still retain their priority for a grant under Hill-Burton. They could construct those 500 beds under the insurance provisions, but they have no right to 500 more beds under Hill-Burton according to present policy, as I understand it, and this causes a problem. It comes out of the Hill-Burton priorities by reducing the beds needed by 500; does it not?

Mr. ROGERS of Florida. I do not believe that is correct. Here is what would happen. Your Hill-Burton program is going to set your priorities throughout the area. These are concurrent programs that can be run and set up, and we are simply saying that if in your area they preferred qualifying or should prefer a higher priority, your hospital group may think that they would rather qualify under a direct grant; or, second, under a guaranteed loan before they go to FHA. This would be to their advantage to have a higher priority. I think this is what we are trying to say in the committee report.

Mr. STAGGERS. Mr. Chairman, I yield such time as he may consume to the gentleman from Florida (Mr. ROGERS).

Mr. ROGERS of Florida. Mr. Chairman, I want to say that the committee spent a great deal of time considering this legislation. We have tried to gear the legislation to meet the needs of today. I believe the committee has done an excellent job in doing this, and as the debate unfolds as we get into the 5-minute rule, I believe it will be evident that we have a very balanced program here to meet the health needs of this Nation, and that we are trying to bring about some innovations through this legislation that will reduce costs, and start a reduction in the cost of hospital care.

I believe that should be of primary importance to the Congress, as I believe it will be to the American people.

Mr. Chairman, I strongly support H.R. 11102, the Medical Facilities Construction and Modernization Amendments of 1969.

Your committee held 4 days of hearings in March on legislation recommended by the Department of Health, Education, and Welfare, on a bill introduced by the distinguished chairman of your committee (Mr. STAGGERS) and by myself with other members of the Subcommittee on Public Health and Welfare.

Following these hearings, there were three executive sessions of the subcommittee and two such sessions of the full committee before agreement on the bill was reached.

The bill before us represents much deliberation and I recommend its passage. It is a bill which is fashioned to meet the needs of today.

This bill will carry forward for 3 years the existing grant programs for construction and modernization of public or other nonprofit hospitals and public health centers, facilities for long-term care, diagnostic or treatment centers, and rehabilitation facilities.

Eight hundred and seventy million dollars would be authorized for these grant programs for the 3 fiscal years.

In addition, a new program has been adopted to better meet the needs for hospital beds in the Nation.

A guaranteed loan program, coupled with a subsidized interest program, would encourage private lending institutions to become more active in the realization of construction and modernization of hospitals and other health facilities.

The bill reported by your committee provides for not more than $300 million of guaranteed loans per year for each of the next 3 fiscal years, beginning July 1, 1970.

The interest subsidy would be a maximum of 3 percent. Total cost of this portion of the bill would be a maximum of $37.3 million for the 3 years.

In addition, your committee has provided for authorization of $10 million for each of the 3 fiscal years for the modernization of emergency rooms. There are many hospitals, particularly in urban areas, where emergency rooms have become, in effect, outpatient facilities for many residents. The situation is serious, and as a result, the emergency rooms are often unable to meet their intended purpose. This money is intended to help correct that situation.

Since 1946 Federal-State cooperation under this program has meant much to the citizens of this Nation in meeting our hospital needs. There is much more to do, but this bill will continue to move us forward in meeting our needs.

Mr. EDMONDSON. Mr. Chairman, I support this bill to authorize additional Federal grants and loan guarantees for construction and modernization of hospitals and other medical facilities, and commend the committee on its work.

The shortage of hospital beds set forth in the committee report is an acute national problem which Oklahoma shares with her sister States.

If we are to close the gap between facilities and public needs, this bill is essential. I have received literally dozens of letters from Oklahomans, who are close to this problem, certifying to the need for this measure.

I am sure it will be overwhelmingly approved.

Mr. CAMP. Mr. Chairman, I urge adoption of H.R. 11102 primarily because it is basically an extension of an already existing program at almost the same levels of financial commitment as they are at the present time.

Of significant importance is the loan guarantee program which will be of great benefit to those projects where direct grants are not sufficient and bond money is difficult to obtain. The loan program might salvage many projects that would not otherwise proceed.

The 3-year extension of the Hill-Burton program is essential to the comprehensive program of health and hospital planning for my district and the entire State of Oklahoma.

Mr. McKNEALLY. Mr. Chairman, I support H.R. 11102, the Medical Facilities Construction and Modernization Amendments of 1969.

Since 1946, when this program was originally enacted, literally hundreds of thousands of hospital and nursing care beds have been provided throughout the country. In addition, this program has made possible the establishment of many other health facilities such as diagnostic and treatment centers.

While these accomplishments are very gratifying, in that they represent the furnishing of a great majority of the Nation's hospital and health needs, there remains a substantial job to be done. This bill which extends the present program of matching grants for 3 years, and establishes a new loan guaranty program, is vitally needed to cope with the problems still confronting us.

However, since the enactment of the original legislation certain circumstances have changed. I refer to the formula for allocating funds to the States. Back in 1946, there was an urgent need to assist rural areas. Now that need has been met to a very great extent and the formula should now be revised to allocate the funds more evenly between rural and urban areas.

The gentleman from New York (Mr. OTTINGER) will offer an amendment to H.R. 11102 which will change the formula to bring about this needed change, and I support him in this endeavor. I trust that my colleagues will do likewise.

Mr. YATES. Mr. Chairman, H.R. 11102 is a vitally important piece of legislation. Its purpose is to stimulate the construction of new hospital facilities and the modernization of medical facilities already in being. The bill addresses itself to one of the most important aspects of the growing crisis in medical care, the lack of adequate medical facilities, particularly in urban communities.

While the progress that has been made during the last 20 years under the Hill-Burton program is heartening, it is not enough. The Public Health Service estimates that in the next 10 years more than $7.2 billion will be required to meet the projected need for new general hospital facilities. Despite the great gains made in recent years, the increased demand for hospital and related medical services all across the country can only be met by new construction. This bill provides funds for that construction.

But the most pressing need is in the area of modernization of existing medical facilities. The situation in many urban hospitals is critical, and unless some assistance is forthcoming it is going to get worse. As things stand today, nationwide, $10 billion is required to bring our health facilities up to acceptable standards. An additional $10 billion will be required over the next decade in the continuing fight against obsolescence. In Chicago alone, it has been estimated that $372.8 million is required for modernization, and that figure does not include current and future needs for additional beds. This bill does not provide all the funds that will be needed, but it is a start.

The need for modernization, especially in urban medical care facilities, is probably best understood in terms of cost. The soaring costs of medical care are such that in some instances it causes such worry that illnesses are aggravated. Dr. Robert Coles has stated before a Senate subcommittee that—

> People are sick and then become even sicker because of what has happened to them financially. . . . It is not only a financial disaster, but a severe psychological disaster.

Of all the various components of the medical care price index, daily hospital charges have increased the most dramatically. The postwar increase in hospital room rates, as shown in the Consumer Price Index, has been 441 percent, compared with 71 percent for all consumer prices, 125 percent for all medical care prices, and 107 percent for physicians' fees. The average rate of increase for hospital room rates has thus been more than three times that of the overall consumer price index.

By modernizing our existing hospital facilities, the productivity of nurses, doctors, and other medical personnel can be greatly increased.

Last August we passed the Health Manpower Act, which is designed to encourage careers in the health field. There is a drastic shortage of doctors and nurses—we are short 50,000 physicians and four or five times that many nurses. Modern facilities will make medical careers more attractive and individually more productive for all medical personnel—doctors, nurses, technicians, and all the other people connected with the medical care profession.

The health manpower situation is measured not only in numbers of employees, but in the amount of medical care each of those employees is able to dispense in the course of his workday. This bill will enable hospitals to modernize their services, increase their productivity, and improve their efficiency. It will improve the overall capability of our medical care delivery system, and the net result will be that we will begin to reach a point where we can hold the line on the escalating cost of illness.

It is important also to put this bill in the larger context of the urban crisis. The modernization of urban hospitals and other medical facilities will make it possible for them to extend their services to more and more citizens. This legislation will hasten the day when serious illness is no longer a tragedy for a middle income family, threatening their economic survival. Modern facilities will mean that the increased supply of health care services will be more accessible to the poor, thereby making some inroads into stopping the cycle of poverty.

Dr. Jack Geiger of the Tufts-New England Medical Center has referred to the health of the poor in the United States as "an ongoing national disaster." He went on to say that—

> The poor are likelier to be sick, and the sick are likelier to be poor. Without intervention, the poor get sicker and the sick get poorer.

It is incumbent on us to do whatever we can to avoid that situation. I urge support for the Medical Facilities Construction and Modernization Amendments of 1969. It is an important step in limiting medical care costs and increasing the amount of medical services available to those who require them.

Mr. HALPERN. Mr. Chairman, our Nation's hospitals are in desperate need of help. One-third of them are already said to be "intolerably obsolete"; the other two-thirds struggle to maintain a balance between the ever-increasing costs of ordinary medical services and the need for modernization of facilities. Even today's prohibitive costs for rooms and services have not been able to stem the tide. It is for this reason, Mr. Speaker, that I join my distinguished colleagues in rising to support the Medical Facilities Construction and Modernization Amendments of 1969.

Testimony received by the committee considering this legislation has clearly indicated the urgency of the problem. In my own city of New York the hospital review and planning council tells us that virtually every hospital facility in New York City requires extensive alteration, if not complete replacement. Ultimately, of course, if we fail to voice our support for this bill the cost will be paid in human terms. Can we in good conscience deny to any of our citizens the benefits of 20th century medical care in modern facilities?

We must remember too that the cost of not acting now will be paid by future generations. The fact that fully one-third of our hospitals are already woefully inadequate should be sufficient warning of what is to come if we do not act affirmatively on this legislation.

Clearly, the need is paramount and the results would be disastrous were we not to act. We will, of course, have the opportunity to consider amendments to improve various aspects of the legislation and I trust that the House in its wisdom will carefully consider any such amendments particularly the one by the distinguished gentleman from New York (Mr. OTTINGER), which I enthusiastically support and which I trust will prevail.

We are asked now to voice our support and our concern for the quality of hospital care throughout our Nation and I urge my colleagues on both sides of the aisle to join in support of this bill and to approve the strengthening amendments.

Mr. SKUBITZ. Mr. Chairman, I am proud to assert that I joined in the introduction of the Hill-Burton bill which is before the House today and was also instrumental in its development into its present form. It is the unanimous judgment of the Subcommittee on Health and Welfare that the provisions of H.R. 11102 as it was reported to the full committee contained a well-balanced equitable program for construction and modernization of the various kinds of health facilities needed throughout the country.

The whole problem of delivery of health services does and will require new and different facilities in every corner of the United States. No area or type of com-

munity has a monopoly on need. The bill before the House recognizes this fact by providing money for construction with a slight nod in the direction of the less populous States. But the bill also makes funds available for modernization and loan guarantees on a different formula which is less rigid and makes possible more liberal allocations to the areas with the older, larger hospitals.

The sums provided in this bill are just about what is being currently spent for these purposes. The only additions are for upgrading emergency rooms and the sums required to pay the interest subsidies on guaranteed loans. These two items account for $67 million out of a total of $937 million for the entire 3-year program.

A small change in the present law which may result in large improvements later is that which will hereafter require hospitals receiving assistance to annually report costs and charges. One reason the alarming spiral of hospital costs continues is the lack of sound information on its true causes. Information gathered under this provision may lead to reversal of this trend. Let us hope so.

H.R. 11102 is recommended to my colleagues in the House and I urge its passage.

Mr. HANLEY. Mr. Chairman, I rise in support of H.R. 11102, the proposed Medical Facilities Construction and Modernization Amendments of 1969 and in support also of several amendments which will be offered during consideration of the bill.

The Hill-Burton program, initiated in 1946, has been partially responsible for over $10 billion in hospital and other medical facilities construction. A Federal investment of just over $3 billion has been matched by about $7.2 billion in non-Federal funds, leading to the construction or expansion of over 9,800 facilities. These projects have provided 425,000 inpatient care beds in hospitals and nursing homes, and have provided nearly 2,800 other health facilities such as public health centers, diagnostic and treatment centers, and rehabilitation facilities.

While I fully support the basic purpose of the bill, I am disappointed that the basic approach of the Hill-Burton program has not been changed to reflect new needs and new priorities which have developed over the years.

Today, there is simply no justification for a rural orientation to this program. Clearly, urbanized States like New York have by far the greatest need for a Federal helping hand in the providing of first-class hospital facilities for their citizens. This has been a fact for some time now, but the program has not been changed to reflect this changing need. I feel that it should be changed, and I feel that States like New York can no longer afford to be shortchanged and slighted by Federal programs which Congress refuses to change to keep pace with changing needs and priorities in America.

Federal assistance for hospital construction began in 1946, and its chief priority, as indicated by the formula which allocated the funds, was to stimulate construction in rural, poor States. The point was made during the Interstate and Foreign Commerce Committee's hearings that the Hill-Burton program, as originally developed, has largely achieved its goals. Dr. H. Phillip Hampton, member of the Council on Legislative Activities of the American Medical Association, presented figures which indicate the need for immediate reevaluation of the Hill-Burton allocation formula. The data prepared by Dr. Hampton shows that in 1948, the eight States with the highest per capital income had an average of 3.92 hospital beds per 1,000 population, while the corresponding figure for the eight States with the lowest per capital income was 2.61. By 1966, however, the eight low-income States had completely caught up with the high-income States. The high-income States still maintained an average of 3.92 beds, but the figure for the low-income States had risen to 3.93 beds. In the face of this fact, it would be unreasonable to continue to allocate hospital construction funds with a formula heavily weighted in favor of the lowest income States.

The Hill-Burton program, which is administered in close cooperation with State agencies, requires a continuing and up-to-date supply of information about the needs of the various States for facilities and for modernization of existing facilities. The need for the construction of facilities continues, but it is outstripped now by the need for modernization. States have indicated that 455,130 acute and long term care beds require modernization at an estimated cost of $10.5 billion. These figures represent more beds and more money than have been involved in the whole 23-year history of the Hill-Burton program.

In New York State alone, it is reported that of the 358 general hospitals in the State, only 128 are acceptable by today's health standards.

It seems to me that the time has come to remove the rural, poor State orientation given to the Hill-Burton program in 1946 and to invest it with an orientation that recognizes that the critical construction and modernization needs are in the urbanized metropolitanized States.

There was a partial recognition of this in 1966 when Congress added to the program a separate category of modernization funds. These funds are distributed among the States in accordance with a formula based on population, the extent of need for modernization, and the financial need of the States as determined by per capital income. The law also permits the States to transfer funds allocated for construction into the State modernization program.

The problem is that while New York is getting its fair share of modernization funds, this fair allocation is not being extended to cover the construction grants where the bulk of the funds are. During fiscal year 1968 New York State, representing 9.1 percent of the national population, received only 6 percent of the funds appropriated for construction grants. However, it did receive 8.7 percent of the modernization money. The rub comes when we recognize that modernization funds, in fiscal 1968, represented only 18 percent of the Hill-Burton total. A fair share of 18 percent is not fair at all, particularly when we reflect on the fact, already stated, that modernization needs now exceed the total accomplishments of the program since 1946.

I believe that all of the funds allocated under the Hill-Burton program should be allocated with the formula which governs the modernization program. In this way, each of the States will have its fair share of the funds and will be in a position to determine for itself how its new construction and modernization needs are going to be met. I noted above that New York received in fiscal year 1968 approximately 8.7 percent of Hill-Burton modernization funds, it received only 6 percent of the far larger amount set aside for construction. The bill proposed by the Interstate and Foreign Commerce Committee recognizes the increasing priority for help in urban and metropolitan areas within each of the States, but it does not take the logical step of recognizing this need to be national in scope. The law limits the amount of Hill-Burton money New York and other urban States receive even while it pays lipservice to the pressing needs in urbanized States.

We hear a great deal today about the struggle going on within Congress, reflecting the divisions among the American people, to reestablish priorities so that areas where need is significantly and demonstrably greatest are given the most attention. In a small way, we can contribute to such a reordering by changing the Hill-Burton formula so that its funds can help where help is needed most.

Mr. NELSEN. Mr. Chairman, I wish to insert at this point in the RECORD a letter I received from Mr. David M. Kennedy, the Secretary of the Treasury, addressed to Bob Finch, Secretary of Health, Education, and Welfare, expressing concern with respect to the loan guarantee and interest subsidy provisions in this bill. It was requested of me that this be made a part of the RECORD:

THE SECRETARY OF THE TREASURY,
Washington, June 4, 1969.

The Honorable ROBERT H. FINCH,
Secretary of Health, Education, and Welfare, Washington, D.C.

DEAR BOB: I am deeply concerned with the proposal by the House Committee on Interstate and Foreign Commerce that the Federal Government guarantee the payment to private investors of interest on obligations of public bodies which is exempt from Federal income taxation. Such a provision appears in the proposed new section 621(a) of the Public Health Service Act, which is incorporated in the Medical Facilities Construction and Modernization Amendments of 1969 (H.R. 11102) reported by the Committee on May 20, 1969.

The report of the Committee recognized that the Treasury Department opposes such Federal guarantees of tax-exempt obligations, and the report cited the arguments made against such guarantees in the 1962 report of the President's Committee on Federal Credit Programs: (1) the cost in tax revenues to the Federal Government would generally exceed the benefits of tax exemption received by borrowers; (2) such Federally-guaranteed tax-exempt securities would be superior to direct Federal obligations themselves, and their increasing

volume would adversely affect Treasury financing; and (3) the availability of increasing amounts of high-grade, tax-exempt issues would tend to attract funds from investors that should appropriately seek risk-bearing opportunities. The House Committee stated that it agrees with the substantial validity of these arguments, but was of the opinion that competing considerations outweighed them. In light of the problems in the tax-exempt market and the undesirable precedent which would be set by acceptance of this legislation, I feel that I must recommend against this action.

Encouragement by the Federal Government of an additional volume of tax-exempt obligations will add to the present extreme pressures on the tax-exempt bond market and will tend to increase the interest rates which all State and local borrowers will be required to pay. The municipal bond market is especially vulnerable to such competition from Federal programs because of the limited nature of that market.

Moreover, as you know, there is currently a great deal of sentiment in the Congress and elsewhere for tax reform, including the problem of tax-exempt interest on municipal bonds. While it is a very complicated problem, which I will not attempt to discuss here, I am sure you would agree that the Federal Government should not be adding to the problem by encouraging an additional volume of tax-exempt bonds through the device of a Federal guarantee.

My concern with tax-exempt guarantees goes beyond the hospital financing program. There have been many recent proposals for Federal guarantees of municipal bonds for a wide variety of capital projects for health, education, transportation, housing, and other public facilities. The Treasury Department has successfully resisted this proposed method of financing new programs, and it would be extremely difficult to approve this financing device for one purpose and at the same time hold the line against its widespread use in other areas—which I am firmly convinced would not only be bad tax and debt management policy but would be a great disservice to the States and localities themselves.

As you know, we have under active consideration a number of proposals to assist States and localities, ranging from revenue sharing plans to specific assistance to high priority programs such as the financing of health facilities. Moreover, we are considering other means of alleviating pressures on State and local financing in the tax-exempt bond market, and I believe it would be counter to our efforts in this regard if new programs of guaranteed tax-exempts were authorized now.

Sincerely,

DAVID M. KENNEDY.

Mr. SPRINGER. Mr. Chairman, the Hill-Burton hospital construction program has been with us now for nearly a quarter of a century. Starting with a limited goal—the creation of new hospital capacity in basically rural areas—it has been expanded gradually to meet the problems which have emerged. New kinds of institutions which are parts of or connected with hospitals have been added. New kinds of services have been provided for. Modernization of outmoded hospitals in larger communities has been recognized as a necessary activity if the whole hospital system within the States is to accomplish its goal of providing beds and at the same time providing trained health professionals and new techniques. Changes have been many while the structure of the scheme has remained intact. Like a certain automobile which I will not name, we have made changes only to make it better and not to make it appear like something new.

The Members of the House will recall that last year the Committee on Interstate and Foreign Commerce came forth with a bare 1-year extension of the Hill-Burton authority. There had been some new thinking on the problems of the bigger hospitals and how to assist them. The other body had turned out a piece of legislation which included a new method of financing large projects. The whole package hit at a very late date in the Congress when there was obviously no time to rush in with such a new idea and ask the House to accept it blindly although many members of our committee were attracted to it. The promise was made then that we would study the whole Hill-Burton program, including the new ideas, and bring legislation to the House fairly early this year.

Whether one considers this to be early could be questioned perhaps, but the committee has done its work and now presents what it believes to be a well-balanced program for the orderly continuance of Federal assistance in the field of hospital and related facility construction. There are new features to traditional grants and the addition of a loan program for the first time. Some features leave room for difference about their desirability, and that should be ironed out here this afternoon.

I would like to describe briefly, but fairly fully what I think we have here. First of all, the bill—H.R. 11102—continues grant assistance to the States for the construction of nonprofit and public hospitals, long-term care facilities, diagnostic, and treatment centers and rehabilitation facilities at the rate of $235 million a year for the next 3 years. That is about the amount being presently spent for these same items.

It would be difficult to make comparisons straight across the board because the law now combines construction and modernization money, and we have separated them this time. Money for modernization will be available for the last three types of facilities mentioned above, whereas it is presently available only for the modernization of hospitals. Although projects for modernization of these newer kinds of facilities may not be numerous, it should be recognized that they are, in many instances, part and parcel of older hospitals physically or organizationally, and as such may need upgrading if and when the parent institution makes such plans.

Modernization money is authorized at levels of $50 million, $55 million, and $60 million over the next 3 fiscal years. These amounts are misleading if considered entirely alone, however. First of all, a State may, if it feels it desirable or necessary, transfer money from construction to modernization. At least one State has done so in the past in significant amounts. That means that all of the money received under the formula can be used in modernization. In addition, the new program which I will mention later involving loans is expected to take up a great deal of the slack in this area.

Several very significant changes have been made which, like the subtle changes in the auto, are not very noticeable but designed to make it run better. One of these is a requirement that all projects for construction or modernization include definite arrangements for extended care. Hard core intensive care has proven to be of questionable benefit when the patient cannot have the benefit of extended care facilities. Either he loses ground because of less than adequate care of this type, or a badly needed bed is tied up for the purpose. The time to make such provision is when a project is planned. Extended care facilities often are an integral part of the hospital plant, but if this is not possible or practical they can be separated physically. The committee also found that there are now some organizations which wish to create extended care facilities within some communities. If these can be made available to the hospital upon a realistic contract basis, the requirement can be met.

Another change is brought about by revising the definition of a hospital. Because we have added new categories of facilities through the years, we have inadvertently created an administrative bottleneck. It is highly desirable that any project to build or expand a hospital should include provisions for all possible services. Extended care we will now require. Other kinds of services needed to make the most efficient use of bed space are things like self-care units, home-care services, and training of personnel. In the past such items have had to be the subject of separate applications and resulted in snafus caused by duplicating and overlapping administrative redtape. If it is, in fact, one project, and the services are desirable services for a hospital to offer, it should be considered as one. By this small change in the definition of a hopsital I think we have accomplished this goal.

Because of its beginnings Hill-Burton has always looked to the rural hospital as its primary objective. This is comforting to the small communities, but not at all realistic today. State agencies must assess the entire problem and establish practical priorities for the whole State. The bill before us frees these State agencies from giving special consideration to rural projects although they may do so if the situation warrants such action.

Comprehensive health planning under the Partnership for Health Act on a regional and areawide basis is beginning to show results in many places. Eventually such organizations will be scrutinizing overall health programs everywhere. The objective is coordination of facilities with all other aspects involved in the delivery of health services to the public. Certainly Hill-Burton projects are a major part in that puzzle. Surely the areawide planners should have a look at Hill-Burton projects as part of their education if nothing else and as part of their planning as it proceeds. Because such organizations were not yet widespread, it was considered premature to require complete coordination in all instances. The bill does provide that where areawide planning organizations exist, they shall have an opportunity to consider Hill-Burton projects and obviously to make suggestions. Eventually these two programs and

others as well should be in full gear. The committee felt that for this time any stiff requirement of full coordination would frustrate both programs, but it also serves notice that the planning function must proceed, and it recognizes the necessary connection between them.

Because Congress and the public are deeply concerned about the rising cost of health services, a provision was added to require full financial reporting by all hospitals receiving any kind of assistance under the act. It is hoped that by learning more about both costs and charges involved in hospital operation we may find some of the answers to the problem.

What might be described as a new program is the provision of grants for the upgrading of emergency rooms in larger hospitals. The bill provides $10 million a year for 3 years. Several publications have done what might be called exposés on the conditions in most emergency rooms. Poor equipment and inadequate help where probably the need is the most critical undoubtedly contribute to many deaths each year.

And now to turn to the really new feature of the bill—the provision of guaranteed loans and interest subsidies for both construction and modernization of health facilities. Costs being what they are, it is seldom possible for a State to furnish all of the grant money for an ambitious hospital project in a sizable community. Even if this were not so, the amounts required from the community to meet its share become forbidding obstacles. For some years there have been funds available through the Department of Housing and Urban Development which have been helpful in some cases. This program is not in any way touched by H.R. 11102. But a great need still exists.

The bill before us today would provide for the guarantee of funds up to $300 million in fiscal 1971, $600 million in 1972, and $900 million in 1973. Nonprofit hospitals could borrow money in the market for entire projects or to supplement grants. The loan and grant together must not exceed 90 percent of the project cost. Each State will have an allotment for guaranteed loans, and projects will require State approval for loan purposes in the same manner as for grants. If approved for a loan guarantee, the project can then also qualify for an interest subsidy of 3 percent. This should bring the debt service load within the reach of most groups. The income allowed for medicare and medicaid can hardly be expected to pay out for a large building or expansion program, but it can make fairly modest interest rates feasible.

All of these programs together—construction, modernization, emergency room, and interest subsidies—amount to $931.3 million over the next 3 fiscal years. It should be pointed out, however, that the only new spending will be for the emergency room projects—$30 million over 3 years—and interest subsidies—$37.3 million over the next 3 years. All other amounts are at or very close to current spending levels.

Recognizing that there are some small differences among us as to priorities and spending levels, I think we have a basically sound bill here that most Members can accept and support. It goes further than suggested legislation by the administration in that it continues the support for new construction, and thus makes available for both construction and modernization in the form of grants about the same amounts we have been spending. The committee did not feel that the magnitude of the problem now facing health facilities justifies radically new approaches at this time.

I feel certain that the sums appropriated under the authority granted in this bill will be carefully watched and judiciously used by the Department of Health, Education, and Welfare. I am certain that the objective of the administration is exactly the same as the objective of this body—to see to it that the American public has adequate health facilities and to use any authority it may have to that end. In the light of this conviction I can recommend this bill to my colleagues in the House and express my hope that we will pass it in substantially the form approved by the committee.

Mr. BOLAND. Mr. Chairman, almost 23 years ago, on August 13, 1946, President Truman signed into law the Hospital Survey and Construction Act. Cosponsors of that historic legislation were Senators Lister Hill of Alabama, and Harold Burton of Ohio. In the more than two decades since that date, the words "Hill-Burton" have been part of the language of, not only the hospital world, but also of the public at large. The Hill-Burton program stands as a striking example of what can be done with Federal assistance to private as well as public groups for the achievement of major public goals. That initial legislation and the program that followed evolved from the recognition that the health of the Nation is a national resource and that Federal leadership and financial encouragement were warranted in preserving and augmenting that resource.

One of the most remarkable aspects of the program is the way it has grown through the years to meet needs as they arose or were discovered. The 1946 bill simply authorized a survey of needs, a development of State plans, and a program of grants for the construction of hospitals and public health centers. In the 20 years since, other bills have extended the basic program and increased authorizations, and have included programs of planning and research and programs for the construction of other important health facilities—facilities such as nursing homes, diagnostic or treatment centers, rehabilitation units, chronic disease facilities. In 1964, Congress took a giant step when it authorized a broad new program for the modernization of obsolete facilities. I feel that a great part of the reason for the continuing success of the program has been its flexibility in responding to new needs as they have become evident.

Today we are preparing to take another major step into the future as we consider the bill before us, H.R. 11102, the Medical Facilities Construction and Modernization Amendments of 1969. I want to commend the Committee on Interstate and Foreign Commerce, whose members have done a fine job in bringing this comprehensive and innovative bill before us. The bill extends the aspects of the Hill-Burton program that have operated so successfully over the years, and initiates new programs to meet new problems confronting the health care facilities of our country.

The legislation, however, has two drawbacks of more than routine significance. The first—and most dramatic—is the bill's continued emphasis on the construction of rural hospital facilities at the expense of urban projects. The second is the continued emphasis on construction rather than modernization. I strongly support the proposed amendments seeking to reverse—or, at least, balance—these priorities.

The funding of new construction and modernization of hospital and other facilities is a difficult and critical area. This bill, besides extending the existing grants program, also creates a new program of federally guaranteed loans, combined with an interest subsidy for construction and modernization of hospitals and other health facilities. The grants program and this new program of loan guarantees and interest subsidies, when added to the program of FHA-insured mortgages for hospital construction enacted just last year, will present a strong and varied source of financing which will go a long way toward meeting our needs for construction and modernization.

The bill has several other far-reaching provisions. The one which requires that every hospital receiving a grant for construction or modernization must have arrangements for care of its patients who require such care in extended care facilities will help considerably to reduce the cost of care for patients and to free overcrowded acute-care beds where they are desperately needed.

The provision defining the proper relationship of State or areawide planning agencies regarding the opportunity to consider and comment on specific projects will help to bring much needed coordination and planning to the broad spectrum of health care.

The program of project grants for the modernization of hospital emergency rooms should assist these emergency rooms, which substitute for the family doctor in many areas of our society, to better cope with their increasing workload and responsibility.

Over two decades ago the Hill-Burton program led the way to new concepts and practices in Federal-State partnerships, grants to public and other nonprofit institutions, State and areawide planning for health facilities, hospital administrative research, and hospital design and construction standards. The patterns of operation established and refined through the years have served as models for other Federal programs, especially those that are State administered.

The bill before us today will allow the Hill-Burton program to pioneer anew with the proposal for a grant-and-loan plan for construction of new facilities, and modernizing and replacing obsolete hospitals. It provides new methods of financing to provide a massive attack on a prodigious problem. This new system of Federal aid will point the way to the future—both for Federal-State

partnership and for methods of meeting urgent needs speedily and efficiency.

I strongly urge the enactment of H.R. 11102.

Mr. REID of New York. Mr. Chairman, I rise in support of the Ottinger amendments, which would revise the formula for allocation of hospital aid funds under the Hill-Burton Hospital Act.

In 1946, when Hill-Burton was first adopted, there was a clear need for new health facilities in this Nation's rural areas. Today, in 1969, the needs of our urban areas are just as great—and yet we still spend approximately 70 percent of Hill-Burton funds in cities of less than 50,000.

In my judgment, the formula now being used to allocate hospital aid funds results in discrimination against the desperately crowded inner cities. The amendments being offered by my colleague from New York would end that discrimination by providing more money for modernization—which most city hospitals need—and shifting the now rural-based grant formula to one based on per capita needs.

An editorial in this morning's New York Times stated that these "amendments are an important beginning in putting the money where the need is most urgent." I commend the editorial to the attention of my colleagues.

Mr. BIAGGI. Mr. Chairman, I rise to add my voice to those supporting this vital bill for the construction and modernization of hospitals and other medical facilities throughout our land. The Hill-Burton hospital construction program has made an immeasurable contribution to the health of our Nation in the 22 years of its existence, and the enactment of the bill before us today will enable the program to draw new vigor for the important work of the future.

The section of the bill authorizing a new guaranteed loan and interest subsidy program will broaden the availability of financing for hospitals and other health facilities. Many more facilities requiring funds for construction, expansion, or modernization will be able to obtain such funds with this new program than otherwise could with just the existing grants program alone. This broader availability of financing is essential if this country is to progress on the road to good health care for all.

The part of the bill authorizing grants for the modernization of emergency rooms in hospitals will help to improve this increasingly important aspect of health care. More and more people are turning to the emergency room for the kind of care that used to be handled by the family doctor. The emergency rooms of our hospitals need assistance if they are going to be able to meet this growing reliance on their services. This section will provide that assistance.

This bill is perhaps the most revolutionary and innovative bill in the history of a revolutionary and innovative program. It does a great deal in changing the program to meet the changing needs of our time. I do feel, however, that it is not innovative enough and requires several more changes before it can really meet the most important problems facing us in the provision of health care. For this reason, I am happy to add my support to necessary amendments of H.R. 11102.

The first of the amendments is that which would change the formula by which construction funds are allocated to the States. The present formula utilizing the squaring factor discriminates grossly against the States with the greatest need. When the Hill-Burton program was first created back in 1946, its main purpose was to establish hospitals and health centers in the smaller, primarily rural communities across our Nation, for these were the areas which had the greatest obvious need. The use of the squaring factor which provided proportionately more aid for the low-income States containing these rural areas made sense at that time. Now, it is time we realize that the original purpose of the 1946 legislation has been largely met. Today it is the higher income States with large urban areas which have the greatest need. Few question this, but nonetheless the greatest proportion of the funds still go to the rural areas. If we look at the figures, we see that in fiscal years 1965 through 1968, almost 70 percent of the funds under the Hill-Burton programs were allocated to communities with populations of less than 50,000.

There can be little question that the existing allocation formula discriminates against highly urbanized States. My own State of New York is a case in point. Senator JAVITS, in his testimony before the committee, reported that his staff had figured that in 1965, New York State, with 9.4 percent of the Nation's population received 5.5 percent of Hill-Burton funds, while the State of Alabama with 1.8 percent of the population, received 4.7 percent of the funds. This inequity must not be allowed to continue. So I recommend that the squaring factor be eliminated, and that we substitute for it a new formula utilizing a test of need for facilities.

I also wish to support the amendment which would change the allocation of funds between new construction programs and modernization programs to bring them more in line with existing needs. Although there is incontrovertible evidence that modernization is the primary need in health facilities, this bill provides twice as much support for new construction as for modernization. This is unquestionably inequitable, and the allocations should be reversed.

The latest figures on unmet needs of health facilities based on a compilation of estimates developed by the individual States indicate an existing shortage of about 85,000 new general hospital beds with an estimated cost of $2.9 billion and over 164,000 long-term beds at an estimated cost of $1.6 billion. These are serious needs, but they are dwarfed in comparison with the needs for modernization. There are 240,624 general hospital beds in need of modernization at a cost of $7.2 billion and 214,506 long-term-care beds needing modernization at a cost of $2.1 billion. We have delayed a long time in doing enough to meet the needs for modernization and the costs have increased. If we continue to delay, the costs undoubtedly will continue to increase.

When a hospital is in need of modernization, this means that the facilities are in such condition that the hospital cannot do even an adequate job of caring for its patients. Again, to cite my own State as an example, in January of this year State Commissioner of Health Ingraham reported that only 128 of the 358 general hospitals in New York are acceptable by the health standards of today. Similar situations exist in many other areas of the country; and if we are going to attempt to remedy this problem, as we must, then we must put the Federal assistance where it truly belongs, in the modernization of obsolete facilities.

I give my full support to the amendment designed to correct what is possibly the most serious deficiency in our national health program—the lack of community diagnostic and treatment facilities to meet the health needs of our low-income metropolitan areas. Poor health is an important factor in maintaining the urban poverty cycle and there is presently a critical shortage of facilities to deal with the problem. This proposed amendment would provide $15 million in grants for the construction of community diagnostic or treatment centers which serve metropolitan areas with low per capita income.

Adoption of this amendment will benefit the hospitals in my congressional district. These hospitals are Albert Einstein, Bronx Municipal, Abraham Jacobi, Misericordia, Parkchester General, Pelham Bay General, Westchester Square, Bronx State, Montefiore, and Van Etten.

A fourth amendment which warrants support requires that all health facility funding under H.R. 11102 be consistent with comprehensive health planning programs established pursuant to Public Law 90–174. Congress created comprehensive health planning programs to provide a way for decentralizing health planning and coordinating health programs so as to do away with duplication and waste. This planning can never be effective unless the comprehensive health planning groups are given a meaningful role in developing health services in their respective States. The present bill fails to do this and the proposed amendment would correct this deficiency.

Finally, I support the amendment which establishes a program of direct assistance in the form of grants and loans to critical hospitals—hospitals so antiquated and overcrowded that they are unable to serve their communities and hospitals which are not getting the help they need under any other program. This amendment was supported by a Public Health survey which showed that at that time 143 of the Nation's private, nonprofit hospitals were in critical condition.

I strongly urge the enactment of these important amendments. With them added to the original bill, I feel that the Medical Facilities Construction and Modernization Amendments of 1969 will be able to adequately meet the problems of health care in our time.

Mr. GIAIMO. Mr. Chairman, I rise today in support of the Medical Facilities Construction and Modernization Amendments of 1969 and, more specifically, the newly proposed guaranteed loan program for hospital construction.

In my opinion, this innovative concept is absolutely vital to the future of health care service in America. I say this because I believe that this Nation's medical and hospital facilities are in desperate need of improvement. This country does not have adequate facilities to care for the sick and the injured. We can send a man to the moon, yet we cannot provide enough beds for our hospitals. We can waste millions of dollars on unworkable defense projects, yet the cries of the ill go unheeded. We can give away millions of dollars in subsidies to wealthy farmers, yet the poor of this country cannot get adequate health care.

This situation must be corrected, and I believe that this loan program can help.

The hospitals of this country want to accommodate all persons who are ill. They want to build, to expand, and to modernize, but they cannot get adequate funds or, in some cases, any funds with which to carry out these projects.

This measure would provide guarantees for $900,000,000 in loans for the construction and modernization of hospitals and other health facilities over a 3-year period. The record clearly shows why this is necessary. Over one-quarter of a million new hospital beds are needed.

This program would provide an impetus to private groups to obtain financing for construction and modernization. With the interest subsidy contained in this bill, the cost of a loan would be reduced considerably. As all Members of this body know, the prohibitive interest rates in this country are strangling the borrowers. For example, repayment of a loan of $10,000 at 7½ percent interest over 25 years will require interest payments totaling $12,170. How can we hope to encourage long-term borrowing for construction unless we ease this interest burden?

The Hospital of St. Raphael, which is located in my district, serves as a good case in point. This is a nonprofit hospital which needs to expand. This program could well help such a hospital by guaranteeing a loan and providing a needed interest subsidy. I am sure that all of you here have similar situations in your congressional districts. This bill will help to alleviate this problem.

This bill, I believe, would also help stem the ever-increasing cost of hospitalization. I have heard many comments and read many letters from constituents who are constantly complaining about the rising cost of medical care. The hospitals do not want to charge more money; they want to help those who cannot afford health service, but they have to have money with which to constantly improve their services and facilities. Where does this money come from? It comes from the patients. This proposal will take some of the financial burden away from them.

Mr. Chairman, we must act now, for the opportunity is here. Let us take this step. Let us give the American people a program that will benefit patients, doctors, hospitals and, in fact, everyone and everything connected with the business of keeping America healthy.

Mr. PEPPER. Mr. Chairman, I am greatly pleased by the action of this House today in considering the Medical Facilities Construction and Modernization Amendments of 1969, since this legislation extends and improves what is commonly called the Hill-Burton program initially recommended by the Senate Subcommittee on Wartime Health and Education, which it was my privilege to head during the early 1940's.

The hospital construction program was instituted to meet the desperate need to provide new facilities, primarily in the rural areas of our country which could least afford them. Today, we have the opportunity to take a significant step in recognizing that the hospital facility shortage has shifted from the rural to urban centers of population.

Although States would continue to receive allotments based on a formula affording the highest percentage to States with the least per capita income, the bill eliminates the mandatory rural priority of these funds in distributing grants and loans within the State.

This can have a very significant effect on urban areas within a State. In March of this year, I spoke at a fundraising drive for South Shore Hospital and Medical Center on South Miami Beach. The hospital is located in an area with a high concentration of those over the age of 60 and is in desperate need of expansion funds, as are most hospitals in the Greater Miami area.

At that time I called for a more urbanized attitude from the State's Division of Community Hospitals and Medical Facilities in the allocation of Federal-State Hill-Burton hospital construction and modernization funds. Up to now, the State has been locked into following the guidelines of rural priority as originally written into the Hill-Burton bill.

Should today's amendments be approved here and by the other body, as I believe and hope they will be, and then signed into law, Florida and other States undergoing rapid urbanization will be in a position to give immediate attention to the need for new hospitals and, more importantly, hospital expansion in the cities.

In the Miami Beach speech, I had pointed out that it had been 10 to 12 years since Dade County—Greater Miami—had received priority treatment for Hill-Burton funds even though 25 percent of the State's permanent population lives there and a 40-percent shortage exists in the number of needed hospital beds. This does not even take into account the seasonal visitor, of which Greater Miami is fortunate to attract due to its favorable climate and other allurements.

With the final approval of the Medical Facilities Construction and Modernization Amendments of 1969, Florida will be able to consider setting up special unit area designations for areas of principal need such as Miami Beach and St. Petersburg. Also, hopefully, we will more adequately provide for additional hospital beds to accommodate the special needs of areas that host a large seasonal population.

We have come a long way since the Senate Subcommittee on Wartime Health and Education initiated a hospital construction program to meet the critical deficiencies which the committee uncovered in the Nation's hospital facilities. Much later we continued by adopting a medicare program to deal with the individual's inability to pay for adequate hospital care which was also documented by the studies of our committee.

My interest in health legislation matured during that experience with the subcommittee and it has continued through the enactment of many substantial health programs over the last quarter of a century.

I am, therefore, personally gratified to see this effort to meet the health needs of our people move forward by enlightened legislation such as is before us today.

Mr. STAGGERS. Mr. Chairman, I have no further requests for time.

Mr. NELSEN. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. The Clerk will read.

Mr. OTTINGER. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

Fifty-two Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 75]

Adams	Dickinson	O'Konski
Anderson, Tenn.	Fascell	Olsen
Andrews, N. Dak.	Flynt	Patman
Ashley	Ford, Gerald R.	Pepper
Ayres	Foreman	Philbin

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ST GERMAIN, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 11102, and finding itself without a quorum, he had directed the roll to be called, when 339 Members

responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE; DEFINITION

SECTION 1. (a) This Act may be cited as the "Medical Facilities Construction and Modernization Amendments of 1969".

(b) As used in the amendments made by this Act, the term "Secretary", unless the context otherwise requires, means the Secretary of Health, Education, and Welfare.

Mr. SAYLOR. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I take this time to direct a question to the chairman of the committee.

In examining this bill which sets up a new structure for loans and grants to hospitals, I find absolutely no reference to the oldest of our labor acts, namely, the Davis-Bacon Act.

It has been my understanding that in all of the prior legislation covering the Hill-Burton program the contractors were required to comply with the provisions of the Davis-Bacon Act.

Can the gentleman from West Virginia explain to us why such a provision is not included in this bill?

Mr. STAGGERS. I shall be happy to do so, if the gentleman will yield.

Mr. SAYLOR. I would be happy to yield to the chairman for that purpose.

Mr. STAGGERS. I would like to explain to the gentleman that the Davis-Bacon Act is in the bill. I would cite to the gentleman the reply to an inquiry that I made of the Department of Health, Education, and Welfare just to clarify this point. The reply reads as follows:

DEAR CHAIRMAN STAGGERS: In reply to your inquiry, the provision of the Davis-Bacon Act applies to the loan guarantee provisions of H.R. 11102 as well as to the grant provisions of the same bill. Specifically, lines 24 and 25 of page 6 and lines 1 and 2 of page 7 state that the provisions of the Davis-Bacon Act will apply to the loan guarantee program.

The letter is signed by Dr. Harald Graning, Assistant Surgeon General.

Therefore, it is clear that Davis-Bacon is included in the bill.

Mr. SAYLOR. I want to thank the chairman of the committee for this information, because I think this will relieve the minds of a great many people who are concerned with whether or not the provisions of the Davis-Bacon Act were to be included in this act.

Mr. STAGGERS. The provisions of the act are specifically included.

Mr. CLEVELAND. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I take this time to inquire of the chairman of the committee concerning certain aspects of this legislation. My question, Mr. Chairman, is whether or not the committee by this legislation has made it explicitly clear, and has made it mandatory that under no circumstances could a project that might have been started but which is not yet completed and has not yet completed all the arrangements for a loan, receive benefits under the modernization program where there will be some subsidy of interest.

As I read the bill it does not make it clear that this type of situation could not be covered. Nor does it make it clear that a State agency could not certify to the Secretary such a project if indeed the State agency wished to do so. And I wondered if it was the intention of the committee that under no circumstances would any pending project be barred from relief under this legislation?

Mr. STAGGERS. Mr. Chairman, if the gentleman from New Hampshire will yield, the bill is not specific on this issue of the loan going back and being covered retroactively. Is that the part that the gentleman is talking about?

Mr. CLEVELAND. Yes; and I am talking, too, about situations which we have a project that may have already been started, but is not as yet completed, and has not completed all arrangements for its final loan. This would not be something that could go back 10 or 15 years, or even 3 or 4 years. The situation I have in mind would be where a project is caught right in the middle of this legislation.

Mr. STAGGERS. That would be an unusual situation. I doubt whether we are going to find many situations such as the gentleman refers to where construction has started and is going on today, with final completion of the loan to be made later.

I would say that my interpretation is that this would be entirely left up to the State agency as to what should be done in this case, but they would have to abide by the law.

Mr. CLEVELAND. It would be the understanding of the gentleman, then, that there would be some discretion in the State agency in regard to that type situation?

Mr. STAGGERS. They would have to obey what the law is. I hate to exactly interpret that right now, but I would say this: I just cannot conceive of any situation such as the gentleman refers to arising where you would have started a facility and you have not made final arrangements for funding, but I would say if there was such a situation it would have to come up before the State agency, and then the State agency would determine it according to the law.

Mr. CLEVELAND. If the State agency thought that some modernization project was worthy of support, even if it had started and perhaps made tentative arrangements for a loan, the State agency hands would not be totally barred by this bill to recommend interest subsidy for its loan. Is that a fair statement?

Mr. STAGGERS. I want to be as clear as I can, and I cannot make too much of a commitment, but I would say this: That the State agency would have to abide by whatever the law says. There are certain parts of the bill where I believe the State agency could make a discretionary judgment on it, but they would have to abide by whatever the law says.

Mr. CLEVELAND. Mr. Chairman, I thank the gentleman. His views have reassured me as to my particular concern and I yield back the balance of my time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

LOAN GUARANTEES AND INTEREST SUBSIDIES FOR CONSTRUCTION AND MODERNIZATION OF HOSPITALS AND OTHER MEDICAL FACILITIES

SEC. 2. Title VI of the Public Health Service Act is amended by redesignating part B as part D; by redesignating section 621, 622, 623, 623A, and 625 (42 U.S.C. 291k–291o), and all references thereto, as sections 641, 642, 643, 644, and 645, respectively; and by inserting after section 610 (42 U.S.C. 291j) the following new part:

"PART B—LOAN GUARANTEES FOR CONSTRUCTION AND MODERNIZATION OF HOSPITALS AND OTHER MEDICAL FACILITIES

"AUTHORIZATION OF LOAN GUARANTEES

"SEC. 621. (a) In order to assist nonprofit private agencies to carry out needed projects for the construction or modernization of nonprofit private hospitals, facilities for long-term care, diagnostic or treatment centers, and rehabilitation facilities, the Secretary may, during the period July 1, 1970, through June 30, 1973, and subject to the limitations contained in this part, guarantee, to non-Federal lenders making loans to such agencies for such projects, payment when due of principal of and interest on loans approved under this part.

"(b) No loan guarantee under this part with respect to any construction or modernization project may apply to so much of the principal amount thereof as, when added to the amount of any grant or loan under this title with respect to such project, exceeds 90 per centum of the cost of such project.

"ALLOCATION AMONG THE STATES

"SEC. 622 (a) For each fiscal year, the total amount of principal of loans which may be guaranteed under this part shall be allotted by the Secretary among the States, in accordance with regulations, on the basis of each State's relative population, financial need, need for construction of the facilities referred to in section 601, and need for modernization of such facilities.

"(b) Any amount so allotted to a State, other than the Virgin Islands, American Samoa, Guam, and the Trust Territory of the Pacific Islands, for a fiscal year ending prior to July 1, 1973, and remaining unobligated at the end of such year shall remain available to such State, for the purpose for which made, for the next fiscal year (and for such year only), and any such amount shall be in addition to the amounts allotted to such State for such purpose for such next fiscal year; except that, with the consent of the State, any such amount remaining unobligated at the end of the first six months of such next fiscal year may be reallotted (on such basis as the Secretary deems equitable and consistent with the purposes of this title) to other States which have need therefor. Any amount so reallotted to a State shall be available for the purposes for wihch made until the close of such next fiscal year and shall be in addition to the amount allotted and available to such State for the same period. Any amount allotted to the Virgin Islands, American Samoa, Guam, or the Trust Territory of the Pacific Islands for a fiscal year ending prior to July 1, 1973, and remaining unobligated at the end of such year shall remain available to it, for the purposes for which made, for the next two fiscal years (and for such years only), and any such amount shall be in addition to the amounts allotted to it for such purpose for each of such next two fiscal years; except that, with the consent of the Virgin Islands,

American Samoa, Guam, or the Trust Territory of the Pacific Islands, as the case may be, any such amount remaining unobligated at the end of the first of such next two fiscal years may be reallotted (on such basis as the Secretary deems equitable and consistent with the purposes of this title) to any other of such four States which have need therefor. Any amount reallotted to a State under the preceding sentence shall be available for the purposes for which made until the close of the second of such next fiscal years and shall be in addition to the amounts allotted and available to such State for the same period.

"(c) Any amount allotted or reallotted to a State under this section shall not, until the expiration of the period during which it is available for obligation, be considered as available for allotment.

"APPLICATIONS AND CONDITIONS

"SEC. 623. (a) For each project for which a loan guarantee is sought under this part, there shall be submitted to the Secretary, through the State agency designated in accordance with section 604, an application by a nonprofit private agency. If two or more such agencies join in the project, the application may be filed by one or more such agencies. Such application shall set forth all of the descriptions, plans, specifications, assurances, and information which would be required under the third sentence of section 605(a) (other than clause (6) thereof) with respect to applications submitted under that section, such other information as the Secretary may require to carry out the purposes of this part, and a certification by the State agency of the total cost of the project, and the amount of the loan with respect to which a guarantee is sought under this part.

"(b) The Secretary may approve such application only if (1) there remains sufficient balance in the allotment determined for such State pursuant to section 622 to cover the amount of the loan with respect to which a guarantee is sought under this part, (2) he makes each of the findings which would be required under clauses (1) through (4) of section 605(b) for the approval of applications for projects thereunder and he finds that there is compliance with section 605(e), (3) he obtains assurances that the applicant will keep such records, and afford such access thereto, and make such reports, in such form and containing such information, as the Secretary may reasonably require, and (4) he also determines that the applicant is otherwise unable to secure the amount of such loan upon reasonable terms and conditions, and that the terms, conditions, maturity, security (if any), and schedule and amounts of repayments with respect to the loan are sufficient to protect the financial interest of the United States and are otherwise reasonable and in accord with regulations, including a determination that the date of interest does not exceed such per centum per annum on the principal obligation outstanding as the Secretary determines to be reasonable, taking into account the range of interest rates prevailing in the private market for similar loans and the risks assumed by the United States.

"(c) No application under this section shall be disapproved until the Secretary has afforded the State agency an opportunity for a hearing.

"(d) Amendment of an approved application shall be subject to approval in the same manner as an original application.

"(e) (1) The United States shall be entitled to recover from the applicant the amount of any payments made pursuant to any guarantee under this part, unless the Secretary for good cause waives its right of recovery, and upon making any such payment, the United States shall be subrogated to all of the rights of the recipient of the payments with respect to which the guarantee was made.

"(2) Guarantees under this part shall be subject to such further terms and conditions as the Secretary determines to be necessary to assure that the purposes of this part will be achieved, and, to the extent permitted by subsection (f), any of such terms and conditions may be modified by the Secretary to the extent he determines it to be consistent with the financial interest of the United States.

"(f) Any guarantee made by the Secretary pursuant to this part shall be incontestable in the hands of an applicant on whose behalf such guarantee is made, and as to any person who makes or contracts to make a loan to such applicant in reliance thereon, except for fraud or misrepresentation on the part of such applicant or such other person.

"PAYMENT OF INTEREST ON GUARANTEED LOANS

"SEC. 624. (a) Subject to the provisions of subsection (b), the Secretary shall pay to each holder of a loan guaranteed under this part, for and on behalf of the hospital or other medical facility for which such loan was made, (1) one-half of the interest which becomes due and payable on such loan, or (2) if lower, the interest which would become so due and payable at an interest rate of 3 per centum. Each holder of a loan guaranteed under this part shall have a contractual right to receive from the United States interest payments required by the preceding sentence.

"(b) Contracts to make the payments provided for in this section shall not carry an aggregate amount greater than such amount as may be provided in appropriations Acts.

"LIMITATION ON AMOUNT OF LOANS GUARANTEED

"SEC. 625. The cumulative total of the principal of the loans outstanding at any time with respect to which guarantees have been issued under this part may not exceed the lesser of—

"(1) such limitations as may be specified in appropriations Acts, or

"(2) in the case of loans covered by allotments for the fiscal year ending June 30, 1971, $300,000,000; for the fiscal year ending June 30, 1972, $600,000,000; and for the fiscal year ending June 30, 1973, $900,000,000.

"LOAN GUARANTEED FUND

"SEC. 626. (a) There is hereby established in the Treasury a loan guarantee fund (hereinafter in this section referred to as the 'fund') which shall be available to the Secretary without fiscal year limitation to enable him to discharge his responsibilities under any guarantee issued by him under this part and for payment of interest under this part on the loans so guaranteed. There are authorized to be appropriated to the fund from time to time such amounts as may be necessary to provide capital for the fund.

"(b) If at any time the moneys in the fund are insufficient to enable the Secretary to discharge his responsibilities under guarantees issued by him under this part and for payment of interest on the loans so guaranteed, he is authorized to issue to the Secreary of the Treasury notes or other obligations in such forms and denominations, bearing such maturities, and subject to such terms and conditions, as may be prescribed by the Secretary with the approval of the Secretary of the Treasury, but only in such amounts as may be specified from time to time in appropriations Acts. Such notes or other obligations shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the notes or other obligations. The Secretary of the Treasury is authorized and directed to purchase any notes and other obligations issued hereunder and for that purpose he is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under that Act, as amended, are extended to include any purchase of such notes and obligations. The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this subsection. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes or other obligations shall be treated as public debt transactions of the United States. Sums borrowed under this subsection shall be deposited in the fund and redemption of such notes and obligations shall be made by the Secretary from such fund."

GRANTS FOR MODERNIZATION OF EMERGENCY ROOMS OF GENERAL HOSPITALS

SEC. 3. Title VI of the Public Health Service Act is amended by inserting after part B (inserted by section 2 of this Act) the following new part:

"PART C—MODERNIZATION OF EMERGENCY ROOMS

"AUTHORIZATION

"SEC. 631. In order to assist in the provision of adequate emergency room service in various communities of the Nation for treatment of accident victims and handling of other medical emergencies through special project grants for the modernization of emergency rooms of general hospitals, there are authorized to be appropriated $10,000,000 each for the fiscal year ending June 30, 1971, and the next two fiscal years.

"ELIGIBILITY FOR GRANTS

"SEC. 632. Funds appropriated pursuant to section 631 shall be available for grants by the Secretary for not to exceed 50 per centum of the cost of modernization of emergency rooms of public or other nonprofit general hospitals. In order to be eligible for a grant under this part, the project, and the applicant therefor, must meet such criteria as may be prescribed by regulations. Such regulations shall be so designed as to provide aid only with respect to projects for which adequate assistance is not readily available from other Federal, State, local, or other sources, and to assist in providing modern, efficient, and effective emergency room service needed to care for victims of highway, industrial, agricultural, or other accidents and to handle other medical emergencies, and to assist in providing such service in geographical areas which have special need therefor.

"PAYMENTS

"SEC. 633. Grants under this part shall be paid in advance or by way of reimbursement, in such installments and on such conditions, as in the judgment of the Secretary will best carry out the purposes of this part."

EXTENSION OF DURATION OF EXISTING GRANT PROGRAMS; SEPARATE AUTHORIZATION FOR MODERNIZATION GRANTS

SEC. 4. (a) Section 601 of the Public Health Service Act (42 U.S.C. 291a) is amended by adding at the end thereof and below paragraph (b) the following new sentence: "In order to assist the States in carrying out such purposes, there are authorized to be appropriated—

"(c) (1) for grants for the construction of public or other nonprofit hospitals and public health centers, $135,000,000 each for the fiscal year ending June 30, 1971, and the next two fiscal years;

"(2) for grants for the construction of public or other nonprofit facilities for long-term care, $70,000,000 each for the fiscal year ending June 30, 1971, and the next two fiscal years;

"(3) for grants for the construction of public or other nonprofit diagnostic or treatment centers, $20,000,000 each for the fiscal year ending June 30, 1971, and the next two fiscal years;

"(4) for grants for the construction of public or other nonprofit rehabilitation fa-

cilities, $10,000,000 each for the fiscal year ending June 30, 1971, and the next two fiscal years; and

"(5) for grants for modernization of the facilities referred to in the preceding subparagraphs, $50,000,000 for the fiscal year ending June 30, 1971, $55,000,000 for the fiscal year ending June 30, 1972, and $60,000,000 for the fiscal year ending June 30 1973."

STATE ALLOTMENTS

SEC. 5. (a) Effective with respect to appropriations pursuant to section 601 of the Public Health Service Act for fiscal years beginning after June 30, 1970, section 602(a) of such Act (42 U.S.C. 291b) is amended to read as follows:

"SEC. 602. (a) (1) The Secretary shall make allotments among the States from the sums appropriated for such year under subparagraphs (1), (2), (3), and (4) of section 601(c) as follows: Each State shall be entitled to an allotment bearing the same ratio to the sums appropriated for such year under subparagraphs (1), (2), (3), and (4), respectively, of section 601(c), as the product of—

"(A) the population of such State, and

"(B) the square of its allotment percentage,

bears to the sum of the corresponding products for all of the States.

"(2) The Secretary shall, in accordance with regulations, make allotments among the States, from the sums appropriated under subparagraph (5) of section 601(c), on the basis of the population, the financial need, and the extent of the need for modernization of the facilities referred to in section 601, of the respective States."

(b) Effective with respect to allotments from such appropriations, section 602(b)(1) of such Act is amended by—

(1) striking out "$50,000" in subparagraph (A) and inserting in lieu thereof "$100,000";

(2) striking out "$100,000" in subparagraph (B) and inserting in lieu thereof "$200,000";

(3) striking out "$200,000" in subparagraph (C) and inserting in lieu thereof "$300,000";

(4) striking out "or for the modernization of facilities referred to in paragraph (a) or (b) or section 601," in subparagraph (C); and

(5) adding after and below subparagraph (C) the following new subparagraph:

"(D) $100,000 for the Virgin Islands, American Samoa, Guam, or the Trust Territory of the Pacific Islands and $200,000 for any other State in the case of an allotment for grants for the modernization of facilities referred to in paragraph (c) of section 601,".

(c) Effective with respect to allotments from such appropriations, section 602(e) of such Act is amended to read as follows:

"(e) Upon the request of any State that a specified portion of any allotment of such State under subsection (a), other than an allotment for grants for the construction of public or other nonprofit rehabilitation facilities, be added to another allotment of such State under such subsection, other than an allotment for grants for the construction of public or other nonprofit hospitals and public health centers, and upon simultaneous certification to the Secretary by the State agency in such State to the effect that—

"(1) it has afforded a reasonable opportunity to make applications for the portion so specified and there have been no approvable applications for such portion, or

"(2) in the case of a request to transfer a portion of an allotment for grants for the construction of public or other nonprofit hospitals and public health centers, use of such portion as requested by such State agency will better carry out the purposes of this title,

the Secretary shall promptly (but after application of subsection (b)) adjust the allotments of such State in accordance with such request and shall notify the State agency."

RURAL AREA PRIORITY

SEC. 6. Effective with respect to projects approved under title VI of the Public Health Service Act after June 30, 1970, section 603(a)(1) of such Act (42 U.S.C. 291c) is amended by striking out "rural communities and areas with relatively small financial resources" and inserting in lieu thereof "areas with relatively small financial resources and, at the option of the State, rural communities".

CLARIFICATION OF MEANING OF DIAGNOSTIC OR TREATMENT CENTER

SEC. 7. Effective with respect to projects approved under title VI of the Public Health Service Act after June 30, 1970, so much of the section of such Act herein redesignated as section 645(f) (42 U.S.C. 291o) as precedes clause (1) is ameded by inserting "(whether as inpatients or outpatients)" after "ambulatory patients".

AVAILABILITY OF EXTENDED CARE SERVICES TO PATIENTS OF GENERAL HOSPITALS

SEC. 8. Section 604(a) of the Public Health Service Act (42 U.S.C. 291d) is amended by striking out "and" at the end of paragraph (11), by striking out the period at the end of paragraph (12) and inserting in lieu thereof "; and", and by adding after paragraph (12) the following new paragraph:

"(13) Effective July 1, 1971, provide that before any project for construction or modernization of any general hospital is approved by the State agency there will be reasonable assurance of adequate provision for extended care services (as determined in accordance with regulations) to patients of such hospital when such services are medically appropriate for them, with such services being provided in facilities which are structurally part of or physically connected with, and under the supervision of the professional staff of, such hospital; except that if the State agency determines that it would be inadvisable to require that such extended care services be provided in facilities that are structurally part of or physically connected with such hospital, the Secretary may waive the requirement that such services be provided in such facilities."

PORTION OF ALLOTMENT AVAILABLE FOR STATE PLAN ADMINISTRATION

SEC. 9. Effective with respect to expenditures under a State plan approved under title VI of the Public Health Service Act which are made for administration of such plan during any fiscal year beginning after June 30, 1970, the first sentence of subsection (c)(1) of section 606 of such Act (42 U.S.C. 291f) is amended by striking out "2 per centum" and "$50,000" and inserting in lieu thereof "3 per centum" and "$75,000", respectively.

FEDERAL SHARE OF COST OF CONSTRUCTION

SEC. 10. Effective with respect to projects approved under title VI of the Public Health Service Act after June 30, 1970, the section of such Act herein redesignated as section 645(b) (42 U.S.C. 291o) is amended to read as follows:

"(b)(1) The term 'Federal share' with respect to any project means the proportion of the cost of such project to be paid by the Federal Government under this title.

"(2) With respect to any project in any State for which a grant is made from an allotment from an appropriation under section 601, the Federal share shall be the amount determined by the State agency designated in accordance with section 604, but not more than 66⅔ per centum or the State's allotment percentage, whichever is the lower, except that, if the State's allotment percentage is lower than 50 per centum, such allotment percentage shall be deemed to be 50 per centum for purposes of this paragraph.

"(3) Prior to the approval of the first project in a State during any fiscal year the State agency designated in accordance with section 604 shall give the Secretary written notification of the maximum Federal shares established pursuant to paragraph (2) for projects in such State to be approved by the Secretary during such fiscal year and the method or methods for determining the actual Federal share to be paid with respect to such projects; and such maximum Federal shares and such method or methods of determination for projects in such State approved during such fiscal year shall not be changed after such approval."

WAIVING OF RIGHT OF RECOVERY

SEC. 11. Section 3(b) of the Hospital and Medical Facilities Amendments of 1964 (Public Law 88-443) is amended by striking out the period at the end of paragraph (5) and inserting in lieu thereof a semicolon, and by adding after such paragraph the following new paragraph:

"(6) the provisions of clause (b) of section 609 of the Public Health Service Act, as amended by this Act, shall apply with respect to any project whether it was approved, and whether the event specified in such clause occurred, before, on, or after the date of enactment of this Act, except that it shall not apply in the case of any project with respect to which recovery under title VI of such Act has been made (or judicially ordered) prior to the enactment of this paragraph."

INCLUSION OF THE TRUST TERRITORY OF THE PACIFIC ISLANDS

SEC. 12. (a) Subparagraphs (A), (B), and (C) of paragraph (1) of subsection (b) of section 602 of the Public Health Service Act (42 U.S.C. 291b) are each amended by inserting "the Trust Territory of the Pacific Islands," after "American Samoa,".

(b) Paragraph (2) of such subsection is amended by inserting "the Trust Territory of the Pacific Islands," after "American Samoa,".

(c) Paragraph (1)(B) of subsection (c) of such section is amended by inserting "the Trust Territory of the Pacific Islands," after "American Samoa,".

(d) Paragraphs (1) and (2) of subsection (d) of such section are each amended by inserting "the Trust Territory of the Pacific Islands," after "American Samoa,".

(e) The section of such Act herein redesignated as section 645(a) (42 U.S.C. 291o) is amended by inserting "the Trust Territory of the Pacific Islands," after "American Samoa,".

(f) The amendments made by this section shall apply for purposes of part B of title VI of the Public Health Service Act and with respect to allotments (and grants therefrom) from appropriations pursuant to section 601(c) of the Public Health Service Act.

AREAWIDE AND STATE HEALTH PLANNING AGENCIES

SEC. 13. (a) Effective with respect to applications approved under title VI of the Public Health Service Act after June 30, 1970, clause (4) of the first sentence of section 605(b) of such Act (42 U.S.C. 291e) is amended by striking out "State agency and" and inserting in lieu thereof "State agency, opportunity has been provided, prior to such approval and recommendation, for consideration of the project by the public or nonprofit private agency or organization which has developed the comprehensive regional, metropolitan area, or other local area plan or plans referred to in section 314(b) covering the area in which such project is to be located or, if there is no such agency or organization, by the State agency administering or supervising the administration of the State plan approved under section 314(a), and the application is for a project which".

(b) Section 314(b) of such Act (42 U.S.C. 246) is amended by adding after the first sentence the following new sentence: "No grant may be made under this subsection after June 30, 1970, to any agency or organization to develop or revise health plans for an area unless the Secretary determines that such agency or organization provides means for appropriate representation of the interests of the hospitals, other health care facilities, practicing physicians serving such area, and the general public."

DEFINITION OF HOSPITAL

SEC. 14. (a) Effective with respect to applications approved under title VI of the Public Health Service Act after June 30, 1970, the section of such Act herein redesignated as section 645(c) is amended—

(1) by inserting after "nurses' home facilities," the following: "extended care facilities, facilities related to programs for home health services, self-care units,"; and

(2) by inserting a comma immediately before "operated" and inserting immediately before "but does not include" the following: "and also includes education or training facilities for health professions personnel operated as an integral part of a hospital,".

(b) Effective with respect to applications approved under title VI of the Public Health Service Act after June 30, 1970, the section of such Act herein redesignated as section 645(h) (42 U.S.C. 291o) is amended by inserting after "means a facility" the following: "(including an extended care facility)".

(c) Effective July 1, 1970, section 604(a) (3) of such Act (42 U.S.C. 291d) is amended—

(1) by inserting "(A)" after "shall include", and

(2) by inserting after "rehabilitation services, and" the following: "representatives particularly concerned with education or training of health professions personnel, and (B)".

FINANCIAL STATEMENTS FOR FACILITIES ASSISTED UNDER TITLE VI OF THE PUBLIC HEALTH SERVICE ACT

SEC. 15. Title VI of the Public Health Service Act is amended by adding at the end thereof the following new section:

"FINANCIAL STATEMENTS

"SEC. 646. In the case of any facility for which a grant, loan, or loan guarantee has been made under this title, the applicant for such grant, loan, or loan guarantee (or, if appropriate, such other person as the Secretary may prescribe) shall file at least annually with the State agency for the State in which the facility is located a statement which shall be in such form, and contain such information, as the Secretary may require to accurately show—

"(1) the financial operations of the facility, and

"(2) the costs to the facility of providing health services in the facility and the charges made by the facility for providing such services,

during the period with respect to which the statement is filed."

Mr. STAGGERS (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment: On page 2, line 23, immediately before "nonprofit" insert "public or".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 2, line 25, immediately before "nonprofit" insert "public or".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 3, line 1, insert "and of public health centers," immediately after "facilities,".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 3, strike out line 22 and all that follows down through and including line 7 on page 5, and insert in lieu thereof the following:

"(b) Any amount allotted to a State for a fiscal year ending prior to July 1, 1973, and remaining unobligated at the end of such year shall remain available to such State, for the purposes for which made, for the next two fiscal years (and for such years only), and any such amount shall be in addition to the amounts allotted to such State for such purpose for each of such next two fiscal years; except that, with the consent of the State, any such amount remaining unobligated at the end of the first of such next two fiscal years may be reallotted (on such basis as the Secretary deems equitable and consistent with the purposes of this title) to other States which have need therefor. Any amount reallotted to a State under this subsection shall be available for the purposes for which made until the close of the second of such next fiscal years and shall be in addition to the amounts allotted and available to such State for the same period."

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 6, line 8, immediately before "nonprofit" insert "public or".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 7, line 6, insert after "(4)" the following: "in the case of an application made by a nonprofit private agency,".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 8, strike out line 24 and all that follows down through and including line 4 on page 9 and insert in lieu thereof the following: "(b), in the case of a guarantee of any loan under this part with respect to a nonprofit private hospital or other medical facility, the Secretary shall pay to the holder of such loan, for and on behalf of such hospital or other medical facility, the interest which becomes due and payable on the guaranteed loan at an interest rate of 3 per centum per annum."

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 14, line 24, strike out "The" and insert in lieu thereof "For each fiscal year, the".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 15, line 11, strike out "The" and insert in lieu thereof "For each fiscal year, the".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 15, line 13, insert "for such year" after "appropriated".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 16, line 4, strike out "or" and insert in lieu thereof "of".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 18, strike out line 18 and all that follows down through and including line 1 on page 19 and insert in lieu thereof the following: "services being provided in facilities which (A) are structurally part of, physically connected with, or in immediate proximity to, such hospital, and (B) either (i) are under the supervision of the professional staff of such hospital or (ii) have organized medical staffs and have in effect transfer agreements with such hospital. If the State agency determines that it would be inadvisable to require that such extended care services be provided in facilities that are structurally part of, physically connected with, or in immediate proximity to, such hospital, the".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 20, line 22, strike out "shares" and insert in lieu thereof "share".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 20, line 25, strike out "or methods".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 21, line 2, strike out "shares" and insert in lieu thereof "share".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 21, line 2, strike out "or methods".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 22, line 17, strike out "part B" and insert in lieu thereof "parts B and C".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: On page 23, line 19, insert "and" immediately after "facilities,".

The committee amendment was agreed to.

AMENDMENT OFFERED BY MR. OTTINGER

Mr. OTTINGER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. OTTINGER: On page 14, strike out line 24 and all that follows down through and including line 17 on page 15 and insert in lieu thereof the following:

"SEC. 602. (a) For each fiscal year the Secretary shall, in accordance with regulations, make allotments among the States, from the sums appropriated for such fiscal year under subparagraphs (1), (2), (3), (4), and (5), respectively, of section 601(c), on the basis of the population, the extent of the need for construction of the facilities referred to in such section (or, in the case of allotments from appropriations under such subparagraph (5), the extent of the need for modernization of such facilities), and the financial need, of the respective States."

The CHAIRMAN. The gentleman from New York is recognized in support of his amendment.

Mr. OTTINGER. Mr. Chairman, this amendment is the one which seeks to change the Hill-Burton allocation formula so that the urban States, containing the majority of the population and the greatest need, will be treated equally with the rural States.

Now, let me point out that this has nothing to do with the distribution of funds within a State. In other words, the fact that you live within a rural area of New York State would have no influence on the increase in funds you would receive under the revised formula. The money goes to the State agency, New York will get $3 million additional, and that will be applied by the State agency to the State's needs, regardless of whether a particular area in the State is rural or urban.

The original Hill-Burton formula, which this amendment seeks to change, is based on a squaring of the per capita income. This is a loaded formula which discriminates against the urban States in favor of the rural States. The result of that has been that 70 percent of the Hill-Burton funds have gone to rural areas, that is, communities with a population of less than 50,000. That is a different definition than the committee used in defining rural areas. The committee defined rural areas only as communities with 2,500 population or less, an exercise in creative definitions that defies reality.

The amendment is designed to change the method of figuring allotments to the States under the Hill-Burton program by removing the squaring factor and substituting a simple, unloaded formula which treats all States alike. The formula is the same as the committee has provided for modernization. Under it, you distribute funds according to population, per capita income and need.

At the time the Hill-Burton program was first enacted in 1946 there was no question but that the greatest need for construction of health facilities was in the rural Southern States. Thus the allotment formula enacted in the 1946 legislation provided for the squaring factors which resulted in allocating a disproportionately large share to those States.

When one sector of the country needed help, all of the sectors of the country joined to provide it.

But now the situation has changed. It is the urban States that are in trouble. The method of figuring the allotment percentage should be amended accordingly. Now when the rural Southern States needed help, we adopted a formula that favored them. You might think that now that the urban States are in trouble, we would propose a formula that gave them an advantage. But that is not what we are proposing. We are proposing a formula that treats all States equally. We do not ask for more than our fair share.

Secretary Veneman, Under Secretary of the Department of Health, Education, and Welfare, in testifying before the Health Subcommittee on March 25 of this year, specifically put the administration on record in full favor of this amendment. The Under Secretary said:

Grants should be made on the basis of population, per capita income, and the need for construction and modernization.

That is what this amendment would provide. I think it goes to the heart of the difficulty in the bill as the bill is presently constituted.

There is no question that there is a continuing need in the rural areas. Nor is there any question that the really concentrated need at the present time is in the urban areas, which at the present time get the least funds. The amendment would meet both needs fairly.

The excellent editorial in today's New York Times expresses the need well. I submit it for my colleagues' consideration:

[From the New York Times, June 4, 1969]

HELP FOR THE HOSPITALS

Nothing fails like yesterday's success. When Congress passed the Hill-Burton Hospital Act a quarter century ago, it made sense to direct the flow of Federal funds to rural areas in small towns, where there was then a critical shortage of medical facilities.

But in 1969, the hospital crisis is in the bigger cities. It is no longer logical to spend approximately 70 per cent of Hill-Burton funds in cities of less than 50,000. This rural formula has become nothing less than flagrant discrimination against the desperately crowded inner cities. It is equally illogical to devote two-thirds of the money to new construction and only one-third to modernization. Unlike the small towns of a generation ago, the big cities have hospitals. What they need is money to renovate them.

In response to these changed conditions, Representative Ottinger of New York plans to offer several amendments when the House of Representatives considers the renewal of the Hill-Burton Act today. His amendments would shift the rural-based grant formula to one based on per capita needs and would reverse the amounts authorized for hospital construction and hospital modernization respectively.

He would also have Congress provide $15-million for community diagnostic centers, require that all allocations of funds meet with the approval of a regional comprehensive health planning agency to avoid duplication or insufficient use of scarce hospital space, and permit the Federal government to give direct assistance to certain hospitals which have reached the stage of crisis.

Much more Federal money for the nation's urban hospitals is essential. A visit to any hospital waiting room or emergency ward would convince members of Congress of the desperate character of the conditions which now prevail. The Ottinger amendments are an important beginning in putting the money where the need is most urgent.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Chairman, I have not had a chance to study the gentleman's amendment. I would like to ask him if in any way his new formula would direct the allocation of Federal funds within the States, or does it just apply to the allocation to the States?

Mr. OTTINGER. It applies only to the allocation to the States, not within the States. It applies to the funds authorized under each section.

The CHAIRMAN. The time of the gentleman from New York has expired.

(On request of Mr. DINGELL, and by unanimous consent, Mr. OTTINGER was allowed to proceed for 2 additional minutes.)

Mr. OTTINGER. The States are specifically given authority to switch funds between categories. The amendment in no way affects this. It only applies to the allocation of funds between the States.

Mr. HALL. Mr. Chairman, I have often made the statement that I support this program as long as the administration remains within the States as far as bed surveys and allocations of matching funds for beds within the various States remains there. But I would resist placing the administering of grants in the hands of a Federal arbiter. Can the gentleman answer yes or no that this does not place in the hands of a Federal arbiter the allocation of funds within a State, should his amendment pass?

Mr. OTTINGER. It would not in any way. It is a fixed formula to the States.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, if the gentleman has two States, both of which have grave need in the rural areas, and one of which has a large urban area

and one of which does not, is it the plan—the law as it now exists would discriminate particularly strongly against that State which might happen to have a large metropolitan area with great need and also has great need in its rural areas—so that in the State which would have great areas of need in urban areas, the rural areas would not be treated equally with the States which did not have those large urban areas? There would be double detriment to the States where the need might be as great both in rural and urban areas.

Mr. OTTINGER. The gentleman is absolutely correct.

The CHAIRMAN. The time of the gentleman from New York has expired.

(On request of Mr. ROGERS of Florida, and by unanimous consent, Mr. OTTINGER was allowed to proceed for 1 additional minute.)

Mr. ROGERS of Florida. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I yield to the gentleman from Florida.

Mr. ROGERS of Florida. Mr. Chairman, I think the House should not be given the wrong impression with this fact. There is not so much a rural or urban factor that is really important, but it is what the income is to the people, so the present formula for grants not for modernization, but construction under the guarantee program, but for the grant program is really geared as to whether it is a poorer State or a richer State. It is the poorer States that have been benefited by this formula, and I think that would be a more correct statement than saying whether it is rural or urban.

Mr. OTTINGER. The effect of the application of that formula is that 70 percent of the funds have gone to rural areas.

Mr. ROGERS of Florida. To the poorer State.

Mr. OTTINGER. Not only to the poorer States, but to rural areas.

Mr. STAGGERS. Mr. Chairman, I rise in opposition to the amendment. The existing program contains two separate formulas for allocating funds: One is for new construction which uses the square of the allotment percentage, which is proposed to be amended by the gentleman's amendment; and another formula has been in the law since 1964, for allocation of modernization funds, which does not use the square of the allotment percentage, but is based on populations, per capita income, and need for modernization. This formula takes care of the needs of the more urban States.

Further, in the reported bill, the new loan guarantee program uses the formula the gentleman's amendment recommends, so that this takes care more adequately of the needs of the urban States.

In other words, the reported bill contains three formulas, one which is slanted toward the poorer States, and the other two slanted toward the urban States. I think that this is a pretty fair compromise, and therefore oppose the gentleman's amendment.

As the gentleman from Florida mentioned, the grant program has necessarily been toward those who are in need, the poorer States. It does not say, in those States, as to how the State agency shall allocate the funds. They can allocate the funds to the urban areas or to the rural areas. This has nothing to do with that.

This is only one of the three formulas. I hope the Members will understand this. The other two are actually slanted toward the urban areas of this country.

The loan guarantee program carries $300 million. I believe we have tried to be fair. The subcommittee did, and the full committee agreed with this. We still need some in the poorer States of the Nation.

Those agencies can allocate as they wish under this grant program. We have the construction program and also the loan program which are actually slanted toward the urban areas.

So, Mr. Chairman, I oppose the amendment.

Mr. NELSEN. Mr. Chairman, I rise in opposition to the amendment and move to strike the requisite number of words.

Mr. Chairman, I join the chairman of the committee in opposition to the amendment.

I wish to point out, I noted on the desk of one of my colleagues a letter pointing out his particular State would get more money under the proposed amendment. I did not receive a letter. My State would get $1 million less.

I want to point out that 32 States and Puerto Rico would lose under this amendment.

What the chairman of the committee has said, that the economic factors still need to be considered, is correct.

I also wish to point out that New York State, or any other State that would gain under this formula, must have in mind that under the guaranteed loan and interest subsidy programs they will have the need factor available to them, so that when they have the total package of the loan formula approach plus the need factor in the guaranteed loan they are going to do pretty well.

It seems to me this is a well-balanced program the way it is set up.

I wish to call attention to the question which was asked by my very distinguished colleague, Dr. HALL, relative to distribution within the States. The States will determine where the money goes, but someone in Washington will determine what the State will get. It will no longer be on a formula basis.

I want to call attention to the loan program I handled in REA. We had a formula; as a result a fairer distribution resulted.

Certainly when we go in the direction, as we do in the guaranteed loan, on a need factor, it seems to me we are applying two different rules of approach for two different situations and that in my judgment will be good and in the public interest.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. NELSEN. I am happy to yield to the gentleman from New York.

Mr. OTTINGER. The formula which is provided I am proposing for construction is the same formula the committee approved for modernization. It is as much a fixed formula as the committee's formula. There is no room for discretion for the Secretary to decide whether money will go to one place or to the other. It is a fixed formula, based on population, per capita income, and need. The only difference is that it is fair. Every State gets treated the same.

Mr. NELSEN. You are revising the formula, however.

Mr. OTTINGER. That is correct. We are putting out a different formula, a simple, direct formula without any gimmicks to give an extra benefit to a special interest or locality.

Also, the loan guarantee program is not nearly as advantageous to the public as the grant program. The bankers may like it, but the people will not. Under the loan guarantee, the patient has to pay the interest, which will increase the hospital costs.

I am sure my friend from Minnesota would not dispute the economics of this situation. The hospital will have to pay the interest on the loan. And, of course, it will have to pass that cost on to the individual who uses its services. Now, the time when the individual uses the hospital's services is exactly the time when he can least afford to pay for it. He is sick or injured and he is, therefore, unable to work. The net effect of the loan program will clearly be to place the expense on the man who can least afford to pay for it. A grant program is financed by all of the taxpayers. They are taxpayers because they are producing income. Thus, the investment through a guarantee program is a little like an insurance policy. When we have the money, when we are producing income, we contribute a little bit to create and support the facilities that we will need if we are taken ill or are hurt.

Mr. NELSEN. I thank the gentleman for his observation, but I still feel the approach we have made in this bill is the better one. I do oppose the amendment as proposed by the gentleman from New York.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. NELSEN. I am happy to yield to the gentleman.

Mr. ECKHARDT. In discussing this bill and in looking at the effects, it seems to me under the new formula as proposed by this amendment the poor States would lose much more drastically and in much larger proportions than other States would gain. My State of Texas, for example, would gain somewhat by the change, but States that are strictly rural would lose extremely drastically. Therefore the amendment would have great impact on the poor States whereas aid to the rich States would tend to be in a lesser degree. Do you find that to be true?

Mr. NELSEN. I think that is true. Some of the States would lose a great amount. For example, Puerto Rico would lose $2 million. As you go down the line you will find that a $1 million loss is not uncommon, under the Ottinger amendment as set up in this bill.

Mr. ECKHARDT. And in those States there would be a larger proportion of losses than gains.

Mr. NELSEN. I think so. I have not

added up the score, but I think you are right.

Mr. HALPERN. Mr. Chairman, I rise in enthusiastic support of this amendment and commend the gentleman from New York, the very able and distinguished gentleman, for offering it. I associate myself with the views and the reasoning which he put forth in behalf of his amendment.

The amendment provides, in my opinion, the equity that this kind of legislation must have. I feel it will greatly improve the bill and I trust the amendment will prevail.

Mr. PUCINSKI. Mr. Chairman, I rise in support of this amendment.

I think that once and for all we ought to start recognizing in some of this legislation that 78 percent of our Nation's population is now centered in 12 major urban areas. That is where the need is the greatest. I have no objection, certainly, to a bill that will try to bring help to all of the communities of the country, but I think the gentleman is correct when he tries to redirect the formula into the areas of greatest needs, which are the 12 major urban areas. You are all aware of the fantastic out-migration from certain of the rural communities in the country into the large urban areas. I wonder how this House expects these urban areas to meet the rising medical needs and the other ever-increasing social problems that this migration is imposing on our large urban areas. We are one big Nation. We ought to start recognizing that we have some common problems, whether you are from an urban or a rural area. While we support and certainly intend to continue supporting assistance to the rural areas of this country, we ought to recognize that something as important as medical aid, the greatest need today exists in the 12 major urban areas where 78 percent of this Nation's population is concentrated.

The amendment offered by the gentleman from New York does not hurt the rural areas of this country, but it does address itself to the vastly increased problems in these areas of high concentration of social needs.

Mr. Chairman, I hope that the House will support the amendment.

Mr. STAGGERS. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. Yes. I yield to the chairman.

Mr. STAGGERS. I do not know whether the gentleman was on the floor awhile ago when I stated that there were three formulas in the bill.

Mr. PUCINSKI. Yes. And I heard the gentleman say that.

Mr. STAGGERS. Two of them have definitely the greatest amount of money slanted toward the urban areas. The greater amount by far. We say after the overall sums go to the State, they can put it in any urban areas they have or other areas. However, we do have the other formula slanted more to the poorer areas. We tried to be fair and balance it in order to make our Nation more or less an integral country. We say that the urban areas need more, and we are trying to provide more for them.

Mr. PUCINSKI. I am well aware of the distinguished chairman's honest and sincere effort to make this a good bill. I have the highest respect for him and we all owe him a debt of gratitude. However, I find it very difficult to justify in my own mind the fact that a populous State like Illinois, with 10½ million people and one of the 12 large urban areas which have suffered this in-migration, receives only $4.5 million under this bill, while the State of Alabama—and I have no quarrel with the State of Alabama; it is a fine State—receives $4.1 million, with a much smaller population. When we look at the per capita needs of the great metropolitan areas such as Chicago and then look at the per capita needs of Atlanta, as well as other parts of the country, the disparity becomes very clear.

Mr. STAGGERS. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. Yes, I yield to the gentleman from West Virginia.

Mr. STAGGERS. We have provided in the bill money for construction and loans. This is the grant program to the poorer States that cannot afford it. That is what we are talking about. When we get into those poor areas we say, "All right, distribute it as you see fit." If we did not do this your large cities would take everything we have. I am sure the gentleman would like to have equalization and what we are trying to do here is to balance the situation.

Mr. PUCINSKI. I think we ought to start facing up to one stark reality. The poorest communities of the Nation today are these 12 major areas that have suffered this fantastic impact of in-migration from rural areas of America. Based upon a per capita basis, whether it is the city of New York, whether it is the city of Chicago, whether is is the city of Detroit or whether it is the city of Boston, you will see the huge social problems that the taxpayers of those communities have to try to solve and finance from local taxes because of this tremendous migration.

I say to you that we ought to start facing up to the fact that the real problem is in the urban areas and try to bring them some meaningful help in dealing with the mounting problem.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. OTTINGER).

The question was taken; and on a division (demanded by Mr. OTTINGER) there were—ayes 42, noes 57.

Mr. OTTINGER. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. OTTINGER and Mr. STAGGERS.

The Committee again divided, and the tellers reported that there were—ayes 51, noes 75.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. TIERNAN

Mr. TIERNAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. TIERNAN:

On page 12, at the end of line 2 add "; EMERGENCY FINANCIAL ASSISTANCE FOR COMMUNITY HOSPITAL SERVICES"; and at the end of line 6 add "AND EMERGENCY ASSISTANCE FOR COMMUNITY HOSPITAL SERVICES".

On page 12, line 21, strike out "under this part" and insert in lieu thereof "from appropriations made under section 631".

On page 13, line 8, strike out "under this part" and insert in lieu thereof "from appropriations under sections 631 and 634".

On page 13, line 11, strike out "of this part.'" and insert in lieu thereof "of those sections,"; and after line 11, insert the following:

"EMERGENCY GRANTS FOR COMMUNITY HOSPITAL SERVICES

"SEC. 634. (a) The Congress finds that certain public and nonprofit private hospitals in the several States are unable to meet the present urgent health service needs of the communities served by the hospitals or to participate in comprehensive health services programs or planning to meet future needs due to a critical lack of adequate facilities and services; that there do not now exist adequate sources of public or private financing to provide the direct emergency assistance needed to resolve this critical condition; and that this results in a serious threat to the health, welfare, and safety of the communities involved and of the Nation.

"(b) In order to provide emergency assistance to those hospitals found to be in critical condition as provided in subsection (c) and in the cases where the communities they serve would otherwise be deprived of needed health services, the Secretary is authorized to make direct emergency grants of up to 66⅔ per centum of the cost of any project to provide necessary facilities and services in accordance with the provisions of this section. No grant of assistance for any single project under this section may exceed 7½ per centum of the amount appropriated under this subsection. For the purpose of making emergency grants as provided in this section there is authorized to be appropriated $100,000,000 for the fiscal year ending June 30, 1970. Sums appropriated under this subsection shall remain available for obligation for the two fiscal years following the fiscal year for which they are appropriated.

"(c) Public and nonprofit private hospitals may qualify as critical hospitals and may be eligible for assistance under this section if the Secretary finds that—

"(1) the average rate of occupancy or the demand for necessary and essential facilities and services of such a hospital so far exceeds reasonable capacity that the community served is deprived of health services of a type and quality conforming to generally accepted standards;

"(2) full and effective use is being made of the existing facilities of the hospital and of other health facilities available to the community;

"(3) the needed assistance is not available from other public or private resources; and

"(4) the failure to provide the needed facilities or services constitutes a threat to the health, welfare, or safety of the community.

"(d) Any hospital seeking emergency assistance under this section shall apply to the Secretary, declaring itself to be in critical need of emergency assistance and setting forth—

"(1) evidence of eligibility under the provisions of subsection (c) in such manner and detail and with such supporting data as the Secretary shall require;

"(2) a detailed description of the project for which emergency assistance is being requested, specifying the deficiencies in health services that the project will correct, and how the project, if approved and completed, will—

"(A) meet the health services needs of the community it serves,

"(B) be coordinated with existing health services available to such community, and

"(C) be integrated with health services programs approved or planned for the community, State, or region in which the hospital is included;

"(3) the estimated cost of completing the project, set forth in such manner and detail as the Secretary shall require;

"(4) the amount of emergency assistance, under this section, that will be required to complete the project; the period of time during which such assistance will be utilized; the source and the amount of funds, other than the grant assistance requested under this section, but including any emergency loan requested under section 635, which will be used to complete the project;

"(5) reasonable assurance that adequate financial assistance will be available to support and maintain the added or expanded facilities or services after the project requested under this section is completed;

"(6) reasonable assurance that wherever any project for which assistance under this section is requested involves construction, all laborers and mechanics employed by contractors or subcontractors in the performance of such construction will be paid wages at rates not less than those prevailing on similar work in the locality as determined by the Secretary of Labor in accordance with the Davis-Bacon Act, as amended (40 U.S.C. 276a–276a-5); and the Secretary of Labor shall have with respect to the labor standards specified in this paragraph the authority and functions set forth in Reorganization Plan Numbered 14 of 1950 (15 F. R. 3176) and section 2 of the Act of June 13, 1934, as amended (40 U.S.C. 276c); and

"(7) agreement that the Secretary may exercise such review authority as he deems advisable in accordance with the provisions of subsection (b).

"(e) The Secretary may approve such application if he determines that—

"(1) the hospital making application for assistance is eligible for assistance under subsection (c), and that the hospital has complied with all relevant provisions of this section;

"(2) the project described in accordance with subsection (d) will help to correct existing deficiencies in health services available to the community, will help to enable the hospital to provide health services of a type and quality conforming to generally accepted standards and conforms to local, State, or regional health planning and programs;

"(3) sufficient funds are available from amounts appropriated under subsection (b) to make the grants of assistance covered by such applications; and

"(4) the project covered by such application is entitled to priority over other projects for which applications have been received under this section but which have not been approved under this subsection.

In making the determination under paragraph (4), the Secretary shall give special consideration to hospitals participating in health services development programs authorized under section 304.

"(f) For the purpose of determining whether a hospital is eligible for assistance under subsection (c) and whether an application conforms to the conditions for approval under subsections (d) and (e), the Secretary is authorized to visit any hospital submitting an application for assistance, to review any relevant records, and to make or request surveys of health facilities and services of the community served by the hospital.

"EMERGENCY LOANS

"SEC. 635. Any hospital unable to secure adequate funds to pay that portion of the project cost not covered by the emergency grant requested under section 634, may apply to the Secretary for an emergency loan and the Secretary is authorized to loan such a hospital up to 90 per centum of that portion of the project cost not covered by the grant provided under that section if (1) the Secretary determines that the hospital is unable to secure the needed funds from other public and private sources, and (2) the Secretary approves the requested emergency grant under section 634. No such emergency loan shall exceed 90 per centum of 33⅓ per centum of the total project cost approved by the Secretary. Each such loan authorized by this section shall bear interest at the rate of 2½ per centum per annum on the unpaid balance thereof and shall be repayable over a period determined by the Secretary to be appropriate, but not exceeding fifty years. In order to make the loans provided for in this section, there are authorized to be appropriated $45,000,000 for the fiscal year ending June 30, 1970. Sums appropriated under this section shall remain available for obligation for the two fiscal years following the fiscal year for which they are appropriated.

"SURVEY OF HOSPITALS AND COMMUNITY HEALTH SERVICES NEEDS

"SEC. 636. To carry out the purposes of sections 634 and 635, the Secretary shall conduct a survey of public and nonprofit private hospitals in the Nation and shall evaluate the type and quality of facilities and services available from such hospitals. Based upon this study, the Secretary shall establish and maintain criteria for determining generally accepted standards of health services and shall report the results of the survey and his determinations to Congress and the President no later than January 1, 1970. Thereafter the Secretary shall revise the survey and his determinations annually and shall report to the President and Congress at the beginning of each session of Congress. Such reports shall include estimates of the cost of meeting the emergency needs of critical hospitals, the availability of funds from public and private sources to meet such costs, and recommendations for additional appropriations under sections 634 and 635 if he finds that such are needed to meet emergency situations. For the purpose of preparing and maintaining the survey according to the provisions of this section, the Secretary is authorized to cooperate with and utilize the resources of such public and private organizations as he deems necessary and advisable.

"DEFINITIONS

"SEC. 636. As used in sections 634 and 635—

"(1) The term 'hospital' includes facilities furnishing domiciliary care.

"(2) The term 'project' includes additions to existing hospital plants, alterations, enlargement, or remodeling of existing buildings, equipment, instruments, and furnishings, and programs involving personnel."

Mr. TIERNAN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

Mr. TIERNAN. Mr. Chairman, this amendment establishes a program of direct assistance in the form of grants and loans to critical hospitals, hospitals that are so antiquated and overcrowded that they are unable today to serve their communities, and hospitals that are not getting the help that they need under any other program in this bill.

Mr. Chairman, this amendment was supported by a public health survey in 1966 which showed at that time that there were 143 of the Nation's private nonprofit hospitals in critical condition. These 143 hospitals were located in 29 States throughout our country.

This amendment would provide for $100 million of direct grants and also loans from the agency loans of $45 million during the fiscal year 1970.

I would like to point out to the committee that these 143 hospitals which were referred to in the survey in 1966 had an occupancy rate at that time in excess of 90 percent of reasonable capacity.

They also found there were 1,289 hospitals that were then experiencing an occupancy rate of between 80 percent and 90 percent.

I would point out to the Members that this was in 1966 before medicaid and medicare was passed. The burden on our hospitals in my State alone and in your State as well today is double that.

For example, in 1966, there was not one hospital that came within the survey in my State. The Miriam Hospital, which is a general hospital, had an occupancy rate of about 112 percent of capacity as of August 1968.

The Roger Williams Hospital had an occupancy rate of 96.1 percent of capacity.

The Institute of Mental Health Hospital had an occupancy rate of 102 percent.

Mr. Chairman, these facts and these figures to me mean that we have to face up to the point that it is not a question of rural or urban—because these hospitals are all throughout our country today. That survey in 1966 showed that 29 of our States were in this situation.

Mr. Chairman, I urge support of this amendment and I think it is most needed at this time. It would provide for a very modest program—a program, I think, which will show great results and great benefits to all of the people in the country.

Mr. Chairman, I urge the acceptance of this amendment and the passage of the bill as amended.

Mr. STAGGERS. Mr. Chairman, I rise in opposition to the amendment, reluctantly.

Mr. Chairman, I know that the gentleman who has offered the amendment has a very good purpose in doing so, but I would like to point this out. The committee agreed on this amendment 2 years ago and it was taken out of the bill here on the House floor when the partnership for health program was up.

The bill that we have before us today is a complete self-contained program and meets the Nation's needs within the limits of our budgetary situation. To provide a new program of project grants would, in my opinion, be a mistake at this time. This amendment to this bill was offered in the Committee on Interstate and Foreign Commerce some weeks ago and the committee overwhelmingly rejected the amendment. I supported that action in committee and I now urge the defeat of the amendment.

Mr. Chairman, when the moneys are allocated to the States in the programs that we have, it certainly can go to these critical areas and hospitals immediately. That would be up to the judgment of and under the jurisdiction of the State agency.

So, as I say, I reluctantly oppose the amendment offered by the gentleman.

Mr. NELSEN. Mr. Chairman, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman.

Mr. NELSEN. Mr. Chairman, it is also true, is it not, that the private nonprofit

hospitals which were referred to come under the terms of this bill and get a loan guarantee plus interest subsidy; is that not also true?

Mr. STAGGERS. That is true.

The CHAIRMAN. The time of the gentleman has expired.

Mr. OTTINGER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of this amendment. It is identical to the amendment I offered last year to the partnership for health program, which was adopted by the Committee on Inerstate and Foreign Commerce, and narrowly defeated in the Committee of the Whole House on the State of the Union.

In my opinion, the amounts of money that we are allocating for our medical facilities under this bill are really very inadequate. In fiscal 1971 it amounts to a mere $298 million in all of its provisions. We weigh that against $6.8 billion for agricultural subsidies. We weigh it against $5 billion for highway construction, primarily out of the Highway Trust Fund. We weigh it against approximately $4 billion for space. The priorities of this country just do not seem to make sense, when desperate health situations in communities all over the United States are not being adequately taken care of.

The medical facilities situation is truly desperate in many communities. We had articles in our newspapers in New York City that showed people having to wait an average of 8 hours in city clinics in order to be able to see a doctor, people actually dying while sitting in the chairs waiting to get X-rays. What we do here, recognizing the fiscal problems facing the country and the tremendous inflationary threat we have, is to provide a relatively modest amount, $100 million additional in grant money, to go to those communities that have the most critical needs. The criteria under which this money is to be allocated is very carefully set out in the amendment.

I would like to read it to you because it really puts money where it counts. This is subsection (c) on page 3 which states as follows:

(c) Public and nonprofit private hospitals may qualify as critical hospitals and may be eligible for assistance under this section if the Secretary finds that—

(1) the average rate of occupancy or the demand for necessary and essential facilities and services of such a hospital so far exceeds reasonable capacity that the community served is deprived of health services of a type and quality conforming to generally accepted standards—

That means you have to have a community that is not being adequately served with health facilities. Continuing to read—

(2) full and effective use is being made of the existing facilities of the hospital and of other health facilities available to the community—

So there can be no duplication of facilities under this provision. Continuing—

(3) the needed assistance is not available from other public or private resources; and

(4) the failure to provide the needed facilities or services constitutes a threat to the health, welfare, or safety of the community.

What paragraph (4) means is that in order for a community to receive this money, there must be a finding that there is a threat to the health, welfare, and safety of that community. It means that without this provision, communities suffering that kind of threat will not get the help that they need. We have this critical need. We do not have sufficient funds to cover all the critical needs of this country. The Public Health Service survey, to which the gentleman from Rhode Island referred, showed 143 communities that were in a desperate situation at that time, 2 years ago. At the present time I assure you those 143 communities, and others besides, are in even worse shape.

I urge the House to provide at least a small amount to the areas that are in critical need under the provisions of this amendment.

In support of this, I submit for the RECORD, the report prepared for the last Congress by the Surgeon General on the need for this legislation. It will do a great deal to dispel a lot of misapprehensions that seem to be current regarding the needs of hospitals and the best way to make health care available at reasonable cost to the people who need it:

REPORT BY SURGEON GENERAL WILLLIAM H. STEWART

1. How many hospitals in the Nation are presently overcrowded? What percentage of these are overcrowded primarily due to inadequate or antiquated facilities and what percentage due primarily to improper use of facilities?

Specific data regarding the number of "overcrowded" hospitals are not available. On an overall national basis, nonfederal short-term general hospitals show an average occupancy of 76 percent—an average considerably below an "overcrowding" level. However, within communities, an even within individual hospitals, overcrowding does exist. For example, one or more hospitals within a single community or area may be running at a very high occupancy rate whereas other hospitals in the same community are running at low occupancy. Within a single facility, one or more nursing units may be overcrowded whereas others, particularly in the obstetrical and pediatric services, may be only partially utilized

The most recent survey accepted by the Public Health Service indicates that 143 of the Nation's private and nonprofit hospitals may be classed as critically overcrowded since they experience average annual occupancy rates of 90% or more of reasonable capacity and since there are not adequate alternative facilities available within the communities they serve.

Another 1289 hospitals serving similarly deprived communities experience occupancy rates of between 80% and 90%, substantially above the national average. It should be realized that in order to average out to 90% a hospital may experience actual occupancy in excess of 100% at certain times. Because of the wide variety of administrative methods and operating standards, it is not possible to set an acceptable occupancy rate that leaves room to accommodate seasonal and other fluctuations; however, any hospital experiencing an average annual occupancy rate of 90% or more exceeds the safe limit.

Not all of the overcrowding can be ascribed to lack of adequate facilities. In some cases, improved administrative procedures could speed patient turnover and more efficient use of facilities. In such cases, the occupancy rate could be reduced without expanding facilities.

Areawide and community planning groups are seriously concerned with this problem and are developing solutions appropriate to their local needs. Such solutions may take a number of different directions. The appropriate one for one community may be to stimulate greater use of the low occupancy facilities. In another community, because of the poor condition of a low occupancy facility, the high occupancy facility may be expanded and one or more of those with low occupancy abandoned.

The obsolescence of a hospital is not usually directly related to the factor of overcrowding. In fact, the converse is more generally the rule. The public is to an increasing degree demanding care in facilities they think appropriate and to the extent they have a choice they select the modern hospital. It is true of course that quality care facilities may be structurally or functionally obsolete and still run at extremely high occupancy rates.

However, even where the hospital is not physically overcrowded, obsolescent facilities and services can produce the same result as overcrowding by overtaxing the hospital's ability to meet the needs of the community.

2. How many hospitals are presently without treatment and service facilities appropriate to the needs of the communities they service?

There is no question that some communities are now deprived of some essential services or facilities. The survey released last year pinpointed 97 communities, served by 143 hospitals, that were critically short of one essential: bed space. However, this was only *one* survey dealing only with *one* problem.

We are aware of certain key problem areas, but there has not been comprehensive survey of facilities and there is consequently no accurate gauge of how many hospitals lack facilities appropriate to the needs of the communities they serve.

Specific reports from hospitals and some areawide planning agencies show the need for expansion or addition of certain services within a given community or area. Because of the scattered nature of such information at this time, the data have not been compiled on a national basis. Vastly differing circumstances and requirements of individual communities would make a national summary *of available* statistics highly unreliable and misleading, rather than helpful as a planning tool. For example, one community may find it desirable to provide care for certain chronic diseases through a home care program, which is not based in a hospital, whereas another community with the same essential problem may find it desirable to provide such service in a nursing home or in some instances from the outpatient department of the hospital. Other communities may plan to provide care for such patients in a general hospital even though such action results in higher costs to the patient and to the community in general.

Determining the needs of a community or area for health service facilities and services is the most serious and difficult problem in the health field today.

Individual hospitals and health service facilities are unlikely to have the resources to take the kind of broad assessment of total community needs and alternative facilities that may be available. In their individual planning and programming efforts, they may in some instances undertake diagnostic or treatment procedures or services which they are not staffed or equipped to provide and the result may be expensive and ineffective duplication of services.

For this reason, the Public Health Service has given a high priority to the activation of support of areawide planning agencies, working in cooperation with State agencies, which have as their primary purpose the

establishment of service, bed, and facility needs of communities and hospitals within a given area. The Public Health Service also provides technical assistance to and support of Hill-Burton State agencies in an effort to improve the planning process.

The Public Health Service does not now have the authority that would be needed to compile and maintain a truly meaningful evaluation of the inadequacies of facilities or services available to specific communities.

3. How many hospitals need renovation and/or modernization?

Hill-Burton State agencies report that 3,327 of the 6,716 existing general hospitals have 272,000 beds which are functionally or structurally obsolete and in need of modernization or replacement. These 272,000 beds represent more than one-third of all existing general short-term beds in the country. All told, some 70,000 beds require complete replacement; the balance require modernization to correct structural or functional deficiencies of the physical plant.

This does not automatically mean, however, that replacement or modernization of the beds is the only answer or even the best answer. Development of alternative care facilities, earlier preventive treatment, increased and more readily available outpatient services—all of these may offer a better solution to a given hospital's problems. In addition, we are convinced that improved hospital operations—including the use of automated systems, improved administrative and treatment techniques, and better physical planning and utilization may greatly offset the need for support of a greatly increased effort in health services research and development, consistent with the President's intentions to establish a National Center for Health Services Research and Development.

By making the results of such research available to hospitals, health service facilities, and local, State and regional planning groups, the Public Health Service can make great strides in helping those hospitals with adequate funding improve and modernize their facilities and services. However, the Public Health Service does not now have the authority to offer direct assistance to hospitals that lack the financial resources to apply the results of the research to their operations.

4. What is the most critical need facing hospitals in general—staffing, better administrative methods, wider use of alternative care resources or what?

As the question indicates, hospitals are faced with multiple problems and because of the significance of efficient hospital operation to total health care, the approach of the Public Health Service has been comprehensive in attempting to solve such problems.

Staffing of professional and technical positions in hospitals is a continuing problem. Training programs geared to the attraction of promising persons into the health field are operated by the Public Health Service, and in addition, grant programs for the construction of facilities to train health professionals, technicians and technologists have been in operation for the past few years.

The application of better administrative methods, including automated techniques and systems, to hospital operations has been a primary goal of the Public Health Service for several years. The Public Health Service has supported to the extent the Congress has made funds available research, development and demonstration projects which hold promise of improving administrative and operational methods employed by hospitals. We believe a substantial increase in such research is required, and legislation recommended by President Johnson and now pending in Congress would authorize a much expanded research and development program in the whole field concerned with delivery of personal health service.

The use of alternative care services and facilities is not only of real significance, but is essential in, delivering efficient and economical comprehensive health care. Many patients occupying expensive acute general hospital beds could be given adequate care in long-term care beds which are more economical to construct and operate. Similarly, some patients could receive adequate care on an outpatient basis rather than being admittted to an expensive acute general bed. Better planning of services for communities and areas and a more sophisticated approach by physicians to the economical utilization of all community health facilities are some of the factors which will contribute to improvement of this situation. The pending conference on rising medical costs to be held June 27 and 28, 1967, will address itself in part to this problem.

However, as we have pointed out before, the effective application of the results of Public Health Service studies depends, in part, upon the availability to the hospital of adequate financial resources. The Public Health Service now has no authority to render direct assistance to individual hospitals or communities that may be facing emergency situations with inadequate financial resources.

5. What is the role of the hospital in a total community medical program? Is the hospital as we know it becoming less important or perhaps less efficient than alternative health care systems or is it becoming more important as the "core" facility in a balanced network of community medical services?

In most communities the hospital has become or is becoming the focal point or core unit for comprehensive health services. Despite its many shortcomings, the hospital is a more efficient health care unit than alternative care facilities, and as the primary facility through which health services are provided its importance, significance, and influence in health care matters within communities will continue to grow.

It is quite possible that hospitals and health facilities serving some communities may not have had the financial resources to keep pace with this changing pattern of community use and, consequently, some communities may not have available the full and necessary range of health services. This was indicated in the survey of hospitals referred to earlier.

6. What resources does the Public Health Service have for helping hospitals to improve their services?

A wide variety of resources are provided by the Public Health Service for helping hospitals to improve their services. Extramural and intramural research programs pertaining to the design, organization, and operation of hospitals are operated by the Public Health Service as well as a program aimed at stimulating experimentation and innovative design and construction. In addition, professional and technical staff are available to provide consultation and informational assistance to hospitals in many areas of hospital operation. Moreover, a highly competent staff of architects and engineers is available to provide assistance regarding the design and functional layout of new hospitals or the expansion, replacement, or modernization of existing facilities. Also, the Public Health Service operates grant programs to assist in the construction of facilities to train physicians, nurses, dentists, pharmacists, and other types of professional, technical and paramedical personnel essential to hospital operation. The Public Health Service also operates programs geared to attracting promising persons in the health field and thus increasing the availability of trained professional and technical health personnel. Finally, mention must be made of the substantial contributions from the basic research programs on specific diseases as administered by the National Institutes of Health.

The Public Health Service does not now have authority to provide any direct financial assistance to hospitals in implementing improvement programs.

7. What are the limitations on your resources for assisting hospitals?

The resources of the Public Health Service for assisting hospitals are appropriate and adequate, within the limits of present authority and funding. At the same time, however, it should be recognized that most health professionals are in short supply and some difficulties are encountered in recruiting experienced staff to deliver technical assistance and consultation regarding such matters as hospital operations, health facility planning, and health service and facility research, particularly at salary levels available for Civil Service employees.

The Public Health Service does not have authority for direct emergency financial assistance to hospitals or health facilities, even if they are in critical condition.

8. Are the existing mechanisms for planning and funding for hospital services flexible and responsive enough to meet the changes in patient population brought about by suburban growth and the dramatic changes in population in our central cities?

Because certain provisions in the existing mechanism for planning and funding of hospital construction projects do not appear to be responsive, the President in his Health Message of February 28, 1967, informed the Congress that a National Advisory Commission on Health Facilities would be appointed to study our needs for the total system of health facilities, and to consider the future and possible redirection of the Hill-Burton program. For example, the present formula structure of the Hill-Burton legislation probably would have to be modified to make a substantial impact on the tremendous backlog of hospital modernization needs, particularly the needs of the quality care hospitals located in our more urban centers of population. Such problems as this together with others which may not be responsive to current problems will be the subject of intensive study by the National Advisory Commission to be appointed by the President.

Mr. RYAN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise in support of this amendment, which would establish a program of direct financial assistance to hospitals in critical need. It authorizes $100 million for an emergency fund for the fiscal year 1970 and, as the gentleman from New York (Mr. OTTINGER) pointed out, it is directed toward emergency situations. Two years ago the Committee on Interstate and Foreign Commerce itself reported out, as part of its Partnership for Health Act in that year, a similar provision, and in view of the fact that the committee supported it then, I would hope that the committee would support it now.

The impetus for the committee's action came from a survey by the Public Health Service which showed that 143 private and nonprofit hospitals were seriously overcrowded and that the communities in which these hospitals were located were unable to provide alternative health care facilities. The 143 hospitals cited by that study had an annual average occupacy rate of 90 percent of their capacity; 1,289 other hospitals studied were experiencing occupancy rates of between 80 and 90 percent substantially above the national average.

Even though the program of emergency assistance was not accepted on the floor, nevertheless the committee's instincts were right in bringing it to the

floor, and 2 years later the conditions which then prompted the committee to report it out favorably are considerably more acute. As a matter of fact, the additional burdens placed on hospitals as a result of expanding medicare and medicaid coverage assures that the demand on hospital services will continue to outstrip the ability of private and public hospitals to keep pace with the demand.

In the city of New York, Harlem Hospital, the major health care facility in Harlem, has been almost forced to close because of the critical financial condition which it faces. It simply does not have the money to provide the services to meet the health needs of the residents of the community. Since the crisis in that hospital is similar to that faced by other hospitals in New York City, Harlem residents have no adequate alternative for health and medical services.

This amendment would provide direct emergency grants up to 66⅔ percent of the project cost in the situation where there is a direct threat to the health, safety, and welfare of the community. It is essential to have this kind of emergency funding, especially where there are no alternative health care facilities.

I respectfully disagree with the chairman of the committee, who said that funds for this purpose might be available under the present law or other provisions of this bill. However, funds would not be available for emergency projects to provide services which are essential to meet the health needs of community residents.

This amendment would make them available for that purpose also, and I urge its approval in order to prevent further deterioration of health care services.

Mr. ROGERS of Florida. Mr. Chairman, I rise in opposition to the amendment.

As the chairman of the committee has said, this amendment was considered very carefully by the full committee and it was overwhelmingly rejected.

The picture has changed a great deal since 1966. We have had medicare come in. For instance, depreciation costs are now reimbursable from the medicare program. We have allocated funds in this bill to take care of all sorts of situations: To build new hospitals, to build long-term care facilities, to build diagnostic and treatment facilities, and for the modernization of facilities and the emergency room facilities.

But in addition to those funds, we have also provided a guarantee loan program of $300 million for the first year, to go up to $600,000,000, and then $900,000,000—$300 million additional for 3 years—so that adequate funds to meet these needs can be made available. It is a State decision under the State Hill-Burton program.

This amendment would change that whole approach and allow the Secretary to come in, no matter what the State plan is, and do whatever he desires.

We do not think that is good administration, and the committee has rejected it. I would urge this body to reject overwhelmingly the amendment, just as the committee itself did.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Florida. I yield to the gentleman from New York.

Mr. OTTINGER. The committee report states the present need for new construction is $5.3 billion and modernization $10.5 billion, or a total of $15.8 billion, whereas over a 3-year period the committee has provided only for approximately $987 million.

Mr. ROGERS of Florida. Mr. Chairman, if the gentleman will permit me, that figure does not even include the loan guarantee program.

Mr. OTTINGER. An additional $300 million.

Mr. ROGERS of Florida. Per year, which is almost another $1 billion right there.

Mr. OTTINGER. It still does not come anywhere near the needs.

Mr. ROGERS of Florida. The gentleman knows we cannot do all of this in 1 year or 2 years. These needs amount to billions of dollars. We have a balanced program to meet the health needs of the people, and this is what the bill is designed to do.

Mr. OTTINGER. If the gentleman will yield 1 minute further, I would like to point out that on page 6, section (e), subsection 2, of the amendment, there is a requirement that the Secretary make findings for any grant that it "conforms to local, State, or regional health planning and programs." We do not go around the State agencies, as the gentleman indicated.

Mr. ROGERS of Florida. I would urge rejection of the amendment.

Mr. NELSEN. Mr. Chairman, I rise in opposition to the amendment.

I wish to restate the point which has been made by my colleague from Florida. There is $300 million the first year, $600 million the second year, and $900 million the third year. There is also a loan guarantee on those amounts, plus an interest subsidy. In addition to that, in the grant areas, for modernization of facilities, there is $50 million in 1971, $55 million in 1972, and $60 million in 1973.

Without question the total hospital needs in the country are extensive. We admit that perhaps they far exceed the total dollars available under this program; however, we are approaching the problem as best we can.

I believe the bill is adequate so far as our ability to meet the needs is concerned. I hope the amendment will be rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Rhode Island (Mr. TIERNAN).

The question was taken; and on a division (demanded by Mr. TIERNAN) there were—ayes 25, noes 64.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: On page 13, line 23, strike out "$135,000,000" and insert in lieu thereof "$60,000,000"; and on page 14, strike out lines 13 through 17 and insert in lieu thereof the following:

"(5) for grants for modernization of the facilities referred to in the preceding subparagraphs, $135,000,000 each for the fiscal year ending June 30, 1971, and the next two fiscal years."

On page 16, beginning in line 20 strike out "other than an allotment for grants for the construction of public or other nonprofit hospitals and public health centers,".

On page 17, after the comma at the end of line 6 insert "or to transfer a portion of an allotment for grants for modernization to an allotment for grants for the construction of public or other nonprofit hospitals and public health centers,".

Mr. DINGELL. Mr. Chairman, I want to stress that the function of this amendment is not really to change the discretion of the State agencies but rather to reflect the critical need which our committee found in connection with the problems of modernization and new construction.

I want to stress that the State agency still may spend the money according to the priorities it sees most necessary in the light of the needs of the State.

But what this does is to seek to authorize a change in terms of public policy as expressed by the Congress, so that we will reverse the policy, so that there will be double the amount of money for modernization that there will be for new construction, as opposed to the situation where we find ourselves now, with double the money for new construction that we have for modernization.

The reason is that there has been a finding and indeed there has been testimony by almost every witness who appeared before our committee that the critical and urgent need in the field of hospital construction and hospital services is not so much construction any more but, quite the contrary, there is now a need for modernization of existing facilities.

My amendment will authorize $50 million for the construction of public or other nonprofit hospitals and public health centers for the fiscal year ending June 30, 1971. It will provide $135 million for modernization of health facilities for the same period of time. In effect I am proposing that we switch the authorizations proposed in the bill for the two programs. In fiscal year 1970 under existing law $130 million is authorized for new construction grants and $65 million is authorized for modernization grants. The bill before us today would increase the amount for construction and decrease the amount for modernization. Every witness who appeared before our committee and addressed himself to the problem testified that the need for modernization is twice as great as the need for new construction. As it appeared in the additional views, this is clearly topsy-turvy legislation. Any rational allocation of funds must provide for twice as much for modernization as is provided for new construction.

Let me stress here that I am not proposing to increase the authorization. I am merely proposing to switch the authorization for modernization and the authorization for construction. The total funds authorized for fiscal year 1971 will remain precisely the same.

The strongest support for my argument comes right out of the majority views in the report of the Committee on Interstate and Foreign Commerce. If my

colleagues will turn to that document, they will find the report notes, and I am now reading:

Information furnished by State agencies administering the program indicate a present need for an additional 85,007 acute care hospital beds, 893 public health centers, 164,430 additional long-term beds, 872 diagnostic and treatment centers, and 388 rehabilitation facilities, with a total estimated cost of $5.3 billion. In addition, 455,130 acute and long-term care beds require modernization at an estimated cost of $10.5 billion.

What the report is saying is that there are double the needs for modernization that there are for new construction.

This amendment, although not tying the hands of State administrators in apportioning the moneys within the jurisdiction of the respective States, would make the congressional intent reflective of the finding of need as between modernization and new construction.

Mr. Chairman, $10.5 billion is almost twice $5.3 billion and $5.3 billion includes long-term beds, diagnostic and treatment centers, and rehabilitation centers, which are not included in the authorization. It is said that the needs for modernization can be taken care of by transfer authority given to State agencies. That expresses a most extraordinary legislative principle. We are here attempting to legislate for the broad needs of the Nation and to lay down legislative policy. We are saying in this bill that if the need is different in the view of the State agencies, they may then change their allocation.

The CHAIRMAN. The time of the gentleman has expired.

(Mr. DINGELL asked and was given permission to proceed for 2 additional minutes.)

Mr. DINGELL. So what we find ourselves in is a very strange set of circumstances whereby we are legislating and stating to the State agencies that they may disregard the broad national findings of need and policies that the Congress expressed. What I am trying to do here is to bring the statement of congressional intent more in line with what we find to be very clearly the need. It is time to let Congress face up to its responsibility and authorize money if it finds the need for it to be greater for modernization than for new construction.

Mr. NELSEN. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to my friend from Minnesota.

Mr. NELSEN. Under your amendment would it allow a transfer from modernization to any other category?

Mr. DINGELL. It would. It would not change that aspect of the bill as drawn. It simply seeks to make the congressional policy and the allocation we make which may later be changed by the State agencies more in conformity with what our real findings of the need happen to be.

Mr. NELSEN. Is it also true, however, that under the terms in the present provisions the State agencies may transfer from construction to modernization?

Mr. DINGELL. That is absolutely correct.

Mr. NELSEN. That is, in order to meet these needs?

Mr. DINGELL. That is the point I just indicated. But I also commented on the novelty of that approach. We make the finding as to need and then we proceed to authorize funds totally inconsistent with that set of circumstances.

What I am trying to do is to continue the flexibility to allow the State administrators to meet the real needs as they find them, and to lay out a legislative basis whereby we approve the funds on a proper and correct legislative basis. The flexibility remains with the State administrators. What we are doing in the bill as drawn is shifting it from the Congress to the State agencies. I do not believe that this is the kind of decisionmaking burden that the Congress should place upon State agencies, particularly in view of the priorities which have been so well established during the course of the hearings.

Mr. STAGGERS. Mr. Chairman, I rise in opposition to the amendment, and I do so reluctantly. I say this because I am sure the gentleman from Michigan has a good intent in what he proposes. But I would like to suggest that the modernization needs are great in this country, but the construction needs too are great.

The bill permits the State agencies to eliminate the existing priority for rural communities in allocating construction funds, which will benefit urban areas. Another reason why I oppose the amendment is that more is involved here than just switching money from construction to modernization. The formula for distributing modernization money differs from the construction fund allocation formula. Because of these different formulas, the gentleman's amendment would provide greater sums for the urban States than they would get under the existing setup in the bill. Under existing law the Secretary of Health, Education, and Welfare has prescribed regulations providing that the State agency shall give priority to projects for modernization in densely populated areas.

So, Mr. Chairman, I reluctantly oppose the amendment because I believe we have adequately taken care of the problem in the bill. The subcommittee worked quite hard on this bill. I do not agree with everything contained in the bill, but we worked for 4 days holding hearings and spent 3 days on the markup of the bill and I believe for this reason we should leave the bill as it is and proceed with it to see that the State agencies have the right to give any priority they want to give to their modernization and construction program. In addition to that we have provided the additional $300 million annually in loan guarantees in order to give emphasis to the areas where they need modernization and construction money.

Mr. NELSEN. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, it is my feeling that the modernization feature is certainly one that has been recognized in the bill, and the guaranteed loan, and the interest subsidy were intended largely to meet this need. Also, as has been pointed out by the author of this amendment, under the authority granted the State money may presently be shifted from construction to modernization, and consequently it seems to me the needs are fully met.

Therefore, Mr. Chairman, I oppose the amendment.

Mr. OTTINGER. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I believe if we were to provide adequately to meet all of the great hospital needs of this country we could not do so with even twice the amount proposed in this legislation. The facts are that the needs far, far exceed the amount of money that we are providing.

My good friend, the gentleman from Minnesota (Mr. NELSEN), and the chairman of the committee, have stated in spite of the amounts we are authorizing, we are really giving the State agencies the opportunity to do as they see fit: to use the money for construction or modernization.

I believe that the authorization of funds by Congress has more significance. I believe we are setting the priorities. We are in effect providing guidelines for the States.

If what we are doing is to allow the State agencies the opportunity to use the money for either modernization or construction as they choose, then why do we not take the simple course and in one provision authorize a total of $185 million to be used for construction or modernization? Why make separate authorizations at all? What is the significance of an authorization under such a concept?

I am afraid that I take very seriously Congress' responsibility for setting priorities in the expenditure of the taxpayers' funds. I believe that when Congress authorizes twice as much money for one program as for another, it is stating the legislative belief that it is going to take twice as much money to solve one problem as it will to solve the other. I believe that when we tell the State agencies that we are providing them with $135 million for new construction and $50 million for modernization, we are telling them to spend something more than $2 on construction for every $1 they spend on modernization. Yet we know—the committee itself concedes—that exactly the reverse is needed.

Therefore, Mr. Chairman, I urge the adoption of the amendment.

Mr. ROGERS of Florida. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I believe we ought to put in perspective here quickly what we are talking about doing if we adopt this amendment, and that is taking money from new construction.

Now, modernization is necessary, but when we modernize let us not forget that at least we have got a bed in being where someone can be taken care of. New construction means we do not ever have a bed at all, and that is what we need to provide also.

Mr. Chairman, let us not underemphasize the need for new beds in every community, in the big cities, in the rural areas, and in every State.

Do the Members know how many new

beds it is estimated we need right now? 85,000 new beds.

Do the Members know how many long term new beds we need? We need 164,000. And this just begins to start with the problem.

So let us not get off balance here on what we are doing, and what the committee has given as its considered judgment on the approach we should make.

We want to do moderization, and we have put $300 million for the guaranteed loan program through which they can go into modernization if the State so decides.

Furthermore, under this present bill that the committee is presenting to the Members, the States can transfer funds from construction to modernization if it is so needed in that State. But do not forget that we need, and need vitally, new beds to take care of the sick people of this country. Therefore, Mr. Chairman, I would urge emphatically that the House reject this amendment.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Florida. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I would ask the gentleman from Florida how many beds are in need of modernization? There are 455,130 beds which need modernization according to the committee's own report.

Mr. ROGERS of Florida. Exactly, and those are beds in being. I agree with the gentleman that there are beds that need modernization, beds that need to be cleaner and need to be nicer and modernized, but we want to provide something over 250,000 beds that are not even in being.

Mr. OTTINGER. It is not just cleaner or nicer. Many of the hospitals are really obsolete in the sense that they can not do their job, people are not getting the care they need and it is dangerous.

Mr. ROGERS of Florida. Two hundred and fifty thousand new beds are the minimum needed to take care of the job.

Mr. OTTINGER. It is not fair to say these funds are just for modernization. Another thing that should be pointed out is that the loan guaranty program funds can be used for new construction as well as modernization.

Mr. ROGERS of Florida. And for modernization also, and the gentleman knows that.

Again, Mr. Chairman, I urge rejection of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan (Mr. DINGELL).

The amendment was rejected.

AMENDMENT OFFERED BY MR. ECKHARDT

Mr. ECKHARDT. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ECKHARDT: On page 23, strike out lines 2 through 10 and insert in lieu thereof the following: "State agency, the application is for a project (A) which is consistent with the comprehensive regional, metropolitan area, or other local area plan or plans, developed under section 314(b), that cover the area in which such project is to be located, or (B) if there is no such plan or plans, which is consistent with the comprehensive State health plan (if any) developed under section 314(a) by the State in which such project is to be located,".

The CHAIRMAN. The gentleman from Texas (Mr. ECKHARDT) is recognized in support of his amendment.

Mr. ECKHARDT. Mr. Chairman, I first want to compliment the committee and the subcommittee and the chairman for the excellent work on the bill—in which I agree in general.

Mr. Chairman, this amendment is both mild and salutary. It would require that programs proposed by the Hill-Burton State agencies must be consistent with plans adopted by comprehensive health planning groups where such plans exist.

I suggest that the language of the original bill on page 23 contains somewhat weaselly words with reference to the States participation. The bill reads as follows: "opportunity has been provided, prior to such approval and recommendation, for consideration of the project by the public or nonprofit private agency or organization which has developed the comprehensive regional, metropolitan area."

When the Congress in 1966 enacted the comprehensive health planning amendments, it was with the realization that lack of planning and control in the health services had resulted in fragmentation, unnecessary and costly duplication and a lack of unity in the attack on poor health care. The legislation was passed in an effort to eliminate those problems, and many States and localities have gone a long way toward implementing the provisions of that act and unifying their planning of health services.

We must go a step further in respect to the Hill-Burton program and integrate it into the entire planning process. It is not enough simply to provide for the planning agencies to be given the opportunity only to consider and comment upon specific projects. The State Hill-Burton plans should be approved by the State comprehensive health planning agency if that agency is to carry out the legislative mandate to coordinate health planning within the State.

If we are to provide some small hope that spiraling health costs can be controlled and even reduced, we must provide the opportunity for utilization of the best information on health needs available and utilization of experience with proven new arrangements and mixes of health services including some services not dependent on facilities alone.

Now I think one of the most salient tendencies in the Congress today is to make the States partners with the Federal Government. But the State or local government should not be a silent nonvoting, nonparticipating stockholder in a venture in which all of the decisions are made elsewhere. For that reason, I suggest this amendment which I think in no respect alters the main direction of the bill and I do hope there will not be serious objections to this amendment.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman.

Mr. BINGHAM. Mr. Chairman, the problem of making adequate health care available to all citizens has a number of dimensions. Hospital service personnel, both professional and nonprofessional, are in short supply. Government funds to help cover the cost of public health care facilities are desperately inadequate. Costs of hospital care of all kinds are skyrocketing. But perhaps most serious is the fact that total health care facilities, particularly in major urban areas, are generally inadequate in quantity and quality.

The situation in my own district, and throughout the city of New York, is intolerable, and growing worse. Hospital facilities are overcrowded. It is not uncommon for patients in urgent need of surgery to wait a month or more for hospital admission. Nursing home facilities for convalescing patients are in short supply, so convalescing patients tie up hospital beds for unnecessarily long periods of time, contributing to overcrowding. The New York City Health and Hospital Planning Council estimates that at least 11,000 additional nursing home beds are needed immediately to begin to relieve patient backlogs and admission delays in regular hospitals.

Many existing hospital facilities in New York City are in critical need of improvement and modernization. Emergency care facilities are particularly inadequate. Patients requiring emergency care for an injury in any of the major New York hospitals will have to wait as long as 8 hours for attention, unless brought in on a stretcher with severe injuries. Reliable estimates indicate that about $1 billion or more would be needed to bring existing medical care facilities up to 1969 standards in the State of New York alone.

Federal assistance for medical facilities construction and modernization under the Public Health Service Act, the so-called Hill-Burton legislation, has been the major stimulus and contributor to medical facilities improvement and expansion since 1946. The original purpose of this legislation was to provide for the construction of medical facilities in the areas that then needed them most—the rural areas of the Nation. Partly due to the successful operation of the program, the primary area of need has shifted considerably over the years from a predominantly rural deficiency in medical facilities, to what has now become a predominantly urban deficiency. While the rural areas have been building and improving their medical facilities at a relatively rapid rate with the help of Hill-Burton funds, urban areas have been experiencing rapid population growth and changing social conditions which require greatly changed and expanded medical facilities. These growing needs for innovative and improved medical facilities in urban areas simply have not been met.

Despite the fact that the predominant need for new and improved medical facilities now exists in the cities, we have continued to funnel the bulk of Federal funds under the Hill-Burton program to rural areas. In fiscal years 1965 through 1968, for example, almost

70 percent of the funds under this program were allocated to communities with populations less than 50,000.

We must take determined steps now to provide greater Federal assistance for expanded and improved medical facilities in our urban areas. The formula for allocation of Hill-Burton funds among the States must be revised to reflect direct indices of need for facilities—such as population and per capita income—along with the factors traditionally taken into account in the formula. The balance between funds available for new construction and funds available for modernization of existing facilities must be shifted in the direction of greater emphasis on modernization to meet the needs of the cities, where many medical facilities built prior to the Hill-Burton program are falling into disrepair and require modernization. Federal legislation must be broadened to permit Hill-Burton funds to be used for such facilities as community diagnostic and treatment centers separate from hospitals to meet the particular needs of the urban poor. Finally, special emergency funds must be made available to assist certain hospitals which have been found to be particularly overcrowded and for which no alternative local facilities are available. A list of 143 such critically overburdened hospitals—average annual occupancy 90 percent or more of capacity—and an additional 1,289 heavily overburdened hospitals—average annual occupancy 80 to 90 percent of capacity—were cited in a 1967 survey by the Public Health Service. Most of these impacted hospitals are located in urban areas, and several of them serve my own district. Nothing has been done since 1967 to lighten the burden on these institutions or to provide the patients who depend upon them for care with adequate services. Funds must be earmarked now to provide direct emergency aid in the form of grants and loans to these hospitals and the communities they serve.

I strongly favor and support efforts to press for these kinds of needed improvements in the Hill-Burton program, along with its extension through 1973. I am pleased to associate myself with several of my colleagues in the House who are proposing changes in this legislation that will allow us to begin to improve health care in our urban centers by beginning to reverse the current downward trend in the quality, quantity, and general adequacy of city health care facilities.

Mr. STAGGERS. Mr. Chairman, I rise—again reluctantly—in opposition to the amendment offered by my colleague.

Mr. Chairman, I oppose the amendment because I think it is premature. There is no question but that we need better coordination of our health programs than we have had in the past. However, I do not think that in our enthusiasm to do something that sounds like a good idea, we should give responsibility to people who may not be ready yet to assume these burdens.

The State comprehensive health planning agencies nationwide are just now beginning to work well. We know this. The legislation creating them came out of our committee in the recent past. They are now just getting into operation. But some States are much further along than others. I do not think we should base our decision for all the States on the performance of a few that might be doing a much better job than others, thereby creating unnecessary confusion in the programs of those States which have not as yet made as much progress as we otherwise would like to have seen them make. I think the time is coming when what the gentleman has proposed will probably have to come, but I do not think that time is now. The subject was considered very carefully by the subcommittee, as I understand, and was voted down by the majority because they felt that this is not time for this to take place.

As I said before, I reluctantly oppose the amendment.

Mr. CARTER. Mr. Chairman, I move to strike the requisite number of words.

It is true that we do have comprehensive health planning agencies in all our States but, of course, they are, so to speak, in their infancy. They actually have not had opportunities to make decisions regarding the present hospitalization plans. We do have Hill-Burton agencies in every State, and they have done a responsible job. Within the next year or two it is planned that the comprehensive health agencies take over, but at the present time it is felt that they simply do not have the expertise that is necessary.

Mr. Chairman, in view of this fact, I oppose the amendment and urge my colleagues to do likewise.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from Texas.

Mr. ECKHARDT. Is the gentleman familiar with the provision in the amendment that states only that the plan must be consistent with the comprehensive regional metropolitan area plan? It does not necessarily have to be slavishly in conformity with that plan. If the plan is not a comprehensive plan, it simply needs to be implemented. I believe that is all this amendment would provide.

Mr. STAGGERS. Mr. Chairman, will the gentleman from Kentucky yield?

Mr. CARTER. I yield to the chairman of the committee.

Mr. STAGGERS. Who determines what is consistent? I think that is the key to the whole thing. You would have to have someone determine what is consistent. As my colleague from Kentucky has said, these agencies are already set up in the States, and they have been working well for a number of years. Here we are trying something new and then require that construction projects would have to be consistent with their plan, but who is going to determine what is consistent?

Mr. CARTER. Whenever the State comprehensive planning agencies say they are capable and can do planning, then we will accept that statement, but even at the present time their plans will be considered. They will be consulted, and in the near future, when they have reached the proper level of experience, they will be permitted to make the determination.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from Texas.

Mr. ECKHARDT. I say that the State Hill-Burton agency would determine consistency.

Mr. CARTER. This will be left to the State Hill-Burton agency.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. ECKHARDT).

The amendment was rejected.

AMENDMENT OFFERED BY MR. FARBSTEIN

Mr. FARBSTEIN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FARBSTEIN: On page 14, line 5, insert "(A)" after "(3)"; and in line 8, insert before the semicolon the following: ", and (B) for grants for the construction of public or other nonprofit diagnostic or treatment centers (whether or not physically connected to a hospital) that will be located in, and will provide services for residents of, any area determined by the Secretary to be a metropolitan area with low per capita income, $15,000,000 each for the fiscal year ending June 30, 1971, and the next two fiscal years".

Mr. FARBSTEIN. Mr. Chairman, the bill before us today provides $20 million each year for 3 years for construction of diagnostic and treatment centers. I offer my amendment with the intent of beginning to meet the medical need of the central cities. I ask $15 million to build public health care centers in depressed areas. Hospitals in central cities are today unable to meet the medical needs of the poor in the depressed areas. With this $15 million we will be able to build independent public health care centers, where children and parents can seek medical care when they are ill, and be treated in public health care centers not necessarily directly linked with hospitals. Today our central city poor have to go to a hospital dispensary and wait 1, 2, or 3 hours before they get any attention. Many never receive medical attention at all.

I appreciate the fact that there is not enough money in the Federal budget to provide all the hospitals that are needed, but, by means of my amendment, the Federal Government will be able to aid in the construction of independent health care centers that will have one, two, or three doctors, and be able to take care of the majority of people who need assistance. We will be able to obviate the long wait they have in the hospitals, and provide them with needed medical care.

I do not think this is snake oil. Presently we have 48 public health care centers throughout the United States funded through OEO. Thirty-six of them were built in central cities. Unfortunately we have not yet faced up to the need for these public health care centers in the inner-core areas where the people are unable to get treatment soon enough in the hospitals.

Under a similar program funded through section 314(e) of the Public Health Service Act, 14 more of them are being built. As a matter of fact, one of them is in my own district; and it is independent of a general hospital. But the

HEW program lacks the authority to actually construct. The authority for HEW to construct $15 million worth of health centers is needed so when the OEO health center program—having proven its value, and as such no longer experimental in nature—is transferred to HEW, which the President has indicated he will do, the Public Health Service will have the authority and funding to construct independent public health care centers for the underprivileged.

When it becomes necessary for someone who is being treated in a public health care center to receive treatment from a hospital, the health centers have been able to negotiate with hospitals to obtain the best treatment required. The public health care centers have proven extremely necessary and valuable. I ask that this be permitted to be extended.

This amendment is part of an effort to close what is perhaps the most serious gap in our health facilities program—the lack of an adequate program to establish community diagnostic and treatment facilities to meet the critical health needs of our metropolitan areas with low per capita income. My amendment will add to the $20 million authorized for grants for the construction of diagnostic or treatment centers associated with hospitals, an additional $15 million specifically reserved for the creation of new public or other nonprofit diagnostic or treatment centers which will serve metropolitan areas with low per capita income, and are not necessarily associated with either new or existing hospitals.

At the present time, we are doing almost nothing to bring decent health care to much of what is the most distressed segment of our society. The most substantial effort to provide health care in the inner city is the neighborhood health centers program of the Office of Economic Opportunity, but even this effort is extremely limited in purpose and scope. This program operates some 48 health centers throughout the country, but of that number 12 are in rural areas and only 36 are in urban settings. When these projects are all fully operational, they will serve about 1 million persons. This is an extremely small number when one thinks of the total need.

The program cannot expand much beyond what exists today so there is not much hope that it can reach many more persons. No new funds for new projects have been provided for this year and are not likely to be provided. Further expansion is to be considered on a case-by-case basis and the Bureau of the Budget has recommended that no new projects be funded.

Furthermore, the OEO program under which most of the present centers have been built is intended to serve as an innovative and experimental program, searching for new and better ways to provide care in this type of setting. These health centers were never really intended to meet the obvious national need for a regular system of day-to-day health care in the inner city. This need is to be met apparently by a section of the Public Health Service Act designated 314(e), "Project Grants for Health Services Development."

This section already is financing some 14 neighborhood health-center-type facilities, including one in my own district in New York City. The present administration has announced that it will be transferring the operation of OEO's centers to the Department of Health, Education, and Welfare, and they will almost certainly be put under this section. There are several limitations and problems with this section. For one, it does not have nearly enough money to do an adequate job. My office has learned that, in addition to the 14 projects already being funded, HEW has at least 30 other worthy proposals that should and could be supported if they had enough money.

Another problem with the use of section 314(e) for these centers is that there is no direct authority under this section for the construction of facilities, only authority to rent and renovate existing facilities, and this is clearly not enough. The OEO has had authority to construct new facilities, utilizing a somewhat devious route through the Federal Housing Administration. Inasmuch as many of the local neighborhood health center staffs are organized as group practices, it has been possible to obtain FHA group practices guaranteed loans for the construction of new facilities.

The enactment of my amendment will eliminate many of these problems. It will put the program under the Public Health Service where the present administration wants it to be; it will authorize the construction of new facilities; and it will provide sufficient funds to at least begin the kind of effort the problem demands.

There are several other considerations concerning this type of approach to health care in the inner city that make my proposal attractive. For one, at the present time much health care in these areas is relegated to hospitals, because there is simply no place else to go for care. The cost of hospital care is very high. The development of outpatient facilities in the neighborhoods not associated with or connected to hospitals can reduce the costs of care quite significantly.

Another factor to consider is that these neighborhood centers operating without any connection with a hospital will be operated and controlled by an organization of residents of the community. For those times and cases when patients do need to fall back on hospital care, this community corporation will have the flexibility and leverage to negotiate with any hospital they choose to obtain this care in, at reasonable costs.

I don't think there can be any question but that there is a real need to stimulate the construction of community diagnostic and treatment centers that will effectively serve the poor of our big cities. I feel that my amendment can be a worthwhile response to this need and I urge your strong support.

Mr. BIAGGI. Mr. Chairman, will the gentleman yield?

Mr. FARBSTEIN. I yield to the gentleman from New York.

Mr. BIAGGI. Mr. Chairman I thank the gentleman for yielding.

I commend the gentleman from New York for the amendment which he has offered, and I associate myself with the gentleman's sentiments.

Mr. FARBSTEIN. Mr. Chairman, today there are 30 independent health care centers ready and waiting for funding from HEW. All that is needed is a little money. I am not asking for much money. I am not asking for $300 million or anything like that. All I want is $15 million for each of the next 3 years in order that the independent health care centers can be built. I do not think it is asking too much to ask the Members to give this aid for the depressed areas by passing this amendment.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. OTTINGER, and by unanimous consent, Mr. FARBSTEIN was allowed to proceed for 1 additional minute.)

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. FARBSTEIN. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I would like to commend the gentleman for a very fine amendment. Too often we develop expensive health facilities and do not get the services to the people who really need them. We find in our urban areas there are people who never have really had any kind of health care whatsoever, because the hospitals are too far from them. In Watts in Los Angeles, there are no health care facilities. We have had great disturbances there, and the people have to travel for the better part of an hour to get to the hospital.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. FARBSTEIN was allowed to proceed for 1 additional minute.)

Mr. FARBSTEIN. Mr. Chairman, appro to what the gentleman has just said, with regard to a public health care center that is not connected with a hospital, we will be able to treat the individuals who do not need hospital care. We have many depressed areas throughout the entire country that need care that can be handled immediately and more inexpensively in the health care centers.

In that way I believe we will save hundreds of millions of dollars and make unnecessary the building of additional hospitals throughout the country.

I hope that my amendment will be adopted.

Mr. STAGGERS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I do so reluctantly again, because I can understand the gentleman's intention. His intentions certainly are good, but this problem has been considered by the committee in every aspect.

The committee had before it measures proposing priorities for construction of these facilities, and carefully considered all the pros and cons. Some witnesses appeared before the subcommittee who were for it, and some appeared who were against it, so the subcommittee had all the different views before they acted. The subcommittee, after hearing all these views, voted to reject the amendment. I support the decision of the subcommittee, and therefore oppose the gentleman's amendment.

There is earmarked in the bill $20 million for this specific program, and in the other loan program which has been provided, of the $900 million, any amount they want can be allocated to these projects, if the State so decides.

It is just a matter of degree. Some could say, "Let us cut off $10 million." Some could say, "Let us put on $15 million." Some could say, "Let us put it all into these centers."

We all recognize these centers do great work. The subcommittee, in its wisdom, tried to allocate the funds the best places they saw fit, after extensive hearings and deliberations, with discussions both ways, to determine what the overall program should be.

Mr. FARBSTEIN. Mr. Chairman, will the gentleman yield?

Mr. STAGGERS. I yield to the gentleman from New York.

Mr. FARBSTEIN. The $20 million the gentleman spoke of refers to centers attached to hospitals. What about those areas that do not have hospitals? Where are those poor unfortunates going to get treatment?

On the $900 million of which the gentleman spoke, this in no way will benefit these individuals, because today there are 36 that were built through the OEO and antipoverty funds and only 12 through Public Health Service funds. Those are solely for the purpose of renovation. This is a temporary program, a demonstration. When it is taken over by HEW they will be under the regulations of this law unable to build any independent health care centers unless they are attached to hospitals.

Mr. STAGGERS. Mr. Chairman, I do not believe the gentleman's amendment would change any of this.

I should like to say that the diagnostic centers now do not have to be attached to the hospital in any way. This is not in the present bill.

Mr. FARBSTEIN. It is in the law. Read the bill.

Mr. STAGGERS. No.

Mr. FARBSTEIN. Here it is.

Mr. STAGGERS. If the gentleman would read the bill, I believe he would find it is different.

Mr. Chairman, I oppose the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. FARBSTEIN).

The question was taken; and on a division (demanded by Mr. FARBSTEIN) there were—ayes 8, noes 68.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. RYAN

Mr. RYAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. RYAN: On page 25, after line 21, add the following new section:

"SEC. 16. Section 605(a) of the Public Health Service Act is amended by striking out "and" at the end of paragraph (5), by striking out the period at the end of paragraph (6) and inserting in lieu thereof "and", and by adding at the end thereof the following new paragraph"

"(7) adequate and enforceable assurances that the public or nonprofit private agency or agencies filing the application will pay to persons displaced from their places of residence or business by or as a result of the construction of the project, amounts covering the moving expenses and direct losses of property incurred by such persons as a result of such displacement within the same monetary limit and subject to the same conditions as those applicable to the relocation payments provided for under section 114 of the Housing Act of 1949."

Mr. RYAN. Mr. Chairman, I believe it is incumbent upon the Federal Government to require that relocation payments and assistance be provided to persons and businesses displaced as a result of construction or modernization financed under this act.

I have been a firm and consistent supporter of Federal assistance for the expansion of the Nation's health care facilities. But particularly in urban areas, where vacant land is not readily available, the construction and expansion of any facility, including hospitals, often conflicts with other interests. My amendment would soften the side effects which often accompany expansion of federally financed facilities in the surrounding community.

Institutional expansion in a city often causes grave personal hardship and expense to individual residents of the community, who are displaced from their homes. These hardships are compounded when there is no relocation assistance. Thus, the construction of a health care facility, however desirable from the standpoint of increasing health care services, must be balanced against the displacement and inconvenience caused to residents of the affected community.

Where Federal funds enable an institution to expand into the community, and thereby result in the displacement of persons from their homes, I believe the Federal Government has a responsibility to require that relocation assistance be provided.

Similarly, proprietors of small businesses are frequently displaced on short notice. Unlike larger businesses and corporations, they do not possess sufficient political influence to have an impact on the location of a new institution or on the expansion of an existing one. If they are forced to move to another neighborhood, they may lose the neighborhood customers who are the mainstay of their business. They face moving expenses, higher rental fees and, in some cases, the prospect of being driven out of business altogether. Again, where Federal funds allow institutions to expand into the community, relocation assistance guarantees to small businesses should be required by the Federal Government.

Under this amendment the benefits which are now provided in section 114 of the Housing Act of 1949 relative to relocation payments in connection with construction financed under the urban renewal program would also be available to construction and modernization financed under this legislation. These benefits include moving expenses and relocation payments. Section 114 provides that a family displaced shall receive assistance in finding housing, and a relocation adjustment up to $500 where the family is unable to find suitable housing within 20 percent of its income. This payment works in the same way as the rent supplement program except that it cannot total more than $500 nor can it be extended over 1 year. It is similarly available to individuals who are single and over 62 years of age.

In the case of small businesses or nonprofit organizations, a small business displacement benefit of $2,500, and in addition moving and property loss compensation up to $3,000 would be payable.

In the Housing and Urban Development Act of 1965 relocation benefits were extended to displacement as the result of low-rent public housing, mass transportation, public facility loans, open space, and urban beautification, and neighborhood facilities, in addition to urban renewal. But persons displaced as a result of the expansion of institutions of higher education or health care do not receive relocation assistance guarantees.

In order to insure equitable treatment for persons displaced by construction under the provisions of the pending bill, I urge the adoption of my amendment to require the applicant to furnish adequate and enforceable assurances of relocation payments.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. RYAN. I shall be glad to yield to the gentleman from New York.

Mr. OTTINGER. I thank the gentleman for yielding.

Mr. Chairman, I support the gentleman's amendment. I think the problem that he points up is tremendous in every city across this country. His amendment, if adopted, would rectify that situation.

Mr. RYAN. I thank the gentleman for his support, and I hope the members of the Committee of the Whole will support this amendment which will not result in any additional cost, but will place a requirement upon any applicant, either a public or a nonprofit private agency, to submit with its application to the Surgeon General of the United States assurances that adequate relocation payments will be made. That is the essential point of the amendment, Mr. Chairman.

Mr. STAGGERS. Mr. Chairman, I rise in opposition to the amendment and again I do so reluctantly. I realize the intent of the gentleman from New York to take care of his constituents and others across the country. There is no right of eminent domain contained in this bill. Of course that right could be exercised by the States. But this would also affect the private hospitals and private industry that are trying to bring about construction of these facilities. Therefore, such money would either have to come from the people who are trying to construct the hospital or facility or force the money to come out of Federal Government funds which we allocate for building hospitals and beds.

It is my opinion that the communities, the States and the cities, ought to be able to take care of this problem and I am sure they will. They have provision for it. Further, I do not feel that this is the proper place for it.

The CHAIRMAN. The question is on

the amendment offered by the gentleman from New York (Mr. RYAN).

The amendment was rejected.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. ST GERMAIN, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11102) to amend the provisions of the Public Health Service Act relating to the construction and modernization of hospitals and other medical facilities by providing separate authorizations of appropriations for new construction and for modernization of facilities, authorizing Federal guarantees of loans for such construction and modernization and Federal payment of part of the interest thereon, authorizing grants for modernization of emergency rooms of general hospitals, and extending and making other improvements in the program authorized by these provisions, pursuant to House Resolution 428, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT

Mr. EDWARDS of Alabama. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. EDWARDS of Alabama. I am, Mr. Speaker, in its present form.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. EDWARDS of Alabama moves to recommit the bill H.R. 11102 to the Committee on Interstate and Foreign Commerce.

The SPEAKER. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

Mr. NELSEN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 351, nays 0, answered "present" 1, not voting 80, as follows:

Mr. Moss with Mr. Gubser.
Mr. Kluczynski with Mr. Podell.
Mr. Philbin with Mr. Bray.
Mr. Ronan with Mr. Langen.
Mr. Slack with Mr. Camp.
Mr. Young with Mr. Foreman.
Mr. Macdonald of Massachusetts with Mr. Blatnik.
Mr. Johnson of California with Mr. Don H. Clausen.
Mr. Culver with Mr. Brock.
Mr. Flynt with Mr. Cowger.
Mr. Pepper with Mr. Thompson of Georgia.
Mr. Pickle with Mr. Dickinson.
Mr. Udall with Mr. Winn.
Mr. Stuckey with Mr. Scheuer.
Mr. Conyers with Mr. Friedel.
Mr. Daniel of Virginia with Mr. Powell.

Mr. EDWARDS of Alabama. Mr. Speaker, I have a live pair with the gentleman from Michigan, Mr. GERALD R. FORD. If he had been present, he would have voted "yea." I voted "nay." I withdraw my vote and vote "present."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. JARMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

CONGRESSMAN ANNUNZIO CALLS ATTENTION TO CHICAGO DAILY NEWS EDITORIAL COMMENDING REPUBLIC OF ITALY ON 23 YEARS OF OUTSTANDING PROGRESS

(Mr. ANNUNZIO asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, on Monday, June 2, 1969, the Italian Republic celebrated the 23d anniversary of the establishment of their democratic form of government, and I included in my remarks in the CONGRESSIONAL RECORD on that date an editorial from the Chicago Sun-Times commemorating this important occasion.

Today, I am delighted to insert in the RECORD an editorial which appeared on June 2 in another of Chicago's leading newspapers, the Chicago Daily News. The Daily News editorial commends the outstanding progress that the Republic of Italy has made during the brief span of 23 years of existence. This achievement becomes even more impressive when one takes cognizance of the fact that Italy suffered more heavily than any other Western nation except Germany in the devastation and destruction of World War II.

The Chicago Daily News editorial follows:

ITALY: 23 YEARS A REPUBLIC

By a comfortable, though not overwhelming, margin of 12,717,923 votes to 10,719,284, the people of Italy exactly 23 years ago elected to become a republic instead of a monarchy. From the vantage point of this 23d anniversary, the choice was clearly a good one.

Modern Italy—good neighbor and strong ally—has come a very long way since the dark days of World War II—and since the dark years just after the war, when the Communists tried powerfully but vainly to draw the nation behind the Iron Curtain.

Chicago and Italy serve one another in many ways. Our city's cultural debt to the Italian people is great and growing. Modern Italy leans heavily upon Chicago for manufactured goods of many kinds.

But a more personal link is Chicago's people of Italian descent—a proud and sensitive and productive people whose inherited gifts add richness and flavor to this capital of the American heartland.

In their behalf, and in behalf of all Chicagoans, *I migliori auguri alla Repubblica Italiana.*

COAL MINE HEALTH AND SAFETY

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, there is a great stirring in the coalfields among the rank and file of coal miners who are determined in 1969 that effective coal mine health and safety legislation be passed by Congress and followed up with effective enforcement. In addition, there is a determination on the part of thousands of coal miners that their union must and will obtain the type of aggressive leadership which has been so sorely missing in recent years. As soon as the United Mine Workers of America can obtain aggressive leadership which will fight for the full protection of the health and safety of its members, then and only then will legislation enacted by Congress be administered effectively.

Elijah Wolford, a Morgantown coal miner who has announced for the presidency of the United Mine Workers of America, recently sent a letter to President Nixon in which he outlined 12 specific recommendations in pending coal mine health and safety legislation. Mr. Wolford also testified before the House and Senate committees considering this legislation. Under unanimous consent, I include the text of a recent news article describing Mr. Wolford's key points.

Another very encouraging development occurred last week in the surprise announcement of the candidacy of Joseph A. Yablonski for the presidency of the United Mine Workers of America. Mr. Yablonski has already gotten off to a very fast start in capturing the imagination of the rank and file of the coal miners who are sincerely interested in once again making the United Mine Workers of America a union genuinely concerned for the health, safety, and welfare of the members. Under unanimous consent, I include an excellent article in the Wall Street Journal of June 2 describing Mr. Yablonski's campaign and platform. I am sure that this candidacy will spur additional support for stronger health and safety legislation in Congress, and at last provide the kind of protection which coal miners throughout the Nation deserve and has too long lacked.

The material referred to follows:

MINE SAFETY PLAN IS SENT WHITE HOUSE

MORGANTOWN, W. VA.—One of three rank-and-file members of the United Mine Workers of America seeking the presidency of the union has sent a letter to President Nixon urging 12 specific recommendations in pending coal mine health and safety legislation.

Elijah Wolford, a Morgantown coal miner, Saturday urged the President to give rule-making authority to the director of the U.S. Bureau of Mines, and suggested that all mine safety training be carried on at the expense of coal operators.

Wolford also recommended the President urge inclusion of the 3.0 milligram level of dust recommended by the U.S. Public Health Service rather than the 4.5 milligrams in the present bill.

Elimination of the Federal Coal Mine Safety Board of Review was urged by Wolford.

The veteran miner called for setting minimum fines as well as maximum fines to be levied against any member of coal mine management which violates or causes violation of health and safety laws.

Wolford wrote the President he would be "glad to meet with you or any of your representatives at your convenience to discuss the miners' views, and the need for these 12 points being incorporated in your bill."

Wolford also recommended:

Installation of one intake airway independent of all other intake air headings.

Requirement of a specific amount of fresh air at the working face of the mine.

Isolation of conveyor belt and haulage headings from the intake air going to the working face of the mine, and return airways be kept clear of obstruction.

Each miner be supplied a gas mask with transparent face cover.

Clearance on the so-called clearance side of haulage ways should be increased from 24 to 30 inches, and that 20 inches clearance be required on the wire side.

Trolley wires or insulated feeder lines should be six inches above the highest piece of equipment moving on the haulage ways.

Where the above not possible, the wire should be 12 inches to the side of the widest piece of equipment moving on the haulage way.

[From the Wall Street Journal, June 2, 1969]

YABLONSKI'S CHALLENGE TO BOYLE'S PRESIDENCY OF MINE WORKERS COULD SPUR BITTER FIGHT

PITTSBURGH.—The Nation's coal producers are worried about the prospects of a bitter fight for control of the United Mine Workers union.

Such a fight looms as the results of last Thursday's announcement by Joseph A. Yablonski, a union leader for more than two decades, that he'll seek to challenge incumbent W. A. (Tony) Boyle in the December election.

One coal industry official declared that a Boyle-Yablonski contest would be "extremely unsettling for the industry, to put it mildly." He expressed fear that strikes might spread across the coal fields as supporters of each man attempt to demonstrate how much backing he has. Ultimately the whole industry could be closed down this way, he adds.

With his announcement, Mr. Yablonski, a UMW International executive board member since 1942, brought to the surface his long-standing resentment of Mr. Boyle and his seven-year rule of the mine workers.

Coal insiders say Mr. Yablonski, who is known as "Jock," is a long-time member of the union's powerful "Eastern establishment" that fumed when former UMW leader John L. Lewis designated Mr. Boyle as his ultimate successor. "Boyle was a staff man, and not one of them," says a coal company president. "Only Lewis' tremendous personal power got Boyle through the early part of his presidency."

At the same time, they say, Mr. Yablonski, a coal miner for 35 years, was an old-line trade unionist whose primary concern was the welfare of the union. Accordingly, although he was opposed to Mr. Boyle at first, he became—in public, at least—one of his ardent backers.

In 1966, Mr. Boyle—in an effort to tighten his control of the union—removed Mr. Yablonski from his power base as president of the UMW's big and potent District 5, headquartered in Pittsburgh. He had served as District 5 chief since 1958. Mr. Boyle replaced him with Michael Budzanoski, the current District 5 head.

It was at this point, Mr. Yablonski says, that he decided to challenge Mr. Boyle for the presidency of the 120,000-member union.

PUBLIC POSTURE MAINTAINED

Even so, Mr. Yablonski maintained his public posture in favor of Mr. Boyle. At last fall's UMW convention in Denver, after Mr. Boyle had refused a gift check proffered by the executive board, Mr. Yablonski took the microphone and told cheering delegates:

"Now, what are you going to do for this fellow? He won't accept an increase in sal-

ary; he won't accept a gift from his fellow officers. I guess about the only thing that we can do is to really try to the utmost of our ability to provide honest-to-God, loyal support for him and his administration that they deserve."

The attitude of the stocky, bespectacled Mr. Yablonski, who speaks in a gravelly voice and has bushy eyebrows in the style of Mr. Lewis, was completely opposite at his Washington press conference last week.

He charged then that an "insufferable gap" has opened between the union's leaders and its members. The 59-year-old board member charged the Boyle administration with being lax on coal-mine safety, too cozy with the industry, intolerant of dissent, and undemocratic.

"I participated in and tolerated the deteriorating performance of this leadership," he said, "But with increasingly troubled conscience. . . . I can no longer tolerate the low state to which our union has fallen."

A spokesman for Mr. Boyle, who has come under increasingly heavy attack from both within and outside the union in recent months, said there wouldn't be any official comment on the Yablonski statement.

TWO WELL-KNOWN SUPPORTERS

With Mr. Yablonski were two well-known supporters; Ralph Nader, consumer crusader who lately has trained his ire on the UMW, and Joseph L. Rauh, former general counsel of the United Auto Workers union and a leading figure among Liberal Democrats and in Americans for Democratic Action.

Mr. Nader said he'd have no official role in the campaign. "I am just interested in seeing there is a debate and contest on the issues involved." Mr. Rauh said he would act as Mr. Yablonski's chief counsel during the campaign.

Mr. Yablonski's lengthy platform, stressed greater union attention to miners' health and safety conditions, issues that led to strikes mainly in West Virginia earlier this year in defiance of Mr. Boyle. Mr. Yablonski said he would place more emphasis on safety in union negotiations with coal producers. Mr. Boyle, on the other hand, has long believed the best way to improve safety conditions is with Federal legislation.

Several campaign promises by Mr. Yablonski would affect the union's relationship with the industry if he were elected. Declaring that "a union must retain an arms-length relationship with management," he promised "an end to demeaning and unproductive ties to the coal industry, including the severance of union membership in the National Coal Policy Conference," an industry-promotion group.

He also promised to demand "a substantial increase" in the 40-cent-a-ton royalty unionized mines pay to finance the UMW pension and welfare fund. And he advocated liberalizing the fund's eligibility rules and benefits, both of which have come under heavy criticism from miners and others.

MANDATORY RETIREMENT

Additionally, he said he would advocate mandatory retirement at age 65 for officers, overhaul the union's paper to permit presentation of dissenting views, establish a complaint office in Washington, and call a special convention to pave the way for secret-ballot elections of officers in districts that currently are under control of trustees appointed by union hierarchy.

To get on the ballot against Mr. Boyle, the challenger must be nominated by 50 of the UMW's roughly 1,300 locals. Nominations will be made in July and August; the election will be held Dec. 9. At least two other dissident candidates for president have declared their intention to run, and Mr. Yablonski said he didn't know if a coalition reform ticket could be arranged.

BAR FALSE AIRLINE ADVERTISING OF UNREALISTIC SCHEDULES

(Mr. WOLFF asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WOLFF. Mr. Speaker, there is an intolerable situation of air traffic delays at major airports in the United States. And the newly instituted Federal Aviation Administration rules governing flight operations at certain high-density airports cannot possibly succeed as long as the airlines are permitted to establish and advertise unrealistic schedules.

The airlines are severely overscheduled and advertise departure times that are physically impossible to keep, even under the best of circumstances. Because promised departure times cannot be adhered to I believe the airlines are engaged in deceptive advertising and that such deception must be ended.

I might note that I reject as more doubletalk the airlines' contention that departure time means when you leave the gate. A reasonable period of up to 15 minutes from the time an aircraft leaves the gate until it is airborne is expected. But anyone who travels a good deal knows that delays of an hour or more due to "air traffic" are common.

I have written to the Federal Trade Commission asking that the airlines be enjoined from false and misleading advertising that promises arrival and departure times which simply cannot be met. Under leave to extend my remarks I wish to include that letter in the RECORD at this point:

JUNE 3, 1969.

Hon. PAUL RAND DIXON,
Chairman, Federal Trade Commission, Washington, D.C.

DEAR MR. CHAIRMAN: Now that the Federal Aviation Administration regulations governing the number of flights permitted at high-density airports have gone into effect it is especially urgent that immediate action be taken to correct an inexcusable fraud being perpetrated on airline travellers.

I have reference to advertisements and printed schedules that promise departure times which are physically impossible to maintain.

Moreover the obvious inability to adhere to departure schedules means that arrival schedules will also be broken thus disrupting plans at airports to which the delayed flights are headed. And, of course, all of these built-in delays cause severe hardship on travellers who are misled by false promises.

Although I do not wish to personalize this matter my experience in flying to Washington yesterday morning on the 9:30 American Airlines flight from LaGuardia is indicative of the problem. We spent a full hour on the ground after boarding the plane and were told air traffic delays were the cause. These are institutionalized delays caused by the impossibility of adhering to promised schedules. A similar situation obtained last evening when I was to return to New York. Although the weather was clear I was told there would be departure delays of up to one hour because of "air traffic." It is clear that the FAA regulations can not solve this problem of deception and action is urgently needed to require honest, realistic scheduling by the airlines.

While emphasizing experiences at LaGuardia are merely symptomatic of a wider problem, I wish to suggest that by advertising departure and arrival times which cannot be kept even under the best circumstances that the airlines are engaging in misleading and deceptive advertising. I request that such false advertising be ended and that the airlines be required to reschedule their flights or their advertising in accordance with the realities at the various airports.

It is fair to expect that new schedules will be drawn in accord with the new FAA regulations. Once established the new schedules should be properly advertised so as to end the abuse of commercial air travellers who are drawn to airports with impossible promises, made to wait for extensive periods for take-off and all too often arrive at their destination too late.

Your prompt attention to this matter is appreciated and I look forward to hearing from you in the near future.

Sincerely,

LESTER L. WOLFF,
Member of Congress.

ADDRESS BY THE PRESIDENT AT THE COMMENCEMENT EXERCISES, THE AIR FORCE ACADEMY

(Mr. HALL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include pertinent material.)

Mr. HALL. Mr. Speaker, our President and Commander in Chief of the armed services, is just completing a commencement address at the U.S. Air Force Academy near Colorado Springs on issues of basic importance to our national security. I am asking that it be published for all concerned to read, study, and use as an example for discussing the problems on which the individual liberty of all, and the freedom of the nations of the world depend. Obviously, the President feels very deeply about these things and they are relevant to matters of great public interest today. Oftentimes the public interest is not backed with complete and distilled information—military intelligence—on which the Commander in Chief must act. This excellent address will help clarify the issues to all Members and the public.

It is high time that we did away with the paradoxes of power and might, backed up by right on one hand; and fear, expediency, and concession on the other. The President clearly sets forth America's role today as that of keeping the peace with dignity and honor. While recognizing the strength of the invaders, would-be rulers, and oppressors, he encourages strength, and "will to do," without desire or control on our part. He gives examples and derides the scofflaws and skeptics, while urging the renaissance and regeneration of stamina toward American idealism. While avoiding "strawman" issues, he urges that we cleave through to the bony structure of support for one world at peace while maintaining national dignity and sovereignty. He puts into proper context, the current discussion of the military-industrial complex and completes the statement of past President Eisenhower, which so many careless ideologists have failed to do.

Finally, Mr. Speaker, the President and Commander in Chief offers a new credo not only for the men of the armed services, but for our Nation as a whole and the peoples of the world. Added to

this, humility and unremitting faith in God, there is no question but that it is the "gauntlet thrown down" and challenge, which none can fail to pick up and run unrelentingly toward repurpose and the American ideal, putting into factual effect the evangelism requisite of the United States of America toward moral stamina and individual freedom and dignity around the world.

I commend its adoption for all, and include it in the RECORD at this point:

ADDRESS BY THE PRESIDENT AT THE COMMENCEMENT EXERCISES AT THE AIR FORCE ACADEMY, JUNE 4, 1969

For each of you, and for your parents and your countrymen, this is a moment of quiet pride.

After years of study and training, you have earned the right to be saluted.

But the members of the graduating class of the Air Force Academy are beginning their careers at a difficult moment in military life.

On a fighting front, you are asked to be ready to make unlimited sacrifice in a limited war.

On the home front, you are under attack from those who question the need for a strong national defense, and indeed see a danger in the power of the defenders.

You are entering the military service of your country when the nation's potential adversaries abroad were never stronger and your critics at home were never more numerous.

It is open season on the armed forces. Military programs are ridiculed as needless if not deliberate waste. The military profession is derided in some of the best circles. Patriotism is considered by some to be a backward, unfashionable fetish of the uneducated and unsophisticated. Nationalism is hailed and applauded as a panacea for the ills of every nation—except the United States.

This paradox of military power is a symptom of something far deeper that is stirring in our body politic. It goes beyond the dissent about the war in Vietnam. It goes behind the fear of the "military industrial complex."

The underlying questions are really these:

What is America's role in the world? What are the responsibilities of a great nation toward protecting freedom beyond its shores? Can we ever be *left* in peace if we do not actively assume the burden of *keeping* the peace?

When great questions are posed, fundamental differences of opinion come into focus. It serves no purpose to gloss over these differences, or to try to pretend they are mere matters of degree.

One school of thought holds that the road to understanding with the Soviet Union and Communist China lies through a downgrading of our own alliances and what amounts to a unilateral reduction of our arms—as a demonstration of our "good faith."

They believe that we can be conciliatory and accommodating only if we do not have the strength to be otherwise. They believe America will be able to deal with the possibility of peace only when we are unable to cope with the threat of war.

Those who think that way have grown weary of the weight of free world leadership that fell upon us in the wake of World War II, and they argue that we are as much responsible for the tensions in the world as any adversary we face.

They assert that the United States is blocking the road to peace by maintaining its military strength at home and its defense forces abroad. If we would only reduce our forces, they contend, tensions would disappear and the chances for peace brighten.

America's presence on the world scene, they believe makes peace abroad improbable and peace in our society impossible.

We should never underestimate the appeal of the isolationist school of thought. Their slogans are simplistic and powerful: "Charity begins at home." "Let's first solve our own problems and then we can deal with the problems of the world."

This simple formula touches a responsive chord with many an overburdened taxpayer. It would be easy to buy some popularity by going along with the new isolationists. But it would be disastrous for our nation and the world.

I hold a totally different view of the world, and I come to a different conclusion about the direction America must take.

Imagine what would happen to this world if the American presence were swept from the scene. As every world leader knows, and as even the most outspoken of America's critics will admit, the rest of the world would be living in terror.

If America were to turn its back on the world, a deadening form of peace would settle over this planet—the kind of peace that suffocated freedom in Czechoslovakia.

The danger to us has changed, but it has not vanished. We must revitalize our alliances, not abandon them.

We must rule out unilateral disarmament. In the real world that simply will not work. If we pursue arms control as an end in itself, we will not achieve our end. The adversaries in the world today are not in conflict because they are armed. They are armed because they are in conflict, and have not yet learned peaceful ways to resolve their conflicting national interests.

The aggressors of this world are not going to give the United States a period of grace in which to put our domestic house in order—just as the crises within our society cannot be put on a back burner until we resolve the problem of Vietnam.

Programs solving our domestic problems will be meaningless if we are not around to enjoy them. Nor can we conduct a successful policy of peace abroad if our society is at war with itself at home.

There is no advancement for Americans at home in a retreat from the problems of the world. America has a vital national interest in world stability, and no other nation can uphold that interest for us.

We stand at a crossroad in our history. We shall reaffirm our aspiration to greatness or we shall choose instead to withdraw into ourselves. The choice will affect far more than our foreign policy; it will determine the quality of our lives.

A nation needs many qualities, but it needs faith and confidence above all. Skeptics do not build societies; the idealists are the builders. Only societies that believe in themselves can rise to their challenges. Let us not, then, pose a false choice between meeting our responsibilities abroad and meeting the needs of our people at home. We shall meet both or we shall meet neither.

This is why my disagreement with the skeptics and the isolationists is fundamental. They have lost the vision indispensable to great leadership. They observe the problems that confront us; they measure our resources; and they despair. When the first vessels set out from Europe for the New World, these men would have weighed the risks, and stayed behind. When the colonists on the Eastern seaboard started across the Appalachians to the unknown reaches of the Ohio alley, these men would have calculated the odds, and stayed behind.

Our current exploration of space makes the point vividly: Here is testimony to man's vision and man's courage. The journey of the astronauts is more than a technical achievement; it is a reaching-out of the human spirit. It lifts our sights; it demonstrates that magnificent conceptions can be made real.

They inspire us and at the same time teach us true humility. What could bring home to us more the limitations of the human scale than the hauntingly beautiful picture of our earth seen from the moon?

Every man achieves his own greatness by reaching out beyond himself. So it is with nations. When a nation believes in itself—as Athenians did in their golden age, as Italians did in the Renaissance—that nation can perform miracles. Only when a nation means something to itself can it mean something to others.

That is why I believe a resurgence of American idealism can bring about a modern miracle—a world order of peace and justice.

I know that every member of this graduating class is, in that sense, an idealist.

In the years to come, you may hear your commitment to America's responsibility in the world derided as a form of militarism. It is important that you recognize the strawman issue for what it is: The outward sign of a desire by some to turn America inward—to have America turn away from greatness.

I am not speaking about those responsible critics who reveal waste and inefficiency in our defense establishment, who demand clear answers on procurement policies, who want to make sure a new weapons system will truly add to our defense. On the contrary, you should be in the vanguard of that movement. Nor do I speak of those with sharp eyes and sharp pencils who are examining our post-Vietnam planning with other pressing national priorities in mind. I count myself as one of those.

As your Commander-in-Chief, I want to relay to you as future officers of our armed forces some of my thoughts on these issues of national moment.

I worked closely with President Eisenhower. I know what he meant when he said ". . . we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military industrial complex."

Many people conveniently forget that he followed that warning with another: "We must also be alert to the equal and opposite danger that public policy could itself become the captive of a scientific-technological elite."

And in that same Farewell Address, President Eisenhower made quite clear the need for national security. As he put it: "A vital element in keeping the peace is our military establishment. Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction."

The American defense establishment should never be a sacred cow, nor should the American military be anybody's scapegoat.

America's wealth is enormous but it is not limitless. Every dollar available to the Federal Government has been taken from the American people in taxes. A responsible government has a duty to be prudent when it spends the people's money. There is no more justification for wasting money on unnecessary military hardware than there is for wasting it on unwarranted social programs.

There can be no question that we should not spend "unnecessarily" for defense. But we must also not confuse our priorities.

The question in defense spending is "how much is necessary?" The President of the United States is the man charged with making that judgment. After a complete review of our foreign and defense policies I have submitted requests to the Congress for military appropriations—some of them admittedly controversial. These requests represent the minimum I believe essential for the United States to meet its current and long-range obligations to itself and to the free world. I have asked only for those programs and those expenditures that I believe are necessary to guarantee the security of this country and to honor our obligations. I will bear the responsibility for these judgments. I do not consider my recommendations infallible. But if I have made a mistake I pray that it is on the side of too

much and not too little. If we do too much, it will cost us our money; if we do too little, it may cost us our lives.

Mistakes in military policy can be irretrievable. Time lost in this age of science can never be regained. I have no choice in my decisions but to come down on the side of security. History has dealt harshly with those nations who have taken the other course.

In that spirit, let me offer this credo for the defenders of our nation:

I believe that we must balance our need for survival as a nation with our need for survival as a people. Americans, soldiers and civilians, must remember that defense is not an end in itself—it is a way of holding fast to the deepest values known to civilized man.

I believe that our defense establishment will remain the servant of our national policy of bringing about peace in this world, and that those in any way connected with the military must scrupulously avoid even the appearance of becoming the master of that policy.

I believe that every man in uniform is a citizen first and a serviceman second, and that we must resist any attempt to isolate or separate the defenders from the defended. In this regard, those who agitate for the removal of the ROTC from college campuses only contribute to an unwanted militarism.

I believe that the basis for decisions on defense spending must be "what do we need for our security" and not "what will this mean for business and employment." The Defense Department must never be considered a modern-day WPA: There are far better ways for government to help ensure a sound prosperity and high employment.

I believe that moderation has a moral significance only in those who have another choice. The weak can only plead magnanimity and restraint gains moral meaning coming from the strong.

I believe that defense decisions must be made on the hard realities of the offensive capabilities of our adversaries, and not on our fervent hopes about their intentions. With Thomas Jefferson, we can prefer "the flatteries of hope" to the gloom of despair, but we cannot survive in the real world if we plan our defense in a dream world.

I believe we must take risks for peace—but calculated risks, not foolish risks. We shall not trade our defenses for a disarming smile or honeyed words. We are prepared for new initiatives in the control of arms in the context of other specific moves to reduce tensions around the world.

I believe that America is not about to become a Garrison State, or a Welfare State, or a Police State—because we will defend our values from those forces, external or internal, that would challenge or erode them.

And I believe this above all: That this nation shall continue to be a source of world leadership and a source of freedom's strength in creating a just world order that will bring an end to war.

Let me conclude with a personal word.

A President shares a special bond with the men and women of the nation's armed services. He feels that bond strongly at moments like these, facing all of you who have pledged your lives, your fortunes and your sacred honor to the service of your country. He feels that bond most strongly when he presents a Medal of Honor to an 8-year-old boy who will not see his father again. Because of that bond, let me say this to you now:

In the past generation, since 1941, this nation has paid for fourteen years of peace with fourteen years of war. The American war dead of this generation has been far greater than all of the preceding generations of Americans combined. In terms of human suffering, this has been the costliest generation in the two centuries of our history.

Perhaps this is why my generation is so fiercely determined to pass on a different legacy. We want to redeem that sacrifice. We want to be remembered, not as the generation that suffered, but as the generation that was tempered in its fire for a great purpose: to make the kind of peace that the next generation will be able to keep.

This is a challenge worthy of the idealism which I know motivates every man who will receive his diploma today.

I am proud to have served in America's armed forces in a war which ended before members of this class were born.

It is my deepest hope and my belief that each of you will be able to look back on your career with pride, not because of the wars in which you served but because of the peace and freedom which your service made possible for America and the world.

ROGERS PRAISES PRESIDENT'S SPEECH ON CAMPUS RIOTERS

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS of Florida. Mr. Speaker, over the past several years there has been a growing concern over the violent activities of a minority of our Nation's students in universities and colleges.

Members of Congress, including myself, have spoken of the need to bring these disorders under control and to again allow our places of learning to return to the task of educating the majority of students who do want to learn.

Because of my concern, I was heartened to hear the President's remarks at the graduation exercises at General Beadle State College.

I think that the fact is significant that the President made mention not only of the violent few who have disregarded the rights of others, but also of the permissive faculty which has abandoned their responsibilities.

For these people who call themselves educators are equally guilty for encouraging this lack of understanding of a democracy and our democratic process.

I hope that the President's comments that our society has up till now restrained its resources for physically quelling these disorders can be construed as a firm warning that our society will not long continue to exercise this restraint if these disorders continue.

I have long believed that those who proclaim themselves as leaders of revolution are indeed heady with their own power. In reality, they can move and speak only because of the basic tenets of our democracy which allows them this privilege, a privilege which they have to date abused, while wrapping themselves in the cloak of self-righteousness.

I think one quote in the President's speech was most cogent.

In a free society, the rights of none are secure unless the rights of all are respected.

Campus rioters have not respected the rights of others. We have witnessed the few infringing the rights of the many.

As the President pointed out, our democratic process has the wherewithal to forcefully see to it that those rights are not infringed. And I hope that the President's remarks can be taken as an indication that in the very near future this intolerable situation will be brought to an end.

Mr. HALEY. Mr. Speaker, will the gentleman yield?

Mr. ROGERS of Florida. I am glad to yield to the gentleman from Florida.

Mr. HALEY. I should like to associate myself with the remarks of my distinguished colleague from Florida and thank him for bringing this to the attention of Congress.

Mr. ROGERS of Florida. I thank the gentleman.

FOREIGN AFFAIRS: DOUBLE-EDGED LIES

(Mr. ADAIR asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ADAIR. Mr. Speaker, on May 14, President Nixon very eloquently and forthrightly described to the American people, and to the world, our objectives in Vietnam and our efforts to achieve an honorable and lasting peace in that area. The President's speech was well received because it was honest and laid the cards on the table. We can only wish the other side were as forthright. Unfortunately, all too many Americans fail to recognize that the Communists, who are experts at propaganda, have used and are using not only distortions of facts, but double-edged lies as a revolutionary warfare tactic to achieve their conquest of South Vietnam.

A column by C. L. Sulzberger, which appeared on the editorial page of the May 30 issue of the New York Times, describes how Hanoi has used propaganda and the direct lie to influence public opinion. Mr. Sulzberger says:

Revolutionary warfare is most ingeniously practiced by Hanoi and its greatest success has been in the United States itself, major political battlefield of the Vietnam conflict.

Mr. Sulzberger's column follows:

FOREIGN AFFAIRS: DOUBLE-EDGED LIES

(By C. L. Sulzberger)

CHICAGO.—The political aspect of Revolutionary Warfare is at least as important as its military aspect and the two are hitched in tandem. In this strategy, propaganda is of maximum importance and it often uses lies to accomplish its ends.

During March, 1969, one example of this came when Hanoi decided to blame Washington for the Communist offensive in South Vietnam although that offensive had actually been decided by Resolution Eight of COSVN (the Central Office, South Vietnam) last October. Troops assigned to it began marching down the Ho Chi Minh Trail through Laos from North Vietnam late in 1968 and fresh supplies were moved out from Cambodia and secreted in advance caches.

COMMUNIST PRETENSE

The offensive began February 22 but stimulated hostile public reaction abroad, damaging the Communist position at Paris peace talks. Hanoi then took a major decision along lines described in the March 20, 1969, issue of "Foreign Report," newsletter of the London "Economist."

This said: "They opted for the direct lie; for the line that the present Communist attacks were essentially a countermeasure against an American 'offensive'. . . . Directives were issued to Hanoi's agents in all the leading western centers—in Paris, London and Stockholm—to push this line relentlessly. . . . The most extraordinary thing is that so many intelligent people have swallowed the story."

This is, indeed, extraordinary since the offensive was planned before President Johnson completely halted U.S. bombing of North Vietnam. Painstaking military preparations took place throughout late 1968—with no reference whatsoever to U.S. operations. Nevertheless, Hanoi subsequently pretended it only assumed the initiative in response to American offensive action—which is patently impossible because of the length of time required to plan and mount its own offensive.

Revolutionary Warfare also lies to friends. An example occurred with a Soviet agent who spoke Vietnamese, sent to inspect the guerrillas in 1965 and help Moscow decide how far it should commit itself.

DUPING MOSCOW

An important Communist officer, Lieut. Col. Le Xuan Chuyen, participated in this particular hoax and later defected. The following is taken from his taped account: "The Russian was interested in finding the extent of the development of the Front (N.L.F.). He wanted to find out about the level of military activities. . . .

"The Front wanted to convince the Soviet Union not to bow to the United States. . . . They wanted to have the full support of the Soviets and all the aid that could be sent. . . . At that time the Soviet Union was undecided."

The Russian came in from Cambodia to see "the Military Region Headquarters Commander and Staff." It was difficult to arrange a real meeting so "a Special Scene" was prepared. The Front designed a setting which "looked like a real command headquarters to be used by a talented general in command of a guerrilla army hundreds of thousands strong. . . .

"The lady [titular] Gen. Nguyen Thi Dinh [not to be confused with the N.L.F. diplomat, Mme. Binh] was installed in a place quite close to the border, with the full trimmings, equipment, facilities and manpower, all the appearance of a real headquarters. . . . She was also supposed to be a common woman who had emerged from the masses. . . .

"The atmosphere was tense and seemed to reflect the active situation on the battlefield. The Russian looked very impressed with what he saw and when the men from COSVN, who really direct the Front, were sure that the time was ripe to exploit the situation they brought the Russian inside to interview Mrs. Dinh. . . ."

A telephone was run from Mrs. Dinh's "headquarters" to a nearby bunker where an experienced Vietcong general, Nguyen Chi Thanh, sat eavesdropping. "Whenever she had to face a really difficult question from the Russian . . . she excused herself to take a phone call. It was of course from Nguyen Chi Thanh who told Mrs. Dinh the answers. . . . Mrs. Dinh looks quite impressive but frankly she really lacks experience.

A GOOD LAUGH

"They had a good kick out of laughing at the Russian. They even killed a couple of chickens to celebrate. . . . The Kremlin had been fooled and for that reason they were most elated."

Similar techniques have often been applied on the American people. Revolutionary Warfare is most ingeniously practiced by Hanoi and its greatest success has been in the United States itself, major political battlefield of the Vietnam conflict.

TEXT OF THE PRESIDENT'S ADDRESS ON THE CHALLENGE OF REVOLUTIONARIES ON CAMPUS

(Mr. STEIGER of Wisconsin asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. STEIGER of Wisconsin. Mr. Speaker, on June 3, President Richard Nixon addressed the General Beadle State College in Madison, S. Dak. The President in his statement expressed the view of many of us that violence, whether on a college campus or elsewhere, cannot be condoned. He said in his speech:

TEXT OF PRESIDENT'S ADDRESS ON THE CHALLENGE OF REVOLUTIONARIES ON CAMPUS, GENERAL BEADLE STATE COLLEGE, MADISON, S. DAK.

Freedom: A condition and a process.

As we dedicate this beautiful new library, I think this is the time and the place to speak of some basic things in American life. It is the time, because we find our fundamental values under bitter and even violent attack; it is the place, because so much that is basic is represented here.

Opportunity for all is represented here.

This is a small college: not rich and famous, like Harvard or Yale; not a vast state university like Berkeley or Michigan. But for almost 90 years it has served the people of South Dakota, opening doors of opportunity for thousands of deserving young men and women.

Like hundreds of other fine small colleges across the nation, General Beadle State College—has offered a chance to people who might not otherwise have had a chance.

The pioneer spirit is represented here, and the progress that has shaped our heritage.

In South Dakota we still can sense the daring that converted a raw frontier into part of the vast heartland of America.

The vitality of thought is represented here.

A college library is a place of living ideas—a place where timeless truths are collected, to become the raw materials of discovery. In addition, the Karl E. Mundt Library will house the papers of a wise and dedicated man who for 30 years has been at the center of public events. Thus, more than most, this is a library of both thought and action, combing the wisdom of past ages with a uniquely personal record of the present time.

VALUES UNDER CHALLENGE

As we dedicate this place of ideas, therefore, let us reflect on some of the values we have inherited, which are now under challenge.

We live in a deeply troubled and profoundly unsettled time. Drugs, crime, campus revolts, racial discord, draft resistance—on every hand we find old standards violated, old values discarded, old precepts ignored. A vocal minority of the young are opting out of the process by which a civilization maintains its continuity: the passing on of values from one generation to the next. Old and young across a chasm of misunderstanding—and the more loudly they shout, the wider the chasm grows.

As a result, our institutions are undergoing what may be their severest challenge yet. I speak not of the physical challenge: the forces and threats of force that have wracked our cities, and now our colleges. Force can be contained.

We have the power to strike back if need be, and to prevail. The nation has survived other attempts at this. It has not been a lack of civil power, but the reluctance of a free people to employ it, that so often has stayed the hand of authorities faced with confrontation.

The challenge I speak of is deeper: the challenge to our values, and to the moral base of the authority that sustains those values.

At the outset, let me draw one clear distinction.

CONCERNED WITH CONDUCT

A great deal of today's debate about "values," or about "morality," centers on what essentially are private values and personal codes: patterns of dress and appearance, sexual mores; religious practices; the uses to which a person intends to put his own life.

These are immensely important, but they are not the values I mean to discuss here.

My concern today is not with the length of a person's hair, but with his conduct in relation to his community; not with what he wears, but with his impact on the process by which a free society governs itself.

I speak not of private morality but of public morality—and of "morality" in its broadest sense, as a set of standards by which the community chooses to judge itself.

Some critics call ours an "immoral" society because they disagree with its policies, or they refuse to obey its laws because they claim that those laws have no moral basis. Yet the structure of our laws has rested from the beginning on a foundation of moral purpose.

That moral purpose embodies what is, above all, a deeply humane set of values—rooted in a profound respect for the individual, for the integrity of his person and the dignity of his humanity.

At first glance, there is something homely and unexciting about basic values we have long believed in. We feel apologetic about espousing them; even the profoundest truths become cliches with repetition. But they can be live sleeping giants: slow to rouse, but magnificent in their strength.

Let us look at some of those values—so familiar now, and yet once so revolutionary:

Liberty: recognizing that liberties can only exist in balance, with the liberty of each stopping at that point at which it would infringe the liberty of another.

Freedom of conscience: meaning that each person has the freedom of his own conscience, and therefore none has the right to dictate the conscience of his neighbor.

Justice: recognizing that true justice is impartial, and that no man can be judge in his own cause.

Human dignity: a dignity that inspires pride, is rooted in self-reliance and provides the satisfaction of being a useful and respected member of the community.

Concern for the disadvantaged and dispossessed: but a concern that neither panders nor patronizes.

The right to participate in public decisions: which carries with it the duty to abide by those decisions when reached, recognizing that no one can have his own way all the time.

Human fulfillment: in the sense not of unlimited license, but of maximum opportunity.

The right to grow, to reach upward, to be all that we can become, in a system that rewards enterprise, encourages innovation and honors excellence.

In essence, these all are aspects of freedom. They inhere in the concept of freedom; they aim at extending freedom; they celebrate the uses of freedom. They are not new. But they are as timeless and as timely as the human spirit because they are rooted in the human spirit.

Our basic values concern not only what we seek but how we seek it.

Freedom is a condition; it also is a process. And the process is essential to the freedom itself.

We have a Constitution that sets certain limits on what government can do but that allows wide discretion within those limits. We have a system of divided powers, of checks and balances, of periodic elections, all of which are designed to insure that the majority has a chance to work its will—but not to override the rights of the minority or to infringe the rights of the individual.

What this adds up to is a democratic process, carefully constructed and stringently guarded. It is not perfect. No system could be. But it has served the nation well—and nearly two centuries of growth and

change testify to its strength and adaptability.

They testify, also, to the fact that avenues of peaceful change do exist. Those who can make a persuasive case for changes they want can achieve them through this orderly process.

To challenge a particular policy is one thing; to challenge the government's right to set it is another—for this denies the process of freedom.

FOREMOST VALUE DENIED

Lately, however, a great many people have become impatient with the democratic process. Some of the more extreme even argue, with curious logic, that there is no majority, because the majority has no right to hold opinions that they disagree with.

Scorning persuasion, they prefer coercion. Awarding themselves what they call a higher morality, they try to bully authorities into yielding to their "demands."

On college campuses, they draw support from faculty members who should know better; in the larger community, they find the usual apologists ready to excuse any tactic in the name of "progress."

It should be self-evident that this sort of self-righteous moral arrogance has no place in a free community. It denies the most fundamental of all the values we hold: respect for the rights of others. This principle of mutual respect is the keystone of the entire structure of ordered liberty that makes freedom possible.

The student who invades an administration building, roughs up the dean, rifles the files and issues "non-negotiable demands" may have some of his demands met by a permissive university administration. But the greater his "victory" the more he will have undermined the security of his own rights.

In a free society, the rights of none are secure unless the rights of all are respected. It is precisely the structure of law and custom that he has chosen to violate—the process of freedom—by which the rights of all are protected.

We have long considered our colleges and universities citadels of freedom, where the rule of reason prevails. Now both the process of freedom and the rule of reason are under attack. At the same time, our colleges are under pressure to collapse their educational standards in the misguided belief that this would promote "opportunity."

Instead of seeking to raise lagging students up to meet the college standards, the cry now is to lower the standards to meet the students. This is the old, familiar, self-indulgent cry for the easy way. It debases the integrity of the educational process.

There is no easy way to excellence, no short-cut to the truth, no magic wand that can produce a trained and disciplined mind without the hard discipline of learning. To yield to these demands would weaken the institution; more importantly, it would cheat the student of what he comes to a college for: his education.

No group, as a group, should be a more zealous defender of the integrity of academic standards and the rule of reason in academic life than the faculties of our great institutions. If they simply follow the loudest voices, parrot the latest slogan, yield to unreasonable demands, they will have won not the respect but the contempt of their students.

THE RIGHTS OF STUDENTS

Students have a right to guidance, to leadership, to direction; they have a right to expect their teachers to listen, and to be reasonable, but also to stand for something—and most especially, to stand for the rule of reason against the rule of force.

Our colleges have their weaknesses. Some have become too impersonal, or too ingrown, and curricula have lagged. But with all its faults, the fact remains that the American system of higher education is the best in this whole imperfect world—and it provides, in the United States today, a better education for more students of all economic levels than ever before, anywhere, in the history of the world.

This is no small achievement.

Often, the worst mischief is done by the name of the best cause. In our zeal for instant reform, we should be careful not to destroy our educational standards, and our educational system along with them; and not to undermine the process of freedom, on which all else rests.

The process of freedom will be less threatened in America, however, if we pay more heed to one of the great cries of the young today. I speak now of their demand for honesty: intellectual honesty, personal honesty, public honesty.

Much of what seems to be revolt is really little more than this: an attempt to strip away sham and pretense, to puncture illusion, to get down to the basic nub of truth.

We should welcome this. We have seen too many patterns of deception:

In political life, impossible promises.

In advertising, extravagant claims.

In business, shady deals.

In personal life, we all have witnessed deceits that ranged from the "little white lie" to moral hypocrisy; from cheating on income taxes to bilking insurance companies.

In public life, we have seen reputations destroyed by smear, and gimmicks paraded as panaceas. We have heard shrill voices of hate, shouting lies, and sly voices of malice, twisting facts.

INTELLECTUAL GYMNASTICS

Even in intellectual life, we too often have seen logical gymnastics performed to justify a pet theory, and refusal to accept facts that fail to support it.

Absolute honesty would be ungenerous. Courtesy compels us to welcome the unwanted visitor; kindness leads us to compliment the homely girl on how pretty she looks. But in our public discussions, we sorely need a kind of honesty that has too often been lacking; the honesty of straight talk; a doing away with hyperbole; a careful concern with the gradations of truth, and a frank recognition of the limits of our knowledge about the problems we have to deal with.

We have long demanded financial integrity in public life; we now need the most rigorous kind of intellectual integrity in public debate.

Unless we can find a way to speak plainly, truly, unself-consciously, about the facts of public life, we may find that our grip on the forces of history is too loose to control our own destiny.

The honesty of straight talk leads us to the conclusion that some of our recent social experiments have worked, and some have failed, and that most have achieved something—but less than their advance billing promised.

This same honesty is concerned not with assigning blame, but with discovering what lessons can be drawn from that experience in order to design better programs next time. Perhaps the goals were unattainable; perhaps the means were inadequate; perhaps the program was based on an unrealistic assessment of human nature.

We can learn these lessons only to the extent that we can be candid with one another. We face enormously complex choices. In approaching these, confrontation is no substitute for consultation; passionate concern gets us nowhere without dispassionate analysis. More fundamentally, our structure of faith, and faith depends on faith, and faith depends on truth.

The values we cherish are sustained by a fabric of mutual self-restraint, woven of ordinary civil decency, respect for the rights of others, respect for the laws of the community, and respect for the democratic process of orderly change.

The purpose of these restraints is not to protect an "establishment," but to establish the protection of liberty; not to prevent change, but to insure that change reflects the public will and respects the rights of all.

This process is our most precious resource as a nation. But it depends on public acceptance, public understanding and public faith.

Whether our values are maintained depends ultimately not on the Government, but on the people.

A nation can be only as great as its people want it to be.

A nation can be only as free as its people insist that it be.

A nation's laws are only as strong as its people's will to see them enforced.

A nation's freedoms are only as secure as its people's determination to see them maintained.

A nation's values are only as lasting as the ability of each generation to pass them on to the next.

We often have a tendency to turn away from the familiar because it is familiar, and to seek the new because it is new.

To those intoxicated with the romance of violent revolution, the continuing revolution of democracy may seem unexciting. But no system has ever liberated the spirits of so many so fully. Nothing has ever "turned on" man's energies, his imagination, his unfettered creativity, the way the ideal of freedom has.

Some see America's vast wealth, and protest that this has made us "materialistic." But we should not be apologetic about our abundance. We should not fall into the easy trap of confusing the production of things with the worship of things. We produce abundantly; but our values turn not on what we have, but on what we believe.

We believe in liberty, and decency, and the process of freedom. On these beliefs we rest our pride as a nation; in these beliefs, we rest our hopes for the future; and by our fidelity to the process of freedom, we can assure to ourselves and our posterity the blessings of freedom.

I believe the President's statement is a significant one. As we attempt to deal with the problems of our society it is necessary to have a high degree of presidential leadership. I am confident that President Nixon will make this speech but the first of a number of talks on this subject. It must be recognized that orderly processes are required before one can accomplish change. This, it seems to me, is what the President has said and I commend him for his continuing concern for the problems of all Americans.

DETRICK SAFETY RECORD IMPRESSIVE

(Mr. BEALL of Maryland asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BEALL of Maryland. Mr. Speaker, recently much has been said in this House about the biological and chemical warfare programs carried on under the Department of Defense. On several occasions statements have been published which would seem to indicate that there is a great danger to the general public in the development, testing and transportation of lethal chemicals and biological agents.

One of the primary installations responsible for reseach in the area of biological warfare is an installation in my district, Fort Detrick, at Frederick, Md. Soon after the charges were made, the

command at Fort Detrick undertook a study to determine the reliability of the safety methods used at the base. I have recently received a reply from the Department of the Army with the results of this investigation and include them in the CONGRESSIONAL RECORD for all to see. This statement from the Army incidentally was sent by them to the news media.

I think it is most interesting to note the safety record of the base in relation to other industries which are quite common in many communities. As you will see from the statistics, Fort Detrick has a record that should be praised rather than criticized. It is also quite pertinent to note that in the 26 years that Fort Detrick has been in operation there is no record of any nonemployee in the community ever having been infected by contact with a biological agent from the base. This is truly a remarkable achievement.

The material referred to follows:

MAY 2, 1969.

The Department of Army accident record is commendable. The record for all types of occupational injuries, which include industrial, mechanical, biological and chemical accidents in the Army, and at Fort Detrick in particular, is excellent.

During the 1964 to 1968 period the frequency of on-the-job injury at Fort Detrick was ten times less than that for all federal civilian employees. For the statistically minded, this comparison is made in terms of the frequency rates for disabling injuries, from any occupationally connected cause, per million man hours of work. These rates are: 0.66 for Fort Detrick, 1.40 for the communications industry, and other such rates as electrical utilities 5.17, all federal civilian employees 6.90, all industry 7.22, printing and publishing 12.61, and the mining of underground coal 35.27. The industry figures have been published by the National Safety Council in its 1968 edition of Accident Facts.

Prior to the beginning of 1960, when new vaccines and improved safety equipment came into general use at Fort Detrick, the number of infections in the laboratory each year was high in comparison to other major biological research institutions. The reason for this is that, in comparison to Fort Detrick, only a small percentage of the employees in these other institutions was engaged in hazardous work.

During the 17 years from 1943 through 1959 there were 370 accidental infections at Fort Detrick. In the last nine years, 1960 through 1968, there were 50 cases of which 19 were hospitalized. This reflects an increasing effectiveness of the safety precautions at Fort Detrick that also is documented by the fact that in the calendar years 1966 and 1967 there were no hospitalized cases. In 1968 to the present there have been *no* infections.

Every effort is being made to continue this excellent record. This unusually fine performance relies in part on reporting and investigating the cause of a large number of nominally trivial accidents. This is because, in any work area, the reporting of minor first aid cases warns the safety director of potential accident situations which, if uncorrected, might possibly lead to serious injuries.

At Fort Detrick the encouragement to report even the most minor accidents and incidents resulted in 3330 accident reports during 1954–1962, about half of which were in the laboratories and these primarily consisted of minor cuts, abrasions and incidences of glassware breakage or droppage that occurred but did not result in injury. In this inclusive figure of 3330 accidents, there were 158 infections of which 21% did not require hospitalization.

One of the major concerns at Fort Detrick is the protection of the surrounding community from any disease being studied in the laboratories. All air from infectious disease laboratories is incinerated or filtered. The sewage is sterilized. All laboratory trash is burned or otherwise decontaminated. Even the clothing of Fort Detrick laboratory employees is sterilized and laundered in a special laundry on the installation. Special gastight cabinet equipment, and other cabinets with carefully controlled air flow, have been developed to prevent escape of microorganisms. These cabinets have proved themselves to be so valuable in protecting personnel that they have been adopted for use in a special laboratory of the Public Health Service National Cancer Institute, and at the Lunar Receiving Laboratory in Houston, Texas, where the moon samples will be received sometime this year.

In continuation of this policy of caution for the community health, local and national public health officials are kept fully informed of all matters that may conceivably affect the public. There have been three deaths resulting from laboratory infection at Fort Detrick during the 26 years of the installation's existence. These were reported to the scientific community and to the press. In other biological laboratories the number and frequency of deaths from laboratory infections is about six times greater than at Fort Detrick. For example, a report by a Public Health Service investigator in 1961 revealed that, in the United States and abroad, there was a history of 2,348 infections with 107 deaths. This results in a fatality rate over six times that of Fort Detrick. Another survey reported fatality rates for laboratory infections ranging from twice the Fort Detrick rate for United States Hospital personnel, to ten times that for foreign countries. This survey was part of a doctoral thesis written in 1965 by G. Briggs Phillips, of the Fort Detrick safety staff, for the Division of General Education and Center for Safety Education at New York University.

A case of pneumonic plague in 1959 proved to be an excellent test of Detrick's highly organized and specialized medical treatment facilities. The history of this disease shows that those who contract plague seldom live unless treated within 24 hours. At Fort Detrick the patient became ill in the morning, was admitted to the Fort Detrick hospital in the afternoon, diagnosis was made by the next morning, the Frederick County Public Health Officer was notified that same day, and with his concurrence health measures were taken to treat the patient and prevent spread of the disease. All efforts were successful. The patient was cured and the disease did not spread.

In the U.S. during 1950 to 1968 there were 34 cases of plague with 11 deaths, according to the Public Health Service Communicable Disease Center Bacterial Disease Section in Atlanta. Throughout the world in 1965 there were 1,326 cases of plague, of which 120 died.

Standards for safe shipping containers, to be used in the transportation of infectious materials, were not the subject of special Federal regulations in 1953, except for medical diagnostic specimens sent through the mail. At that time Fort Detrick, on its own initiative, began testing the strength of containers for transport of these materials, by dropping them from various heights onto a concrete surface. On 24 May 1956 a 2½ gallon bottle of living poliomyelitis virus vaccine, from a commercial pharmaceutical laboratory, broke open and leaked at the Washington National Airport during a cargo transfer. Although Detrick was not involved, its personnel were asked to decontaminate the aircraft.

As a result of this incident the Public Health Service issued Federal Regulation 42 CFR 72.25 that set the standards for transportation of infectious materials and limited the transportable quantities to one gallon per container. Since that time the Army has continued its tests to insure that no microorganisms will leak from the container, even after drops from extreme heights to hard soil and concrete. In 1965, representatives of the Department of Defense, Army, Air Force, Navy, and Public Health Service began a series of meetings to establish requirements for safe shipping containers for infectious materials. As a result, in 1966 three cargo aircraft containing shipping containers were crashed at takeoff and landing speed, exceeding 138 miles per hour, into an immovable concrete wall. The containers survived without leakage. These tests resulted in setting standards for packaging and shipping.

The net effect of the precautions employed by Department of Defense and Fort Detrick is that there has never been any leakage of infectious material during a Department of Defense shipment, nor has any member of the general public ever been infected.

YOUTH FOR DECENCY RALLY IN BIRMINGHAM, ALA.

(Mr. BUCHANAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BUCHANAN. Mr. Speaker, on Sunday last, it was my distinct pleasure to attend a Youth for Decency rally in Birmingham, the city it is my privilege to represent in Congress.

I found it highly encouraging, amid all the turmoil on campuses across the Nation and the violent demonstrations by a portion of our youth, to see young people so concerned about seeking positive solutions to today's problems.

A crowd of several thousand came to hear six young Americans speak out for decency and democracy. Many of those attending the rally dashed under the bleachers when a downpour drenched Legion Field, but they remained through the rain to hear the program.

The young people's addresses covered nearly every sphere of contemporary life. Alabama's Junior Miss, Carol Ann Crowgey, spoke on "Belief in God and That He Loves Us"; Negro policeman Frank Horn on "Love of Country"; Negro radio newsman "Tall" Paul White on "Love of Family and Respect for Authority"; former Girls' State President Cathy Johnson on "Reverence for One's Self," and Stan Moss, "Equality of All Men."

The rally was organized by a young coastguardsman, Steve Gilbreath, who was granted leave to attend the rally. His coorganizational committee members were Ray Smith and Jeanus Wallace, vice presidents; Debbie Gilbreath and Cindy Butler, secretaries, and Sandi Harding, treasurer.

A choral group which calls itself Sing Out Valley provided some very fine music for the rally which radio personalities Doug Layton and Tommy Charles emceed.

Mr. Speaker, my district is not unique in the desire by many of its youth to spread democracy through decency. Rallies of this type are going on throughout the Nation. I wish they would be as thoroughly covered by our news media as the campus riots.

The media give little coverage to a gathering of thousands of young people who meet for a decency rally, but the story of a few militants protesting or seizing an administration building often finds its way into headlines.

The young people who spoke in Birmingham are not passivists—they are not content to sit back and let the world go by. When they find things that need to be changed, and there are such things, they work toward that change, but not through violence and anarchy.

These young people, I think, represent the majority of American youth and are an indication that this country still has an outstanding future.

Mr. MIZELL. Mr Speaker, throughout the years that I was active in professional baseball and ever since then, for that matter, I was associated with youth in one way or another.

I learned a long time ago that the young people of this Nation warrant the respect, the understanding, and the love of their elders. Given a chance, a young boy or girl accepts and takes on responsibility with unbounded energy.

The Youth Decency Rallys are indications of this—evidence that the young people of today will not sit back and allow their reputations to be blemished by an irresponsible minority.

The young people are the heart of this Nation—and it is gratifying to know that they are accepting the responsibility of going all out to insure that America remains a decent and beautiful place to live. I feel that the Congress of the United States should commend these fine young people for the wonderful work they are doing. We have a responsibility to support those things which promote the ideals of this country. The youth decency programs do exemplify the philosophy this country was founded on.

I would like to join my distinguished colleague, the gentleman from Alabama (Mr. BUCHANAN), in asking for the unanimous endorsement of Congress for this truly American movement.

FOUNDATION OF ALL GREAT REPUBLICS IS THE QUALITY OF THE PEOPLE THAT INHABIT THAT NATION

(Mr. BLACKBURN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BLACKBURN. Mr. Speaker, the foundation of all great republics is the quality of the people that inhabit that nation. America has always been a great Nation because its leaders and people have been progressive, honest, and educated. In our rapidly changing world, the need for a highly educated populous is becoming more urgent and apparent. However, as this need is increasing so is the cost involved in providing higher education for our people.

One of the hallmarks of American culture is the reliance of the individual on providing for his own needs. In the past, American students have both worked and attended school at the same time. However, this era is quickly passing. Because of the academic community's increasing demand on the student's time and the skyrocketing cost of education, the burden of financing the higher education of our youth has fallen on the parents, the university, and the Government. Presently, in a public university, it costs the average male student at least $964 for tuition, room and board for 1 academic year, and the average cost in a private university is $2,048 for 1 academic year. Thus, it is readily seen that there is a great need to provide some assistance to those parents who are providing higher education for our Nation's youth.

I believe that when someone spends a large sum to provide himself or his children with a higher education, he is spending money in the national interest, and it is only fair that the Nation try to ease his burden through our tax laws.

Therefore, today, I am introducing a bill that will provide a tax credit for higher education. The basic provisions of my bill are:

A 100-percent tax credit on the first $200 spent on the cost of higher education; 75 percent tax credit on the next $300; 25 percent tax credit on the next $1,000.

In order to help equalize the benefits among different tax brackets, I am providing for a 1 percent reduction from the tax credit for those earning an adjusted gross income in excess of $25,000. Thus, as an individual reaches a higher tax bracket, the tax credit will be smaller for him than for an individual in a lower tax bracket.

The tax credit will be available to anyone who pays the specific expenses of an individual to obtain a higher education. It will be available to students trying to put themselves through school. It will be available to parents trying to help their children through college and it will be available to anyone who contributes additional financial aid. Thus, this measure would help to create individual scholarships where the donor would receive a tax credit. Colleges and universities could encourage their alumni to give scholarships to deserving students.

I am well aware of the fact that many of our graduating high school seniors are not going to college but plan to attend post-secondary schools such as business, trade, technical, and other vocational institutions. It would be discriminatory to exclude individuals who are attending these institutions. Therefore, in my definition of institutions of higher education, I include the above-mentioned institutions.

There are many students in college today who are receiving full or partial scholarships. If my bill were enacted, many of these scholarships would no longer be needed by the students holding them, thus opening the way for more needy students to receive this financial aid. For example, the median family income of students receiving scholarships is $8,436. Most State-supported schools have a tuition cost of less than $600. My proposal would provide a maximum of $650 in tax credits to any one individual.

In the Fourth Congressional District, there are many fine institutions of higher learning such as Georgia State College and DeKalb Junior College. Georgia State's tuition cost for three quarters is $315. Under the provisions of my bill a student attending this institution would receive a $296.25 tax credit. The tuition cost for two trimesters at DeKalb Junior College is $220. Under my plan, a tax credit of $215 would be granted to anyone incurring the cost of attending DeKalb Junior College.

In conclusion, Mr. Speaker, I must point out that a dollar spent on education today means thousands of dollars saved on welfare rolls in future generations. My bill will allow the individual to provide for his own education without seeking the assistance of the Federal Government.

I therefore urge the House to consider this measure at the earliest possible date.

MATT DEMORE HONORED AT TESTIMONIAL DINNER

(Mr. FEIGHAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. FEIGHAN. Mr. Speaker, at a dinner at the Sheraton-Cleveland Hotel on May 31, more than 1,500 persons from all walks of life paid honor and tribute, richly deserved, to Matt DeMore in recognition of his service to members of the International Association of Machinists & Aerospace Workers. It has been my good fortune to know Matt very well for three decades and I was happy to be among those present. Under leave to extend my remarks, I include an article from the program written by Anthony Mazzolini, labor editor of the Cleveland Press, and the remarks by Matt DeMore:

MEET MATT DEMORE—FROM NEWSBOY TO LABOR STATESMAN

(By Anthony Mazzolini)

The measure of a man's success in life is not how much wealth he accumulates, but how much he helps his fellow-men.

By this measurement, Matt DeMore has achieved a notable success. He has led a life rich in assisting his fellow-men to improve their lives.

He has done this not only as a union member and officer for nearly 40 years, but also as an outspoken, articulate champion of causes designed to help all men and women, whether they belong to a union or not.

For example, Matt was one of the labor leaders who participated in the long fight to provide fair treatment for the nation's elderly.

He could, if he was the boastful kind—which he is not—claim credit for helping to constantly improve the Social Security program, to provide increased payments for millions of pensioners. He also was a leader in the fight for Medicare, which established the principle that senior citizens are entitled to hospital and medical care—and that a single major illness should not be permitted to wipe out their life savings, or imperil the financial stability of their children's and grandchildren's families.

Now that he is retiring, Matt may benefit from these endeavors himself . . . but he certainly didn't have himself in mind when he was actively preaching the cause of the elderly.

He also fought for the interests of the young and the middle-aged. Thousands of families were able to live a better life because of the wage increases and other benefits won for them by Matt DeMore, the dedicated union negotiator.

Matt's courage has been tested—and he met the challenge successfully—on many occasions during his career as a labor leader.

He did not hesitate in 1959 to criticize Michael V. DiSalle, then Ohio's governor, for sponsoring a bill that Matt said would put every union in Ohio out of business.

Matt's outspoken criticism helped kill the bill sponsored by DiSalle, who had been swept into office in 1958 in labor's great and successful fight to defeat a so-called "Right-To-Work" proposal, which was really a scheme to kill unions.

Matt was a leader in this fight by all organized labor in Ohio.

Who can forget Matt, blood streaming from his head, after he was clubbed by police in 1949 during the strike at Warner & Swasey? Matt was on the picket line with his members. That's where he thought he belonged.

Many honors have come to Matt DeMore during his long career, but he never lost touch with the rank-and-file of the International Association of Machinists and Aerospace Workers.

His door was always open to members when he served as president of District 54 in Cleveland.

Matt was born in Cleveland on April 5, 1903.

He never forgot his humble beginnings. He came from a large family, and worked as a newsboy at age 9. Two years later, he was working part-time as a clerk in Palevsky's Hardware Store.

He left East High School at age 16 to take a job as a blacksmith's helper for the Michigan Central Railroad in Detroit.

After two years, he returned to Cleveland in 1920 to become a maintenance machinist at the Electric Vacuum Cleaner Co., now the Vacuum Cleaner Division of General Electric.

He helped organize IAM Lodge 439 at the plant, becoming a member in 1935. He served as shop steward before he was elected president in 1936.

In 1938, he was elected president of District 54 at the age of 35. He was one of the youngest major union officers in Cleveland.

He was re-elected District 54 president 22 consecutive years. During his presidency, District 54's membership grew from 4500 to more than 20,000.

Matt also served as legislative director of the Ohio State Council of Machinists and as vice president of the Cleveland Federation of Labor and Ohio AFL–CIO.

He also served on the Regional War Labor Board and on the Cleveland War Manpower and War Production Committees during World War II.

During the Korean War, he was a labor member of the Regional Wage Stabilization Board. In the 1950's, he was on the Ohio Advisory Committee on Workmen's Compensation.

His record of achievement was recognized in 1961 when he was elected a general vice president of the IAM and was assigned to the northeast region with headquarters in New York.

He served there until 1964, when he was assigned as resident vice president in IAM headquarters in Washington. In 1965, he was elected general secretary-treasurer without opposition.

This made Matt the second ranking officer of this great union, serving more than 900,000 members in all 50 states and the ten Canadian provinces.

Needless to say, Matt won a wide reputation as a sound and sensible executive and counsellor, working as an effective player on the IAM team which continued to win major benefits for its members.

He was also a respected voice in the top levels of organized labor in America.

And his voice always spoke for what he considered the best interests of the rank-and-file.

Matt DeMore never forgot that a union exists primarily to serve its members. And he has always served them well.

One of the nice things about Matt's retirement, from the viewpoint of this community, is that it will bring Matt and his wife, the former Mary Bacha, "back home." They are returning here to live close to their five children and 14 grandchildren.

REMARKS BY MATT DEMORE, GENERAL SECRETARY-TREASURER, IAM, AT DISTRICT 54 TESTIMONIAL DINNER, CLEVELAND, OHIO, MAY 31, 1969

As I look around this room—and see so many warm and wonderful friends—I can assure you that underneath the rough exterior that stands before you there beats a heart that's been deeply moved by all that has been said and done here tonight.

This is a moment I shall never forget. For at this moment I cannot imagine any man on the face of the earth who could feel more fortunate and highly blessed. Certainly, no one could feel a deeper sense of gratitude. And as I stand here and think back over the years that so many of us have worked—and sometimes fought—together, I feel not only a sense of gratitude but a sense of wonder. I wonder what I could possibly have done in my life to really deserve the honor of a gathering such as this.

In saying that I am not being falsely humble. It was my good fortune in life to have had an opportunity to serve a cause I believe in—a cause that has been worth every ounce of effort, energy and inspiration I had to give.

That cause was, of course, the cause of unionism—and unionism, by any definition, is the cause of the working people.

I have now reached that place in life where it is permissible to look back. And when I do I see an almost unbelievable difference—the difference that unionism has made in the life of the average American.

It is hard to believe—in times like those we enjoy today—that things could change so much in so short a time. When I was working at the old Electric Vacuum Cleaner Company—back in the early 30's—a skilled tool and die maker earned a top rate of 60 cents an hour. Production workers made 50 cents an hour—if they were men—and 30 cents an hour if they were women. There wasn't much you could do on $20.00 a week. But as individuals—standing alone—there also wasn't much you could do *about* it. We tried, of course. First we formed an independent union and twice we went out on strike—once in 1933 and once in 1935. The company whipped us both times. And so finally the time came when we decided the only way we could make progress was to join up with a real union.

We wanted a union that was honest, progressive, militant and democratic. When we affiliated with the District 54 and the IAM in the summer of 1935 that is what we got. A lot of years have passed since we made that decision. But I don't think any of the people who made it have ever regretted their choice. In the passage of the years the old Electric Vacuum Cleaner Company—like so many small, independent concerns—got swallowed up by a corporate giant. It became the Vacuum Cleaner Division of General Electric. And it's a good thing that we had the Machinists Union—and not an independent—when that happened.

For once we joined the Machinist Union—we had District 54 behind us—and with District 54 in our corner—we began to make progress.

Today, after many long years of bargaining, people who work in my old plant have progressed from 30 to 60 cents an hour wages to scales that range from $2.01 to $4.30 an hour. Where we used to get a one week vacation after five years and two weeks after 10 years, they get one week after one year, two weeks after two years, three weeks after 10 years and four weeks after twenty years.

They also enjoy benefits we never heard of—including a cost of living clause, a health and welfare plan, pensions and supplemental unemployment benefits.

This is what unionism has meant in just one plant in just one place. It has meant a better standard of living, better homes and greater security for hundreds of families.

To measure the impact that the organized labor movement has had on America and the American way of life—we need only to multiply this one experience by the experience of millions of other unionized workers from one end of this great country to the other. That is why I feel proud and lucky in my life. I happened to come along at a time in our nation's history when the conditions of life and labor for most working people were desperate.

Through unionism we transformed desperation into hope, we changed fear into dignity and we translated poverty into decency. That, I think, is something to be proud of. And that is why I am grateful to have had the opportunity to serve the union cause.

Now, of course, the time has come for me to retire from the battle—and to leave the field to others. In the past few months many people have asked me—"How does it feel to reach retirement age?" And I almost feel like saying "Who—me?" At 55 retirement seemed an eternity away. At 60 it still seemed no more than a remote possibility in the distant future. And then, one morning—far sooner that I ever thought possible—I woke up and there it was—my 65th birthday staring me right in the eye.

And though it has come faster than I had expected I am happy to move aside and make room for new blood and fresh leadership. Just as I am proud of the past I am also confident of the future. The IAM is blessed with an abundance of capable leadership at every level. Like those of us who have gone before, leadership in the IAM will continue to be developed out of the ranks of the membership. With this leadership the dimensions of our union's services and effectiveness will continue to grow.

Certainly, the challenges of union leadership will become more difficult. The officers and representatives of unions today have to know much more than we did 30 years ago. As benefits have broadened contracts have become longer and more legalistic. As the rights of the workers have increased so have their expectations. As labor's role in society has expanded so has its relationships with other private and public agencies.

Despite the difficulties and challenges that lie ahead I believe that with its new leaders the IAM will continue to grow as a force for economic and social justice in America.

Officially my retirement from the office of General Secretary Treasurer will take effect on June 30. Though I am retiring from office I want to assure you that I am not retiring from a full and active life. As some of you know I am going to be associated with the National Council of Senior Citizens. This organization is working with—and seeking the some goals as—the labor movement. So in a sense I will still be serving the cause I have served all these years. That is a cause I will continue to serve—as well as I can—for as long as I can.

And so, let me say once more to each and every one of you—*Thank you*. Thank you not only for your friendship and generosity tonight but for your friendship and support through the years.

In Italian we don't say goodbye—we say *Arrivederci*, which means, of course, "I'll be seeing you."

And since I *will* be seeing you it is not goodbye but *Arrivederci* that I say to you now.

DISSEMINATION OF OBSCENE MATERIALS

The SPEAKER pro tempore (Mr. MOLLOHAN). Under a previous order of the House the gentleman from Ohio (Mr. WYLIE) is recognized for 30 minutes.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to revise and extend remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. WYLIE. Mr. Speaker, I have requested this time to focus the attention of this body on the urgent and pressing problem concerning the dissemination of obscene materials.

Last weekend, while at home in my district, I received several telephone calls from constituents protesting the receipt by mail of the latest piece of smut literature being widely distributed. The problem has reached such proportions that action by Congress should be taken immediately.

House Members are aware of the problem as evidenced by the fact that 126 bills, on this subject involving 158 authors, have been referred to the Committee on the Judiciary. Another 39 obscene materials bills with 48 authors have been referred to the Committee on Post Office and Civil Service.

President Nixon has called for action in his message to Congress on May 2. The President recommended a three-phase attack by calling for:

First. A prohibition against sending offensive sex materials to any person under 18 years of age.

The second part of the President's message would prohibit the sending of advertising designed to appeal to a prurient interest in sex, and it would apply regardless of the age of the recipient;

The third phase would provide a means whereby persons could prevent smut advertising from being mailed into their home.

On May 7, H.R. 11031—which would prohibit the use of interstate facilities, including the mails, for the transportation of certain materials to minors—was introduced by the gentleman from Ohio (Mr. MCCULLOCH) for himself, the distinguished minority leader, and 23 other House Members, to implement the first part of the President's message.

On March 6, 1969, Congressman HUNT and I introduced a similar bill H.R. 8397 which would prohibit the dissemination through interstate commerce or the mails of obscene materials to persons under the age of 18 years. It would restrict the exhibition of movies or other obscene matter to such persons. There is an additional section in our bill which would provide that the Supreme Court and Courts of Appeals would not have jurisdiction to review any determination that material was, in fact, designed primarily to appeal to a minor's prurient interest. In this aspect it is in line with suggestions made on the subject by Senators MANSFIELD and DIRKSEN.

Since the introduction of H.R. 8397, I have received over 500 letters and 3,000 names on petitions in support of our legislation. Among the petitions was one from Buckeye Branch 78 of the National Association of Letter Carriers containing 838 names of letter carriers which stated that if our obscene literature bill is passed, it would "help relieve us of the guilty conscience of having had to handle such filth." We are also in receipt of a letter from Mr. James H. Rademacher, president of the National Association of Letter Carriers, in which he states:

> I want you to know of our unequivocal support for any legislation which would prohibit dissemination through the mails of obscene materials. Since our members daily find themselves compelled to deliver such smut to youngsters and to enraged citizens, it is only natural that people who carry the mail are vitally concerned over the liberty which the smut peddlers do have.

The scope of the problem is emphasized by a reading of U.S. Supreme Court cases on the subject. In 1957 the Supreme Court of the United States developed the so-called "Roth" test to determine whether material is obscene. The test then stated was "whether to the average person, applying contemporary community standards, the dominant theme of the material taken as a whole appeals to the prurient interest"—*Roth 1. U.S.*, 354 U.S. 476, p. 489.

In 1964, the Court, in affirming the Roth test, held in the Jacobelli case that "contemporary community standards" means contemporary national standards and not local ones. (*Jacobelli* v. *Ohio*, 378 U.S. 184, pp. 192–3).

In 1966 in *A Book Named "John Cleland's Memoirs of a Woman of Pleasure"* v. *Attorney General of Massachusetts*, 383 U.S. 413, the Court at page 418 elaborated on the Roth test by holding that in order to find matter to be obscene the following three tests must coalesce:

> (a) the dominant theme of the material taken as a whole appeals to a prurient interest in sex; (b) the material is patently offensive because it affronts contemporary community standards relating to the description or representation of sexual matters; and (c) the material is utterly without redeeming social value.

On the same day the Woman of Pleasure case was decided, the Supreme Court handed down the *Ginzburg* v. *U.S.*, case 383 U.S. 463, creating a new test involving a consideration of the manner in which the material is being distributed, that is whether a "pandering" element could be found. The Court said:

> Where an exploitation of interests in titillation by pornography is shown with respect to material lending itself to such exploitation through pervasive treatment or description of sexual matters, such evidence may support the determination that the material is obscene even though in other contexts the material would escape such condemnation.

From all these cases, the Supreme Court developed a definition of obscene as something which to the average person, applying contemporary standards, the predominant appeal of the matter, taken as a whole, is to prurient interest; that is, shameful or morbid interest in nudity, sex, or excretion which goes substantially beyond the limits of candor in description or representation of such matters and is matter which is utterly without redeeming social importance.

Then the Supreme Court apparently qualified that test in *Redrup* v. *New York*, 386 U.S. 767 (May 1967) by applying a "variable" standard concept saying what is "obscene" varies according to the audience to which it is directed.

There is a ray of hope. In *Ginzberg* v. *New York*, 390 U.S. 629 the Court upheld a criminal obscenity statute which prohibits the sale to minors of obscene material and based on its appeal to minors and not on whether or not an adult might find the matter obscene. The Court stated:

> The well-being of its children is of course a subject within the State's Constitutional power to regulate.

Based on the second Ginzberg case many of us have introduced bills to prohibit the mailing of materials which "would be harmful to minors." That phrase is defined as:

> That quality of any description or representation, whatever form, of nudity, sexual conduct, sexual excitement, or sado-masochistic abuse which—
>
> (a) predominantly appeals to the prurient, shameful, or morbid interest of minors;
>
> (b) is patently offensive to prevailing standards in the adult community as a whole with respect to what is suitable material for minors; and
>
> (c) is utterly without redeeming social importance for minors.

Obviously, to me, if these tests are met, the material is obscene.

I have sent several pieces of such material to the Post Office Department and to the Justice Department protesting on behalf of my constituents and myself. The material was obviously obscene and totally objectionable. Yet, very little is done because it is pointed out that although the Federal statutes prohibit the transportation of "obscene" matter through the mails, in interstate commerce and its importation from abroad, and broadcasting in obscene language, the term "obscene" is not defined in these statutes.

However, in 1967, Congress created the Commission on Obscenity and Pornography—Public Law 90–100; 81 Stat. 253. One of the duties of the Commission is "to evaluate and recommend definitions of obscenity and pornography." The Commission's final report is to be issued no later than January 31, 1970.

People writing to me have not had the benefit of the confusion of the Supreme Court cases and regard material which is obscene in everyday terms such as is found in Webster's Seventh New Collegiate Dictionary—as "disgusting to the senses, repulsive, abhorrent to morality or virtue, specifically designed to lust or depravity."

The dictionary definition of "obscenity" is not the legal definition of "obscenity," however.

The standard dictionary definition which emphasizes the disgusting and loathsome aspects of the "obscene" and the Supreme Court-legal definition which emphasizes the prurient appeal—which is the sexually exciting aspect—express somewhat different concepts of what is obscene.

We are told that this is the age of sexual enlightenment and that there is no longer a role for obscenity as a legal concept.

Obscenity laws, we are to believe, serve no useful purpose. Countries such as Sweden and Denmark, we are informed, have very liberal laws which permit all sorts of obscene material to be circulated and the inhabitants of these countries, we are to believe, are well adjusted sexually and are, therefore, well adjusted citizens who live in a Utopia. Sweden has the highest suicide rate in the world and Denmark is not far behind.

Our own society has never been as permissive as in recent years and if the distribution of smut reduced the number of sexual and other crimes, we should be crime-free, judging from the quantity of obscene material which is being circulated. But, this, of course, is not the case.

To those who argue that more liberal practices relative to the publication of all material, obscene, violent, and what have you act as a safety valve, I would point out that although our society has never permitted greater license in sexual matters than at present, nevertheless, rape and other violent crimes have steadily increased in the United States in recent years.

Thornstein Sellin, the sociologist-statistician has said:

> The United States has the worst crime statistics of any major country in the Western world.

Most of the increase in crime is attributable to youthful offenders. New York Times, September 1, 1968, page E5.

Where is the point where permissiveness reaches total depravity? Is that point close to being reached in this country and at what consequences to us? One may speak disdainfully of puritanism but at least one could walk the streets in relative safety 30 years ago. In what large city in this country can the same claim be made today?

The connection can be demonstrated between the increase in pornography and the increase in crime. There is much evidence that the flooding of the market with obscene material undermines the moral fiber of our society, weakens the teaching and guidance of the home, the church and other organizations which contribute to the stability of our country.

One of the major points which those who oppose all censorship of obscenity make is that there is an absence of scientifically substantiated evidence that obscenity is harmful. Is this really true? What is "obscene" and whatever it is, is it harmful?

Most of what is obscene is designed to be pornographic, most of it is produced for pornographic purposes, that is, to make money in the pornographic market. This material has no other reason for its existence. It is a recognition of this motivation, this "pandering" to obscene taste to make money that the Supreme Court of the United States emphasized in its decision in the recent *Ginzburg* case—383 U.S. 463 1966. In upholding the conviction of the defendant for using the mails to send obscenity, the Court stressed the character of the material in the context of the circumstances of its production, sale, and publicity and held that while the material taken alone might not be hard-core pornography, when the other factors were also considered it was obscene and could be barred from the mails. The Court strained and added there is respectable authority that obscene material is injurious and that the possibility of harmful effects on youth cannot be dismissed as frivolous.

The subject has received so much attention in my district that it was the topic of a Columbus Town Meeting program on April 27. The sole purpose of this independent forum is to provide information on current issues, local to international. This association, supported entirely by public contributions, has been in existence for 30 years.

This is, indeed, one of the really serious problems confronting our Nation. We only need to look to history to know that where there is moral decay there is political decay. Great nations have risen and fallen; throughout history, one thread is common to the fall of all great nations—moral decay.

Edward Gibbon, in his book "The Decline and Fall of the Roman Empire," attributes a major part of the fall of the Roman Empire to moral decay—to a breakdown of the family—to open promiscuity. The triumph of the barbaric hordes is attributable, in part, to the abolition of arts and ambition through wanton indulgence in lust and cruelty, resulting in a loss of patriotism and the will to fight oppression according to Gibbon.

Arnold J. Toynbee in his book, "A Study of History," and more specifically in the chapter on the "Disintegration of Empires," makes the observation that one of the ways a society destroys itself is through the passive attempt in which the soul "lets itself go" in the belief that by giving free rein to its own spontaneous appetities and aversions it will be "living according to nature" and will automatically receive back from that mysterious goddess the precious gift of creativity which it has been conscious of losing.

In this the passive response is a sense of promiscuity in which the soul surrenders itself to the melting pot. In the medium of language and literature and art this sense of promiscuity declares itself the currency and of a similarly standardized and composite style of literature, painting, sculpture, and architecture.

There is no lack of evidence a breakdown of our Western society could result through abandonment or return to nature. From this we may tentatively draw the cynical conclusion if through abandonment our Western Civilization has broken down, its disintegration cannot be far behind.

The flood of indecent books, pornographic films, and obscene plays, if allowed to continue, cannot help but have a harmful effect on our youth and coming generations.

FBI crime statistics show that three-fourths of all arrests for crime in the United States last year were people under 25 years of age. The largest class of criminals in the United States are 15 years of age, and the second largest class are 16-year-olds. One thousand five hundred teenagers a day are afflicted with venereal diseases. Rape in the United States has increased 78 percent since 1960, and this rate rose 7 percent from 1966 to 1967 over the Nation. The FBI recently released figures showing that the increase in rapes over the 1967 total was 17 percent over the Nation.

The Director of the Federal Bureau of Investigation, Mr. J. Edgar Hoover, has stated:

> A peddler who assaults our children's minds is as clearly a sexual offender as a man who molests a child's body.

Rapes and molestations are only a small part of the problem. Sexual promiscuity among young frequently leads to smoking marijuana, taking LSD and other drugs.

The individual has a right of privacy not to be deluged and snowed under by unwanted mail especially if it offends his morals. In addition, parents have a right to guide the teaching of their family insofar as what is morally obscene and what is not. If an individual wants to go out of his way to obtain obscene material, to see an obscene show or purchase an obscene book, I might question his judgment but that is up to him. I do not want it dumped on me and my constituents do not.

The Post Office Department estimates that 100 million pieces of obscene mail are carried each year at a profit estimated to be about $500 million a year. Much of it goes to teenagers for whose names the companies sending this literature pay a lot of money. They operate on the theory that if they can mold the teenager to their way of thinking, they have him hooked and will have a steady customer for years.

I know that other Congressmen must have had similar experiences. The people of the United States are demanding action, and we must give them action. I suggest that hearings begin immediately toward the enactment of meaningful legislation on this subject.

Mr. HUNT. Mr. Speaker, will the gentleman yield?

Mr. WYLIE. I yield to the gentleman.

Mr. HUNT. Mr. Speaker, I take this opportunity to compliment the gentleman from Ohio for his fine presentation today and also for his unstinting effort to combat the latest wave of not ordinary smut but the filthiest of filthy smut.

This latest wave of pornographic literature to emanate through our postal system and to be transmitted by it, apparently, has been aimed at business houses and business concerns. Over the past weekend I have had reported to me over 40 telephone calls from prominent business concerns and people in my district about this one paper that emphasizes what we are discussing today.

It is high time that we begin to take a very serious look, and stop squawking about what we should be doing and simply do it.

The bill that you have cosponsored with me, in my estimation, will be one of the answers to this problem.

I simply cannot let this opportunity pass by without saying simply to you as my learned colleague from the State of Ohio that you are making a magnificent contribution.

Mr. WYLIE. I thank the gentleman for his generous remarks.

I wish to say I am proud to be a co-author with the gentleman from New Jersey (Mr. HUNT) on the bill H.R. 8397.

Mr. DEVINE. Mr. Speaker, will the gentleman yield?

Mr. WYLIE. I am happy to yield to my able colleague the gentleman from Ohio.

Mr. DEVINE. Mr. Speaker, I too would like to join in commending our colleague from the 15th District of Ohio for his leadership in trying to prevent some of this pornography and obscenity from being circularized across the Nation and particularly in the way it gets into the hands of the youth of this Nation.

The gentleman now in the well and I happen to share the capital county of Ohio, Franklin County, in which the capital city of Columbus is located. We both receive tremendous volumes of letters, particularly from professional people—from doctors and dentists and lawyers—who have been involuntarily receiving this lascivious, this pornographic, this lewd, this obscene and trashy material from these purveyors of filth.

The citizens are rightfully outraged when they receive this material in their homes. The great danger exists that small children as well as teenagers may open this kind of mail.

I have in my possession a vast quantity of this material that has been forwarded to me by irate constituents demanding that the Federal Government do something about this.

I have introduced two of the so-called administration bills and I introduced another one yesterday—a fourth bill designed to do something about this problem. This last contribution was made after a considerable amount of research by members of my staff and myself relating to the subject of pornography.

We deplore the attitude of the Post Office Department, as it has been constituted, in looking for excuses not to do something.

We came up with the idea that perhaps the theory followed in the gun control legislation, under which firearms are considered unmailable, could be followed in relation to the material. It seems to me if they can outlaw the mailing of things like firearms in the U.S. mails, they could likewise outlaw this type of filth and material that does reach the residents of our various communities.

I think all of us should lean on the chairman of the Post Office and Civil Service Committee and the other committees where legislation on this subject has been referred in order that prompt hearings be had and that this matter be aired fully. Let them take the materials that have come into my hands and into the hands of the gentleman in the well. Let them take a look at the type of junk that is being sent across the nation and let us indeed pass meaningful legislation that will help clear this very serious problem.

Again I wish to commend the gentleman in the well (Mr. WYLIE), for his leadership in this particular area.

Mr. WYLIE. I thank my very competent colleague for his statement. I know of his hard work and continuing interest in this problem. I am interested in the bill which my colleague introduced yesterday and the theory behind it. It is most interesting. I think, too, we should have some hearings on his bill H.R. 11815 because of his unique approach to the problem. I wish him success with his bill.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. WYLIE. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Mr. Speaker, I associate myself with the gentleman's remarks. There is no question that this is a serious problem. I was interested in the remarks made by my colleague because it becomes quite apparent that the campaign of sending out the most filthy kind of literature is a nationwide campaign. I think as we talk to the various Members of Congress from different parts of the country, we find that the same type of literature is being mailed to communities all across the Nation. It is rather interesting that they are selecting the business houses of these communities. I have been deluged with similar mail that has been sent to my office by businessmen in my district. Apparently the people are just going down a mailing list that is being peddled by someone somewhere and sending this mail out.

I congratulate my colleagues for the various efforts that have been made here to deal with this problem. I am not sure where the answer lies. Every effort we have made has been stymied by the various decisions of the Supreme Court. My own contribution in this effort has been to try to put some sort of curb on this mailing business. In this connection I have introduced legislation which would bar the sale of mailing lists which would be used for the distribution of pornographic literature in interstate commerce. I do not know whether my bill would solve the problem in dealing with this subject. But when I introduced the bill, I said I was putting it in in desperation because of the many efforts made by this Congress to deal more effectively with this problem have been rebuked by the various Court decisions. It is my hope that somewhere along the line we can find some effective vehicle to deal with the problem. I am amazed at the kind of filth that is going through the mails. You almost have to ask yourself if indeed democracy is self-destructive if our society cannot deal with this problem. For that reason I congratulate the gentleman for taking the time today and calling our attention to this problem.

The whole country is deeply disturbed about the problem. It seems almost incredible that an organized society, such as ours, a nation of laws, cannot deal effectively with this traffic in filth.

Mr. HUNT. Mr. Speaker, will the gentleman yield?

Mr. WYLIE. I yield to the gentleman from New Jersey.

Mr. HUNT. I should like to commend the gentleman for his contribution. I would call to your attention the fact that when I said this was the filthiest material I had ever seen, I believe I pointed out that it had been mailed to many, practically all the business houses in my district. I thought it might at this time be appropriate to insert in the RECORD the name of this company so we might know who we are dealing with in these terms.

This has an address shown as "Cinema Products, Post Office Box 333, North Ridge, Calif., 91324." This is not from an ordinary 25-cent address listing, but these envelopes have the address typed on them individually. Someone has gone to great pains to get a mailing list.

I feel the same as the gentleman does. The literature I have in my hand enclosed in this envelope would make a kangaroo blush. That is how filthy it is. I have a 20-year-old daughter. I even hesitate from time to time to permit my secretaries to read or look at such filth as this, in order that we might make a record of it.

I am frustrated, the same as the gentleman and other Members of the House, about our inability to circumvent certain decisions that have been handed down by our higher court. Somewhere along the line, with all the legal brains we have in the Congress of the United States, we must find some way to get an effective law to halt this flow of pornographic filth that is emanating from various and nondescript origins, so we can compel someone to place in jail those who are found guilty.

For the life of me, I just cannot understand why we cannot get such a bill. I hope the bill introduced by my colleague, Mr. WYLIE of Ohio, and me, can begin to fill this gap and that we can get around the decisions that have been hampering us.

I know the people of this country demand it. I know the gentleman demands it. I have listened to him speak on this floor, and I know his attitude. I compliment him on his insistence. But I think it is time for the House, all 435 Members of the House, to get together and say that we want something done now. We do not want to talk about it any more. We want to do it. We want this wiped out.

I ask the gentleman to use his good offices and those of his committee to get this bill to the floor and to do it without any further equivocation.

Mr. PUCINSKI. Mr. Speaker, if the gentleman will yield further, I think there might be one flicker of hope. Obviously, I cannot speak for anyone but myself, but I feel that perhaps with the appointment, approved by the Senate, of Supreme Court Chief Justice Burger, we may notice some change in the attitude of the Supreme Court. If all the things are true that I have read about his views and his judgments and his sober outlook on the needs and problems of this Republic, it is entirely possible that the trend of the past few years in the Supreme Court may be reversed and that legislation we perfect in this Chamber will be upheld.

There is no question in my mind that the Supreme Court has made a mockery of the democratic process. Nobody in this country wants to deny any citizen his complete rights under the Constitution of freedom of the press, freedom of speech and freedom of assembly, but when we see the literature to which the gentleman has referred in his remarks, we must take some action.

I might say the same mailing house the gentleman is talking about is distributing the very same filthy literature in Chicago in my district to merchants and to people—all unsolicited. There is no question about the problem when we look at the literature going through the mail, and when we see the obscene films. We find we cannot take our children to the movies today. There are any number of times when I have a free evening and would love to take my children to a movie, but we cannot find a decent film in the directory to which we can take our children.

Years ago there used to be 8-minute stag films shown at smokers. Today those same people go to Hollywood and make 90-minute films, put titles on them, put phony plots around them, put some actors in them, call them art, and distribute them to the whole country.

One company has been incorporated and is making a fortune on such films.

However, it seems to me there now is a flicker of hope that Judge Burger is going to bring some new direction to this country and put some new hope into this fight against pornography.

Mr. WYLIE. I thank the gentleman from Illinois for his very worthwhile and well-stated contribution.

I know that most of the obscene literature mailed over the weekend went to business establishments, but the thing which bothers me more than anything else, more than the deluge of obscene material to business establishments, is the fact that much of it goes into homes where there are minor children. I had an experience where a very obscene piece of literature was delivered to my office by a parent. It had been mailed to her 12-year old son. There was no question about the fact that it was mailed to the boy, because his name was different from that of his father. It went to the address of his father. One cannot imagine how filthy this piece of literature was.

As the gentleman has suggested, these mailing lists are very valuable and are being sold across the Nation. If we can curb this practice it would be of some help. There is a real hope, as was suggested, from the Supreme Court.

As a matter of fact, the bill which Congressman HUNT and I have introduced, H.R. 8397, follows the guidelines of the Supreme Court in the so-called second Ginzburg case. The Supreme Court has invited the Congress of the United States to enact a law which would in effect prohibit the dissemination of certain materials to minors, or to persons under the age of 18 years, which would be similar to the statute from the State of New York from which this case arose.

Mr. DEVINE. Mr. Speaker, will the gentleman yield?

Mr. WYLIE. I am glad to yield to the gentleman from Ohio.

Mr. DEVINE. Just in order that the RECORD may be made unmistakably clear, to indicate that the persons speaking here on the floor today in opposition to obscene mail are qualified in this regard, the gentleman in the well (Mr. WYLIE), is a former city attorney. He has engaged in the prosecution of criminal offenses over the years. He has great background and experience in this field. The gentleman from New Jersey (Mr. HUNT) is a known criminologist who has been in this field for many years of his life, in addition to having been a lieutenant in the New Jersey State Patrol. I happen to have been a prosecuting attorney for a number of years, and I have seen probably the raunchiest type of material one could imagine going across my district attorney's desk. I am not easily shocked, but indeed the material being sent through the mail and getting into the hands of these youngsters is of the worst and basest kind.

I must repeat, something must be done.

The gentleman in the well (Mr. WYLIE) has worked in this crusade, and he appeared on what was known as the Columbus Town Meeting, an hour television program, and very ably debated this question with professors and others.

I believe an aroused public is going to demand proper legislation in this field.

Mr. WYLIE. I thank the gentleman very much.

Now is the time for action. This Congress owes it to the people of our great Nation.

Mr. HUNT. Mr. Speaker, I thank the gentleman from Ohio (Mr. WYLIE) for reserving this time today in order that attention might be focused on the accelerating traffic in obscene and pornographic materials.

Because of the widespread use of the U.S. mails by organizations and individuals which profit from this depraved smut peddling, the Post Office Department's figures on the magnitude of complaints are convincing of the need for more stringent laws to forbid the use of this vast distribution network for such activities. Through April 1969, covering the first 10 months of fiscal year 1969, the Post Office Department received 172,000 complaints about unsolicited, sexually-oriented materials from their recipients. In the corresponding 10-month period for the fiscal year ending June 30, 1968, the Department received 131,000 such complaints, and for all of fiscal 1968, almost 168,000 were recorded. In the first 2½ months following the effective date, April 14, 1968, of the provisions of Public Law 90–206 prohibiting pandering advertisements in the mail, the Department recorded action on almost 20,000 cases in which the addressees received pandering advertisements that he, in his sole discretion, considered to be "erotically arousing or sexually provocative." Through April 1969 of the current fiscal year, the number of complaints handled in accordance with this act is roughly estimated at 87,000.

Although I believe the Post Office Department, in conjunction with the Department of Justice, has made an honest and diligent effort to enforce not only the provisions of this most recent Anti-Pandering Law, but the postal obscenity statute as well, the fact of the matter is that present laws, limited as they have been by decisions of the courts, are inadequate to the task of curbing the generation of smut at its source, before it enters the mails or the facilities of interstate commerce.

I am most encouraged by the President's reaction to the seriousness of this problem with the submission to the Congress of a message containing three positive legislative proposals. When enacted, and if effectively enforced with the judicious backing of the courts, these measures will materially alleviate the corruption of mind and morals with which obscenity and pornography are inseparably related. Congressman WYLIE and I have sponsored legislation which is specifically designed to combat the flow of obscene materials into the vast market of our minor children, those under 18 years of age. I believe this is paramount; it is given priority among the President's proposals.

There is some thought that legislation should not be considered by the Congress until the Commission on Obscenity and Pornography submits its findings and recommendations, due no later than January 31, 1970. In all frankness, I can think of few issues which are as replete with evidence, testimony, and judicial precedents as that of traffic in obscenity and pornography, nor is there any position which commands such broadly based public support than that determined to curb this traffic. The idea of a commission in 1967, when the law creating it was adopted, was timely enough to mollify somewhat mounting public pressure for congressional action in this field. But the tide is flowing again and will not ebb until substantive legislation is adopted. The time for action is now and I believe the legislation, circumscribed by the President's announced guidelines, need not be complicated by fancy semantics or imponderable constitutional questions with which Congress cannot deal without the Commission's report.

I would reiterate and emphasize what the President said in his May 2 message:

> There are constitutional means available to assist parents seeking to protect their children from the flood of sex-oriented materials moving through the mails. The Courts have not left society defenseless against the smut peddler; they have not ruled out reasonable government action.
>
> Cognizant of the constitutional strictures, aware of recent Supreme Court decisions, this Administration has carefully studied the legal terrain of this problem.
>
> We believe we have discovered some untried and hopeful approaches that will enable the federal government to become a full partner with states and individual citizens in drying up a primary source of this social evil.

I earnestly believe these proposals are a responsible effort and are within the means and body of knowledge of the Congress to deliberate intelligently without further delay. The Commission's report may uncover something which has not yet been revealed to those who have

studied this problem over the years, and its recommendations may point to even further and more stringent measures to isolate the peddlers from their prime markets. Whatever the eventualities, there can be no substitute for taking what reasonable action can be taken, and which the American people are appealing to the Congress to take now.

Mr. CLANCY. Mr. Speaker, today we are confronted with a domestic crisis of gigantic proportions. The permissive attitude of a small minority is eroding and destroying the spiritual vitality of our country. The decent citizens of this Nation have had disgusting, unwanted obscenity and pornography foisted upon them and their children for far too long. The consequences of exposing especially the impressionable young people to salacious literature, photographs, films, and so forth, are tragic. Whether through the mails or at the corner newsstand, it is impossible to calculate the devastating damage done by this material.

Freedom of speech, expression, and the press are inherent characteristics of a democratic society. We must realize, however, that freedom brings with it responsibility. The two are inseparable. We must also realize that our actions have effect upon others and this must determine what is right and what is wrong. These freedoms are not so sacred that we can say it is more important to preserve them than to preserve society.

The recent trend, both in court decisions and subsequently in the media, has been toward the extreme of upholding the right of the individual above that of society. Recent films, publications, and mailings demonstrate the growing momentum of permissiveness.

The Supreme Court has gone far in allowing society's rights to be negated by the right of the individual. The very permissiveness that has made the new floodtide of obscenity possible rests squarely with the Supreme Court.

This compelling problem requires our immediate attention and action. The need for strong, emphatic, and enforceable obscenity control legislation at both the State and Federal level is clear. The time has come to act decisively in order to stamp out the poison of pornography in our Nation. In order to alleviate this domestic crisis. I have joined in introducing two bills, recommended by the President, to halt this trend and to protect our homes and children.

The bills have been carefully drawn to meet the Court's interpretations of the first amendment. The first bill places a flat ban on sending any obscene material to a person under 18 years of age. If the bill becomes law, it will be a Federal crime to use the mails or other means of commerce to deliver to anyone under 18 years of age material dealing with a sexual subject in a manner unsuitable for young people. It would be up to mailers to remove from their lists the names of anyone under age. A first violation would be punishable with a prison term up to 5 years and a $50,000 fine. This proposal is based on a New York statute which has been upheld by the Supreme Court.

The second bill makes it a Federal crime to mail or transport in interstate commerce an advertisement intended to produce a market for obscene materials by stimulating the prurient interest of the recipient. This form of pandering could bring a maximum penalty of 5 years or $50,000 for the first offense.

There are additional bills introduced by my colleagues that have great merit and should also receive the prompt and careful attention of the committee's authorized to consider these matters.

It is time to stand up for decency in America.

Mr. SCHERLE. Mr. Speaker, the gentleman from Ohio (Mr. WYLIE) is to be commended for taking this time today to bring to the attention of the public the serious problem of pornography which is now sweeping this Nation. Each week my office receives an increasing amount of pornographic material which is sent unsolicited to the residents of my congressional district.

The only defense available against this type of smut, much of it aimed at teenagers, is a section of the 1967 Post Office bill which states that any person who finds such unsolicited material objectionable may notify their local postal officials in writing that he does not wish to receive any additional mail from that sender. If that person receives another mailing of any kind from that sender following a 30-day period after the official complaint has been filed, the Post Office Department will ask the U.S. Attorney General to apply for a Federal court order directing compliance. Failure to observe this court order may be punishable by a fine or imprisonment.

Since January 1968, when this law went into effect the Post Office Department has already issued 134,000 stop orders and over 450 cases are pending today in the Department of Justice for Federal court orders.

Much more is needed to stop the peddlers of this filth. There are many meaningful proposals to curb the growing menaces of pornography and yet maintain to the fullest extent the constitutional right of free speech.

I agree with Representative WYLIE that the time for congressional action against pornography is now.

GENERAL LEAVE

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks immediately following my remarks on the subject of this special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

THE PRESIDENT'S RESPONSIBLE SPEECH ON THE ROLE OF THE MILITARY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. HOSMER) is recognized for 10 minutes.

Mr. HOSMER. Mr. Speaker, in his address to the graduating class at the Air Force Academy this morning, President Nixon conscientiously and clearly articulated America's need for maintaining a strong national defense. This was a speech unmistakably needed at this time in our history when so many are openly ashamed of our defense capability and so willing to condemn its maintenance and reject its improvement.

It was a speech which I believe can be endorsed by almost all those concerned with military spending—supporters and foes alike—except perhaps the isolationists, the unilateral disarmers, and those who are blinded by the glare of the spotlights and deafened by their own rhetoric. It was not a militaristic, saber-rattling speech, but a carefully reasoned and balanced analysis of the proper place of the military in the Nation.

To those who see military spending as preventing attention to our myriad domestic problems, the President said:

> Let us not, then, pose a false choice between meeting our responsibilities abroad and meeting the needs of our people at home. We shall meet both or we shall meet neither.

And he added:

> I am not speaking about those responsible critics who reveal waste and inefficiency in our defense establishment, who demand clear answers on procurement policies, who want to make sure a new weapon system will truly add to our defense. On the contrary, you should be in the vanguard of that movement. Nor do I speak of those with sharp eyes and sharp pencils who are examining our post-Vietnam planning with other pressing national priorities in mind. I count myself as one of those.

The President acknowledged his concern over the growth of the so-called military-industrial complex, then said:

> I believe our defense establishment will remain the servant of our national policy of bringing about peace in this world, and that those in any way connected with the military must scrupulously avoid even the appearance of becoming the master of that policy.

And he made a most important point regarding what kind and how much defense we must have as a nation and why we must have it:

> I believe that defense decisions must be made on the hard realities of the offensive capabilities of our adversaries, not on our fervent hopes about their intentions.

Mr. Speaker, I was greatly impressed with President Nixon's speech, and would hope that those who would make our Armed Forces a scapegoat for their frustration would carefully read his words.

SCHOOL PRAYER ISSUE VERY MUCH ALIVE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. ASHBROOK) is recognized for 30 minutes.

Mr. ASHBROOK. Mr. Speaker, the Washington Star of June 2 carried a UPI dispatch reporting on a commencement speech given at the University of Bridgeport by Julian Bond, the Georgia legislator, who created such a furor in that State several years ago when he condemned this Nation's position and ac-

tions in Vietnam while praising the courage of young draft resistors. Mr. Bond asserted that the older generation had lost its authority over the young, and directed these words to the parents in the audience:

> You've already lost. . . . If you think you are faced with militant young people today, just see what today's 7- and 8-year-olds have waiting for you 5 to 10 years from now, when they grow up.

I do not know who supplies Mr. Bond with speech material, but this excerpt from his Bridgeport speech had a familiar ring. Back in December 1968, the House Committee on Un-American Activities, of which I am a member, held hearings on the disruption of the Democratic Convention in Chicago at which Tom Hayden, one of the key figures in the revolutionary organization, Students for a Democratic Society, testified. During his testimony Mr. Hayden stated:

> If you think that you have had militant people before you in these hearings, you have yet to see what the 7- and 8-year-olds are going to bring you over the next 5 or 10 years.
>
> You have taught them very well to have no respect for your authority . . . you have lost all authority. And when a group of people who have power lose their authority, then they have lost. You have lost, period.

While the similarity between the statements of Messrs. Bond and Hayden are curious, to say the least, the salient point to remember is that Mr. Hayden and others with anarchistic motivations are actively working to bring about a loss of authority by parents and authorized officials. The Students for a Democratic Society—(SDS)—is, of course, the organization which has been the prime mover of many of the disorders on college campuses in the recent past. Its avowed policy is to either rule or ruin and its long-range goal is the destruction of the American way of life.

In marked contrast is the constructive approach to the problems of youth endorsed by the present administration. The New York Times of April 28, 1969, carried an article on the weekly White House interdenominational religious services under the heading, "Nixon Hopes Youth Turns to Religion," in which the President is hopeful that more and more of America's youth look to religion as an answer to today's "crisis of the spirit."

The resumption of weekly religious services at the White House is another recent encouraging indication that a reemphasis of moral values is taking place in our society. Who can forget the inspiring Christmas message broadcast to earth by Astronauts Borman, Lovell, and Anders just recently in which passages from Genesis reaffirmed our dependence on divine providence? In those fleeting moments of December 24 the religious heritage of our Nation was once again proclaimed for all to hear.

It is ironic, therefore, in view of our religious foundation as a nation, that our young people cannot offer prayers voluntarily in the schoolroom as has been the custom in many public schools in years past. If there were ever an issue in which large numbers of citizens have made their wishes known, only to be ignored, it is on the issue of school prayer. In my remarks in the CONGRESSIONAL RECORD on April 13, 1967, entitled "Making God Popular in Schools," I cited several cases of newspaper accounts testifying to the extent to which public opinion endorsed voluntary school prayer. For example, Columnist Bruce Biossat in the Washington Daily News of June 23, 1964, stated:

> By contrast with all this, 93 of the 98 congressmen who appeared were in support of constitutional change. They and many of their fellows have been buried in the greatest avalanche of mail in congressional history.

In response to the stated wishes of so many citizens, I and many other Members of Congress introduced legislation calling for a constitutional amendment to clarify the status of voluntary prayer in the public schools. Unfortunately, legislation of this nature has never been voted out of committee in the House, and similar legislation has failed to get the necessary number of votes in the Senate. During the present Congress I have again introduced voluntary prayer legislation which I am hopeful will receive favorable action by Congress.

The need for a clarifying of this issue is evident. The Chicago Tribune of March 27, 1969, carried an article entitled "Schools Defy High Court on Prayer Ban," in which it cited findings of Prof. Richard B. Dierenfield of Macalester College. According to the professor's survey, as of 1966 nearly 13 percent of the Nation's public schools and nearly 50 percent of the South's schools were continuing devotional readings. As Senator Everett Dirksen has pointed out, the U.S. Supreme Court has never clarified its position on the matter of voluntary prayer in public schools, for in the case of Stein against Oshinsky the Court refused to review the petition of the parents of 21 children of differing faiths to permit voluntary prayer in public schools.

This is not the only case in which, I have taken exception to the Supreme Court ruling on an issue with religious significance. In my remarks on April 13, 1967, cited above, I noted that the members of the Court had disapproved of the placing of the inscription, "In God we trust," above the bench in the courtroom of the U.S. Supreme Court. Justice Warren, in answer to a query, stated in part:

> After consulting with all the members of the Court, I advise you that I would not approve the bills or the inscription referred to therein . . . It is believed that ornamentation other than that provided in the original plans would detract from the total concept of the building.

Here again, in my opinion, the Court's position runs counter to the sentiments of a majority of the American people. The elected representatives of the people in the Senate and the House saw fit to have the inscription placed on their chamber walls. In addition, I do not recall any widespread clamor to have the inscription removed from coins of the United States. As with other issues of late, the preference of the members of the Court by no means reflects the feelings of the American public whom they have been appointed to serve.

In the final analysis, corrective action regarding Court decisions will be effected when the American people demand such changes in sufficient numbers. Popular support will not necessarily effect changes unless constant pressure is applied upon elected officials year in and year out, if need be. In the case of voluntary school prayer, it has been demonstrated that an overwhelming majority are in favor of corrective action. When their elected officials get the message that public demand will not let up until changes are made, the chances of remedial action will be greatly increased.

The reference above made by Tom Hayden of the destruction-bent Students for a Democratic Society concerning our 7- and 8-year-olds might well prove true if positive efforts are not made now to fortify our young people with religious and moral values. What better first step to take than by making it possible for them place reliance upon the God our Founding Fathers through the exercise of voluntary prayer in the public schools.

DO NOT OVERLOOK WHAT CAN BE DONE

While I feel that Congress has been unnecessarily slow in moving to establish the basic right of prayer in school by rectifying the Supreme Court decision, it is also obvious that many good people throughout the country wring their hands as if nothing can be done. While a constitutional amendment is needed, it is not at all clear that all of the fears expressed by patriotic citizens and groups are well founded. In fact, God need not be taken out of the classrooms and should not be taken out.

A very important distinction was noted by UPI staff editor Louis Cassels when he wrote:

> The start of a new school term is a good time to list once again the specific activities which the Court ruled out—and those which it permitted and even encouraged.
>
> In the *Engel vs. Vitale* case of 1962, the Court held that it is unconstitutional for a public school to require the recitation of an official non-sectarian prayer as part of a classroom religious exercise.
>
> The following year, in *Abingdon School District vs. Schempp*, the Court said that a public school may not require the reading of a portion of the Bible or the recitation of the Lord's Prayer as part of a classroom religious exercise.
>
> That is all that the Court has forbidden public schools to do.
>
> The Justices went out of their way to state that there is no constitutional objection to the following school activities:
>
> Use of the Bible as a reference work for teaching secular subjects.
>
> Study of the Bible for its literary and historic qualities.
>
> Objective instruction in comparative religion or the history of religion and its role in the advancement of civilization.
>
> Reciting historical documents, such as the Declaration of Independence, which refer to God.
>
> Singing the National Anthem or patriotic hymns such as *"America,"* which have religious themes.
>
> The Court not only said the aforementioned things may be done in public schools; it strongly suggested that they should be done.

This is very much in point. The 1962 Supreme Court decision by no means outlawed all references to God in the classrooms. It is certainly disgusting to consider, as Mr. Cassels put it, that the Bible can be considered as an historical

document rather than the inspired work that most people consider it to be. Yet, consider this footnote to the majority decision in this famous Engel case:

There is of course nothing in the decision reached here that is inconsistent with the fact that school children and others are officially encouraged to express love for our country by reciting historical documents such as the Declaration of Independence which contain references to the Deity or by singing officially espoused anthems which include the composer's professions of faith in a Supreme Being, or with the fact that there are many manifestations in our public life of belief in God.

Often we overlook the fact that the Supreme Court in its 1963 decision declaring that no State or locality may require a recitation of the Lord's Prayer or Bible verses in public schools, nonetheless "took pains to explain that it was not attacking the religious basis of our national life," as James Reston wrote in the New York Times, June 19, 1963.

In one section of its majority opinion the Court testifies at length to belief in a Supreme Being throughout American history:

The fact that the Founding Fathers believed devotedly that there was a God and that the unalienable rights of man were rooted in Him is clearly evidenced in their writings, from the Mayflower Compact to the Constitution itself. This background is evidenced today in our public life through the continuance in our oaths of office from the Presidency to the alderman of the final supplication, *"so help me God."*

Likewise each house of the Congress provides through its chaplain an opening prayer, and the sessions of this court are declared open by the crier in a short ceremony, the final phrase of which invokes the grace of God.

Again, there are such manifestations in our military forces, where those of our citizens who are under the restrictions of military service wish to engage in voluntary worship . . .

It can be truly said, therefore, that today, as in the beginning, our national life reflects a religious people who, in the words of Madison, are *"earnestly praying, as . . . in duty bound, that the Supreme Lawgiver of the universe . . . guide them into every measure which may be worthy of His . . . blessing."*

In another section of the 1963 majority opinion, the Court affirms:

The First Amendment, however, does not say that in every and all respects there shall be a separation of church and state. Rather, it studiously defines the manner, the specific ways, in which there shall be no concert or union or dependency one on the other. That is the common sense of the matter. (343 U.S., at 312.)

Again this 1963 decision points out:

In addition, it might well be said that one's education is not complete without a study of comparative religion or the history of religion and its relationship to the advancement of civilization. It certainly may be said that the Bible is worthy of study for its literary and historic qualities.

Nothing we have said here indicates that such study of the Bible or of religion, when presented objectively as part of a secular program of education, may not be effected consistent with the First Amendment.

While these Supreme Court decisions recognize that belief in God is at the heart of American life, it should be kept in mind that they do nevertheless prohibit religious exercises in public schools.

One of the basic reasons I believe that a constitutional amendment should be offered is the wilderness area which has been created following the 1962 and 1963 decisions. Many schools have wanted to "play it safe." To take no chances, they have cut down on Easter and Christmas observances and have secularized baccalaureate services. Few of these steps were required but they indicate how a decision can influence local boards of education and administrators who want to take the safe route.

The American Association of School Administrators through a special commission stated on June 30, 1964:

The Commission believes that the public school curriculum must give suitable attention to the religious influences in man's development.

A curriculum which ignored religion would itself have serious religious implications. It would seem to proclaim that religion has not been as real in men's lives as health or politics or economics. By omission it would appear to deny that religion has been and is important in man's history—a denial of the obvious. In day-by-day practice, the topic cannot be avoided. As an integral part of man's culture, it must be included.

Whatever else the Supreme Court decisions may or may not have done, they have stimulated the public schools to a search for appropriate means to deal effectively with religion as one of the great influences in man's history . . .

The Commission recognizes three distinct policy areas, related to each other and to the subject of this report, where explicit educational policy, adequate materials, and effective methods need to be developed.

In one large area, recognition must be given to the role of religion and the religious in literature, in history and the humanities, and in the arts.

In a second area ways must be found to portray the part played by religion in establishing and maintaining the moral and ethical values that the school seeks to develop and transmit.

Finally, the public schools are called on to build an understanding of the relationship between civil government and religious freedom, and to prepare youth for citizenship in a multifaithed society.

TEACH WHAT CAN BE TAUGHT

Within the limits set by the Supreme Court, there are more than a few opportunities for educators to develop the curriculum so that it faithfully reflects the recognition of God as an integral part of American life.

One thing that teachers can do right now is to make suitable reference to such facts as the following:

First, the Mayflower Compact: 41 pilgrims on the deck of the Mayflower in 1620 prepared the first written constitution of our land. It opened with these words: "In the name of God, Amen," and stated that the long and difficult voyage to the New World had been "undertaken for the glory of God." They signed it "solemnly and mutually in the presence of God."

Second, Declaration of Independence: This profound document, the cornerstone of American freedom, provides a clear and unshakable basis for our Constitution, Bill of Rights, and all subsequent legislation in behalf of human rights. As finally approved by the Founding Fathers, the declaration makes these four specific references to the dependence of our Nation on God: "the laws of nature and of nature's God," "that all men are created equal, that they are endowed by their Creator with certain unalienable rights," "appealing to the Supreme Judge of the world for the rectitude of our intentions," "with a firm reliance on the protection of divine providence."

Third, Thanksgiving Day: From the very start of our Nation, one day each year has been set aside to render thanks to Almighty God. The Chief Executive officially asks each citizen to express gratitude to a bountiful Creator.

Fourth, the American seal: On every dollar bill the seal is pictured with the "eye of God" directly above the pyramid. The words "Annuit Coeptis" signify:

He (God) has favored our undertakings.

Congress approved this design on June 20, 1782.

Fifth, oath of office: The oath taken by Government employees, witnesses in court, and those seeking passports concludes with the prayerful petition: "So help me God." This practice was originated by George Washington when he took his first oath of office as President of the United States, April 30, 1789.

I have read the inaugural addresses of our Presidents and every one of them referred to God and beseeched his help and guidance in the assumption of the trying responsibilities of the office.

Sixth, national anthem: Francis Scott Key composed the "Star Spangled Banner" during the bombardment of Fort McHenry on the night of September 13, 1814. For 117 years, this song was popular as a patriotic hymn. On March 3, 1931, Congress adopted the "Star Spangled Banner" as our national anthem. It closes this way:

"Praise the Power that hath made and preserved us a nation.
Then conquer we must, when our cause it is just
And this be our motto—'In God is our Trust'."

Seventh, national motto: A joint resolution was also adopted by Congress on July 20, 1956, establishing "In God We Trust" as the national motto of the United States:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the national motto of the United States is hereby declared to be "In God We Trust."

Eighth, State constitutions: My own State of Ohio has "grateful to Almighty God for our freedom" written into the constitution. In fact, 49 of the 50 State constitutions recognize our dependence on God Himself as the source of human rights and liberties. Here are other excerpts from some of the State constitutions:

Alaska: "We the people of Alaska, grateful to God and to those who founded our nation and pioneered this great land."

California: "We, the people of the State of California, grateful to Almighty God for our freedom."

Florida: "grateful to Almighty God for our constitutional liberty."

Georgia: "We the people of Georgia, relying upon the protection and guidance of Almighty God . . ."

Hawaii: "We the people of the State of Ha-

waii, grateful for Divine Guidance and mindful of our Hawaiian heritage . . ."

Illinois: "We, the people of the State of Illinois, grateful to Almighty God for the civil, political and religious liberty . . ."

Massachusetts: "We, therefore, the people of Massachusetts, acknowledging with grateful hearts the goodness of the great Legislator of the universe . . ."

Michigan: ". . . grateful to Almighty God for the blessings of freedom, and earnestly desiring to secure these blessings . . ."

Missouri: "We, the people of Missouri, with profound reverence for the Supreme Ruler of the Universe, and grateful for His goodness . . ."

New York: "We, the people of the State of New York, grateful to Almighty God for our freedom . . ."

Pennsylvania: ". . . grateful to Almighty God for the blessings of civil and religious liberty . . ."

Texas: ". . . invoking the blessings of Almighty God, the people of the State of Texas do ordain and establish this Constitution . . ."

Ninth, pledge of allegiance: On April 20, 1953, a resolution was introduced in the House of Representatives to add the words "under God" to the pledge of allegiance to the flag. Both the House of Representatives and Senate adopted the resolution. It was made the law of the land when President Eisenhower signed the bill on June 14, 1954. The pledge now reads:

I pledge allegiance to the flag of the United States of America and to the Republic for which it stands; one nation under God, indivisible, with liberty and justice for all.

While it may be clearly debatable how religious we are as a people and how deep our commitment is to the faith of our fathers, it cannot be argued that our Government was founded on anything except those Judeo-Christian principles which come from the Bible. While we are waiting to stem the tide which has resulted from the Supreme Court decision, we can nonetheless affirmatively point out many of the truths which are here stated and remind ourselves that our Constitution, our Government, our way of life has a deep religious heritage which should be militantly portrayed rather than shrinkingly withdrawn.

Tenth, legislative sessions: In the Ohio Legislature and in the U.S. Congress, each session has been opened with a prayer. There are chaplains in the House and Senate who are full-time officers of Congress here in Washington and at least part-time members of the legislative family in Columbus. No Supreme Court decision has deterred our legislators from conducting their deliberations in the atmosphere of religious commitment.

THE PRESIDENT'S ADDRESS AT THE AIR FORCE ACADEMY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. LIPSCOMB) is recognized for 5 minutes.

Mr. LIPSCOMB. Mr. Speaker, the President in his address today at the Air Force Academy has presented an important message on America's role in the world today and on the responsibilities of protecting freedom beyond our Nation's shores. Demonstrating the courage of a great leader in these times of controversy and of fundamental differences of opinion, our President candidly and forcefully stated that America cannot be left in peace if we do not actively assume the burden of keeping the peace.

Explicitly ruling out unilateral disarmament, the President said that the direction America must take today is one of commitment to preserving world peace by maintaining our Nation's military strength to meet the long-range obligations to itself and to the free world.

As to the level of military strength required of us, the President carefully noted that the critical question in defense spending is "how much is necessary?" In answering this question so vital to our Nation's future, America is indeed fortunate that our President has recommended defense decisions which will maintain our national security. Recognizing that in this age of science mistakes in military policy can be irretrievable, the President stated:

But if I have made a mistake, I pray that it is on the side of too much and not too little. If we do too much, it will cost us our money; if we do too little, it may cost us our lives.

The President deserves America's fullest support as he recommends defense decision based on the hard realities of the offensive capabilities of our adversaries. These are indeed difficult decisions and the President has not taken the easy road to basing these decisions on our fervent hopes about our adversaries' intentions.

Although the isolationists' call for creating an Utopia in America certainly has superficial appeal, President Nixon's defense recommendations are designed to secure lasting world peace by refusing to weaken our military strength to the point of submission to the political philosophy which challenges democracies all over the globe and seeks world domination.

President Nixon deserves our fullest support, for any peace obtained as a result of weakness on our part, or by our unilateral reduction of arms, or by turning away from the pleas of freedom in suppressed countries can only be a false illusion—one of temporary peace—and one which results in the demise of freedom and democracy as we now enjoy it.

INFORMATION BOOKLET FOR HIGH SCOOL GRADUATES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. ESCH) is recognized for 5 minutes.

Mr. ESCH. Mr. Speaker, as a special service to high school graduates in Michigan's Second Congressional District, I have compiled a booklet of information which I believe will be useful to them. This information includes not only scholarship and funding information for further education in a college or vocational school, but also details regarding selective service rules and regulations, proposed changes in the Selective Service System and information on various means of satisfying military requirements.

I believe that this information would be useful to students around the Nation and hope that this forum will assist in making it available on a broad basis:

INFORMATION BOOKLET FOR HIGH SCHOOL GRADUATES

This booklet attempts to give briefly the possibilities of obtaining college loan or scholarship aid from all available sources. In addition to those mentioned in this booklet, there are countless loan, scholarship, and work-study opportunities at the individual colleges and universities and you should not overlook the possibility of obtaining some kind of financial assistance from the college or university of your choice.

You may have to combine several sources to finance your educational program. Complete information on the details of such programs can be secured *only* by writing directly to the institution.

If you have a good high school record and need financial help, you should proceed as follows:

1. Check with your high school guidance counselor, principal or advisor for scholarship information.

2. Write to admission directors at the colleges in which you are interested. New scholarship programs are being established every day and it would be impossible to list them all in this booklet.

3. Write to foundations and private businesses which offer special grants, such as the General Motors and Ford Foundation Scholarship Plans; the Kroger Company; Sears, Roebuck Foundation; Procter & Gamble; etc.

4. Write to the College Scholarship Service of the College Entrance Board, 475 Riverside Drive, New York, New York 10027. They will provide information on their services and a parental financial statement upon request.

5. Write to the Division of Student Financial Aid, Bureau of Higher Education, U.S. Office of Education, Washington, D.C. 20201, for a copy of "Federal Aids for College Students." There is no charge for this publication. This booklet is also available through my office at 501 Cannon House Office Building, Washington, D.C. 20515.

FEDERAL ASSISTANCE—THE DEFENSE STUDENT LOAN PROGRAM

In 1958, President Eisenhower signed into law the National Defense Education Act in which most colleges and universities in the United States participate.

High School graduates who have been accepted for enrollment by colleges and universities and who need financial help for educational expenses are eligible for student loans.

An undergraduate student may borrow up to $1,000 each academic year—to a total of $5,000. Repayment does not begin until 9 months after college; interest also does not begin until then. Repayments at 3% interest per annum may be extended over a 10-year period although the school may require in minimum repayment of $15 a month.

The "Teachers' Forgiveness Clause" in this program provides that if a borrower becomes a full-time teacher in an elementary or secondary school or an institution of higher education, up to half of the loan may be forgiven at the rate of 10% for each year of teaching service. Borrowers who elect to teach in certain eligible schools located in areas of primarily low-income families or to teach handicapped children may qualify for cancellation of their entire obligation at the rate of 15% per year

The colleges and universities—NOT the Federal Government—approve and make the loans. A student desiring this financial assistance should make application directly to the college or university which has accepted him.

A booklet containing a summary of this loan program and listing participating colleges and universities may be obtained by writing to the Department of Health, Edu-

cation, and Welfare, Office of Education, Washington, D.C. 20201 or to me.

FEDERAL GRANTS AND GUARANTEED LOANS

One of the final acts of the First Session of the 89th Congress was the Higher Education Act of 1965, which authorizes both Federally-financed grants and guaranteed student loans.

The grants are available through colleges and universities for students found to be in exceptional financial need. The maximum annual grant will be $1,000.

The colleges and universities will determine who is to receive the scholarships, and in what amount, so that application should be made directly to the college the student is attending or plans to attend.

Special emphasis will be placed upon identifying able students while they are still in high school with the promise of scholarship aid upon graduation from high school.

GUARANTEED STUDENT LOAN PROGRAM

Under this program, students may borrow from a local commercial bank, savings and loan association, mutual savings bank, insurance company, credit union, or other eligible lender to help meet college costs. The loan is made directly to the student, and is, in turn, guaranteed against default by a guarantee agency designated for each State. Loans may range up to $1,500 per year. Repayment may begin not less than nine nor more than twelve months after the student leaves college. For such loans, the Federal Government will pay a portion of the interest charges for eligible students.

TRAINING FOR TEACHERS OF HANDICAPPED CHILDREN

Grants are available through selected institutions for individuals for training as teachers or specially trained education personnel for children who are mentally retarded, seriously emotionally disturbed, hearing, speech or sight impaired, crippled, or otherwise health impaired. Available are traineeship grants for full-time senior year undergraduate study as well as post-graduate study. For information write: Division of Handicapped Children and Youth, U.S. Office of Education, Washington, D.C. 20201.

The War Orphans' Education Program offers assistance to the children of deceased or permanently and totally disabled veterans in certain categories. Financial aid is available for the education of children of veterans who are, or who died while, permanently and totally disabled from or whose death was due to disease or injury incurred or aggravated in the line of duty during the Spanish-American War, World War I, World War II, the Korean Conflict, the Vietnam Conflict and the induction period. The latter is the period, exclusive of war time, when young men are liable to induction under the Universal Military Service and Training Act.

Children of the above veterans may be entitled to help for 36 months or 4 academic years. Those who attend approved colleges, vocational and business schools can receive $130 monthly if on a full-time basis. Those on a ¾ time basis may receive $95 monthly and those on half-time may get $60 monthly.

To inquire about this program, write to the Veteran Administration Office nearest to your home, or to me.

FEDERAL LOAN ASSISTANCE FOR VOCATIONAL STUDENTS

Students attending public and private vocational schools (including private schools operated for profit) may also apply for loans under a loan guarantee program highly similar to that described above. Such students are also eligible for Federal interest benefits.

Information concerning this assistance may be obtained through local Commissions for Higher Education, from high school counselors and from the business, trade, or vocational school the student plans to attend.

The United Business Schools Association maintains a listing of schools it has accredited. Many of these schools offer general work or service scholarships to eligible students. Some also offer work-study program. For a listing of these accredited business schools and additional information write: Accrediting Commission for Business Schools, 5057 Woodward Avenue, Detroit, Michigan 48202.

THE FIELD MEDICINE

Federal: The Health Professions Educational Assistance Act of 1963, as amended in 1965, provides for loans up to $2,500 per year for students pursuing a full-time course of study leading to a doctorate degree in medicine, dentistry, osteopathy, optometry, pharmacy, podiatry, and surgical chiropody. The 1965 Amendments provide for scholarships up to $2500 per year for students in schools of medicine, osteopathy, dentistry, and optometry. Specific enquiries should be addressed to the institution to which students have applied for admission, or at which they are enrolled.

Medical Social Work: Medical Social Work Section, National Association of Social Workers, 2 Park Avenue, New York, N.Y. 10016.

Physical Therapy: American Physical Therapy Association, 1740 Broadway, New York, N.Y. 10019.

Medicine: Council on Medical Education and Hospitals, American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610 or Association of American Medical Colleges, 2530 Ridge Avenue, Evanston, Illinois 60201.

Occupational Therapy: American Occupational Therapy Assn., 251 Park Ave., South, New York, N.Y. 10010.

NURSES

If you are interested in a career as a nurse, or in furthering your education if you are presently in nursing, you may want to contact the following sources for information: Department of Information Services, National League for Nursing, 10 Columbus Circle, N.Y., N.Y. 10019.

The National Foundation, 800 Second Ave., New York, N.Y. 10017.

The 8 and 40 Tuberculosis Nursing Scholarship Fund assists students in securing advanced preparation for positions in supervision, administration or teaching with a direct relationship to tuberculosis control. Write: Box 1055, Indianapolis, Indiana 46206.

A list of institutions offering nursing traineeships is available at no cost from the Division of Nursing Public Health Service, Room 407, 800 No. Quincy St., Arlington, Va. 22203.

The Nursing Student Loan Program provides for the establishment of a student loan fund in those public or nonprofit schools of nursing which wish to participate.

Talented high school graduates in need of financial assistance to enter and complete basic programs in nursing should apply for admission to the schools of their choice. Once admitted, they are eligible for loans under this Act. For information, write: Division of Community Health Services, Rm. 810, 800 N. Quincy St., Arlington, Va. 22203.

Students may cancel up to 50% of their loan for full-time employment as a professional nurse in any public or nonprofit private institution or agency. For each complete year of service, the rate of cancellation shall be 10% of the loan, plus interest, which is unpaid on the first day of employment.

PRIVATE FINANCIAL ASSISTANCE

In addition, there are hundreds of private scholarships and loans available at every college and university in the Nation. I have listed some of the major funds. However, only the financial aids officer at your college can give you a full breakdown on the funds which are available. Among the private scholarship and loan funds which are available are the following:

The National Merit Scholarship Program awards 4-year scholarships which may be used in any accredited college or university in the United States. Students are selected through a process starting with nation-wide competitive examinations. This is a national program, and students compete each year for over 2,300 awards ranging from $100 to $1,500 per pear in value. Applicants must take the National Merit Scholarship Qualifying Test in the year preceding high school graduation, normally as juniors. For detailed information, consult your high school counselor or write the National Merit Scholarship Corporation, 990 Grove Street, Evanston, Illinois 60201.

The National Achievement Scholarship Program awards 4-year scholarships to outstanding Negro students in an annual nation-wide competition. Winners may use their awards at any accredited college or university in the United States and receive from $250 to $1,500 per year. Over 250 awards are given annually. The program is administered by the National Merit Scholarship Corporation. For detailed information, consult your high school counselor or write the National Achievement Scholarship program, 990 Grove Street, Evanston, Illinois 60201.

Knights of Columbus Educational Trust Fund: Scholarships are available to sons and daughters of Knights who were killed or disabled as a result of military service during World War II, the Korean War or the Viet Nam War. In addition, special $1000 scholarships are awarded for undergraduate study at The Catholic University of America, Washington, D.C., for sons and daughters, brothers and sisters of living or deceased members of the Knights of Columbus. Write to the Supreme Secretary, Knights of Columbus, Drawer 1670, New Haven, Connecticut 06507.

Westinghouse Science Scholarships and Awards: The Science Clubs of America conduct an annual talent search for outstanding students who are interested in science. 40 winners are selected with the top five getting $25,000 in scholarships and the other 35 awards of $250 each. Information may be obtained from the Science Clubs of America, 1719 N Street, N.W., Washington, D.C. 20036. Deadline for all materials is December 27.

The Elks have scholarship programs for children of members who were killed or died in the armed services. Applications should be made directly to the lodge of which their father was a member.

Fraternal Order of Eagles offers medical, dental and educational assistance to minor children of Eagle members who lost their lives while in the armed services. For information contact the local Eagle Aerie or Eagles Memorial Foundation, 4710 14th St., W., Bradenton, Florida 33505.

The AMVETS grant scholarships to high school seniors whose fathers are deceased or disabled veterans of World War II or the Korean War. Write: AMVETS, 1710 Rhode Island Avenue, N.W., Washington, D.C. 20036.

American Association of University Women Educational Foundation: Awards about 50 fellowships. Write American Association of University Women, 2401 Virginia Avenue, N.W., Washington, D.C. 20007.

The Hattie M. Strong Foundation makes loans without interest or collateral up to $3,000 to students who are within 2 years of their final degree. Loans are based almost entirely on need—top limit of $1,500 per year per student. For additional information write the Hattie M. Strong Foundation, Room 409, 1625 Eye Street, Washington, D.C. 20006.

The Woodrow Wilson National Fellowship Foundation grants 1,000 fellowships for first year graduate students interested in college teaching careers in the liberal arts field. Current grants are contingent upon availability of funds beyond June, 1968. Write the Wood-

row Wilson National Fellowship Foundation, Box 642, Princeton, New Jersey 08540.

Foundation for Independent Education, 224 Clarendon Street, Boston, Massachusetts. Approximately 8 to 10 scholarships valued at $300 are awarded annually to attend private junior colleges. For information write: Funds for Education, Inc., 319 Lincoln Street, Manchester, New Hampshire 03103.

Church Scholarships are available through many denominations. 500 National Methodist Scholarships are awarded to outstanding students in over 100 accredited Methodist institutions. Students may also obtain loans from the Methodist Student Loan Fund while attending any institution of higher education accredited by its regional accrediting association. Write, Department of Student Loans and Scholarships, P.O. Box 871, Nashville, Tenn. 37202. The American Baptist Student Aid Fund also awards national scholarships and further information on this program may be obtained by writing, American Baptist Student Aid Fund, Valley Forge, Pa. 19481. The United Presbyterian Church U.S.A. offers 50 scholarships to qualified Presbyterian youths entering 45 church-related colleges. Application forms may be secured from the Board of Christian Education, United Presbyterian Church, 425 Witherspoon Building, Philadelphia, Pa. 19107. The Lutheran Churches affiliated with the Lutheran Council in the U.S.A. have a unified graduate scholarship program in social work for qualified Lutheran applicants. For details write: Division of Welfare Services, LCUSA, 315 Park Avenue South, New York, New York 10010. The National Jewish Welfare Board, 145 East 32nd Street, N.Y., N.Y. 10016, will furnish information about careers in social group work and scholarship help for graduate social work education.

FINANCIAL AID BOOK-SHELF

There are many books about financial aid for students. Here are a few that tell about privately operated aid programs as well as those operated by the Office of Education and other Federal agencies. Many school and public libraries have them.

Comparative Guide to American Colleges for Students, Parents, and Counselors, by James Cass and Max Birnbaum. Published by Harper and Row, 49 East 33d Street, New York 10016. Paperback $4.95.

How About College Financing? by S. Norman Feingold. Published by the American Personnel and Guidance Association, 1605 New Hampshire Avenue NW., Washington, D.C. 2009. 30¢.

Need a Lift? American Legion Scholarship Information Service, Box 1055, Indianapolis, Indiana 46206. 25¢

Nursing Student Loan Program: Information for Students. U.S. Public Health Service, Washington, D.C. 20201. Single copies free.

The Health Professions Student Loan Program. U.S. Public Health Service, Washington, D.C. 20201. Single copies free.

A Letter to Parents: Financial Aid for College by Sidney Margolius. Available from the College Entrance Examination Board, 475 Riverside Drive, New York, New York 10027. Free to high school counselors. (Ask yours.)

A National Catalog of Scholarships and Other Financial Aids for Students Entering College, by Oreon Keeslar. Published by the William C. Brown Company, Dubuque, Iowa 52001. Paperback $6.95.

College Costs Today. New York Life Insurance Company, Career Information Service, Box 51 Madison Square Station, New York, New York 10010. Free.

Facing Facts About College Costs. The Prudential, Education Department, Box 36, Newark, New Jersey 07101. Also available from any Prudential Life agent. Free.

IF YOU DO NOT KNOW WHICH SCHOOL YOU WANT TO ATTEND

Four admissions information centers have been established to help high school seniors and graduates looking for colleges and colleges looking for prospective students. These centers charge a nominal fee and function as clearing centers where the records of student applicants are reviewed by interested colleges. Any student who has not made up his mind about college might find the services of these centers most useful:

1. American College Admissions Advisory Center, 12th & Walnut Streets, Philadelphia, Pennsylvania.

2. College Admissions Assistance Center, 41 East 65th Street, New York, New York.

3. College Admissions Center, 610 Church Street, Evanston, Illinois.

4. Catholic Colleges Admissions and Information Center, 500 Salisbury Street, Worcester, Massachusetts 01609.

Every young man has military obligations to the United States under the Selective Service Act of 1967. However, the military does not need all the young men who are available and the Selective Service System has been established to select those who must serve.

Most selective service troubles arise because of, first the registrant's ignorance of, or carelessness about, his rights—especially the right of appealing any new classification given by the local board; and second the registrant's failure to keep his local board informed of changes in status, qualification, and location.

All contact with the appeals to your local Draft Board should be put in writing. Registrants should keep copies of all correspondence with their local board and should put in writing for inclusion in their file all verbal communications with the local board, including telephone calls and summaries of personal appearances. This reduces the chance of misunderstanding.

The following are the general rules and regulations of the Selective Service System at the present time. If questions arise, you should contact your draft board immediately. My office will also be glad to provide you with assistance and information, although I have absolutely no power to make a determination on your specific case.

GENERAL RULES AND REGULATIONS

1. A Selective Service local board places a registrant in a deferred class when it determines that the national interest would be best served by continuing the individual registrant temporarily in a civilian status.

After the young man registers at the age of 18, his local board mails him a Classification Questionnaire. The information submitted in this and subsequent questionnaires is the foundation for classification; but the registrant, his employer, his university, or a dependent may submit new or supplemental information. For men seeking occupational deferment, employer information supporting occupational deferment should be filed at the time of employment, and should be kept current thereafter.

2. A registrant has the right to request a personal appearance before his board within 30 days of the date of mailing of any notice of classification by the local board. Following such personal appearance, he will be given a new classification card, and will have the right to appeal that classification within 30 days. A personal appearance before the local board is not required, and any registrant may bypass this step and make a direct request for appeal. However, he forfeits his right to a personal appearance if he appeals before requesting a personal appearance.

Along with the Classification Notice mailed to registrants classified in Classes I–A, I–A–O and I–O, there will be forwarded information that a Government Appeal Agent is available to them for legal advice on Selective Service matters, particularly in connection with appeals.

A request for a personal appearance or for an appeal should be sent to the local board. Requests for appeal should be accompanied by supporting letters and documents from teachers, employers, dependents, or others to justify the registrant's claim.

A *personal appearance* can be made only before the registrant's own local board. However, a registrant has the right to request a transfer of his *appeal* to the appeal board having jurisdiction over his principal place of employment or place of residence, if his local board is in a different state or jurisdictional area. The request for transfer must be made at the same time that the appeal is requested. The local board will forward the entire file to the appeal board, which may change or sustain the classification given the registrant.

3. Denial of deferment at the state level may be appealed to the President within 30 days if the vote of the appeal board was split. If the vote was unanimous, the registrant, an employer, a school, or a disinterested agency such as the Scientific Manpower Commission, may seek review at State Selective Service Headquarters and following that review, may seek further review at National Selective Service Headquarters in Washington, D.C. The State Director in the local board state, the State Director in the appeal board state, or the National Director of Selective Service may take an appeal to the President following unanimous classification by the appeal board.

4. A registrant cannot be inducted during the time any appeal is pending. No local board may deny an appeal.

5. No deferment is valid for a period longer than one year. However, most deferments may be renewed. The registrant and his employer or his school should apply for a continuation of the deferred classification prior to its expiration. The registrant is responsible for keeping his local board up-to-date on his status. In the case of undergraduate students, the request for continued deferment shoud be made on Form 104 and must be supported by Form 109, or any revised versions thereof that may be issued.

6. If an induction order has not been issued, the local board may be asked to reopen a classification if new information is supplied by the registrant or others in his behalf. The local board *must* reopen only when the new information, if true, would require placing the registrant in a new classification (such as I–S), or if ordered to re-open by the State or National Director of Selective Service. They *may* re-open when the new information would justify a change in classification, and was not considered in previous classification action. When a classification is re-opened and considered anew by the local board, rights of appeal are reestablished.

7. Registrants who have passed their 26th birthday without fulfilling their military obligation are dropped next to the bottom of the call list. Registrants deferred under authority of regulations issued by the President remain liable for service until they are 35 years old.

STUDENT DEFERMENT

High school and 2 year college students

8. The full-time, satisfactory high school student who is ordered for induction shall be deferred in Class I–S. This deferment classification ends when he graduates or reaches age 20 or ceases satisfactorily to pursue a full-time course of study. The student

seeking this deferment should ask the school principal to write to the local board giving the pertinent information. School principals should notify their students that such deferment is available.

Students in a two year college program not leading to a baccalaureate degree may be deferred in Class II–A.

Undergraduates

9. Presidential regulations provide that any undergraduate student who is satisfactorily pursuing a full-time course of instruction at a college or university shall be deferred at his request until he completes his baccalaureate degree, fails to pursue satisfactorily a full-time course of study, or attains the age of 24, whichever occurs first. The student must request such deferment in order to be placed in Class II–S, and in so doing he forfeits his right to deferment for fatherhood after completing his education, unless his induction would create a hardship for his dependents.

Additionally, until his thirty-fifth birthday, he shall be subject to call in the prime age group (see Number 35) if calls are placed by age group and if he ceases to be in a deferred class. However, he is not restricted from occupational deferment because he has been deferred as a student. The request for student deferment should be made on SSS Form 104.

College students under age 19 should *not* request student deferment, since the student is not currently subject to induction and should not incur the liabilities of II–S classification until he needs the deferment to stay in school, and has successfully completed his freshman year.
